The policy towards territorial disputes by the government is one of pragmatism, with the government solving disputes in a number of ways, such as bringing the case to the International Court of Justice.[70] The Spratly Islands are disputed by many states in the area, although tensions have eased since the 2002 Declaration on the Conduct of Parties in the South China Sea. Brunei and Malaysia in 2008 announced an end to claims of each other's land, and to resolve issues related to their maritime borders. The Philippines has a dormant claim to Sabah. Singapore's land reclamation has caused tensions, and maritime border disputes exist with Indonesia.[71]

Malaysia has never recognised Israel and has no diplomatic ties with it.[72] It has remained a strong supporter of the State of Palestine,[73] and has called for Israel to be taken to the International Criminal Court over the Gaza flotilla raid.[74] Malaysian peacekeeping forces are present in Lebanon[75] and have contributed to many other UN peacekeeping missions.[3]

Royal Malaysian Navy's first Scorpène class submarine

Malaysian defence requirements are assigned to the Malaysian Armed Forces. The armed forces has three branches, the Royal Malaysian Navy, the Malaysian Army, and the Royal Malaysian Air Force. There is no conscription, and the required age for voluntary military service is 18.

The military uses 1.9 per cent of the country's GDP, and employs 1.23 per cent of Malaysia's manpower.[76]

The Five Power Defence Arrangements is a regional security initiative which has been in place for almost 40 years. It involves joint military exercises held among Malaysia, Singapore, Australia, New Zealand, and the United Kingdom.[77] Joint exercises and war games have been held with Indonesia for years.[78] Malaysia and the Philippines have agreed to host joint security force exercises in order to secure their maritime border and tackle issues such as illegal immigration.[79] There are fears that unrest in the Muslim areas of the southern Philippines[80] and southern Thailand[81] could spill over into Malaysia.

Subdivisions

Main articles: States and federal territories of Malaysia and Districts of Malaysia

Malaysia is a federation of 13 states and three federal territories. These are divided between two regions, with 11 states and two federal territories on Peninsular Malaysia and the other two states and one federal territory in East Malaysia. Governance of the states is divided between the federal and the state governments, and the Federal government has direct administration of the federal territories.[82]

The 13 states are based on historical Malay Kingdoms, and 9 of the 11 Peninsular states, known as the Malay states, retain their royal families. The King is elected by and from the nine rulers to serve a five-year term.[3] Each state has a unicameral legislature known as the State Legislative Assembly. The states of East Malaysia (Sabah and Sarawak) have separate immigration policies and controls, and a unique residency status.[83] For citizens of one of these states or Peninsular Malaysia, the other areas of Malaysia are considered foreign countries under immigration laws.[84] Each state is further divided into districts, which are then divided into mukim. In Sabah and Sarawak districts are grouped into divisions.[85]

The federal parliament is permitted to legislate on issues of land, the Islamic religion and local government, in order to provide for a uniform law among all states. It may also intervene at the request of the state assembly concerned. Except for some land related laws, the in question must also be passed by the state assembly. Non-Islamic issues that fall under the purview of the state may also be legislated at the federal level for the purpose of conforming with Malaysian treaty obligations.[86]

Geography

Main article: Geography of Malaysia

A view from Low's peak, the highest peak of Mount Kinabalu

Malaysia is the 66th largest country by total land area, with a land area of 329,847 square kilometres (127,355 sq mi). It has land borders with Thailand in West Malaysia, and Indonesia and Brunei in East Malaysia.[2] It is linked to Singapore by a narrow causeway, and also has maritime boundaries with Vietnam[87] and the Philippines.[88] The land borders are defined in large part by geological features such as the Perlis River, the Golok River and the Pagalayan Canal, whilst some of the maritime boundaries are the subject of ongoing contention.[2] Brunei forms what is almost an enclave in Malaysia,[89] with the state of Sarawak dividing it into two parts. Malaysia is the only country with territory on both the Asian mainland and the Malay archipelago.[90] Tanjung Piai, located in the southern state of Johor, is the southernmost tip of continental Asia.[91] The Strait of Malacca, lying between Sumatra and Peninsular Malaysia, is one of the most important thoroughfares in global commerce, carrying 40 per cent of the world's trade.[92]

The two parts of Malaysia, separated from each other by the South China Sea, share a largely similar landscape in that both Peninsular and East Malaysia feature coastal plains rising to hills and mountains.[2] Peninsular Malaysia, containing 40 per cent of Malaysia's land area,[90] extends 740 kilometres (460 mi) from north to south, and its maximum width is 322 kilometres (200 mi).[93] It is divided between its east and west coasts by the Titiwangsa Mountains,[94] part of a series of mountain ranges running down the centre of the peninsula.[90] These mountains are heavily forested,[95] and mainly composed of granite and other igneous rocks. Much of it has been eroded, creating a karst landscape.[90] The range is the origin of some of Peninsular Malaysia's river systems.[95] The coastal plains surrounding the peninsula reach a maximum width of 50 kilometres (31 mi), and the peninsula's coastline is nearly 1,931 kilometres (1,200 mi) long, although harbours are only available on the western side.[93]

National Park, Pahang

East Malaysia, on the island of Borneo, has a coastline of 2,607 kilometres (1,620 mi).[2] It is divided between coastal regions, hills and valleys, and a mountainous interior.[90] The Crocker Range extends northwards from Sarawak,[90] dividing the state of Sabah. It is the location of the 4,095.2 metres (13,436 ft) high Mount Kinabalu,[96] the tallest mountain in Malaysia. Mount Kinabalu is protected as the Kinabalu National Park, a UNESCO World Heritage Site.[97] The highest mountain ranges form the border between Malaysia and Indonesia. Sarawak contains the Mulu Caves, the largest cave system in the world.[90]

Around these two halves of Malaysia are numerous islands, the largest of which is Banggi.[98] The local climate is equatorial and characterised by the annual southwest (April to October) and northeast (October to February) monsoons.[93] The temperature is moderated by the presence of the surrounding oceans.[90] Humidity is usually high, and the average annual rainfall is 250 centimetres (98 in).[93] The climates of the Peninsula and the East differ, as the climate on the peninsula is directly affected by wind from the mainland, as opposed to the more maritime weather of the East. Local climates can be divided into three regions, highland, lowland, and coastal. Climate change is likely to affect sea levels and rainfall, increasing flood risks and leading to droughts.[90]

Biodiversity

Main article: Wildlife of Malaysia

Proboscis monkey in Borneo

Malaysia is a megadiverse country with a high number of species and high levels of endemism.[99] It is estimated to contain 20 per cent of the world's animal species.[100] High levels of endemism are found on the diverse forests of Borneo's mountains, as species are isolated from each other by lowland forest.[90] There are about 210 mammal species in the country.[101] Over 620 species of birds have been recorded in Peninsular Malaysia,[100] with many endemic to the mountains there. A high number of endemic bird species are also found in Malaysian Borneo.[90] 250 reptile species have been recorded in the country, with about 150 species of snakes[102] and 80 species of lizards.[101] There are about 150 species of frogs,[101] and thousands of insect species.[101] Malaysia's exclusive economic zone is 1.5 times larger than its land area,[103] and some of its waters are in the Coral Triangle, a biodiversity hotspot.[104] The waters around Sipadan island are the most biodiverse in the world.[100] Bordering East Malaysia, the Sulu Sea is a biodiversity hotspot, with around 600 coral species and 1200 fish species.[105]

About two thirds of Malaysia is covered in forest,[93] with some forests believed to be 130 million years old.[101] The forests are dominated by dipterocarps.[106] Lowland forest occurs below 760 metres (2,493 ft),[93] and formerly East Malaysia was covered in such rainforest,[106] which is supported by its hot wet climate.[90] There are around 14,500 species of flowering plants and trees.[101] Besides rainforests, there are over 1,425 square kilometres (550 sq mi) of mangroves in Malaysia,[93] and a large amount of peat forest. At higher altitudes, oaks, chestnuts, and rhododendrons replace dipterocarps.[90] There are an estimated 8,500 species of vascular plants in Peninsular Malaysia, with another 15,000 in the East.[107] The forests of East Malaysia are estimated to be the habitat of around 2,000 tree species, and are one of the most biodiverse areas in the world, with 240 different species of trees every hectare.[90] These forests host many members of the Rafflesia genus, the largest flowers in the world,[106] with a maximum diameter of 1 metre (3 ft).[101]

Some species of *Rafflesia* can grow up to 1 metre (3 ft) in diameter, making them the largest flowers in the world.

Logging, along with cultivation practices has devastated tree cover, causing severe environmental degradation in the country. Over 80 per cent of Sarawak's rainforest has been cleared.[90] Floods in East Malaysia have been worsened by the loss of trees, and over 60 per cent of the Peninsular's forest have been cleared.[101] With current rates of deforestation, the forests are predicted to be extinct by 2020.[90] Deforestation is a major problem for fauna, as the forest is cut to make room for plantations.[108] Most remaining forest is found inside national parks.[101] Habitat destruction has proved a threat for marine life.[105] Illegal fishing is another major threat,[105] with fishing methods such as dynamite fishing and poisoning depleting marine ecosystems.[109] Leatherback turtle numbers have dropped 98 per cent since the 1950s.[102] Hunting has also been an issue for some animals,[101] with overconsumption and the use of animal parts for profit endangering many animals, from marine life[105] to tigers.[108] Marine life is also detrimentally affected by uncontrolled tourism.[110]

The Malaysian government aims to balance economic growth with environmental protection, but has been

accused of favouring big business over the environment.[101] Some state governments are now trying to counter the environmental impact and pollution created by deforestation;[106] and the federal government is trying to cut logging by 10 per cent each year. 28 national parks have been established; 23 in East Malaysia and seven in the Peninsular.[101] Tourism has been limited in biodiverse areas such as Sipadan island.[110] Animal trafficking is a large issue, and the Malaysian government is holding talks with the governments of Brunei and Indonesia to standardise anti-trafficking laws.[111]

Economy

Main article: Economy of Malaysia

Malaysia is a relatively open state-oriented and newly industrialised market economy.[112][113] The state plays a significant but declining role in guiding economic activity through macroeconomic plans. Malaysia has had one of the best economic records in Asia, with GDP growing an average 6.5 per cent annually from 1957 to 2005.[3] In 2010 the GDP (PPP) was $414,400 billion, the 3rd largest economy in ASEAN and 29th largest in the world.[114]

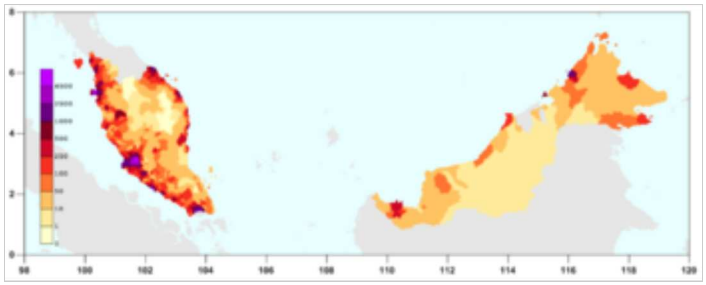
In the 1970s, the predominantly mining and agricultural-based economy began a transition towards a more multi-sector economy. Since the 1980s the industrial sector has led Malaysia's growth.[115] High levels of investment played a significant role in this.[3] The economy recovered from the 1997 Asian Financial Crisis sooner than neighbouring countries, and has since recovered to the levels of the pre-crisis era with a GDP per capita of $14,800.[116][117] Inequalities exist between different ethnic groups. The Chinese make up about one-third of the population but accounts for 70 per cent of the country's market capitalisation.[118]

An oil palm plantation, from which palm oil is extracted.

International trade, facilitated by the adjacent Strait of Malacca shipping route, and manufacturing are key sectors of the country's economy.[119][120][121] Malaysia is an exporter of natural and agricultural resources, the most valuable exported resource being petroleum.[3] At one time, it was the largest producer of tin,[122] rubber and palm oil in the world. Manufacturing has a large influence in the country's economy,[123] although Malaysia's economic structure has been moving away from it.[124] Malaysia remains one of the worlds largest producers of palm oil.[125]

In an effort to diversify the economy and make it less dependent on exported goods, the government has pushed to increase tourism to Malaysia. As a result, tourism has become Malaysia's third largest source of income from foreign exchange, although it is threatened by the negative effects of the growing industrial economy, with large amounts of air and water pollution along with deforestation affecting tourism.[126] The country has developed into a centre of Islamic banking, and is the country with the highest numbers of female workers in that industry.[127] Knowledge-based services are also expanding.[124]

Science policies in Malaysia are regulated by the Ministry of Science, Technology, and Innovation. The country is one of the world's largest exporters of semiconductor devices, electrical goods, and information and communication technology products.[3] Malaysia began developing its own space programme in 2002,[128][129] and in 2006 Russia agreed to transport one Malaysian to the International Space Station as part of a multi-billion dollar purchase of 18 Russian Sukhoi Su-30MKM fighter jets by the Royal Malaysian Air Force.[130] In an effort to create a self-reliant defensive ability and support national development, Malaysia privatised some of its



military facilities in the 1970s. This has created a defence industry, which in 1999 was brought under the Malaysia Defence Industry Council. The government continues to try and promote this sector and its competitiveness, actively marketing the defence industry.[131]

Demographics

Main article: Demographics of Malaysia

As of the 2010 census, the population of Malaysia was 28,334,135,[4] making it the 43rd most populated country. The population of Malaysia consists of many ethnic groups. Malays make up 50.4 per cent of the population, while other *bumiputra* make up another 11 per cent.[2] According to constitutional definition, Malays are Muslims who practice Malay customs and culture. They play a dominant role politically. *Bumiputra* status is also accorded to certain non-Malay indigenous peoples, including ethnic Thais, Khmers, Chams and the natives of Sabah and Sarawak. Non-Malay bumiputra make up more than half of Sarawak's population and over two thirds of Sabah's population.[2] There also exist aboriginal groups in much smaller numbers on the peninsula, where they are collectively known as the Orang Asli.[132] Laws over who gets *bumiputra* status vary between states.[133]

Other minorities who lack *bumiputra* status make up a large amount of the population. 23.7 per cent of the population are of Chinese descent, while those of Indian descent comprise 7.1 per cent of the population.[2] The Chinese have historically been dominant in the business and commerce community, and form a plurality of the population of Penang. Indians began migrating to Malaysia in the early 19th century.[134] The majority of the Indian community are Tamils.[135]

Population density (person per Km^2)

Malaysian citizenship is not automatically granted to those born in Malaysia, but is granted to a child born of two Malaysian parents outside Malaysia. Dual citizenship is not permitted.[136] Citizenship in the states of Sabah and Sarawak in Malaysian Borneo are distinct from citizenship in Peninsular Malaysia for immigration purposes. Every citizen is issued a biometric smart chip identity card known as *MyKad* at the age of 12, and must carry the card at all times.[137]

The education system features a non-compulsory kindergarten education followed by six years of compulsory primary education, and five years of optional secondary education.[138] Schools in the primary education system are divided into two categories: national primary schools, which teach in Malay, and vernacular schools, which teach in Chinese or Tamil.[139] Secondary education is conducted for five years. In the final year of secondary education, students sit for the Malaysian Certificate of Education examination.[140] Since the introduction of the matriculation programme in 1999, students who completed the 12-month programme in matriculation colleges can enroll in local universities. However, in the matriculation system, only 10 per cent of places are open to non-bumiputra students.[141]

The infant mortality rate in 2009 was 6 deaths per 1000 births, and life expectancy at birth in 2009 was 75 years.[142] With the aim of developing Malaysia into a medical tourism destination, 5 per cent of the government social sector development budget is spent on health care.[143] The population in concentrated on Peninsular

Malaysia[144] where 20 million of approximately 28 million Malaysians live.[3] 70 per cent of the population is urban.[2] Kuala Lumpur is the capital[2] and the largest city in Malaysia,[145] as well as its main commercial and financial centre.[146] Putrajaya, a purpose-built city constructed from 1999, is the seat of government,[147] as many executive and judicial branches of the federal government were moved there to ease growing congestion within Kuala Lumpur.[148]

Due to the rise in labour intensive industries,[149] the country is estimated to have over 3 million migrant workers; about 10 per cent of the population.[150] Sabah-based NGOs estimate that out of the 3 million that make up the population of Sabah, 2 million are illegal immigrants.[151] Malaysia hosts a population of refugees and asylum seekers numbering approximately 171,500. Of this population, approximately 79,000 are from Burma, 72,400 from the Philippines, and 17,700 from Indonesia. Malaysian officials are reported to have turned deportees directly over to human smugglers in 2007, and Malaysia employs RELA, a volunteer militia with a history of controversies, to enforce its immigration law.[152]

Religion

Main article: Religion in Malaysia

The Malaysian constitution guarantees freedom of religion while making Islam the state religion.[154] According to the Population and Housing Census 2010 figures, ethnicity and religious beliefs correlate highly. Approximately 61.3% of the population are practicing Islam. 19.8% practice Buddhism; 9.2% Christianity; 6.3% Hinduism; and 1.3% practice Confucianism, Taoism and other traditional Chinese religions.[155] 0.7% declared no religion and the remaining 1.4% practised other religions or did not provide any information.[155]

Kampung Laut Mosque in Kota Bharu is one of the oldest mosques in Malaysia, dating to early 18th century.

All ethnic Malays are considered Muslim by law of the Constitution.[154] Statistics from the 2010 Census indicate that 83.6% of the Chinese population identify as Buddhist, with significant numbers of adherents following Taoism (3.4%) and Christianity (11.1%), along with small Hui-Muslim populations in areas like Penang. The majority of the Indian population follow Hinduism (86.2%), with a significant minority identifying as Christians (6.0%) or Muslims (4.1%). Christianity is the predominant religion of the non-Malay *bumiputra* community (46.5%) with an additional 40.4% identifying as Muslims.[155]

Muslims are obliged to follow the decisions of Syariah courts in matters concerning their religion. The Islamic judges are expected to follow the Shafi`i legal school of Islam, which is the main *madh'hab* of Malaysia.[156] The jurisdiction of Shariah courts is limited to Muslims in matters such as marriage, inheritance, divorce, apostasy, religious conversion, and custody among others. No other criminal or civil offences are under the jurisdiction of the Shariah courts, which have a similar hierarchy to the Civil Courts. Despite being the supreme courts of the land, the Civil Courts do not hear matters related to Islamic practices.[157]

Language

Main article: Languages of Malaysia

The official language of Malaysia is Bahasa Malaysia,[2] a standardised form of the Malay language.[158] Historically English was the de facto administrative language, with Malay becoming predominant after the 1969

race riots.[159] English remains an active second language, and serves as the medium of instruction for maths and sciences in all public schools.[160][161] Malaysian English, also known as Malaysian Standard English, is a form of English derived from British English. Malaysian English is widely used in business, along with Manglish, which is a colloquial form of English with heavy Malay, Chinese, and Tamil influences. The government discourages the misuse of Malay and has instituted fines for public signs that mix Malay and English.[162][163]

Many other languages are used in Malaysia, which contains speakers of 137 living languages.[164] Peninsular Malaysia contains speakers of 41 of these languages.[165] The native tribes of East Malaysia have their own languages which are related to, but easily distinguishable from, Malay. Iban is the main tribal language in Sarawak while Dusunic languages are spoken by the natives in Sabah.[166] Chinese Malaysians predominately speak Chinese dialects from the southern provinces of China. The more common dialects in the country are Cantonese, Mandarin, Hokkien, Hakka, Hainanese, and Fuzhou. Tamil is used predominantly by Tamils, who form a majority of Malaysian Indians. Other south Asian languages are also widely spoken in Malaysia, as well as Thai[2] A small number of Malaysians have Caucasian ancestry and speak creole languages, such as the Portuguese based Malaccan Creoles,[167] and the Spanish based Chavacano language.[168]

Culture

Main article: Culture of Malaysia

Malaysia has a multi-ethnic, multicultural, and multilingual society. The original culture of the area stemmed from indigenous tribes that inhabited it, along with the Malays who later moved there. Substantial influence exists from Chinese and Indian culture, dating back to when foreign trade began. Other cultural influences include the Persian, Arabic, and British cultures. Due to the structure of the government, coupled with the social contract theory, there has been minimal cultural assimilation of ethnic minorities.[169]

A cook making murtabak, a type of pancake mixed with eggs, small pieces of meat and onions, in Kuala Lumpur.

In 1971, the government created a "National Cultural Policy", defining Malaysian culture. It stated that Malaysian culture must be based on the culture of the indigenous peoples of Malaysia, that it may incorporate suitable elements from other cultures, and that Islam must play a part in it.[170] It also promoted the Malay language above others.[171] This government intervention into culture has caused resentment among non-Malays who feel their cultural freedom was lessened. Both Chinese and Indian associations have submitted memorandums to the government, accusing it of formulating an undemocratic culture policy.[170]

Some cultural disputes exist between Malaysia and neighbouring countries, notably Indonesia. The two countries have a similar cultural heritage, sharing many traditions and items. However, disputes have arisen over things ranging from culinary dishes to Malaysia's national anthem. Strong feelings exist in Indonesia about protecting their national heritage.[172] The Malaysian government and the Indonesian government have met to defuse some of the tensions resulting from the overlaps in culture.[173] Feelings are not as strong in Malaysia, where most recognise that many cultural values are shared.[172]

Fine arts

See also: Music of Malaysia and Malaysian literature

Char Kuey Teow made by frying flat noodles with fish cakes, cockles and bean sprouts is a popular dish in Malaysia.

Traditional Malaysian art was mainly centred around the areas of carving, weaving, and silversmithing.[174] Traditional art ranges from handwoven baskets from rural areas to the silverwork of the Malay courts. Common artworks included ornamental kris, beetle nut sets, and woven batik and songket fabrics. Indigenous East Malaysians are known for their wooden masks.[90] Each ethnic group have distinct performing arts, with little overlap between them. However, Malay art does show some North Indian influence due to the historical influence of India.[175]

Malaysian batik

Traditional Malay music and performing arts appear to have originated in the Kelantan-Pattani region with influences from India, China, Thailand and Indonesia. The music is based around percussion instruments,[175] the most important of which is the gendang (drum). There are at least 14 types of traditional drums.[176] Drums and other traditional percussion instruments and are often made from natural materials.[176] Music is traditionally used for storytelling, celebrating life-cycle events, and occasions such as a harvest.[175] It was once used as a form of long-distance communication.[176] In East Malaysia, gong-based musical ensembles such as agung and kulintang are commonly used in ceremonies such as funerals and weddings.[177] These ensembles are also common in neighbouring regions such as in the southern Philippines, Kalimantan in Indonesia, and Brunei.[177]

Malaysia has a strong oral tradition that has existed since before the arrival of writing, and continues today. Each of the Malay Sultanates created their own literary tradition, influenced by pre-existing oral stories and by the stories that came with Islam.[178] The first Malay literature was in the Arabic script. The earliest known Malay writing is on the Terengganu stone, made in 1303.[90] Chinese and Indian literature became common as the numbers of speakers increased in Malaysia, and locally produced works based in languages from those areas began to be produced in the 19th century.[178] English has also become a common literary language.[90] In 1971, the government took the step of defining the literature of different languages. Literature written in Malay was called "the national literature of Malaysia", literature in other *bumiputra* languages was called "regional literature", while literature in other languages was called "sectional literature".[171] Malay poetry is highly developed, and uses many forms. The *Hikayat* form is popular, and the *pantun* has spread from Malay to other languages.[178]

Cuisine

Main article: Malaysian cuisine

Malaysia's cuisine reflects the multi-ethnic makeup of its population.[179] Many cultures from within the country and from surrounding regions have greatly influenced the cuisine. Much of the influence comes from the Malay, Chinese, Indian, Thai, Javanese, and Sumatran cultures,[90] largely due to the country being part of the ancient spice route.[180] The cuisine is very similar to that of Singapore and Brunei,[101] and also bears resemblance to Filipino cuisine.[90] The different states have varied dishes,[101] and often the food in Malaysia is different from

the original dishes.[135]

(clockwise from bottom left): beef soup, nasi impit (compressed rice cubes), beef rendang and *sayur lodeh*

Sometimes food not found in its original culture is assimilated into another; for example, Chinese restaurants in Malaysia often serve Malay dishes.[181] Food from one culture is sometimes also cooked using styles taken from another culture,[101] This means that although much of Malaysian food can be traced back to a certain culture, they have their own identity.[180] Rice is popular in many dishes. Chili is commonly found in local cuisine, although this does not necessarily make them spicy.[179]

Holidays and festivals

Main article: Public holidays in Malaysia

South-East Asia's Largest Temple- Kek Lok Si in Penang being illuminated in preparation for the Lunar New Year.

Malaysians observe a number of holidays and festivities throughout the year. Some are federally gazetted public holidays and some are observed by individual states. Other festivals are observed by particular ethnic or religion groups, and the main holiday of each major group have been declared a public holiday. The most observed national holiday is *Hari Merdeka* (Independence Day) on 31 August, commemorating the independence of the Federation of Malaya in 1957.[90] Malaysia Day on 16 September commemorates federation in 1963.[182] Other notable national holidays are Labour Day (1 May), and the King's birthday (first week of June).[90]

Muslim holidays are prominent as Islam is the state religion; *Hari Raya Puasa* (also called *Hari Raya Aidilfitri*, Malay for Eid al-Fitr), *Hari Raya Haji* (also called *Hari Raya Aidiladha*, the translation of Eid ul-Adha), *Maulidur Rasul* (birthday of the Prophet), and others being observed.[90] Malaysian Chinese celebrate festivals such as Chinese New Year and others relating to traditional Chinese beliefs. Hindus in Malaysia celebrate *Deepavali*, the festival of lights,[154] while *Thaipusam* is a religious rite which sees pilgrims from all over the country converge at the Batu Caves.[183] Malaysia's Christian community celebrates most of the holidays observed by Christians elsewhere, most notably Christmas and Easter. East Malaysians also celebrate a harvest festival known as *Gawai*.[184] Despite most festivals being identified with a particular ethnic or religious group, celebrations are universal. In a custom known as "open house" Malaysians participate in the celebrations of others, often visiting the houses of those who identify with the festival.[185]

Sports

Main article: Sport in Malaysia

Popular sports in Malaysia include soccer, badminton, field hockey, bowls, tennis, squash, martial arts, horse riding, sailing, and skate boarding.[185] Badminton matches attract thousands of spectators, and since 1948 Malaysia has been one of three countries to hold the Thomas Cup.[186] The Malaysian Lawn Bowls Federation was registered in 1997.[187] Squash was brought to the country by members of the British army, with the first competition being held in 1939. The Squash Racquets Association of Malaysia was created on 25 June 1972.[188] Malaysia has proposed a Southeast Asian football league.[189] The men's national field hockey team

ranked 15th in the world as of August 2010.[190] The 3rd Hockey World Cup was hosted at Merdeka Stadium in Kuala Lumpur, as well as the 10th cup.[191] The country also has its own Formula One track–the Sepang International Circuit. It runs for 310.408 kilometres (192.88 mi), and held its first Grand Prix in 1999.[192]

Sepang International Circuit.

The Federation of Malaya Olympic Council was formed in 1953, and received recognition by the IOC in 1954. It first participated in the 1956 Melbourne Olympic Games. The council was renamed the Olympic Council of Malaysia in 1964, and has participated in all but one Olympic games since its inception. The largest number of athletes ever sent to the Olympics was 57 to the 1972 Munich Olympic Games.[193] Malaysian athletes have won a total of four Olympic medals, all of which are in badminton.[194] The country has competed at the Commonwealth Games since 1950 as Malaya, and 1966 as Malaysia, and the games were hosted in Kuala Lumpur in 1998.[195][196]

Media

Main article: Media of Malaysia

Malaysia's main newspapers are owned by the government and political parties in the ruling coalition,[197] although some major opposition parties also have their own.[198] A divide exists between the media in the two halves of the country. Peninsular-based media gives low priority to news from the East, and often treats the eastern states as colonies of the Peninsula.[199] The media has been blamed for increasing tension between Indonesia and Malaysia, and giving Malaysians a bad image of Indonesians.[200] The country has Malay, English, Chinese, and Tamil dailies.[199]

There is very little freedom of the press, leading to very little government accountability.[201] The government has previously tried to crack down on opposition papers before elections.[198] In 2007, a government agency issued a directive to all private television and radio stations to refrain from broadcasting speeches made by opposition leaders,[202] a move condemned by politicians from the opposition Democratic Action Party.[203] Sabah, where all tabloids but one are independent of government control, has the freest press in Malaysia.[199] Laws such as the Printing Presses and Publications Act have also been cited as curtailing freedom of expression.[204]

Infrastructure

See also: Transport in Malaysia and Energy policy of Malaysia

The North-South Expressway

The infrastructure of Malaysia is one of the most developed in Asia.[205] Its telecommunications network is second only to Singapore's in Southeast Asia, with 4.7 million fixed-line subscribers and more than 30 million cellular subscribers.[206][207] The country has seven international ports, the major one being the Port Klang. There are 200 industrial parks along with specialised parks such as Technology Park Malaysia and Kulim Hi-Tech Park.[185] Fresh water is available to over 95 per cent of the population. During the colonial period, development was mainly concentrated in economically powerful cities and in areas forming security concerns. Although rural areas have been the focus of great development, they still

lag behind areas such as the West Coast of Peninsular Malaysia.[208] The telecommunication network, although strong in urban areas, is less available to the rural population.[206]

Malaysia's road network covers 98,721 kilometres (61,342 mi) and includes 1,821 kilometres (1,132 mi) of expressways.[2] The longest highway of the country, the North-South Expressway, extends over 800 kilometres (497 mi) between the Thai border and Singapore. The road systems in Sabah and Sarawak are less developed and of lower quality in comparison to that of Peninsular Malaysia.[209] Malaysia has 118 airports, of which 38 are paved. The country's official airline is Malaysia Airlines, providing international and domestic air service alongside two other carriers. The railway system is state-run, and covers a total of 1,849 kilometres (1,149 mi).[2] Relatively inexpensive elevated Light Rail Transit systems are used in some cities, such as Kuala Lumpur.[210] The Asean Rail Express is a railway service that connects Kuala Lumpur to Bangkok, and is intended to eventually stretch from Singapore to China.[205]

Traditionally, energy production in Malaysia has been based on oil and natural gas.[211] The country has 13 GW of electrical generation capacity.[212] However, the country only has 33 years of natural gas reserves, and 19 years of oil reserves, while the demand for energy is increasing. In response, the government is expanding into renewable energy sources.[211] Sixteen per cent of electricity generation is hydroelectric, the remaining 84 per cent being thermal.[212] The oil and gas industry is dominated by state owned Petronas,[213] and the energy sector as a whole is regulated by the Energy Commission of Malaysia, a statutory commission that governs the energy in the peninsula and Sabah, under the terms of the Electricity Commission Act of 2001.[214]

History of Malaysia

From Wikipedia, the free encyclopedia

Malaysia is a country in South East Asia whose strategic sea-lane position brought trade and foreign influences that fundamentally influenced its history. Hindu and Buddhist cultures imported from India dominated early Malaysian history. They reached their peak in the Sumatran-based Srivijaya civilization, whose influence extended through Sumatra, Java, the Malay Peninsula and much of Borneo from the 7th to the 14th centuries.

Although Muslims had passed through Malaysia as early as the 10th century, it was not until the 14th and 15th centuries that Islam first established itself on the Malay Peninsula. The adoption of Islam by the 15th century saw the rise of number sultanates, the most prominent of which was the Melaka (Malacca). Islamic culture has had a profound influence on the Malay people, but has also been influenced by them. The Portuguese were the first European colonial powers to establish themselves in Malaysia, capturing Malacca in 1511, followed by the Dutch. However, it was the British, who after initially establishing bases at Jesselton, Kuching, Penang and Singapore, ultimately secured their hegemony across the territory that is now Malaysia. The Anglo-Dutch Treaty of 1824 defined the boundaries between British Malaya and the Netherlands East Indies (which became Indonesia). A fourth phase of foreign influence was immigration of Chinese and Indian workers to meet the needs of the colonial economy created by the British in the Malay Peninsula and Borneo.[1]

Japanese invasion during World War II ended British domination in Malaysia. The subsequent occupation from 1942 to 1945 unleashed nationalism in Malaya and Borneo. In the Peninsula, the Malayan Communist Party took up arms against the British. A tough military response was needed to end the insurgency and bring about the establishment of an independent, multi-racial Federation of Malaya in 1957. On 31 August 1963, the British territories in North Borneo and Singapore were granted independence and formed Malaysia with the Peninsular states on 16 September 1963. Approximately two years later, Singapore was expelled from the Federation. A confrontation with Indonesia occurred in the early-1960s. Race riots in 1969 led to the imposition of emergency rule, and a curtailment of political life and civil liberties which has never been fully reversed. Since 1970 the "National Front coalition" headed by United Malays National Organisation (UMNO) has governed Malaysia. Economic growth dramatically increased living standards by the 1990s. This growing prosperity helped minimise political discontent.

Prehistory

Main article: Prehistoric Malaysia

The earliest evidence of human habitation in Malaysia dates back 40,000 years.[2] A study of Asian genetics points to the idea that the original humans in Asia came from in Southeast Asia.[3] The indigenous groups on the peninsula can be divided into three ethnicities, the Negritos, the Senois, and the proto-Malays.[4] The first inhabitants of the Malay Peninsula were most probably Negritos.[5] These Mesolithic hunters were probably the ancestors of the Semang, an ethnic Negrito group who have a long history in the Malay Peninsula.[6]

The Senoi appear to be a composite group, with approximately half of the maternal DNA lineages tracing back to the ancestors of the Semang and about half to later ancestral migrations from Indochina. Scholars suggest they are descendants of early Austronesian-speaking agriculturalists, who brought both their language and their technology to the southern part of the peninsula approximately 4,000 years ago. They united and coalesced with the indigenous population.[7]

The Proto Malays have a more diverse origin.,[8] and were settled in Malaysia by 1000BC.[9] Although they show some connections with other inhabitants in Maritime Southeast Asia, some also have an ancestry in Indochina around the time of the Last Glacial Maximum, about 20,000 years ago. Anthropologists support the notion that the Proto-Malays originated from what is today Yunnan, China.[10] This was followed by an early-Holocene dispersal through the Malay Peninsula into the Malay Archipelago.[11] Around 300 BC, they were

pushed inland by the Deutero-Malays, an Iron Age or Bronze Age people descended partly from the Chams of Cambodia and Vietnam. The first group in the peninsula to use metal tools, the Deutero-Malays were the direct ancestors of today's Malaysian Malays,[6] and brought with them advanced farming techniques.[9] The Malays remained politically fragmented throughout the Malay archipelago, although a common culture and social structure was shared.[9]

Early kingdoms

In the first millennium CE Malay's became the dominant race on the peninsula. The small early states that were established were greatly influenced by Indian culture.[12] Indian influence in the region dates back to at least the 3rd century BCE.

The Buddha-Gupta stone, dating to the 4th-5th Century CE, was dedicated by an Indian Merchant, Buddha Gupta, as an expression of gratitude for his safe arrival after a voyage to the Malay peninsula. It was found in Seberang Perai, Malaysia and is kept in the National Museum, Calcutta, India.

The Malay Peninsula was known to ancient Tamils as *Suvarnadvipa* or the "Golden Peninsula". It was shown on Ptolemy's map as the "Golden Khersonese". He referred to the Straits of Melaka as *Sinus Sabaricus*.[13] Trade relations with China and India were established in the 1st century BC.[9] In the early centuries of the first millennium, the people of the Malay Peninsula adopted the Indian religions of Hinduism and Buddhism, religions which had a major effect on the language and culture of those living in Malaysia.[14] The Sanskrit writing system was used as early as the 4th century.[15]

There were numerous Malay kingdoms in the 2nd and 3rd century, as many as 30, mainly based on the Eastern side of the Malay peninsula.[12] Among the earliest kingdoms known to have been based in what is now Malaysia is the ancient empire of Langkasuka, located in the northern Malay Peninsula and based somewhere in Kedah.[12] It was closely tied to Funan in Cambodia, which also ruled part of northern Malaysia until the 6th century. According to the Sejarah Melayu ("Malay Annals"), the Khmer prince Raja Ganji Sarjuna founded the kingdom of Gangga Negara (modern-day Beruas, Perak) in the 700s. Chinese chronicles of the 5th century CE speak of a great port in the south called Guantoli, which is thought to have been in the Straits of Malacca. In the 7th century, a new port called Shilifoshi is mentioned, and this is believed to be a Chinese rendering of Srivijaya.

Between the 7th and the 13th century, much of the Malay peninsula was under the buddhist Srivijaya empire.[16] The site of Srivijaya's centre is thought be at a river mouth in eastern Sumatra, based near what is now Palembang.[16] For over six centuries the Maharajahs of Srivijaya ruled a maritime empire that became the main power in the archipelago. The empire was based around trade, with local kings (dhatus or community leaders) swearing allegiance to the central lord in order for mutual profit.[17]

In 1025 and 1026 Gangga Negara was attacked by Rajendra Chola I, the Tamil emperor who is now thought to have laid Kota Gelanggi to waste. Kedah—known as *Kedaram*, *Cheh-Cha* (according to *I-Ching*) or *Kataha*, in ancient Pallava or Sanskrit—was in the direct route of the invasions and was ruled by the Cholas from 1025. The senior Chola's successor, Vira Rajendra Chola, had to put down a Kedah rebellion to overthrow other invaders. The coming of the Chola reduced the majesty of Srivijaya, which had exerted influence over Kedah, Pattani and

as far as Ligor.

Avalokiteshvara statue found in Perak, 8th-9th century bronze

Pattinapalai, a Tamil poem of the 2nd century CE, describes goods from Kedaram heaped in the broad streets of the Chola capital. A 7th-century Sanskrit drama, *Kaumudhimahotsva*, refers to Kedah as Kataha-nagari. The *Agnipurana* also mentions a territory known as Anda-Kataha with one of its boundaries delineated by a peak, which scholars believe is Gunung Jerai. Stories from the *Katasaritasagaram* describe the elegance of life in Kataha. The Buddhist kingdom of Ligor took control of Kedah shortly after. Its king Chandrabhanu used it as a base to attack Sri Lanka in the 11th century, an event noted in a stone inscription in Nagapattinum in Tamil Nadu and in the Sri Lankan chronicles, *Mahavamsa*.

At times, the Khmer kingdom, the Siamese kingdom, and even Cholas kingdom tried to exert control over the smaller Malay states.[12] The power of Srivijaya declined from the 12th century as the relationship between the capital and its vassals broke down. Wars with the Javanese caused it to request assistance from China, and wars with Indian states are also suspected. In the 11th century CE the centre of power shifted to Melayu, a port possibly located further up the Sumatran coast at near the Jambi River.[17] The power of the Buhhdist Maharajas was further undermined by the spread of Islam. Areas which were converted to Islam early, such as Aceh, broke away from Srivijaya's control. By the late 13th century, the Siamese kings of Sukhothai had brought most of Malaya under their rule. In the 14th century, the Hindu Java-based Majapahit empire came into possession of the peninsula.[16]

Arrival of Islam

Islam came to the Malay Archipelago via Arab and Indian traders in the 13th century, ending the age of Hinduism and Buddhism.[9] It arrived in the region gradually, and became the religion of the elite before it spread to the commoners. The Islam in Malaysia was influenced by previous religions and was originally not orthodox.[12]

The port of Malacca on the west coast of the Malay Peninsula was founded in 1402 by Parameswara, a Srivijaya prince fleeing Temasek (now Singapore),[12] who was claimed in the Sejarah Melayu to be a descendant of Alexander the Great. Parameswara in particular sailed to Temasek to escape persecution. There he came under the protection of Temagi, a Malay chief from Patani who was appointed by the king of Siam as regent of Temasek. Within a few days, Parameswara killed Temagi and appointed himself regent. Some five years later he had to leave Temasek, due to threats from Siam. During this period, a Javanese fleet from Majapahit attacked Temasek.

Parameswara headed north to found a new settlement. At Muar, Parameswara considered siting his new kingdom at either Biawak Busuk or at Kota Buruk. Finding that the Muar location was not suitable, he continued his journey northwards. Along the way, he reportedly visited Sening Ujong (former name of present-day Sungai Ujong) before reaching a fishing village at the mouth of the Bertam River (former name of the Melaka River), and founded what would become the Malacca Sultanate. Over time this developed into modern-day Malacca Town. According to the *Malay Annals*, here Parameswara saw a mouse deer outwitting a dog resting under a Malacca tree. Taking this as a good omen, he decided to establish a kingdom called Malacca. He built and improved facilities for trade. The Malacca Sultanate is commonly considered the first independent state in the peninsula.[18]

At the time of Melaka's founding, the emperor of Ming Dynasty China was sending out fleets of ships to expand trade. Admiral Zheng He called at Malacca and brought Parameswara with him on his return to China, a recognition of his position as legitimate ruler of Malacca. In exchange for regular tribute, the Chinese emperor offered Melaka protection from the constant threat of a Siamese attack. The Chinese and Indians who settled in the Malay Peninsula before and during this period are the ancestors of today's Baba-Nyonya and Chetti community. According to one theory, Parameswara became a Muslim when he married a Princess of Pasai and he took the fashionable Persian title "Shah", calling himself Iskandar Shah.[19] Chinese chronicles mention that in 1414, the son of the first ruler of Malacca visited the Ming emperor to inform them that his father had died. Parameswara's son was then officially recognised as the second ruler of Melaka by the Chinese Emperor and styled Raja Sri Rama Vikrama, Raja of Parameswara of Temasek and Malacca and he was known to his Muslim subjects as Sultan Sri Iskandar Zulkarnain Shah or Sultan Megat Iskandar Shah. He ruled Malacca from 1414 to 1424.[19][20] Through the influence of Indian Muslims and, to a lesser extent, Hui people from China, Islam became increasingly common during the 15th century.

The earliest record of a local law influenced by Islamic teaching and written in Jawi. The stone monument is found in Terengganu.

After an initial period paying tribute to the Ayutthaya,[12] the kingdom rapidly assumed the place previously held by Srivijaya, establishing independent relations with China, and exploiting its position dominating the Straits to control the China-India maritime trade, which became increasingly important when the Mongol conquests closed the overland route between China and the west.

Within a few years of its establishment, Malacca officially adopted Islam. Parameswara became a Muslim, and due to the fact Malacca was under a Muslim Prince the conversion of Malays to Islam accelerated in the 15th century.[16] The political power of the Malaccan Sultanate helped Islam’s rapid spread through the archipelago. Malacca was an important commercial centre during this time, attracting trade from around the region.[16] By the start of the 16th century, with Malaccan Sultanate in the Malay peninsula and parts of Sumatra,[21] the Sultanate of Demak in Java,[22] and other kingdoms around the Malay archipelago increasingly converting to Islam,[23] it had become the dominant religion among Malays, and reached as far as the modern day Philippines, leaving Bali as an isolated outpost of Hinduism today.

Malacca's reign lasted little more than a century, but during this time became the established centre of Malay culture. Most future Malay states originated from this period.[9] Malacca became a cultural centre, creating the matrix of the modern Malay culture: a blend of indigenous Malay and imported Indian, Chinese and Islamic elements. Malacca's fashions in literature, art, music, dance and dress, and the ornate titles of its royal court, came to be seen as the standard for all ethnic Malays. The court of Malacca also gave great prestige to the Malay language, which had originally evolved in Sumatra and been brought to Malacca at the time of its foundation. In time Malay came to be the official language of all the Malaysian states, although local languages survived in many places. After the fall of Malacca, the Sultanate of Brunei became the major centre of Islam.[9]

Struggles for hegemony

The closing of the overland route from Asia to Europe by the Ottoman Empire and the claim towards trade monopoly with India and south-east Asia by Arab traders, led European powers to look for a maritime route. In 1511 Afonso de Albuquerque led an expedition to Malaya which seized Malacca with the intent of using it as a base for activities in southeast Asia.[12] This was the first colonial claim on what is now Malaysia.[16] The son of

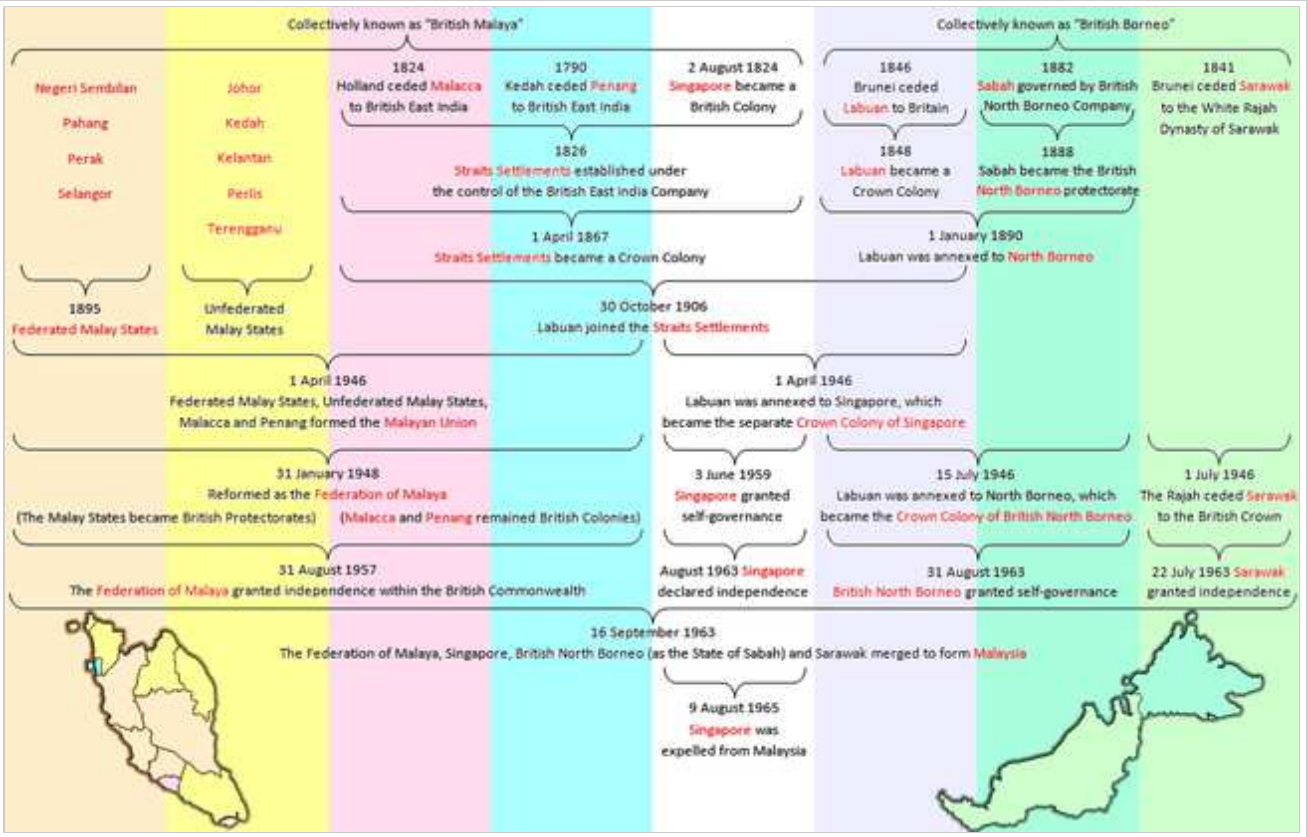
the last Sultan of Melaka fled to the southern tip of the peninsula, where he founded a state that which became the Sultanate of Johor.[12] Another son created the Perak Sultanate to the north. By the late 16th century the tin mines of northern Malaya had been discovered by European traders, and Perak grew wealthy on the proceeds of tin exports.[17] Portuguese influence was strong, as they aggressively tried to convert the population of Malacca to Catholicism.[12] In 1571 the Spanish captured Manila and established a colony in the Philippines, sharply ruducing the Sultanate of Brunei's power.[9]

A Famosa fortress in Malacca. It was built by the Portuguese in the 16th century.

After the fall of Malacca to Portugal, the Johor Sultanate and the Sultanate of Aceh on northern Sumatra moved to fill in the power vacuum left behind.[12] The three powers struggled to dominate the Malay peninsula and the surrounding islands.[17] Johor founded in the wake of Malacca's conquest grew powerful enough to rival the Portuguese, although it was never able to recapture the city. Instead it expanded in other directions, building in 130 years one of the largest Malay states.[12] In this time the numerous attempts to recapture Malacca led to a strong backlash from the Portuguese, whose raids even reached Johor's capital of Johor Lama in 1587.[12]

In 1607, the Sultanate of Aceh rose as the powerful and wealthiest state in Malay archipelago. Under Iskandar Muda reign, he extended the sultanate's control over a number of Malay states. A notable conquest was Perak, a tin-producing state on the Peninsula.[17] The strength of his formidable fleet was brought to an end with a disastrous campaign against Malacca in 1629, when the combined Portuguese and Johor forces managed to destroy all his ships and 19,000 troops according to Portuguese account. Aceh forces was not destroyed, however, as Aceh was able to conquer Kedah within the same year and taking many of its citizens to Aceh. The Sultan's son in law, Iskandar Thani, former prince of Pahang later became his successor. The conflict over control of the straits went on until 1641, when the Dutch (allied to Johor) gained control of Malacca.

In the early 17th century the Dutch East India Company (*Vereenigde Oost-Indische Compagnie*, or VOC) was established. During this time the Dutch were at war with Spain, who obtained the Portuguese Empire due to the Iberian Union. From there they expanded across the archipelago, forming an alliance with Johor and using this to push the Portuguese out of Malacca in 1641.[12] Backed by the Dutch, Johore established a loose hegemony over the Malay states, except Perak, which was able to play off Johore against the Siamese to the north and retain its independence.[*citation needed*] The Dutch did not interfere in local matters in Malacca, but at the same time diverted most trade to its colonies on Java.[12]



The weakness of the small coastal Malay states led to the immigration of the Bugis, escaping from Dutch colonization of Sulawesi, who established numerous settlements on the peninsula which they used to interfere with Dutch trade.[12] They seized control of Johor following the assassination of the last Sultan of the old Melaka royal line in 1699.[*citation needed*] Bugis expanded their power in the states of Johor, Kedah, Perak, and Selangor.[12] The Minangkabau from center Sumatra migrated into Malaya, and eventually established their own state in Negeri Sembilan. The fall of Johore left a power vacuum on the Malay Peninsula which was partly filled by the Siamese kings of Ayutthaya kingdom, who made the five northern Malay states – Kedah, Kelantan, Patani, Perlis and Terengganu – their vassals. Johore's eclipse also left Perak as the unrivalled leader of the Malay states.

The economic importance of Malaya to Europe grew rapidly during the 18th century. The fast-growing tea trade between China and United Kingdom increased the demand for high-quality Malayan tin, which was used to line

tea-chests. Malayan pepper also had a high reputation in Europe, while Kelantan and Pahang had gold mines. The growth of tin and gold mining and associated service industries led to the first influx of foreign settlers into the Malay world – initially Arabs and Indians, later Chinese – who colonised the towns and soon dominated economic activities. This established a pattern which characterised Malayan society for the next 200 years – a rural Malay population increasingly under the domination of wealthy urban immigrant communities, whose power the Sultans were unable to resist.[*citation needed*]

British influence

Main article: British Malaya

Evolution of Malaysia

English traders had been present in Malay waters since the 17th century. Until the arrival of the British European power became fully apparent in Malaysia.[9] Before the mid 19th century British interests in the region were predominantly economic, with little interest in territorial control. Already the most powerful colonizer in India, they were looking towards southeast Asia for new resources.[12] The growth of the China trade in British ships increased the Company's desire for bases in the region. Various islands were used for this purpose, but the first permanent acquisition was Penang, leased from the Sultan of Kedah in 1786.[24] This was followed soon after by the leasing of a block of territory on the mainland opposite Penang (known as Province Wellesley). In 1795, during the Napoleonic Wars, the British with the consent of the Netherlands occupied Dutch Melaka to forestall possible French interest in the area.[16]

When Malacca was handed back to the Dutch in 1815, the British governor, Stamford Raffles, looked for an alternative base, and in 1819 he acquired Singapore from the Sultan of Johor.[25] The exchange of the British colony of Bencoolen for Malacca with the Dutch left the British as the sole colonial power on the peninsula.[12]

The territories of the British were set up as free ports, attempting to break the monopoly held by other colonial powers as the time, and making them large bases of trade. They allowed Britain to control all trade through the straits of Malacca.[12] British influence was increased by Malayan fears of Siamese expansionism, to which Britain made a useful counterweight.[*citation needed*] During the 19th century the Malay Sultans aligned themselves the British Empire, due to the benefits of associations with the British and the belief in superior British civilization.[17]

In 1824 British hegemony in Malaya (before the name Malaysia) was formalised by the Anglo-Dutch Treaty, which divided the Malay archipelago between Britain and the Netherlands. The Dutch evacuated Melaka[16] and renounced all interest in Malaya, while the British recognised Dutch rule over the rest of the East Indies. By 1826 the British controlled Penang, Malacca, Singapore and the island of Labuan, which they established as the crown colony of the Straits Settlements,[12] administered first under the East India Company until 1867, when they were transferred to the Colonial Office in London.[17]

Federated and Unfederated Malay States

Initially the British followed a policy of non-intervention in relation between the Malay states.[17] The commercial importance of tin mining in the Malay states to merchants in the Straits Settlements led to infighting between the aristocracy on the peninsula. The destabilisation of these states damaged the commerce in the area, causing British intervention. The wealth of Perak's tin mines made political stability there a priority for British investors, and Perak was thus the first Malay state to agree to the supervision of a British resident.[12] British gunboat diplomacy was employed to bring about a peaceful resolution to civil disturbances caused by Chinese and Malay gangsters employed in a political tussle between Ngah Ibrahim and Raja Muda Abdullah. The Pangkor Treaty of 1874 paved the way for the expansion of British influence in Malaya. The British concluded treaties with some Malay states, installing "residents" who advised the Sultans and soon became the effective rulers of their states.[26] These advisors held power in everything except to do with Malay religion and customs.[12]

Johore alone resisted, by modernizing and giving British and Chinese investors legal protection. By the turn of the 20th century, the states of Pahang, Selangor, Perak, and Negeri Sembilan, known together as the Federated Malay States, had British advisors.[12] In 1909 the Siamese kingdom was compelled to cede Kedah, Kelantan, Perlis and Terengganu, which already had British advisors, over to the British.[12] Sultan Abu Bakar of Johor and Queen Victoria were personal acquaintances, and recognised each other as equals. It was not until 1914 that Sultan Abu Bakar's successor, Sultan Ibrahim accepted a British adviser.[*citation needed*] The four previously Thai states and Johor were known as the Unfederated Malay States. The states under the most direct British control developed rapidly, becoming the largest suppliers in the world of first tin, then rubber.[12]

19th Century Borneo

During the late 19th century the British also gained control of the north coast of Borneo, where Dutch rule had never been established. Development on the Peninsula and Borneo were generally separate until the 19th century.[27] The eastern part of this region (now Sabah) was under the nominal control of the Sultan of Sulu, a vassal of the Spanish Philippines. The rest was the territory of the Sultanate of Brunei. In 1841, a British adventurer, James Brooke, helped the Sultan of Brunei suppress a revolt, and in return received the title of raja and the right to govern the Sarawak River District. In 1846 his title was recognised as hereditary, and the "White Rajahs" began ruling Sarawak as a recognised independent state. The Brookes expanded Sarawak at the expense of Brunei.[12]

In 1881 the British North Borneo Company was granted control of the territory of British North Borneo, appointing a governor and legislature. It was ruled from the office in London. Its status was similar to that of a British Protectorate, and like Sarawak it expanded at the expense of Brunei.[12] The Spanish Philippines never recognised this loss of the Sultan of Sulu's territory, laying the basis of the subsequent Filipino claim to Sabah. In 1888 what was left of Brunei was made a British protectorate, and in 1891 another Anglo-Dutch treaty formalised the border between British and Dutch Borneo.

By 1910 the pattern of British rule in the Malay lands was established. The Straits Settlements were a Crown Colony, ruled by a governor under the supervision of the Colonial Office in London. Their population was about half Chinese, but all residents, regardless of race, were British subjects. The first four states to accept British residents, Perak, Selangor, Negeri Sembilan and Pahang, were termed the Federated Malay States: while technically independent, they were placed under a Resident-General in 1895, making them British colonies in all but name. The Unfederated Malay States (Johore, Kedah, Kelantan, Perlis and Terengganu) had a slightly larger degree of independence, although they were unable to resist the wishes of their British Residents for long. Johore, as Britain's closest ally in Malay affairs, had the privilege of a written constitution, which gave the Sultan the right to appoint his own Cabinet, but he was generally careful to consult the British first.

Race relations

Unlike some colonial powers, the British always saw their empire as primarily an economic concern, and its colonies were expected to turn a profit for British shareholders. Malaya's obvious attractions were its tin and gold mines, but British planters soon began to experiment with tropical plantation crops – tapioca, gambier, pepper and coffee. But in 1877 the rubber plant was introduced from Brazil, and rubber soon became Malaya's staple export, stimulated by booming demand from European industry. Rubber was later joined by palm oil as an export earner. All these industries required a large and disciplined labour force, and the British did not regard the Malays as reliable workers. The solution was the importation of plantation workers from India, mainly Tamil-speakers from South India. The mines, mills and docks also attracted a flood of immigrant workers from southern China. Soon towns like Singapore, Penang and Ipoh were majority Chinese, as was Kuala Lumpur, founded as a tin-mining centre in 1857. By 1891, when Malaya's first census was taken, Perak and Selangor, the main tin-mining states, had Chinese majorities.

The Chinese mostly arrived poor; yet, their belief in industriousness and frugality, their emphasis in their children's education and their maintenance of Confucian family hierarchy, as well as their voluntary connection with tightly knit networks of mutual aid societies (run by "Hui-Guan" 會館, or non-profit organizations with nominal geographic affiliations from different parts of China) all contributed to their prosperity. In the 1890s Yap Ah Loy, who held the title of Kapitan China of Kuala Lumpur, was the richest man in Malaya, owning a chain of mines, plantations and shops. Malaya's banking and insurance industries were run by the Chinese from the start, and Chinese businesses, usually in partnership with London firms, soon had a stranglehold on the economy. Since the Malay Sultans tended to spend well beyond their means, they were soon indebted to Chinese bankers, and this gave the Chinese political as well as economic leverage. At first the Chinese immigrants were mostly men, and many intended to return home when they had made their fortunes. Many did go home, but many more stayed. At first they married Malay women, producing a community of Sino-Malayans or baba people, but soon they began importing Chinese brides, establishing permanent communities and building schools and temples.

The Indians were initially less successful, since unlike the Chinese they came mainly as indentured labourers to work in the rubber plantations, and had few of the economic opportunities that the Chinese had. They were also a less united community, since they were divided between Hindus and Muslims and alonlines aof language and caste. An Indian commercial and professional class emerged during the early 20th century, but the majority of Indians remained poor and uneducated in rural ghettos in the rubber-growing areas.

Traditional Malay society had great difficulty coping with both the loss of political sovereignty to the British and of economic power to the Chinese. By the early 20th century it seemed possible that the Malays would become a minority in their own country. The Sultans, who were seen as collaborators with both the British and the Chinese, lost some of their traditional prestige, particularly among the increasing number of Malays with a western education, but the mass of rural Malays continued to revere the Sultans and their prestige was thus an important prop for colonial rule. A small class of Malay nationalist intellectuals began to emerge during the early 20th century, and there was also a revival of Islam in response to the perceived threat of other imported religions, particularly Christianity. In fact few Malays converted to Christianity, although many Chinese did. The northern regions, which were less influenced by western ideas, became strongholds of Islamic conservatism, as they have remained.

The one consolation to Malay pride was that the British allowed them a virtual monopoly of positions in the police and local military units, as well as a majority of those administrative positions open to non-Europeans. While the Chinese mostly built and paid for their own schools and colleges, importing teachers from China, the colonial government fostered education for Malays, opening Malay College in 1905 and creating the Malay Administrative Service in 1910. (The college was dubbed "Bab ud-Darajat" – the Gateway to High Rank.) A Malay Teachers College followed in 1922, and a Malay Women's Training College in 1935. All this reflected the official British policy that Malaya belonged to the Malays, and that the other races were but temporary residents. This view was increasingly out of line with reality, and contained the seeds of much future trouble.

In the years before World War II, the British were concerned with finding the balance between a centralized state and maintaining the power of the Sultans in Malaya.[17] There were no moves to give Malaya a unitary government, and in fact in 1935 the position of Resident-General of the Federated States was abolished, and its powers decentralised to the individual states. With their usual tendency to racial stereotyping, the British regarded the Malays as amiable but unsophisticated and rather lazy, incapable of self-government, although making good soldiers under British officers. They regarded the Chinese as clever but dangerous – and indeed during the 1920s and '30s, reflecting events in China, the Chinese Nationalist Party (the Kuomintang) and the Communist Party of China built rival clandestine organisations in Malaya, leading to regular disturbances in the Chinese towns. The British saw no way that Malaya's disparate collection of states and races could become a nation, let alone an independent one.

War and Emergency

The outbreak of war in the Pacific in December 1941 found the British in Malaya completely unprepared. During the 1930s, anticipating the rising threat of Japanese naval power, they had built a great naval base at Singapore, but never anticipated an invasion of Malaya from the north. Because of the demands of the war in Europe, there was virtually no British air capacity in the Far East. The Japanese were thus able to attack from their bases in French Indo-China with impunity, and despite stubborn resistance from British, Australian and Indian forces, they overran Malaya in two months. Singapore, with no landward defences, no air cover and no water supply, was forced to surrender in February 1942, doing irreparable damage to British prestige. British North Borneo and Brunei were also occupied.

Tugu Negara, the Malaysian national monument is dedicated to those that fell during World War II and the Malayan Emergency

The Japanese had a racial policy just as the British did. They regarded the Malays as a colonial people liberated from British imperialist rule, and fostered a limited form of Malay nationalism, which gained them some degree of collaboration from the Malay civil service and intellectuals. (Most of the Sultans also collaborated with the Japanese, although they maintained later that they had done so

unwillingly.) The occupiers regarded the Chinese, however, as enemy aliens, and treated them with great harshness: during the so-called *sook ching* (purification through suffering), up to 80,000 Chinese in Malaya and Singapore were killed. Chinese businesses were expropriated and Chinese schools either closed or burned down. Not surprisingly the Chinese, led by the Malayan Communist Party (MCP), became the backbone of the Malayan Peoples' Anti-Japanese Army (MPAJA), which with British assistance became the most effective resistance force in the occupied Asian countries. But the Japanese also offended Malay nationalism by allowing their ally Thailand to re-annex the four northern states, Kedah, Perlis, Kelantan and Terengganu that had been surrendered to British in 1909. The loss of Malaya's export markets soon produced mass unemployment which affected all races and made the Japanese increasingly unpopular.

During occupation, ethnic tensions were raised and nationalism grew.[28] The Malayans were thus on the whole glad to see the British back in 1945, but things could not remain as they were before the war, and a stronger desire for independence grew.[29] Britain was bankrupt and the new Labour government was keen to withdraw its forces from the East as soon as possible. Colonial self-rule and eventual independence were now British policy. The tide of colonial nationalism sweeping through Asia soon reached Malaya. But most Malays were more concerned with defending themselves against the Malayan Communist Party (MCP) which was mostly made up of Chinese, than with demanding independence from the British – indeed their immediate concern was that the British not leave and abandon the Malays to the armed Communists of the MPAJA, which was the largest armed force in the country.

Japanese troops moving through Kuala Lumpur during their advance through Malaya

In 1944 the British drew up plans plans for a Malayan Union, which would turn the Federated and Unfederated Malay States, plus Penang and Malacca (but not Singapore), into a single crown colony, with a view towards independence. The Bornean territories and Singapore were left out as it was thought this would make the union more difficult to achieve.[17] There was however strong opposition from the Malays, who opposed the weakening of the Malay rulers and the granting of citizenship to the ethnic Chinese and other minorities.[30] The British had decided on equality between races as they perceived the Chinese and Indians as more loyal to the British durin the war than the Malays.[17] The Sultans, who had initially supported it, backed down and placed themselves at the head of the resistance. In 1946 the United Malays National Organisation (UMNO) was founded by Malay nationalists led by Dato Onn bin Jaafar, the Chief Minister of Johore.[17] UMNO favoured independence for Malaya, but only if the new state was run exclusively by the Malays. Faced with implacable Malay opposition, the British dropped the plan for equal citizenship. The Malayan Union was thus established in 1946, and was dissolved in 1948 and replaced by the Federation of Malaya, which restored the autonomy of the rulers of the Malay states under British protection.

Meanwhile the Communists were moving towards open insurrection. The MPAJA had been disbanded in December 1945, and the MCP organised as a legal political party, but the MPAJA's arms were carefully stored for future use. The MCP policy was for immediate independence with full equality for all races. This meant it recruited very few Malays. The Party's strength was in the Chinese-dominated trade unions, particularly in Singapore, and in the Chinese schools, where the teachers, mostly born in China, saw the Communist Party of China as the leader of China's national revival. In March 1947, reflecting the international Communist movement's "turn to left" as the Cold War set in, the MCP leader Lai Tek was purged and replaced by the veteran MPAJA guerrilla leader Chin Peng, who turned the party increasingly to direct action. These rebels, under the leadership of the Malayan Communist Party, launched guerrilla operations designed to force the British out of Malaya. In July, following a string of assassinations of plantation managers, the colonial

government struck back, declaring a State of Emergency, banning the MCP and arresting hundreds of its militants. The Party retreated to the jungle and formed the Malayan Peoples' Liberation Army, with about 13,000 men under arms, all Chinese.

The Malayan Emergency as it was known, lasted from 1948 to 1960, and involved a long anti-insurgency campaign by Commonwealth troops in Malaya. The British strategy, which proved ultimately successful, was to isolate the MCP from its support base by a combination of economic and political concessions to the Chinese and the resettlement of Chinese squatters into "New Villages" in "white areas" free of MCP influence. The effective mobilisation of the Malays against the MCP was also an important part the British strategy. From 1949 the MCP campaign lost momentum and the number of recruits fell sharply. Although the MCP succeeded in assassinating the British High Commissioner, Sir Henry Gurney, in October 1951, this turn to "terrorist" tactics alienated many moderate Chinese from the Party. The arrival of Lt-Gen Sir Gerald Templer as British commander in 1952 was the beginning of the end of the Emergency. Templer invented the techniques of counter-insurgency warfare in Malaya and applied them ruthlessly. Although the insurgency was defeated Commonwealth troops remained with the backdrop of the Cold War.[31] Against this backdrop, independence for the Federation within the Commonwealth was granted on 31 August 1957,[32] with Tunku Abdul Rahman as the first prime minister.[16]

Towards Malaysia

Chinese reaction against the MCP was shown by the formation of the Malayan Chinese Association (MCA) in 1949 as a vehicle for moderate Chinese political opinion. Its leader, Tan Cheng Lock, favoured a policy of collaboration with UMNO to win Malayan independence on a policy of equal citizenship, but with sufficient concessions to Malay sensitivities to ease nationalist fears. Tan formed a close collaboration with Tunku (Prince) Abdul Rahman, the Chief Minister of Kedah and from 1951 successor to Datuk Onn as leader of UMNO. Since the British had announced in 1949 that Malaya would soon become independent whether the Malayans liked it or not, both leaders were determined to forge an agreement their communities could live with as a basis for a stable independent state. The UMNO-MCA Alliance (which was later joined by the Malayan Indian Congress (MIC)), won convincing victories in local and state elections in both Malay and Chinese areas between 1952 and 1955.

Dataran Merdeka (Independence Square) in Kuala Lumpur, where Malaysians celebrate Independence Day on 31 August each year

The introduction of elected local government was another important step in defeating the Communists. After Joseph Stalin's death in 1953, there was a split in the MCP leadership over the wisdom of continuing the armed struggle. Many MCP militants lost heart and went home, and by the time Templer left Malaya in 1954 the Emergency was over, although Chin Peng led a diehard group that lurked in the inaccessible country along the Thai border for many years. The Emergency left a lasting legacy of bitterness between Malays and Chinese.

During 1955 and 1956 UMNO, the MCA and the British hammered out a constitutional settlement for a principle of equal citizenship for all races. In exchange, the MCA agreed that Malaya's head of state would be drawn from the ranks of the Malay Sultans, that Malay would be the official language, and that Malay education and economic development would be promoted and subsidised. In effect this meant that Malaya would be run by the Malays, particularly since they continued to dominate the civil service, the army and the police, but that the Chinese and Indians would have proportionate representation in the Cabinet and the parliament, would run those states where they were the majority, and would have their economic position protected. The difficult issue of

who would control the education system was deferred until after independence. This came on August 31, 1957, when Tunku Abdul Rahman became the first Prime Minister of independent Malaya.

This left the unfinished business of the other British-ruled territories in the region. After the Japanese surrender the Brooke family and the British North Borneo Company gave up their control of Sarawak and Sabah respectively, and these became British Crown Colonies. They were much less economically developed than Malaya, and their local political leaderships were too weak to demand independence. Singapore, with its large Chinese majority, achieved autonomy in 1955, and in 1959 the young socialist leader Lee Kuan Yew became Prime Minister. The Sultan of Brunei remained as a British client in his oil-rich enclave. Between 1959 and 1962 the British government orchestrated complex negotiations between these local leaders and the Malayan government.

In 1961, Abdul Rahman mooted the idea of forming "Malaysia", which would consist of Brunei, Malaya, Sabah, Sarawak and Singapore, all of which had been British colonies. The reasoning behind this was that this would allow the central government to control and combat communist activities, especially in Singapore. It was also feared that if Singapore achieved independence, it would become a base for Chinese chauvinists to threaten Malayan sovereignty. To balance out the ethnic composition of the new nation, the other states, whose Malay and indigenous populations would cancel out the Singaporean Chinese majority, were also included.[33]

Although Lee Kuan Yew supported the proposal, his opponents from the Singaporean Socialist Front resisted, arguing that this was a ploy for the British to continue controlling the region. Most political parties in Sarawak were also against the merger, and in Sabah, where there were no political parties, community representatives also stated their opposition. Although the Sultan of Brunei supported the merger, the Parti Rakyat Brunei opposed it as well. At the Commonwealth Prime Ministers Conference in 1961, Abdul Rahman explained his proposal further to its opponents. In October, he obtained agreement from the British government to the plan, provided that feedback be obtained from the communities involved in the merger. The Cobbold Commission, named after its head, Lord Cobbold, conducted a study in the Borneo territories and approved a merger with Sabah and Sarawak; however, it was found that a substantial number of Bruneians opposed merger. A referendum was conducted in Singapore to gauge opinion, and 70% supported merger with substantial autonomy given to the state government.[34][35] The Sultanate of Brunei withdrew from the planned merger due to opposition from certain segments of its population as well as arguments over the payment of oil royalties and the status of the Sultan in the planned merger.[36][37] Additionally, the Bruneian Parti Rakyat Brunei staged an armed revolt, which, though it was put down, was viewed as potentially destabilising to the new nation.[38]

After reviewing the Cobbold Commission's findings, the British government appointed the Landsdowne Commission to draft a constitution for Malaysia. The eventual constitution was essentially the same as the 1957 constitution, albeit with some rewording. For instance, giving recognition to the special position of the natives of the Borneo States. Sabah, Sarawak and Singapore were also granted some autonomy unavailable to the states of Malaya. After negotiations in July 1963, it was agreed that Malaysia would come into being on 31 August 1963, consisting of Malaya, Sabah, Sarawak and Singapore. The date was to coincide with the independence day of Malaya and the British giving self-rule to Sarawak and Sabah. However, the Philippines and Indonesia strenuously objected to this development, with Indonesia claiming Malaysia represented a form of "neocolonialism" and the Philippines claiming Sabah as its territory. The opposition from the Indonesian government led by Sukarno and attempts by the Sarawak United People's Party delayed the formation of Malaysia.[39] Due to these factors, an 8-member United Nations team had to be formed to re-ascertain whether Sabah and Sarawak truly wanted to join Malaysia.[40][41] Malaysia formally came into being on 16 September 1963, consisting of Malaya, Sabah, Sarawak and Singapore. In 1963 the total population of Malaysia was about 10 million.

Challenges of independence

At the time of independence Malaya had great economic advantages. It was among the world's leading producers of three valuable commodities, rubber, tin and palm oil, and also a significant iron ore producer. These export industries gave the Malayan government a healthy surplus to invest in industrial development and infrastructure projects. Like other developing nations in the 1950s and '60s, Malaya (and later Malaysia) placed great stress on state planning, although UMNO was never a socialist party. The First and Second Malayan Plans (1956–60 and 1961-65 respectively) stimulated economic growth through state investment in industry and repairing infrastructure such as roads and ports, which had been damaged and neglected during the war and the Emergency. The government was keen to reduce Malaya's dependence on commodity exports, which put the country at the mercy of fluctuating prices. The government was also aware that demand for natural rubber was bound to fall as the production and use of synthetic rubber expanded. Since a third of the Malay workforce worked in the rubber industry it was important to develop alternative sources of employment. Competition for Malaya's rubber markets meant that the profitability of the rubber industry increasingly depended on keeping wages low, which perpetuated rural Malay poverty.

Foreign objection

Indonesian President Sukarno, backed by the powerful Communist Party of Indonesia (PKI), chose to regard Malaysia as a "neocolonialist" plot against his country, and backed a Communist insurgency in Sarawak, mainly involving elements of the local Chinese community. Indonesian irregular forces were infiltrated into Sarawak, where they were contained by Malaysian and Commonwealth of Nations forces.[17] This period of *Konfrontasi*, an economic, political, and military confrontation lasted until the downfall of Sukarno in 1966.[16] The Philippines objected to the formation of the federation, claiming North Borneo was part of Sulu, and thus the Philippines.[17] In 1966 the new president, Ferdinand Marcos, dropped the claim, although it has since been revived and is still a point of contention marring Philippine-Malaysian relations.[42][43]

Racial strife

The Depression of the 1930s, followed by the outbreak of the Sino-Japanese War, had the effect of ending Chinese emigration to Malaya. This stabilised the demographic situation and ended the prospect of the Malays becoming a minority in their own country. At the time of independence in 1957, the Malays were 55% of the population, the Chinese 35% and the Indians 10%.[*citation needed*] This balance was altered by the inclusion of the majority Chinese Singapore, upsetting many Malays.[12] The federation increased the Chinese proportion to close to 40%. Both UMNO and the MCA were nervous about the possible appeal of Lee's People's Action Party (then seen as a radical socialist party) to voters in Malaya, and tried to organise a party in Singapore to challenge Lee's position there. Lee in turn threatened to run PAP candidates in Malaya at the 1964 federal elections, despite an earlier agreement that he would not do so (see PAP-UMNO Relations). Racial tensions intensified as PAP created an opposition alliance aiming for equality between races.[17] This provoked Tunku Abdul Rahman to demand that Singapore withdraw from Malaysia, which it did in August 1965.[44]

The most vexed issues of independent Malaysia were education and the disparity of economic power among the ethnic communities. The Malays felt unhappy with the wealth of the Chinese community, even after the expulsion of Singapore. Malay political movements emerged based around this.[12] However, since there was no effective opposition party, these issues were contested mainly within the coalition government, which won all but one seat in the first post-independence Malayan Parliament. The two issues were related, since the Chinese advantage in education played a large part in maintaining their control of the economy, which the UMNO leaders were determined to end. The MCA leaders were torn between the need to defend their own community's

interests and the need to maintain good relations with UMNO. This produced a crisis in the MCA in 1959, in which a more assertive leadership under Lim Chong Eu defied UMNO over the education issue, only to be forced to back down when Tunku Abdul Rahman threatened to break up the coalition.

The Education Act of 1961 put UMNO's victory on the education issue into legislative form. Henceforward Malay and English would be the only teaching languages in secondary schools, and state primary schools would teach in Malay only. Although the Chinese and Indian communities could maintain their own Chinese and Tamil-language primary schools, all their students were required to learn Malay, and to study an agreed "Malayan curriculum." Most importantly, the entry exam to the University of Malaya (which moved from Singapore to Kuala Lumpur in 1963) would be conducted in Malay, even though most teaching at the university was in English until the 1970s. This had the effect of excluding many Chinese students. At the same time Malay schools were heavily subsidised, and Malays were given preferential treatment. This obvious defeat for the MCA greatly weakened its support in the Chinese community.

As in education, the UMNO government's unspoken agenda in the field of economic development was to shift economic power away from the Chinese and towards the Malays. The two Malayan Plans, and the First Malaysian Plan (1966–70), directed resources heavily into developments which would benefit the rural Malay community, such as village schools, rural roads, clinics and irrigation projects. Several agencies were set up to enable Malay smallholders to upgrade their production and increase their incomes. The Federal Land Development Authority (FELDA) helped many Malays buy farms or upgrade ones they already owned. The state also provided a range of incentives and low-interest loans to help Malays start businesses, and government tendering systematically favoured Malay companies, leading many Chinese-owned businesses to "Malayanise" their management. All this certainly tended to reduce to gap between Chinese and Malay standards of living, although some argued that this would have happened anyway as Malaysia's trade and general prosperity increased.

The crisis of 1969

Main article: May 13 Incident

The collaboration of the MCA and the MIC in these policies weakened their hold on the Chinese and Indian electorates. At the same time, the effects of the government's affirmative action policies of the 1950s and '60s had been to create a discontented class of educated but underemployed Malays. This was a dangerous combination, and led to the formation of a new party, the Malaysian People's Movement (Gerakan Rakyat Malaysia) in 1968. Gerakan was a deliberately non-communal party, bringing in Malay trade unionists and intellectuals as well as Chinese and Indian leaders.[*citation needed*] At the same time, an Islamist party, the Islamic Party of Malaysia (PAS) and a Chinese socialist party, the Democratic Action Party (DAP), gained increasing support, at the expense of UMNO and the MCA respectively.[12]

At the May 1969 federal elections, the UMNO-MCA-MIC Alliance polled only 48 percent of the vote, although it retained a majority in the legislature. The MCA lost most of the Chinese-majority seats to Gerakan or DAP candidates. The victorious opposition celebrated by holding a motorcade on the main streets of Kuala Lumpur with supporters holding up brooms as a signal of its intention to make sweeping changes. Fear of what the changes might mean for them (as much of the country's businesses were Chinese owned), a Malay backlash resulted, leading rapidly to riots and inter-communal violence in which about 6,000 Chinese homes and businesses were burned and at least 184 people were killed.[45][46] The government declared a state of emergency, and a National Operations Council, headed by the Deputy Prime Minister, Tun Abdul Razak, took power from the government of Tunku Abdul Rahman, who in September 1970 was forced to retire in favour of Abdul Razak. It consisted of 9 members, mostly Malay, and wielded full political and military power.[12]

Using the Emergency-era Internal Security Act (ISA), the new government suspended Parliament and political parties, imposed press censorship and placed severe restrictions on political activity. The ISA gave the government power to intern any person indefinitely without trial. These powers were widely used to silence the government's critics, and have never been repealed. The Constitution was changed to make illegal any criticism, even in Parliament, of the Malaysian monarchy, the special position of Malays in the country, or the status of Malay as the national language.

In 1971 Parliament reconvened, and a new government coalition, the National Front (Barisan Nasional), took office.[12] This included UMNO, the MCA, the MIC, the much weakened Gerakan, and regional parties in Sabah and Sarawak. The DAP was left outside as the only significant opposition party. The PAS also joined the Front but was expelled in 1977. Abdul Razak held office until his death in 1976. He was succeeded by Datuk Hussein Onn, the son of UMNO's founder Onn Jaafar, and then by Tun Dr Mahathir bin Mohamad, who had been Education Minister since 1981, and who held power for 22 years. During these years policies were put in place which led to the rapid transformation of Malaysia's economy and society, such as the controversial New Economic Policy, which was intended to increase proportionally the share of the economic "pie" of the bumiputras ("indigenous people", which includes the majority Malays, but not always the indigenous population) as compared to other ethnic groups—was launched by Prime Minister Tun Abdul Razak. Malaysia has since maintained a delicate ethno-political balance, with a system of government that has attempted to combine overall economic development with political and economic policies that promote equitable participation of all races.[47]

Modern Malaysia

See also: Human rights in Malaysia

In 1970 75 percent of Malaysians living below the poverty line were Malays, the majority of Malays were still rural workers, and Malays were still largely excluded from the modern economy. The government's response was the New Economic Policy of 1971, which was to be implemented through a series of four five-year plans from 1971 to 1990.[*citation needed*] The plan had two objectives: the elimination of poverty, particularly rural poverty, and the elimination of the identification between race and prosperity.[12] This latter policy was understood to mean a decisive shift in economic power from the Chinese to the Malays,[*citation needed*] who until then made up only 5% of the professional class.[12]

Kuala Lumpur, a blend of old and new.

Poverty was tackled through an agricultural policy which resettled 250,000 Malays on newly cleared farmland, more investment in rural infrastructure, and the creation of free trade zones in rural areas to create new manufacturing jobs. Little was done to improve the living standards of the low-paid workers in plantation agriculture, although this group steadily declined as a proportion of the workforce. By 1990 the poorest parts of Malaysia were rural Sabah and Sarawak, which lagged significantly behind the rest of the country. During the 1970s and '80s rural poverty did decline, particularly in the Malayan Peninsula, but critics of the government's policy contend that this was mainly due to the growth of overall national prosperity (due in large part to the discovery of important oil and gas reserves) and migration of rural people to the cities rather than to state intervention. These years saw rapid growth in Malaysian cities, particularly Kuala Lumpur, which became a magnet for immigration both from rural Malaya and from poorer neighbours such as Indonesia, Bangladesh, Thailand and the Philippines. Urban poverty became a problem for the first time, with shanty towns growing up around the cities.[*citation needed*]

The second arm of government policy, driven mainly by Mahathir first as Education Minister and then as Prime Minister, was the transfer of economic power to the Malays. Mahathir greatly expanded the number of secondary schools and universities throughout the country, and enforced the policy of teaching in Malay rather than English. This had the effect of creating a large new Malay professional class. It also created an unofficial barrier against Chinese access to higher education, since few Chinese are sufficiently fluent in Malay to study at Malay-language universities. Chinese families therefore sent their children to universities in Singapore, Australia, Britain or the United States – by 2000, for example, 60,000 Malaysians held degrees from Australian universities. This had the unintended consequence of exposing large numbers of Malaysians to life in Western countries, creating a new source of discontent. Mahathir also greatly expanded educational opportunities for Malay women – by 2000 half of all university students were women.

Petronas Twin Towers, Kuala Lumpur the tallest building in South-East Asia.

To find jobs for all these new Malay graduates, the government created several agencies for intervention in the economy. The most important of these were PERNAS (National Corporation Ltd.), PETRONAS (National Petroleum Ltd.), and HICOM (Heavy Industry Corporation of Malaysia), which not only directly employed many Malays but also invested in growing areas of the economy to create new technical and administrative jobs which were preferentially allocated to Malays. As a result, the share of Malay equity in the economy rose from 1.5 percent in 1969 to 20.3 percent in 1990, and the percentage of businesses of all kinds owned by Malays rose from 39 percent to 68 percent. This latter figure was deceptive because many businesses that appeared to be Malay-owned were still indirectly controlled by Chinese, but there is no doubt that the Malay share of the economy considerably increased. The Chinese remained disproportionately powerful in Malaysian economic life, but by 2000 the distinction between Chinese and Malay business was fading as many new corporations, particularly in growth sectors such as information technology, were owned and managed by people from both ethnic groups.

Malaysia's rapid economic progress since 1970, which was only temporarily disrupted by the Asian financial crisis of 1997, has not been matched by change in Malaysian politics. The repressive measures passed in 1970 remain in place. Malaysia has had regular elections since 1974, and although campaigning is reasonably free at election time, it is in effect a one-party state, with the UMNO-controlled National Front usually winning nearly all the seats, while the DAP wins some Chinese urban seats and the PAS some rural Malay ones. Since the DAP and the PAS have diametrically opposed policies, they have been unable to form an effective opposition coalition. There is almost no criticism of the government in the media and public protest remains severely restricted. The ISA continues to be used to silence dissidents, and the members of the UMNO youth movement are deployed to physically intimidate opponents.

Mahathir administration

The restoration of democracy after the 1969 crisis caused disputes in the UMNO, a struggle of power which increased after the death of Tun Abdul Razak. The ailing Datuk Hussein Bin Onn replaced him, but the fight for control shifted to appointing the deputy prime minister. Mahathir bin Mahamad was chosen, an advocate of bumiputra who also tried to benefit the other ethnic communities.[12]

Under the premiership of Mahathir bin Mohamad, Malaysia experienced economic growth from the 1980s, a 1985-86 property market depression,[48] and returned to growth through to the mid-1990s.[49] Mahathir increased privatization and introduced the New Development Policy (NDP), designed to increase economic

wealth for all Malaysians, rather than just Malays.[12] The period saw a shift from an agriculture-based economy to one based on manufacturing and industry in areas such as computers and consumer electronics. It was during this period, too, that the physical landscape of Malaysia changed with the emergence of numerous mega-projects. Notable amongst these projects were the construction of the Petronas Twin Towers (at the time the tallest building in the world, and, as of 2010, still the tallest twin building), KL International Airport (KLIA), the North-South Expressway, the Sepang International Circuit, the Multimedia Super Corridor (MSC), the Bakun hydroelectric dam and Putrajaya, the new federal administrative capital.

Mahathir bin Mohamad was the leading force in making Malaysia into a major industrial power.

Under Mahathir bin Mohamad's long Prime Ministership (1981–2003), Malaysia's political culture became increasingly centralized and authoritarian, due to Mahathir's belief that the multiethnic Malaysia could only remain stable through controlled democracy. In 1986-87, he faced leadership challenges among his own party. The Internal Security Act was invoked in October 1987 arresting 106 people, including opposition leaders. The head of the judiciary and 5 members of the supreme court who had questioned his use of the ISA were also arrested, and a clampdown on Malaysia's press occurred.[12]

This culminated in the dismissal and imprisonment on unsubstantiated charges of the Deputy Prime Minister, Anwar Ibrahim, in 1997 after an internal dispute within the government. The complicity of the judiciary in this piece of persecution was seen as a particularly clear sign of the decline of Malaysian democracy. The Anwar affair led to the formation of a new party, the People's Justice Party, or Keadilan, led by Anwar's wife, Dr. Wan Azizah Wan Ismail. At the 1999 elections Keadilan formed a coalition with the DAP and the PAS known as the Alternative Front (Barisan Alternatif). The result of this was that the PAS won a number of Malay seats from UMNO, but many Chinese voters disapproved of this unnatural alliance with the Islamist PAS, causing the DAP to lose many of its seats to the MCA, including that of its veteran leader, Lim Kit Siang. Wan Azizah won her husband's former constituency in Penang but otherwise Keadilan made little impact.

In the late 1990s, Malaysia was shaken by the Asian financial crisis, which damaged Malaysia's assembly line based economy. Mahathir combated it initially with IMF approved policies. However, the devaluation of the Ringgit and the deepening recession caused him to create his own programme, based on protecting Malaysia from foreign investors and reinvigorating the economy through construction projects and the lowering of interest rates. The policies caused Malaysia's economy to rebound by 2002, but brought disagreement between Mahathir and his deputy, Anwar Ibrahim, who backed the IMF policies.[12] This led to the sacking of the Anwar, causing political unrest.[50] Anwar was arrested and banned from politics on what are considered trumped up charges.[12] In 2003 Dr Mahathir, Malaysia's longest serving prime minister, voluntarily retired in favour of his new deputy, Abdullah Ahmad Badawi.[12] In November 2007 two anti-government rallies occurred, precipitated by allegations of corruption and discrepancies in the election system that heavily favoured the ruling political party, National Front, which has been in power since Malaya achieved independence.[51]

Badawi administration

Dato Seri Abdullah Ahmad Badawi freed Anwar,[12] which was seen as a portent of a mild liberalisation. [*citation needed*] At the 2004 election, the National Front led by Abdullah had a massive victory,[12] virtually wiping out the PAS and Keadilan, although the DAP recovered the seats it had lost in 1999. This victory was seen as the result mainly of Abdullah's personal popularity and the strong recovery of Malaysia's economy, which has lifted the living standards of most Malaysians to almost first world standards, coupled with an ineffective opposition. The government's objective is for Malaysia to become a fully developed country by 2020

as expressed in *Wawasan 2020*. It leaves unanswered, however, the question of when and how Malaysia will acquire a first world political system (a multi-party democracy, a free press, an independent judiciary and the restoration of civil and political liberties) to go with its new economic maturity.

In November 2007, Malaysia was rocked by two anti-government rallies. The 2007 Bersih Rally which was attended by 40,000 people was held in Kuala Lumpur, Malaysia, on November 10 to campaign for electoral reform. It was precipitated by allegations of corruption and discrepancies in the Malaysian election system that heavily favor the ruling political party, Barisan Nasional, which has been in power since Malaysia achieved its independence in 1957.[52] Another rally was held on 25 November in the Malaysian capital led by HINDRAF. The rally organiser, the Hindu Rights Action Force, had called the protest over alleged discriminatory policies favouring ethnic Malays. The crowd was estimated to be between 5,000 and 30,000.[53] In both cases the government and police tried to prevent the gatherings from taking place. In 16 October 2008, HINDRAF was banned when the government labelled the organisation as "a threat to national security".[54]

Yang di-Pertuan Agong

From Wikipedia, the free encyclopedia

The **Yang di-Pertuan Agong** is the head of state of Malaysia. The office was established in 1957 when the Federation of Malaya (now Malaysia) gained independence.

A literal English translation of the title is "He who is made Lord". However, common alternatives are "King", "Supreme Ruler", "Paramount Ruler", or "Supreme Head of State". Malaysia is a constitutional monarchy with an elected monarch as head of state. The *Yang di-Pertuan Agong* is one of the few elected monarchs in the world.

Since 1993, the full title in Malay has been, *Seri Paduka Baginda Yang di-Pertuan Agong* (His Conqueror Majesty The Supreme Lord of the Federation). Prior to that, the honorific *Ke Bawah Duli Yang Maha Mulia* (The Dust Under The Feet Of His Majesty) was also used. The consort of the Yang di-Pertuan Agong is called the *Raja Permaisuri Agong* (Queen Lady Consort). The couple are addressed in English as "His Majesty" and "Her Majesty".

Yang di-Pertuan Agong of Malaysia

MONARCHY
FEDERAL

Arms of His Majesty the Yang di-Pertuan Agong of Malaysia

Incumbent:
Abdul Halim
the Sultan of Kedah

Style:	His Majesty
First monarch:	Tuanku Abdul Rahman of Negeri Sembilan
Formation:	31 August 1957

In Malaysia's constitutional monarchy, the role of the *Yang di-Pertuan Agong* is largely ceremonial. The constitution specifies that the executive power of the Federal government is vested in the Yang di-Pertuan Agong and is exercised by him on the advice of the federal Council of Ministers. The latter is headed by the Prime Minister, appointed by the Yang di-Pertuan Agong from among the elected members of Parliament.

The 14th and current Yang di-Pertuan Agong is Sultan Abdul Halim of Kedah. His reign began on 13 December 2011 after his election by the Conference of Rulers. He previously served as the fifth Yang di-Pertuan Agong from 1970-1975. He is the first ruler to hold the position twice, as well as the oldest elected to the office at 83 years old.[1] The date of installation of the new Yang di-Pertuan Agong has been set for 11th April 2012, at Istana Negara.[2]

History

In August 1957, having rejected the suggested title of *Yang di-Pertuan Besar* in favour of *Yang di-Pertuan Agong*, the Council of Rulers met to elect the first occupant of the throne. By seniority, the 84-year old major general Sultan Ibrahim, Sultan of Johor since 1895, was first in line, but he declined due to old age. The next in line, Sultan Abu Bakar, Sultan of Pahang since 1932, was rejected five times by his fellow electors. Tuanku Abdul Rahman of Negeri Sembilan, having succeeded to his state throne in 1933, was elected by eight votes to one.

Royal Headgear (*Solek Dendam Tak Sudah*) of the Yang di-Pertuan Agong, in the style of a black *songkat* headgear embroidered with gold thread.

The first Council of Rulers were:

1. Sultan Abu Bakar Riayatuddin Al-Muadzam Shah ibni Almarhum Sultan Abdullah Al-Mutassim Billah Shah (Sultan of Pahang; 1932–1974);
2. Tuanku Abdul Rahman ibni Almarhum Tuanku Muhammad (Yang di-Pertuan Besar of Negeri Sembilan; 1933–1960);
3. Sultan Hisamuddin Alam Shah Al-Haj ibni Almarhum Sultan Alaeddin Sulaiman Shah (Sultan of Selangor; 1938–1942, 1945–1960);
4. Sultan Badlishah ibni Almarhum Sultan Abdul Hamid Halim Shah (Sultan of Kedah; 1943–1958);
5. Sultan Ibrahim Petra ibni Almarhum Sultan Muhammad IV (Al-Sultan of Kelantan; 1944–1960);
6. Tuanku Syed Putra ibni Almarhum Syed Hassan Jamalullail (Raja of Perlis; 1945–2000);
7. Sultan Ismail Nasiruddin Shah ibni Almarhum Sultan Zainal Abidin III (Sultan of Terengganu; 1945–1979);
8. Sultan Yusuf Izzudin Shah ibni Almarhum Sultan Abdul Jalil Nasruddin shah (Sultan of Perak; 1948–1963); and
9. Tunku Ismail ibni Sultan Ibrahim (Crown Prince or Tunku Mahkota of Johor; later Sultan 1959–1981).

List of Yang di-Pertuan Agong

The following Rulers have served as *Yang di-Pertuan Agong*:

No.	Name	State	Reign	Age on Reign	Birth	Death
1	Tuanku Abdul Rahman	Negeri Sembilan	31 August 1957 – 1 April 1960 (2 years)	62 - 65	24 August 1895	1 April 1960
2	Sultan Hisamuddin Alam Shah	Selangor	14 April 1960 – 1 September 1960 (4 months)	62	13 May 1898	1 September 1960
3	Tuanku Syed Putra	Perlis	21 September 1960 – 20 September 1965 (5 years)	40 - 45	25 November 1920	16 April 2000
4	Sultan Ismail Nasiruddin Shah	Terengganu	21 September 1965 – 20 September 1970 (5 years)	58 - 63	24 January 1907	20 September 1979
5	Tuanku Abdul Halim	Kedah	21 September 1970 – 20 September 1975 (5 years)	43 - 48	28 November 1927	
6	Sultan Yahya Petra	Kelantan	21 September 1975 – 29 March 1979 (4 years)	58 - 62	10 December 1917	29 March 1979
7	Sultan Ahmad Shah Al-Mustain Billah	Pahang	29 March 1979 – 25 April 1984 (5 years)	49 - 54	24 October 1930	
8	Sultan Iskandar	Johor	26 April 1984 – 25 April 1989 (5 years)	52 - 57	8 April 1932	22 January 2010
9	Sultan Azlan Muhibbuddin Shah	Perak	26 April 1989 – 25 April 1994 (5 years)	61 - 66	19 April 1928	
10	Tuanku Jaafar	Negeri Sembilan	26 April 1994 – 25 April 1999 (5 years)	72 - 77	19 July 1922	27 December 2008
11	Sultan Salahuddin Abdul Aziz	Selangor	26 April 1999 – 21 November 2001 (2 years)	73 - 75	8 March 1926	21 November 2001
12	Tuanku Syed Sirajuddin	Perlis	13 December 2001 – 12 December 2006 (5 years)	58 - 63	17 May 1943	
13	Tuanku Mizan Zainal Abidin	Terengganu	13 December 2006 – 12 December 2011 (5 years)	44 - 49	22 January 1962	
14	Tuanku Abdul Halim[1]	Kedah	13 December 2011 – present	84 -	28 November 1927	

1.^ Tuanku Abdul Halim is the first Yang di-Pertuan Agong to reign twice.[3] He is also the oldest to ascend the throne.

Election

The Yang di-Pertuan Agong is formally elected to a five-year term by and from among the nine Rulers of the Malay states (nine of the thirteen states of Malaysia that have hereditary royal rulers), who form the Conference of Rulers (*Majlis Raja-raja*). The Yang di-Pertuan Agong may not be re-elected after his term has expired.

The compound of the Istana Negara at Jalan Istana, official residence of the Yang di-Pertuan Agong from 1957 to 2011. It is replaced by the new Istana Negara at Jalan Duta in 2011.

In the event of the Yang di-Pertuan Agong's death in office, the Conference of Rulers elects a new Yang di-Pertuan Agong as if the previous term had expired. The new Yang di-Pertuan Agong is elected for a full five-year term. After his term expires, the Conference holds a new election, in which the incumbent would not be re-elected.

The position *de facto* rotates among the nine Rulers. The selection of the Yang di-Pertuan Agong initially followed an order based on the seniority (calculated by length of reign) of each Ruler in 1957 at the Federation of Malaya's independence from the United Kingdom. The Conference of Rulers, which has the power to disqualify a candidate, has sometimes varied the original seniority order. Minors are automatically disqualified from office. After each of the nine Rulers of the states had served as the Yang di-Pertuan Agong, the order of seniority was based on the order of the states whose rulers have been elected the Yang di-Pertuan Agong.

The Conference of Rulers has met regularly since 1895. The membership of the council includes the four governors (*Yang di-Pertua Negeri*), but only royal rulers are allowed to vote and stand for election as *Yang di-Pertuan Agong*.

Qualifications

- Only a royal ruler may be elected.
- Only the royal rulers may vote.
- Rulers are elected in turn.

The Constitution provides that a Ruler is not eligible for election as Yang di-Pertuan Agong if:

- The Ruler is a minor.
- The Ruler has notified the Keeper of the Rulers' Seal that he does not wish to be elected.
- The Conference of Rulers by a secret ballot resolves that the Ruler is unsuitable by reason of infirmity of mind or body, or for any other cause, to exercise the functions of the Yang di-Pertuan Agong. The resolution requires at least five members of the Conference to vote in favour of it.

Election proceedings

The election is carried out by a secret ballot. The ballot papers used are not numbered, but marked with the same pen and ink, and are inserted into a ballot box. Only the Rulers participate in the election.

A Ruler may appoint another Ruler as his proxy to vote on his behalf if he is unable to attend the Election Meeting.

During the election process, the Keeper of the Rulers' Seal distributes the ballot with only one candidate (the most senior Ruler). Each Ruler is requested to indicate whether the most senior Ruler is suitable or not to be elected as Yang di-Pertuan Agong.

The most junior Ruler, who is not listed as nominee for the office of the Yang di-Pertuan Agong, or the Yang di-Pertuan Agong is appointed to count the ballot papers together with the Keeper of the Rulers' Seal.

The nominee must have obtained a majority of five votes before the Ruler presiding over the Election Meeting offers him the office of Yang di-Pertuan Agong. If the successful nominee declines the offer or the nominated Ruler fails to secure the required majority votes, the voting process is repeated with the nomination of the second most senior Ruler in the Seniority List of Rulers.

The process is completed only after the Ruler has accepted the offer of the office of Yang di-Pertuan Agong. The Conference declares the Ruler as the Yang di-Pertuan Agong to hold office for a term of five years. The ballot papers are destroyed in the presence of the Rulers as soon as the result of the election is announced.

On taking office as Yang di-Pertuan Agong, he appoints a regent for the duration of his five-year term for the state which he rules. Usually, but not always, the Regent is a close relative.

Order of seniority of states

After the first cycle of nine *Yang di-Pertuan Agong* (1957–1994), the order among the eligible, all peninsular, state rulers has followed the order established by that cycle, namely:

1. the *Yang di-Pertuan Besar* (or Yamtuan Besar) of Negeri Sembilan (itself an elective monarchy)
2. the Sultan of Selangor
3. the Raja of Perlis
4. the Sultan of Terengganu
5. the Sultan of Kedah
6. the Sultan of Kelantan
7. the Sultan of Pahang
8. the Sultan of Johor
9. the Sultan of Perak

Four of the states of Malaysia have no hereditary royal rulers. These are Penang and Malacca in Peninsular Malaysia, and Sabah and Sarawak on the island of Borneo. These four states, along with Malaysia's three federal territories, never supply the Yang di-Pertuan Agong.

Timbalan Yang di-Pertuan Agong

A Timbalan Yang di-Pertuan Agong (Deputy Yang di-Pertuan Agong) is elected by the same process immediately after the Yang di-Pertuan Agong. The office is usually (but not always) held by the ruler next in line after the Yang di-Pertuan Agong. The Timbalan Yang di-Pertuan Agong exercises the functions of the head of state during the Yang di-Pertuan Agong's absence, or inability to exercise functions owing to illness or infirmity.

The Timbalan Yang di-Pertuan Agong does not automatically advance to become the Yang di-Pertuan Agong when a vacancy occurs in the office. The Timbalan Yang di-Pertuan Agong acts as the head of state before the elections of the new Yang di-Pertuan Agong and Timbalan Yang di-Pertuan Agong.

Roles

The Yang di-Pertuan Agong's role is that of a constitutional monarch. The Federal Constitution and Parliamentary Acts made in accordance with it define the extent of his powers as the Federal Head of State. The executive power of the federal government is vested in him.

The monarch's powers are basically divided into two broad categories:

- the powers that he exercises on the advice of the Prime Minister, a Minister, the Cabinet, the Conference of Rulers, or some other officer or institution; and
- the powers that he exercises at his discretion (without the consent of any other authority).

The discretionary powers of the Yang di-Pertuan Agong pertain chiefly to appointing the Prime Minister, withholding consent to dissolve Parliament, and calling meetings with the Conference of Rulers "concerned solely with the privileges, position, honours and dignities of Their Royal Highnesses." Under the Westminster System, the Yang di-Pertuan Agong is expected to appoint a Prime Minister who will command the confidence of a majority of the elected lower house of Parliament, the *Dewan Rakyat*. Should the Prime Minister be or become unacceptable, he may be forced out by a vote of no confidence, which would require the Yang di-Pertuan Agong to dissolve Parliament on advice of the Prime Minister, or refuse to dissolve Parliament and appoint someone else as Prime Minister. Conventionally, the Prime Minister is the head of the party with a majority in Parliament. Since independence in 1957, this has been the *Barisan Nasional* (National Front, formerly known as the Alliance).

The Yang di-Pertuan Agong renews the appointment of a Prime Minister after every general election until the minister decides to step down. Whenever the Prime Minister chooses to dissolve Parliament, he calls for a general election. The Yang di-Pertuan Agong may choose to refuse a Prime Minister's request to dissolve Parliament, as one of his discretionary powers.

Residences

The official residence of the Yang di-Pertuan Agong is *Istana Negara* (the National Palace) located in Jalan Duta in the federal capital Kuala Lumpur. It was completed in 2011. The old Istana Negara will be turned into a royal museum. Other residences include the royal retreat, *Istana Melawati* (Melawati Palace) in the federal administrative capital Putrajaya. It is also the venue of meetings of the Conference of Rulers (Malay: *Majlis Raja-raja*), which elects the Yang di-Pertuan Agong.

Appointments

The Yang di-Pertuan Agong appoints numerous high-ranking office holders in the Federation under the terms of the Constitution and various Acts passed by Parliament. The constitution established procedures for such appointments.

The Council of Ministers (Cabinet)

- Prime Minister as the Chairman of the Cabinet, at his discretion from among the elected members of the House of Representatives who belong to the majority party or coalition.
- Deputy Prime Minister, Ministers and Deputy Ministers, on the advice of the Prime Minister.
- Chief Secretary to the Government as the Secretary of the Cabinet, on the advice of the Prime Minister.

Commissions and committees

- The Election Commission, on the advice of the Conference of Rulers.
- The Judicial and Legal Service Commission, after consultation with the Chief Justice
- The Malaysian Public Service Commission at his discretion, after considering the advice of the Prime Minister and after consultation with the Conference of Rulers.

Judges

- The Chief Justice of Malaysia, on the advice of the Prime Minister and the Conference of Rulers.
- The Chief Judge of Malaya, on the advice of the Prime Minister and the Conference of Rulers.
- The Chief Judge of Sabah and Sarawak, on the advice of the Prime Minister and the Conference of Rulers.

Senators

The Yang di-Pertuan Agong appoints 44 members of the Dewan Negara, the Malaysian Senate.

State governors

The Yang di-Pertuan Agong appoints the *Yang di-Pertua Negeri* (Governors), of the states of Penang, Malacca, Sabah and Sarawak, at his discretion, after considering the advice of the state's Chief Minister.

The Yang di-Pertuan Agong also appoints the Mayor and City Council of Kuala Lumpur, which is a Federal Territory.

Head of Islam

In addition, the Yang di-Pertuan Agong is the Head of Islam in the four states ruled by appointed Governors: the three Federal Territories, as well as in his own state. In this role, he is advised by the State Islamic Affairs Council in each of the States.

The Yang di-Pertuan Agong appoints the Chairman and members of each council. He also appoints the State Mufti in each of these states. There is a single Islamic Affairs Council with jurisdiction for the three Federal Territories. This council is also appointed by the Yang di-Pertuan Agong.

Duties as Commander-in-Chief

In accordance with Article 41 of the Federal Constitution, the Yang di-Pertuan Agong is Commander-in-Chief of the Federation's Armed Forces. As such, he is the highest-ranking officer in the military chain of command.

As the Supreme Commander of the Malaysian Armed Forces, the Yang di-Pertuan Agong appoints the Chief of the Armed Forces Staff, on the advice of the Armed Forces Council. He also appoints the service heads of each of the three branches of the military forces.

King's Birthday

The first Saturday of June yearly is mandated by the Malaysian Constitution as the Yang di-Pertuan Agong's official birthday.

Trooping the Colour

Trooping the Colour in Malaysia, althrough inherted from the British, has tranformed into a more grander and more Malaysian celebration on the first Saturday of June annually live on Kuala Lumpur's Independence Square, which is both open to invited guests and the general public. As the Supreme Commander of the Malaysian Armed Forces, the Yang di-Pertuan Agong takes the salute on this day together with the commanders of the three services of the Malaysian Armed Forces, the Joint Forces Command, Malaysia and the members of the Malaysian Armed Forces Council, of which he is the chairman.

Here are the features that make it truly Malaysian:

- The Malaysian Royal Armoured Corps's Mounted Ceremonial Squadron plus members of the Royal Malaysian Police provide the Sovereign's Escort for the ceremony. The MCS's fanfare trumpeters sound a fanfare upon the Sovereign's arrival in the Merdeka Square Saluting Base while the MCS itself also has a motorized mounted escort troop and a lancers guard troop ready to accompany them on the way.
- Instead of being just purely a infantry activity the entire Malaysian Armed Forces go out in full participation in this parade, as seen in the 4 Guard Companies and the National Defence University Band or the Armed Forces Central Band participating in the ceremonial march.
- An open top Land Rover is used in the inspection segment of the parade.
- The Saluting Base in Independence Square is more longer in construction in order for more invited guests to attend the ceremony and take the salute.
- All the commands and salutes are said in Malay, like *Hormat DiRaja* (Royal Salute), *Hormat Perdana* (Premier's Salute) and *Hormat Sedia* (General Salute).
- The roles of Field Officer, Brigade Majors (the parade has two instead of 1, which is another unique feature), Adjutant and Ensigns are occupied by select officers of the Armed Forces, either Army, Navy or Air Force officers, with Armed Forces NCOs doing the jobs of Regimental Sergeants Major and Colour Sergeants. However the Deputy Brigade Major (coming from the Malaysian Army) is also the concurrent commander of the 1st parade unit, that of the Joint Escort for/to the Colours, which has 5 Sergeants Major with the rank of Warrant Officer 2 or Warrant Officer 1 while the three other units have 3 officers and 2 Warrant Officers each
- All Warrant Officers in this parade, like their British counterparts, carry pace sticks but the WOs of No.1 Guard Company (Composite) throw them to the Orderlies during the Trooping segment
- State Flypast by 5 military helicopters of the Flag of Malaysia, Flag of the Malaysian Armed Forces, and Flags of the Malaysian Army, Royal Malaysian Navy and Royal Malaysian Air Force during the performance of Negaraku, the National Anthem
- 21-gun salutes are performed during the National Anthem
- Negaraku in its abbreviated form is also performed during the colours obtainment segment by the Joint Escort for the Colors, which becomes the Escort to the Colours after the Colours Party join the Escort
- In the Islamic traditions of the Armed Forces, prayers are done after the marchpast ends.

All three branches of the Armed Forces - the Malaysian Army (represented by the Royal Malay Regiment or other units), the Royal Malaysian Navy, and the Royal Malaysian Air Force - participate in the Trooping, in their No. 1 uniforms. The band in attendance is either the Central Band of the Armed Forces or the Band of the National Defence University.

The Colours Party and the Escort for(to) the Colours also reflect the three participant Armed Forces branches.

The Colours Party is composed of Ensigns, Colour Sergeants and assistant soldiers making up three Colours Parties from the Army, and there is also a single Colour Party each from the Navy and the Air Force. The Escort for(to) the Colours is a composite company, comprising an Army platoon and a squad each from the Navy and Air Force ready to receive their respective colours during the ceremony. The Parade Field Officer, Brigade Major and Adjutant are also from all the Armed Forces branches, and so too are the Regimental Sergeants-Major and Colour Sergeants.

RTM broadcasts this unique ceremony live, with the telecast starting at 7:30 in the morning with a nationwide simulcast.

====Details of the Trooping====* Hand over of command to the FO

- Parade stands at ease in preparation
- Salutes
  - Commander's Salute
  - General Salute
  - Ministerial Salute
  - Prime Minister's Salute
- Arrival of the Sovereigns and first Royal Salute with 21-gun salute by the Royal Artillery Regiment, Malaysian Army and first State Flypast by helicopters of the Royal Malaysian Air Force carrying the Flag of Malaysia, the Armed Forces Flag and the flags of the Army, Navy and Air Force
- Parade Inspection

  Menjunjung Duli is played during the inspection by the Massed Bands.

- Trooping and Marchpast of the Massed Armed Forces Bands, in both slow and quick time
  - During the quick march, a lone drummer from the Massed Bands away and goes into the No.1 Guard, and when the music stops he beats the Drummer's Call
- Trooping Proper
  - Joint Escort for the Colours prepares for march after the Drummer's Call ends and when the drummer marches back to the Massed Bands. The Subaltern then takes change and all the SMs' pace sticks are removed using a single throw (another unique feature of the ceremony) and are then given to the orderlies so that they can draw and use their swords
  - Joint Escort marches in quick time to the Joint Colours Party
  - Handover of the Royal Colours to the RSMs
  - Slow March of the Colours Party and the RSMs happens and then the Ensigns, after saluting and returning their swords, receive their Royal Colours from the RSMs
  - Second performance of the National Anthem (in abbreviated form)
  - Joint Escort becomes the Joint Escort to the Colours, and the Colours Party join the company, thus merging them with the Joint Escort now that the Colours are in their full possession.
  - The Joint Escort begins its slow march for the Trooping, marching towards No.4 Guard
  - The FO commands the parade to present arms when the Joint Escort begins its trooping
  - Trooping of the Joint Escort in slow time, accompanied by the Massed Armed Forces Bands
  - After the Colours have been trooped in slow time, the Joint Escort halts in place, turns about, and then presents arms. After this, the parade is told to shoulder arms by the FO, signalling the end of the Trooping proper
- Marchpast
  - The FO tells the parade officers, the Colours and WOs to take post
  - The parade executes a right form after which, to the tune of the military band, it does a about turn to the right while forming divisions
  - The FO, with the parade now in position, commands the slow march.

Yang di-Pertuan Agong Scholarship

In November 2006, the 10th Yang di-Pertuan Agong awarded, for the first time, the Yang di-Pertuan Agong Scholarship to ten outstanding students to pursue postgraduate studies at high-ranking world universities. The award of scholarships was held at the Istana Negara in conjunction with the Independence Day celebrations and Council of Rulers Conference.[4]

Immunity

In 1993, an amendment to the Malaysian constitution removed the legal immunity of the Yang di-Pertuan Agong and the rulers in their personal capacity. A Special Court (*Makhamah Khas Raja-raja*) is established where civil and criminal proceedings can be made against a ruler with the approval of the Attorney General. The right to sue a ruler is limited to Malaysian citizens following a precedent. The Special Court also have jurisdiction where a ruler initiates legal actions against any party.

When a ruler is charged with an offence in the Special Court, he is required to stop exercising the functions of a ruler. In the event of a ruler being sentenced to imprisonment, he will cease to be a ruler unless a free pardon is granted. [5]

The Yang di-Pertuan Agong or any ruler cannot pardon himself or his immediate family. In such case, they may request clemency from the Conference of Rulers.

The Yang di-Pertuan Agong cannot be sued in court for his actions while carrying out his official duties. Any claims can be made against the federal government.

Royal Standards

The Royal Standard of the Yang di-Pertuan Agong is royal yellow with the Coat of arms of Malaysia in the center, surrounded by a rice paddy wreath. The same goes for the Royal Standards of the Raja Permaisuri Agong and the Timbalan Yang di-Pertuan Agong, but the designs are different. The Queen's Standard is green in color, with the coat of arms at the center surrounded by the paddy wreath. The Deputy Yang di-Pertuan Agong's standard is bicolored, yellow at the top and light blue at the bottom, with the coat of arms at the center (without the paddy) and below that is the office bearer's title.

Royal Style

Formal address to the Yang di-Pertuan Agong is taken seriously in Malaysia. There are two ways of addressing the Yang di-Pertuan Agong:

- **Malay** : Tuanku
- **English** : Your Majesty

Monarchical styles of **The Yang di-Pertuan Agong**	
Reference style	His Majesty
Spoken style	Your Majesty
Alternative style	*Tuanku*

Biography

Early career

Born at Istana Anak Bukit near Alor Star as Tunku Abdul Halim, he was the second, but eldest surviving son, of Sultan Badlishah (born 1894; reigned 1943–1958), who later became the 27th Sultan of Kedah. His mother was Tunku Sofiah binti Tunku Mahmud (born 1910), who died in an automobile accident on 28 February 1935. Tunku Abdul Halim's maternal grandfather, Tunku Mahmud, was once *Raja Muda* or heir presumptive to the throne of Kedah.[1]

He was educated at Alor Merah and Titi Gajah Malay schools and Sultan Abdul Hamid College in Alor Star between 1946 and 1948. He went on to Wadham College, Oxford and obtained a Diploma in Social Science and Public Administration. He subsequently joined the Kedah Administrative Service, serving in the Alor Star district office and later, the state treasury.[2]

On 6 August 1949 he was appointed *Raja Muda* or heir apparent and succeeded as twenty-eighth Sultan of

Kedah on his father's death on 15 July 1958.[3] He was installed at the Balai Besar in Alor Star on 20 February 1959.[4]

First Election as Deputy King

Tuanku Abdul Halim (as he became), served as Deputy Yang di-Pertuan Agong between 21 September 1965 and 20 September 1970.

Election as King

Tuanku Abdul Halim was elected as the fifth Yang di-Pertuan Agong of Malaysia and served his term in office from 21 September 1970 to 20 September 1975.

He is the third youngest monarch to ascend the throne of Yang di-Pertuan Agong after Tuanku Syed Putra of Perlis and Tuanku Mizan Zainal Abidin of Terengganu.

During his kingship, Tuanku Abdul Halim presided over the first transfer of power of the civilian government when his uncle, Prime Minister Tunku Abdul Rahman resigned in favour of his deputy Tun Abdul Razak. Tunku Abdul Rahman had felt that he should not serve under a nephew, given strict Malay royal protocol, but agreed to stay on as prime minister for one day of Tuanku Abdul Halim's reign.[5]

The Yang di-Pertuan Agong in a carriage with Elizabeth II on a state visit to London, 1974.

Second election as Deputy King

On 2 November 2006, Tuanku Abdul Halim was for the second time elected Deputy Yang di-Pertuan Agong to serve a five-year term. He is the third person to have been elected twice to this office, after Tuanku Jaafar of Negeri Sembilan and Sultan Mizan Zainal Abidin of Terengganu.

Second election as King

In October 2011, Abdul Halim was elected to serve a second term as the Yang di-Pertuan Agong which commenced on 13 December 2011. He is the first person to hold the position twice.[6] He is also the oldest Malay Ruler to be crowned Yang di-Pertuan Agong at 84 years 15 days, beating the previous record holder, Sultan Salahuddin Abdul Aziz of Selangor, who was crowned at 73 years 49 days.

A Council of Regency consisting of his brothers Tunku Annuar, Tunku Sallehuddin, Tunku Abdul Hamid Thani, and daughter Tunku Puteri Intan Safinaz will discharge his duties as Sultan of Kedah while he serves his term as King.[7]

Family Life

Tuanku Abdul Halim has two wives:

1. Tuanku Bahiyah, daughter of Tuanku Abdul Rahman of Negeri Sembilan, married 1956. She served as Sultanah of Kedah and Raja Permaisuri Agong. She died on 26 August 2003 at Istana Kuala Cegar in Alor Star. [8] They have 3 daughters: Tunku Soraya, Tunku Sarina and Tunku Intan Safinaz. Tunku Soraya and Tunku Sarina are twins. The daughters produce 5 grandchildren: three grandsons, Raja Nabil Imran, Raja Idris Shah and Raja Siffudin Muadzam and two granddaughters, Raja Sarina Bahiyah and Raja Safia Azizah.
2. Cik Haminah binti Hamidun, married 1975. A commoner from Perak, she was titled Che Puan Kedah until 9 January 2004 when she was crowned to Sultanah.[9] She is serving as Raja Permaisuri Agong during his second term as Yang di-Pertuan Agong.

Golden Jubilee Celebrations

On 15 July 2008, Tuanku Abdul Halim Muadzam Shah celebrated his Golden Jubilee as the Sultan of Kedah. He is only the fourth Sultan in a line of 28 Sultans who have celebrated 50 years of reign in Kedah.[10]

In conjunction with the Golden Jubilee, 15 July 2008 was declared as a public holiday for the whole state of Kedah.[11] A ceremony of handing over the contributions in conjunction with the Golden Jubilee was held at the Istana Anak Bukit on 6 July 2008 by Kedah Menteri Besar Azizan Abdul Razak. Throughout the whole week of the Golden Jubilee, various events were held to commemorate the Sultan.

Kedah Kingdom

Map of the early Kadaha kingdom and the Early transpeninsular routeway.

Kedah Kingdom (630-1136) was founded by Maharaja Derbar Raja of Gemeron around 630 CE and the Hindu dynasty ended when Phra Ong Mahawangsa converted to Islam.

History

Main article: Early history of Kedah

Around 170 CE a group of native refugees of Hindu faith arrived at Kedah, joining them soon were peoples from nearby islands and from the northern Mon-Khmer region. Ancient Kedah covered the areas of Kuala Bahang, Kuala Bara, Kuala Pila and Merpah, and the inhabitants of Kedah appointed Tun Derma Dewa and Tun Perkasa as their village chiefs.

Timeline

Malaysia Portal

Ancient artefact found in Kedah.

The king from Gemeron

In the year 630 CE, Maharaja Derbar Raja of Gemeron (now known as Bandar Abbas) in Persia was defeated in battle and escaped to Sri Lanka, and he was later blown off course by a storm to the remote shores of Kuala Sungai Qilah, Kedah. The inhabitants of Kedah found him to be a valiant and intelligent person, and they made him the king of Kedah. In the year 634 CE, a new kingdom was formed in Kedah consisting of Persian royalty and native Malay of Hindu faith, the capital was Langkasuka.

Conversion to Islam

In the late 11th century, after the Chola military left Kadaram, the 9th Hindu rajah, Dubar Raja II, renounced the Hinduism and converted to Islam, which was introduced by Muslims from neighbouring Aceh, he also changed his name to Sultan Mudzafar Shah. He ruled the northern region of Malay Peninsula from 1136 to 1179. According to the *Kedah Annals*, the first king of Kedah was Maharaja Derbar Raja I, a fleeing king from Gameron in Persia.

List of rulers

According to tradition, the founding of the Kedah kingdom (or *Kadaram*) occurred around 630 CE, replacing the ancient kingdom of Langkasuka. It is said to have been founded by Durbaraja I, a Hindu who originated from Gemeron in Persia. The Hindu dynasty ended when the ninth king Durbaraja II, styled "Phra Ong Mahawangsa" by the Siamese, converted to Islam in 1136.[1]

Pre-Islamic era

The following is a list of kings of Kadaram, nine in total. Each used the Hindu title of *maharaja*. The exact dates of each king's reign are not known.

1. Sri Paduka Maharaja Durbar Raja I (c. 630–?)
2. Sri Paduka Maharaja Diraja Putra
3. Sri Paduka Maharaja Maha Dewa I
4. Sri Paduka Maharaja Karna Diraja
5. Sri Paduka Maharaja Karma
6. Sri Paduka Maharaja Maha Dewa II
7. Sri Paduka Maharaja Darma Raja
8. Sri Paduka Maharaja Maha Jiwa
9. Sri Paduka Maharaja Durbar Raja II (?–1136; succeeded as *Sultan of Kedah*, see below)

Source for the list of sultans is the Muzium Negeri Kedah, Alor Setar, Malaysia. "The sultans of Kedah".

Islamic era

The beginning of the use of the title *sultan* in Kedah is attributed to a visit by a Muslim scholar from Yemen, Sheikh Abdullah bin Ja'afar Quamiri, to Durbaraja II's palace at Bukit Mariam in 1136. The audience resulted in the king's conversion to Islam. He adopted the name "Mud'zafar Syah" and established the sultanate of Kedah, which continues to rule today.[1]

Sultans of Kedah

Number	Sultan	Reign
1	Sultan Mudzafar Shah I	1136–1179
2	Sultan Mu'adzam Shah	1179–1201
3	Sultan Muhammad Shah	1201–1236
4	Sultan Mudzaffar Shah II	1236–1280
5	Sultan Mahmud Shah I	1280– 1321
6	Sultan Ibrahim Shah	1321– 1373
7	Sultan Sulaiman Shah I	1373–1422
8	Sultan Ataullah Muhammad Shah I	1422–1472
9	Sultan Muhammad Jiwa Zainal Adilin I	1472–1506

Culture

Nobat

The Nobat musical instruments of Nagara and Nepiri were introduced to Kedah by Maharaja Derbar Raja. The instrument is also called semambu. The band is led by the king, and it consists of drums, a gong, a flute and a

trumpet. Today, Nobat is a Royal orchestra, played only during royal ceremonies such as inaugurations, weddings, and funerals. The building which houses the instruments and where the ensemble rehearses is known as the Balai Nobat, literally the Office of Nobat.

Morocco

From Wikipedia, the free encyclopedia

Morocco (Arabic: المغرب *al-Maghrib* ; Berber: ⵍⵎⵖⵔⵉⴱ / ⵓⵎⵓⵔⵕ[7] *Elmeɣrib / Amerruk*), officially the **Kingdom of Morocco**,[8] is a country located in North Africa. It has a population of about 35 million and an area of 710,850 km², including the disputed region of the Western Sahara, seen by and mostly administered by Morocco as the Southern Provinces. Morocco is part of the Maghreb region, in addition to Tunisia, Algeria, Mauritania, and Libya, with which it shares cultural, historical and linguistic ties.

Morocco is a constitutional monarchy with an elected parliament. The King of Morocco holds vast executive powers, including the power to dissolve the parliament. Executive power is exercised by the government but more importantly by the king himself. Legislative power is vested in both the government and the two chambers of parliament, the Assembly of Representatives and the Assembly of Councillors. The king can also issue decrees called dahirs which have the force of law. The latest Parliamentary elections were held in November 25, 2011, and were considered by some neutral observers to be mostly free and fair. Voter turnout in these elections was estimated to be 43% of registered voters, but only about 25% of Moroccan adult citizens actually voted. The rest either chose not to vote or they were not registered as voters. The political capital is Rabat, but the largest city is Casablanca; other main cities include Marrakesh, Tetouan, Tangiers, Salé, Fez, Agadir, Meknes, Oujda, and Nador.

Most Moroccans natively speak either Moroccan Arabic or Berber as a mother tongue. Both languages have regional dialects and accents. Hassaniya Arabic is also spoken natively in the southern parts of the country by a small population.

Etymology

The full Arabic name *al-Mamlakat al-Maghribiyyah* (المملكة المغربية) translates to "The Western Kingdom". *Al-Maghrib* (المغرب), meaning "The West", is commonly used. For historical references, medieval Arab historians and geographers used to refer to Morocco as *al-Maghrib al-Aqṣá* (المغرب الأقصى, "The Farthest West"), disambiguating it from neighboring historical regions called *al-Maghrib al-Awsaṭ* (المغرب الأوسط, "The Middle West", Algeria) and

al-Maghrib al-Adná (المغرب الأدنى, "The Nearest West", Tunisia).[9]

The English name "Morocco" originates from Spanish "Marruecos" or the Portuguese "Marrocos", from medieval Latin "Morroch", which referred to the name of the former Almoravid and Almohad capital, Marrakesh.[10] In Persian and Urdu, Morocco is still called "Marrakesh". Until recent decades, Morocco was called "Marrakesh" in Middle Eastern Arabic. In Turkish, Morocco is called "Fas" which comes from the ancient Idrisid and Marinid capital, Fez.

The word "Marrakesh" is made of the Berber word combination *Mur n Akush* (*Mur n Akuc*), meaning *Land of God*.

History

Main article: History of Morocco

The earliest well-known Moroccan independent state was the Berber kingdom of Mauretania under king Bocchus I. This Berber Kingdom of Mauretania (current northern Morocco) dates at least to 110 BC.[11] The region remained a part of the Roman Empire until 429 AD when invading Vandals overran the area and Roman administrative presence came to an end.

Ruins of Chellah, Rabat

Umayyad Muslims conquered the region in the 7th century, bringing their language, their system of government, and Islam, to which many of the Berbers slowly converted, mostly after the Arab rule receded. In the Islamic era the first Moroccan Muslim state, independent from the Abbasid Empire, was The Kingdom of Nekor, an emirate in the Rif area. It was founded by the Legend of Salih I ibn Mansur in 710 AD, as a client state to Caliphal grant. According to the Medieval Legends Idris I fled to Morocco from the Abbasids' massacre against his tribe in Iraq and managed to convince the Awraba Berber tribes to break allegiance to the distant Abbasid caliphs in Baghdad. He founded the Idrisid Dynasty in 780 AD. Morocco became later a center of learning and a major power. From the 11th century onwards, a series of powerful Berber[12][13][14] dynasties arose. Under the Almoravid dynasty and the Almohad dynasty, Morocco dominated the Maghreb, Muslim-conquered Spain, and the western Mediterranean region. In the 13th century the Merinids gained power over Morocco and strove to replicate the successes of the Almohads. In the 15th century the Reconquista ended Islamic rule in central and southern Iberia (modern day Spain + Portugal) and many Muslims and Jews fled to Morocco. Under the Saadi Dynasty, the first Moroccan dynasty initiated by ethnic Arabs since the Idrisids, the country would consolidate power and fight off Portuguese and Ottoman invaders, as in the battle of Ksar el Kebir. The reign of Ahmad al-Mansur brought new wealth and prestige to the Sultanate, and a massive invasion of the Songhay Empire was initiated.

However, managing the territories across the Sahara proved too difficult. After the death of al-Mansur the country was divided among his sons. In 1666 the sultanate was reunited by the Alaouite dynasty, who have since been the ruling house in Morocco. The organization of the state developed with Ismail Ibn Sharif. With his Jaysh d'Ahl al-Rif (the Riffian Army) he seized Tangier from the English in 1684 and drove the Spanish from Larache

in 1689.

In 1912, after the First Moroccan Crisis and the Agadir Crisis, the Treaty of Fez was signed, effectively dividing Morocco into a French and a Spanish protectorate. In 1956, after forty-four years of occupation, Morocco regained independence from France and Spain as the "Kingdom of Morocco".

Population of Morocco

The area of present-day Morocco has been inhabited since Paleolithic times (at least since 200,000 BC, as attested by signs of the Aterian culture), a period when the Maghreb was less arid than it is today. In Paleolithic ages, the geography of Morocco resembled a savanna more than the present-day arid landscape.[15] In the classical period, Morocco was known as Mauretania, although this should not be confused with the modern-day nation of Mauritania. The suggested skeletal similarities between the robust Iberomaurusian "Mechta-Afalou" burials and European Cro-Magnon remains, as well as the case for continuity of the bearers of the Iberomaurusian industry from Morocco with later northwest African populations suggested by the dental evidence should be considered. Current scientific debate is concerned with determining the relative contributions of different periods of gene flow to the current gene pool of North Africans. Anatomically modern humans are known to have been present in North Africa during the Upper Paleolithic 175,000 years ago as attested by the Aterian culture. With apparent continuity, 22,000 years ago, the Aterian was succeeded by the Iberomaurusian culture which shared similarities with Iberian cultures. The Iberomaurusian was succeeded by the The Bell-Beaker culture in Morocco.

Additionally, recent studies have discovered a close mitochondrial link between Berbers and the Saami of Scandinavia which confirms that the Franco-Cantabrian refuge area of southwestern Europe was the source of late-glacial expansions of hunter-gatherers that repopulated northern Europe after the Last Glacial Maximum and reveals a direct maternal link between those European hunter-gatherer populations and the Berbers.[16]

A Jewish community historically lived in Morocco. In any case, over the centuries, nearly all Berbers were Islamicized. Still, a large Jewish community remained in Morocco especially after the arrival of Sephardi Jews following the Alhambra decree. In the early 20th century, numerous Moroccan Jews emigrated to the United States and Italy, after Italian Jews established study centers and schools to bring the Enlightenment to Moroccan Jews.

In 1948, before the creation of Israel, Jews numbered approximately 265,000. The hostilities and disruption of the war of independence and other wars in the Mideast caused more Jews to leave for Palestine, Europe and the United States. Seven thousand live there now (mostly in a few major cities). In relation to the commemoration of Christopher Columbus' voyage to the New World, numerous academic studies were undertaken about the Moroccan Jews of Morocco. The late king Hassan II reached out internationally to descendants of Jews who had lived in the country and encouraged returns and visits, with recognition of their contributions to the nation, but there has not been markedly increased immigration.

Romans and Morocco

North Africa and Morocco were slowly drawn into the wider emerging Mediterranean world by Phoenician trading colonies and settlements in the early Classical period. Major early substantial settlements of the Phoenicians were at Chellah, Lixus and Mogador,[17] with Mogador being a Phoenician colony as early as the early 6th century BC.[18] The arrival of Phoenicians heralded a long engagement with the wider Mediterranean, as this strategic region formed part of the Roman Empire,

A Roman mosaic in Volubilis

as Mauretania Tingitana. In the 5th century, as the Roman Empire declined, the region fell to the Vandals, Visigoths, and then the Byzantine Empire, the Eastern Roman Empire, in rapid succession. During this time, however, the high mountains of most of modern Morocco remained unsubdued, and stayed in the hands of their Berber inhabitants. Christianity was introduced in the 2nd century and gained converts in the towns and among slaves and Berber farmers.

Islamic era

The Kasbah of Aït Benhaddou, High Atlas. Built by the Berbers from the 14th century onwards, a Kasbah was a single family stronghold (as opposed to a Ksar: a fortified tribal village).

Islamic expansion began in the 7th century. In 670 AD, the first Islamic conquest of the North African coastal plain took place under Uqba ibn Nafi, a general serving under the Umayyads of Damascus. Mercenaries of The Ummayyad armies brought their language and Islam, to which most of the Berbers converted. After the outbreak of the Great Berber Revolt in 739, the region's Berber population asserted its independence, forming states and kingdoms such as the Miknasa of Sijilmasa and the Barghawata. Under Idris ibn Abdallah, who was appointed by the Awraba Berbers of Volubilis to be their representative, the country soon cut ties and broke away from the control of the distant Abbasid caliphs in Baghdad and the Umayyad rule in Al-Andalus. The Idrisids established Fes as their capital and Morocco became a centre of Jewish learning and a major regional power.

Morocco would reach its height under a series of Berber dynasties that replaced the Idrisids after the 11th century.[19] From the 13th century onwards the country saw a massive migration of Banu Hilal Arab tribes. Their arrival was to have a critical effect on the nation: due to them nomadism returned, urban civilization fell and the country's inhabitants were quickly becoming Arabized. The Maghrawa, the Almoravids, the Almohads, the Marinids, the Wattasids and finally the Saadi dynasty would see Morocco rule most of Northwest Africa, as well as large sections of Islamic Iberia, or Al-Andalus. Following the Reconquista of the Iberian Peninsula, large numbers of Muslims and Jews were forced to flee to Morocco.[20]

The Sultan Abderrahmane of Morocco, by Eugène Delacroix

After the Saadi, the Alaouite Dynasty eventually gained control. Morocco was facing aggression from Spain and the Ottoman Empire that was sweeping westward. The Alaouites succeeded in stabilizing their position, and while the kingdom was smaller than previous ones in the region, it remained quite wealthy. In 1684, they annexed Tangier. The organization of the kingdom developed under Ismail Ibn Sharif (1672–1727), who, against the opposition of local tribes began to create a unified state.[21] According to Elizabeth Allo Isichei, "In 1520, there was a famine in Morocco so terrible that for a long time other events were dated by it. It has been suggested that the population of Morocco fell from 5 to under 3 million between the early sixteenth and nineteenth centuries."[22]

Morocco was the first nation to recognize the fledgling United States as an independent nation in 1777.[23] In the beginning of the American Revolution, American merchant ships were subject to attack by the Barbary Pirates while sailing the Atlantic Ocean. On December 20, 1777, Morocco's Sultan Mohammed III declared that the American merchant ships would be under the protection of

the sultanate and could thus enjoy safe passage. The Moroccan-American Treaty of Friendship stands as the U.S.'s oldest non-broken friendship treaty.[24][25]

European influence

Main articles: Portuguese Empire, French colonial empire, and Spanish Protectorate of Morocco

Pre-1956 Tangier had a highly heterogeneous population that included 40,000 Muslims, 30,000 Europeans and 15,000 Jews.[26]

Successful Portuguese efforts to invade and control the Atlantic coast in the 15th century did not profoundly affect the Mediterranean heart of Morocco. After the Napoleonic Wars, Egypt and the North African Maghreb became increasingly ungovernable from Istanbul, the resort of pirates under local beys, and as Europe industrialized, an increasingly prized potential for colonization. The Maghreb had far greater proven wealth than the unknown rest of Africa and a location of strategic importance affecting the exit from the Mediterranean. For the first time, Morocco became a state of some interest in itself to the European powers.

France showed a strong interest in Morocco as early as 1830.[27] Recognition by the United Kingdom in 1904 of France's sphere of influence in Morocco provoked a reaction from the German Empire; the crisis of June 1905 was resolved at the Algeciras Conference in Spain in 1906, which formalized France's "special position" and entrusted policing of Morocco jointly to France and Spain. The Agadir Crisis provoked by the Germans, increased tensions between European powers. The Treaty of Fez (signed on March 30, 1912) made Morocco a protectorate of France. By the same treaty, Spain assumed the role of protecting power over the northern and southern Saharan zones on November 27 that year.[28]

Many Moroccan soldiers (Goumieres) served in the French army in both World War I and World War II, and in the Spanish Nationalist Army in the Spanish Civil War and after (*Regulares*).

Resistance

Death of Spanish general Margallo during the Melilla War. Le Petit Journal, 13 November 1893.

Under the French protectorate, Moroccan natives were denied their basic human rights such as freedom of speech, the right of gathering and travel in their own country. French settlers built for themselves modern European-like cities called "villages" or "villes" next to poor old Arab cities called "Medinas". The French colonial system forbade native Moroccans from living, working, and traveling into the French quarters. The French education system taught a minority of noble native Moroccan families about French history, art and culture, while disregarding their native language and culture. Colonial authorities exerted tighter control on religious schools and universities, namely "madrassas" and Quaraouaine university. The rise of a young Moroccan intellectual class gave birth to nationalist movements whose main goals were to restore the governance of the country to its own people.[29] Nationalist political parties, which subsequently arose under the French protectorate, based their arguments for Moroccan independence on such World War II declarations as the Atlantic Charter (a joint U.S.-British statement that set forth, among other things, the right of all people to choose the form of

government under which they live). A manifesto of the Istiqlal Party (Independence party in English) in 1944 was one of the earliest public demands for independence. That party subsequently provided most of the leadership for the nationalist movement.

France's exile of Sultan Mohammed V in 1953 to Madagascar and his replacement by the unpopular Mohammed Ben Aarafa, whose reign was perceived as illegitimate, sparked active opposition to the French and Spanish protectorates. The most notable violence occurred in Oujda where Moroccans attacked French and other European residents in the streets. Operations by the newly created "Jaish al-tahrir" (Liberation Army), were launched on October 1, 1955. Jaish al-tahrir was created by "Comité de Libération du Maghreb Arabe" (Arab Maghreb Liberation Committee) in Cairo, Egypt to constitute a resistance movement against occupation. Its goal was the return of King Mohammed V and the liberation of Algeria and Tunisia as well. France allowed Mohammed V to return in 1955, and the negotiations that led to Moroccan independence began the following year.[30]

All those events helped increase the degree of solidarity between the people and the newly returned king. For this reason, the revolution that Morocco knew was called "Taourat al-malik wa shaab" (The revolution of the King and the People) and it is celebrated every August 20.

Contemporary Morocco

Further information: Insurgency in the Maghreb (2002–present)

The Mausoleum of Mohammed V in Rabat

On November 18, 2006, Morocco celebrated the 50th anniversary of its independence. Morocco recovered its political independence from France on March 2, 1956, and on April 7, France officially relinquished its protectorate. Through agreements with Spain in 1956 and 1958, Moroccan control over certain Spanish-ruled areas was restored, though attempts to claim other Spanish colonial possessions through military action were less successful. The internationalized city of Tangier was reintegrated with the signing of the Tangier Protocol on October 29, 1956 (see Tangier Crisis). Hassan II became King of Morocco on March 3, 1961. His early years of rule were marked by political unrest. The Spanish enclave of Ifni in the south was reintegrated to the country in 1969. Morocco annexed the Western Sahara during the 1970s ("Marcha Verde", Green March) after demanding its reintegration from Spain since independence, but final resolution on the status of the territory remains unresolved. (See History of Western Sahara.)[20]

Political reforms in the 1990s resulted in the establishment of a bicameral legislature in 1997. Morocco was granted Major non-NATO ally status by the United States in June 2004 and has signed free trade agreements with the United States and the European Union.

Morocco has always been known for its islamic liberalism and openness towards the Western world. King Mohammed VI of Morocco with his ruling elite are democratically minded, showing tolerance within the limits of territorial integrity and traditional laws and customs.[31]

Geography

Main article: Geography of Morocco

Morocco has a coast on the Atlantic Ocean that reaches past the Strait of Gibraltar into the Mediterranean Sea. It is bordered by Spain to the north (a water border through the Strait and land borders with three small Spanish-controlled exclaves, Ceuta, Melilla, and Peñón de Vélez de la Gomera), Algeria to the east, and Western Sahara to the south. Since Morocco controls most of Western Sahara, its *de facto* southern boundary is with Mauritania.

High Atlas in central Morocco

The internationally recognized borders of the country lie between latitudes 27° and 36°N, and longitudes 1° and 14°W. Adding Western Sahara, Morocco lies mostly between 21° and 36°N, and 1° and 17°W (the Ras Nouadhibou peninsula is slightly south of 21° and west of 17°).

The geography of Morocco spans from the Atlantic Ocean, to mountainous areas, to the Sahara (desert). Morocco is a Northern African country, bordering the North Atlantic Ocean and the Mediterranean Sea, between Algeria and the annexed Western Sahara.

Essaouira Beach

A large part of Morocco is mountainous. The Atlas Mountains are located mainly in the center and the south of the country. The Rif Mountains are located in the north of the country. Both ranges are mainly inhabited by the Berber people. At 172,402 sq mi (446,519 km^2), Morocco is the fifty-seventh largest country in the world (after Uzbekistan). Algeria borders Morocco to the east and southeast though the border between the two countries has been closed since 1994.

Bin el Ouidane Dam, Beni-Mellal

Spanish territory in Morocco comprises five enclaves on the Mediterranean coast: Ceuta, Melilla, Peñón de Vélez de la Gomera, Peñón de Alhucemas, the Chafarinas islands, and the disputed islet Perejil. Off the Atlantic coast the Canary Islands belong to Spain, whereas Madeira to the north is Portuguese. To the north, Morocco is bordered by and controls part of the Strait of Gibraltar, giving it power over the waterways in and out of the Mediterranean sea.

The Rif mountains occupy the region bordering the Mediterranean from the north-west to the north-east. The Atlas Mountains run down the backbone of the country, from the south west to the north east. Most of the south east portion of the country is in the Sahara Desert and as such is generally sparsely populated and unproductive economically. Most of the population lives to the north of these mountains, while to the south is the desert.

To the south, lies the Western Sahara, a former Spanish colony that was annexed by Morocco in 1975 (see Green March).[32] Morocco claims that the Western Sahara is part of its territory and refers to that as its Southern Provinces.

Morocco's capital city is Rabat; its largest city is its main port, Casablanca. Other cities include Agadir, Essaouira, Fes, Marrakech, Meknes, Mohammadia, Oujda, Ouarzazat, Safi, Salé, Tangier and Tétouan.

Morocco is represented in the ISO 3166-1 alpha-2 geographical encoding standard by the symbol *MA*.[33] This code was used as the basis for Morocco's internet domain, .ma.[33]

Climate

The climate is Mediterranean in the North and in some mountains (West of Atlas), which becomes more extreme towards the interior regions. The terrain is such that the coastal plains are rich and accordingly, they comprise the backbone for agriculture, especially in the North. Forests cover about 12% of the land while arable land accounts for 18%; 5% is irrigated. In the Atlas (Middle Atlas), there are several different climates: Mediterranean (with some more humid and fresher variants), Maritime Temperate (with some humid and fresher variants too) that allow different species of oaks, moss carpets, junipers, atlantic cedars and many other plants, to form extensive and very rich humid cloud forests. In the highest peaks a different climate may occur. On the other side of Atlas mountains (East Atlas), the climate changes, due to the barrier/shelter effect of these mountainous system, turning it very dry and extremely warm during the summer (that can last several months), especially on the lowlands and on the valleys faced to the Sahara. Here it starts the big Desert Sahara and it is perfectly visible, for example, on the Draa Valley, on which it is possible to find oases, sand dunes and rocky desert landscapes. So the climate in this region is desert.

Biodiversity

The Barbary lion, now extinct in the wild, was native to Morocco and is a national emblem of the country[34]

Further information: List of birds of Morocco, List of the Butterflies of Morocco, List of mammals of Morocco, List of reptiles of Morocco, Flora of Morocco, and List of ecoregions in Morocco.

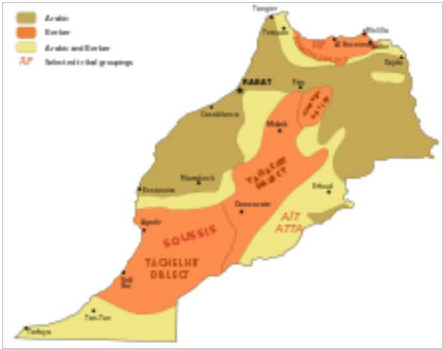
Morocco is known for its wildlife biodiversity. Birds represent the most important fauna.[35] The avifauna of Morocco includes a total of 454 species, five of which have been introduced by humans, and 156 are rarely or accidentally seen.[36]

The last known Barbary lion in the wild was shot in the Atlas Mountains in 1922.[37] The two other primary predators of northern Africa, the Atlas bear and Barbary leopard, are now also extinct and critically endangered, respectively.

Demographics

Main articles: Demographics of Morocco, Religion in Morocco, and Moroccan people

Most Moroccans practice Sunni Islam and are of either Arabized Berbers or Berber ethnic. Arabized-Berber make up about 99.1% of the Moroccan population.[34]



Population of Morocco [38]	
Year	**Million**
1971	15.7
1990	24.8
2009	32.0
Source: OECD/World Bank	

Morocco has been inhabited for at least the last 200,000 years. The Muslims conquered the territory that would become Morocco in the 7th and 11th centuries, at the time under the rule of various late Byzantine Roman leaders and indigenous Berber and Romano-Berber principalities, laying the foundation for the emergence of an Arab-Berber culture. A sizeable portion of the population is identified as Haratin and Gnawa (or Gnaoua), black or mixed race. Morocco's Jewish minority (265,000 in 1948) has decreased significantly and numbers about 5,500 *(See History of the Jews in Morocco)*.[39] Most of the 100,000 foreign residents are French or Spanish. Some of them are colonists' descendants, who primarily work for European multinational companies, others are married to

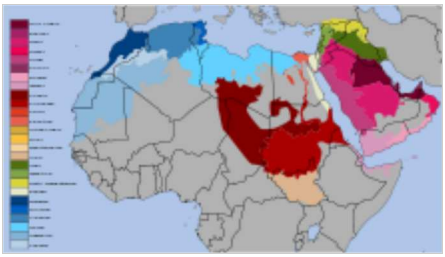
Moroccans and preferred to settle in Morocco. Prior to independence, Morocco was home to half a million Europeans.[40]

According to The Medieval Legends, In the 12th and 13th centuries there was an invasion of Arab nomads from The Fatimid Empire located in North Eastern Africa, known as Banu Hilal and Banu Sulaym tribes who were a bunch of Arabized Libyan Tribes founded in the Fayum Oasis in Egypt and Cyrenaica of Libya, swept the Eastern Maghreb,[41] but recent studies make clear no significant genetic differences exist between Arabic and non-Arabic speaking populations, highlighting that in common with most of the Arab World, Arabization was mainly via acculturation of indigenous populations over time.[42] The Moorish refugees from Spain settled in the coast-towns.[43] According to the *European Journal of Human Genetics*, Moroccans from North-Western Africa were genetically closer to Iberians than to Black Sub-Saharan Africans and Middle Easterners.[42]

The largest concentration of Moroccans outside Morocco is in France, which has reportedly over one million Moroccans. The Netherlands (370,000) and Belgium have 1 million Moroccans from the Riff (Al Hoceima, Nador). There are also large Moroccan communities in Spain (about 700,000 Moroccans),[44] the Netherlands, Belgium, Italy, Israel and the United States.[45] Moroccan Jews are the second biggest Jewish ethnic group in Israel.

Ethnolinguistic Groups in Morocco

Most people live west of the Atlas Mountains, a range that insulates the country from the Sahara Desert. Casablanca is the center of commerce and industry and the leading port; Rabat is the seat of government; Tangier is the gateway to Morocco from Spain and also a major port; Fes is the cultural and religious center; and Marrakech is a major tourist center.



There is a European expatriate population of 100,000, especially in Morocco's main economic center Casablanca, mainly of French or Spanish descent; many are teachers or technicians or retirees.

Languages

In Morocco, there are 15 to 18 million Berber speakers, about 50 to 65% of the population[46] or 28.07% of the total population according to the 2004 population census,[4] that speak the Tachelhit in the High Atlas, the Anti-Atlas and Souss, the Tamazight in the Middle Atlas and Tarifit in the region of Rif. In the 20th century many Berbers have also moved from rural areas to the major cities.

Main article: Languages of Morocco

Morocco's official languages are Arabic and the Amazigh language.[47][48] The country's distinctive group of Moroccan Arabic dialects is referred to as Darija. Approximately 89.84%[4] of the whole population speak Moroccan Arabic. The Berber languages can be found in three different dialects (Tarifit, Tashelhit and Central Atlas Tamazight).[49] Much like other Magreb countries, French is Morocco's unofficial second language and is taught universally, serving as Morocco's primary language of commerce and economics. It also is widely used in government and as a medium of education (to get a master's degree or doctorate in Morocco in any subject other than Arabic language, law or theology, one must study the curriculum in French).

An overview of the different Arabic dialects

Spanish is also popular, especially in the northern part of the country, but the number of speakers is difficult to estimate. According to the 2004 census, 2.19 million Moroccans spoke a foreign language other than French.[4] English, while still far behind French and Spanish in terms of number of speakers, is rapidly becoming the second foreign language of choice, after French, among educated youth. As a result of national education reforms entering into force in late 2002, English is taught in all public schools from the fourth year on. French is still taught nationally from the earliest grades.

Below is the number of speakers of each Berber language, according to the 2004 census:[4]

Region	Tashlhyt	Tamazight	Tarifit	Total pop	% of Berber Languages speakers
Souss-Massa-Draa	1,717,139	313,284	3,873	2,775,953	73.28%
Oriental	48,076	85,916	741,913	1,739,440	50.36%
Guelmim-Es Semara	182,695	6,670	766	382,029	49.77%
Meknes-Tafilalet	37,533	843,595	33,966	1,926,247	47.51%
Tadla-Azilal	199,092	409,446	1,436	1,299,536	46.94%
Marrakech-Tensift-El Haouz	969,561	14,170	2,372	2,765,908	35.65%
Taza-Al Hoceima-Taounate	18,923	111,731	338,083	1,613,315	29.05%
Rabat-Sale-Zemmour-Zaer	166,658	268,687	14,965	2,136,636	21.08%

The number of Tamazight-Tarifit speakers was estimated at around 3 million in 1990.[50] There are also 2 million Riff-speakers in Europe. The Riffians represent over 96%[*citation needed*] of the Morrocans in The Netherlands and Belgium. and 45%[*citation needed*] of the Morroccans in France are Riffian. The High Atlas Region Tamazight dialect is the most widely spoken variety of Berber, as it covers the whole of the Region High Atlas Mountains, including greater external Mountains referred to as Jbel Atlas Saghru or Little Atlas. Studies done in 1990 show around 3 million people, concentrated in the central south of Morocco, speak Tashelhit.[50]

Linguistically, Berber languages belong to the Afro-Asiatic languages group, and has many accents or variants. Collectively, these are known by many Moroccans as "Shelha". Classical Arabic of the Middle East still uses the word "Barbaria" (The equivalent of "Berber" in English). Although, there is an increasing tendency by Maghrebian Media to use the word "Amazighiyya" because the Arabic word "Barbari" means both "Berber" and "Barbarian". The terms "Barbar" and "Berber" are considered by some Berbers and most Berber activists to be offensive. They prefer the word *Amazigh*.

Moroccan DNA

Berber village in the Ourika valley, High Atlas

Recent studies make clear no significant genetic differences exist between Arabic and non-Arabic speaking populations, HLA DNA data suggest that most Moroccans are of a Berber origin and that Arabs who invaded North Africa and Spain in the 7th century did not substantially contribute to the gene pool.[41][51] The Moorish refugees from Spain settled in the coast-towns.[43] According to a 2000 article in *European Journal of Human Genetics*, Moroccans from North-Western Africa were genetically closer to Iberians than to Sub-Saharan Africans of Bantu Ethnicity and Middle Easterners.[52]

The different loci studied revealed close similarity between the Berbers and other north African groups, mainly with Moroccan Arabic-speakers, which is in accord with the hypothesis that the current Moroccan population has a strong Berber background.[53]

Distribution of Y haplotype E-M81 E1b1b1b in North Africa, West Asia and Europe.

The E1b1b1 clade is presently found in various forms in Morocco. Total E1b1b1 (E-M35) frequencies reached at 93.8% in Moroccans [54]

E1b1b1b1(E-M81), formerly E1b1b1b, E3b1b, and E3b2, is the most common Y chromosome haplogroup in Morocco, dominated by its sub-clade E-M18. This haplogroup reaches a mean frequency of 100% to 50% In North Africa, decreasing in frequency from approximately 85% or more in Moroccan Berber populations, including Saharawis, to approximately 25% to the east of this range in Egypt. Because of its prevalence among these groups and also others such as Mozabite, Middle Atlas, Kabyle and other Berber groups, it is sometimes referred to as a genetic "Berber marker". Average North African Moroccan Berbers have frequencies of E3b3 in the +80%. Alvarez *et al.*(2009) study shows a frequency of E3b1b of 28/33 or 84.8% in Berbers from Marrakesh. With the rest of the frequencies being 1/33=3% E3a*, 1/33=3% E3b*, 1/33 or 3% E3b1a, and 1/33 or 3% E3b1c.[54]

The most basal and rare E-M78* paragroup has been found at lower frequencies in Moroccan Arabs. The sub-clade: E1b1b1a1d (E-V65), is found in high levels in the Maghreb regions of far northern Africa. Cruciani et al. (2007) report levels of about 20% amongst Libyan Arab lineages, and about 30% amongst Morrocan Arabs. It appears to be less common amongst Berbers, but still present in levels of >10%. The authors suggest a North African origin for this lineage. In Europe, only a few individuals were found in Italy and Greece. Capelli et al. (2009) studied the beta cluster in Europe. They found small amounts in Southern Italy, but also traces in Cantabria, Portugal and Galicia, with Cantabria having the highest level in Europe in their study, at 3.1% (5 out of 161 people).

Other frequencies of E1b1b1a1c (E-V22) is reported by Cruciani et al. (2007) include Moroccan Arabs (7.27%, 55 people) and Moroccan Jews (8%, 50 people).

Genetic continuity in Morocco

The population exhumed from the archaeological site of Taforalt in Morocco (12,000 years BP) is a valuable source of information toward a better knowledge of the settlement of Northern Africa region and provides a revolutionary way to specify the origin of Ibero-Maurusian populations. Ancient DNA was extracted from 31

bone remains from Taforalt.The HVS1 fragment of the mitochondrial DNA control region was PCR-amplified and directly sequenced. Mitochondrial diversity in Taforalt shows the absence of sub-Saharan haplogroups suggesting that Ibero-Maurusian individuals had not originated in sub-Saharan region.Our results reveal a probable local evolution of Taforalt population and a genetic continuity in North Africa and Morocco. [55]

Genetic structure of Taforalt:

Eurasiatic Component : H, U, JT, V: 90.5%

North African component: U6: 9.5 %

42.8% (9/21) H or U
14.2% (3/21) JT
9.5% (2 individuals) U6

In modern Human population, JT is presents only in:

1.6% Berbers from the North of Morocco 1.8% of Sicilians, 1.6% of Italians.

Genetic Berber Heritage continuity of Moroccan Arabs

The cultural differentiation present in North Africa between Berber and Arab samples seems not to reflect genetic differences between both groups, as shown in the AMOVA analyses, and the MDS and PC analyses. If Arabs in Northern Africa were mostly descendants of Middle Eastern Arabs, the frequencies of haplogroups such as N, U1, U3, U7, and HV that are much more prevalent in the Middle East than elsewhere should be larger in N. African Arabs than in Berbers. However, the opposite is observed : these haplogroups add up to 5% in North African Arabs but to 10% in Berbers. The lack of differentiation between North African Arabs and Berbers has also been observed using other genetic markers such as classical markers (Bosch et al. 1997); autosomal STRs (Bosch et al. 2000), Alu insertion polymorphisms (Comas et al. 2000); and Y-chromosome lineages This pattern suggests that the Arabization of the area was mainly a cultural process, rather than a demographic replacement of the Berber populations that inhabited the region where the Arabic expansion took place,(Bosch et al. 2001).

Genetic influence of Moroccans on Southern Europe

Trombetta et al. (2011) felt that V257 showed a parallel with its sibling clade E-V68 in the way that both clades show signs of having migrated from North West Africa Likely Morocco to southwestern Europe across the Mediterranean sea. They found 6 "E-V257*" individuals in their samples who were E-V257, from a Moroccan Marrakesh Berber, a Corsican, a Sardinian, a southern Spaniard and a Cantabrian.

> Within E-M35, there are striking parallels between two haplogroups, E-V68 and E-V257. Both contain a lineage which has been frequently observed in North West Africa mainly Morocco (E-M78 and E-M81, respectively) and a group of undifferentiated chromosomes that are mostly found in southern Europe. An expansion of E-M35 carriers of E-V68* and E-V257* in the Northren Africa makes a maritime spread between Morocco and southern Europe a more plausible hypothesis.
>
> —Trombetta (2011)

A study from Semino (published 2004) showed that Y-chromosome haplotype E1b1b1b (E-M81), is specific to Moroccan populations and almost absent in Europe except the Iberia (Spain and Portugal) and Sicily. Another 2004 study showed that E1b1b1b is found present, albeit at low levels throughout Southern Europe (ranging

from 1.5% in Northern Italians, 2.2% in Central Italians, 1.6% in southern Spaniards, 3.5% in the French, 4% in the Northern Portuguese, 12.2% in the southern Portuguese and 41.2% in the genetic isolate of the Pasiegos from Cantabria).[56] The findings of this latter study contradict a more thorough analysis Y-chromosome analysis of the Iberian peninsula according to which haplogroup E1b1b1b surpasses frequencies of 10% in Southern Spain. The study points only to a very limited influence from northern Africa and the Middle East both in historic and prehistoric times.[57] The absence of microsatellite variation suggests a very recent arrival from Morocco consistent with historical exchanges across the Mediterranean during the period of Islamic expansion, namely of Berber populations. A study restricted to Portugal, concerning Y-chromosome lineages, revealed that "The mtDNA and Y data indicate that the Berber presence in that region dates prior to the Moorish expansion in 711 AD. ... Our data indicate that male Berbers, unlike sub-Saharan immigrants, constituted a long-lasting and continuous community in the country".[58]

Haplotype V(p49/TaqI), a characteristic Moroccan haplotype, may be also found in the Iberian peninsula, and a decreasing North-South cline of frequency clearly establishes a gene flow from Morocco towards Iberia which is also consistent with Moorish presence in the peninsula.[59] This North-South cline of frequency of halpotype V is to be observed throughout the Mediterranean region, ranging from frequencies of close to 30% in southern Portugal to around 10% in southern France. Similarly, the highest frequency in Italy is to be found in the southern island of Sicily (28%).[60][61]

A wide-ranging study (published 2007) using 6,501 unrelated Y-chromosome samples from 81 populations found that: "Considering both these E-M78 sub-haplogroups (E-V12, E-V22, E-V65) and the E-M81 haplogroup, the contribution of Moroccan lineages to the entire male gene pool of Iberia (barring Pasiegos), continental Italy and Sicily can be estimated as 5.6%, 3.6% and 6.6%, respectively."[61]

A study about Sicily by Gaetano *et al*. 2008 found that "The Hg E3b1b-M81, widely diffused in northwestern African Moroccan populations, is estimated to contribute to the Sicilian gene pool at a rate of 6%." .[62]

According to another recent study about Iberia by Adams et al. 2008 that analysed 1,140 unrelated Y-chromosome samples in Iberia, a much more important contribution of Moroccan lineages to the entire male gene pool of Iberia was found : "mean Moroccan admixture is 10.6%, with wide geographical variation, ranging from zero in Gascony to 21.7% in Northwest Castile".[42][63]

Politics

Main article: Politics of Morocco

Morocco is a *de jure* constitutional parliamentary monarchy with an elected parliament. With the 2011 constitutional reforms, the King of Morocco, still retains few executive powers whereas those of the prime minister have been enlarged. Opposition political parties are legal. Politics of Morocco take place in a framework of a parliamentary constitutional monarchy, whereby the Prime Minister of Morocco is the head of government, and of a multi-party system. Executive power is exercised by the government. Legislative power is vested in both the government and the two chambers of parliament, the Assembly of Representatives of Morocco and the Assembly of Councillors. The Moroccan Constitution provides for a monarchy with a Parliament and an independent judiciary.

The constitution grants the king honorific powers; he is both the secular political leader and the "Commander of the Faithful" as a direct descendant of the Prophet Mohammed. He presides over the Council of Ministers; appoints the Prime Minister from the political party that has won the most seats in the parliamentary elections, and on recommendations from the latter, appoints the members of the government. The previous

constitution(note constitution of 1996) theoretically allows the king to terminate the tenure of any minister, and after consultation with the heads of the higher and lower Assemblies, to dissolve the Parliament, suspend the constitution, call for new elections, or rule by decree, the only time this happened was in 1965. The King is formally the chief of the military. Upon the death of his father Mohammed V, King Hassan II succeeded to the throne in 1961. He ruled Morocco for the next 38 years, until he died in 1999. His son, King Mohammed VI, assumed the throne in July 1999. Following protests in Morocco and elsewhere in the Arab world in early 2011, King Mohammed VI announced the establishment of a committee aimed at preparing the text of a new constitution, which included further limitations on the powers of the monarch.

The current King of Morocco, Mohammed VI

Following the March 1998 elections, a coalition government headed by opposition socialist leader Abderrahmane Youssoufi and composed largely of ministers drawn from opposition parties, was formed. Prime Minister Youssoufi's government is the first ever government drawn primarily from opposition parties, and also represents the first opportunity for a coalition of socialists, left-of-center, and nationalist parties to be included in the government until October 2002. It was also the first time in the modern political history of the Arab world that the opposition assumed power following an election. The current government is headed by Abbas El Fassi.

Legislative branch

Since the constitutional reform of 1996, the bicameral legislature consists of two chambers. The Assembly of Representatives of Morocco (*Majlis an-Nuwwâb/Assemblée des Répresentants*) has 325 members elected for a five year term, 295 elected in multi-seat constituencies and 30 in national lists consisting only of women. The Assembly of Councillors (*Majlis al-Mustasharin*) has 270 members, elected for a nine year term, elected by local councils (162 seats), professional chambers (91 seats) and wage-earners (27 seats). The Parliament's powers, though still relatively limited, were expanded under the 1992 and 1996 and even further in the 2011 constitutional revisions and include budgetary matters, approving bills, questioning ministers, and establishing ad hoc commissions of inquiry to investigate the government's actions. The lower chamber of Parliament may dissolve the government through a vote of no confidence.

The legislature's building in Rabat

2011 Constitutional reforms

On July 1 voters approved the draft of a new constitution which entered into effect on 29 July 2011.[48]

The constitutional reforms consisted of the following:[64]

- The Berber (Amazigh) language[65] is an official state language along with Arabic.[66]
- The state preserves and protects the Hassānīya language (spoken by some 200,000 people in the Moroccan southern Sahara) and all the linguistic components of the Moroccan culture as a heritage of the nation[66]
- Since 2011, the king has the obligation to appoint a prime minister from the party that wins the most seats in the parliamentary elections. Previously, he could appoint any person in this position regardless of the

elections results.[64][67][68]

- The king is no longer "holy and sacred" but the "integrity of his person" is "inviolable",[69] which means that he is still uncriticizable by anybody.
- High administrative and diplomatic posts (including ambassadors, CEOs of state-owned companies, provincial and regional governors), are now appointed by the prime minister and the ministerial council which is presided by the king, previously the latter exclusively held this power.[70][71]
- The prime minister is the head of government and president of the council of government, he has the power to dissolve the parliament.[72]
- The prime minister will preside over the council of Government, which prepares the general policy of the state. Previously the king held this position.[72]
- The parliament has the power of granting amnesty. Previously this was exclusively held by the king [73]
- The judiciary system is independent from the legislative and executive branch, the king guarantees this independence[72][74]
- Women are guaranteed "civic and social" equality with men. Previously, only "political" equality was guaranteed, though the 1996 constitution grants all citizens equality in terms of rights and before the law[68]
- The King would retain complete control of the armed forces, foreign policy and the judiciary;[75] authority for choosing and dismissing prime ministers[76] and he would retain control of matters pertaining to religion.
- All citizens have the freedom of: thought, ideas, artistic expression and creation. Previously only free-speech and the freedom of circulation and association were guaranteed.[68][77]

On 2 July 2011 some Moroccan protesters said they were undeterred despite a landslide victory for King Mohammed in a referendum on constitutional changes they say do nothing to ease his autocratic grip on power.[78]

The nation's interior ministry has offered the tentative date of November 11, 2011 for parliamentary elections[79]

Military

Main article: Military of Morocco

Moroccan Navy Floreal class frigate

Compulsory military service in Morocco has been suppressed since September 2006, and the country's reserve obligation lasts until age 50. The country's military consists of the Royal Armed Forces—this includes the army (the largest branch) and a small navy and air force—the National Police Force, the Royal Gendarmerie (mainly responsible for rural security), and the Auxiliary Forces. Internal security is generally effective, and acts of political violence are rare (with one exception, the 2003 Casablanca bombings which killed 45 people[80]). The UN maintains a small observer force in Western Sahara, where a large

number of Morocco's troops are stationed. The Saharawi group Polisario maintains an active militia of an estimated 5,000 fighters in Western Sahara and has engaged in intermittent warfare with Moroccan forces since the 1980s.

A Moroccan soldier trains with United States Marines

The military of Morocco is composed of the following main divisions:

- Royal Armed Forces
  - Army
  - Navy
  - Air Force
  - Gendarmerie
  - Auxiliary Forces
  - Moroccan Royal Guard
  - Marche Verte

Western Sahara status

Main articles: Western Sahara and Legal status of Western Sahara

East of the berm is the territory controlled by the Polisario

Because of the conflict over Western Sahara, the status of both regions of "Saguia el-Hamra" and "Río de Oro" is disputed. The United Nations views Western Sahara as a non-self-governing territory, and as a case of unfinished decolonization. Morocco's rule in the territory is not internationally recognized, nor is the independent republic proposed by Polisario, a Saharawi group which fought against the Spanish colonial rule and then for Western Sahara's independence as the Sahrawi Arab Democratic Republic (today headquartered in Algeria). There is a ceasefire in effect since 1991, and a UN mission (MINURSO) is tasked with organizing a referendum on whether the territory should become independent or recognized as a part of Morocco. At the time, both parties signed an agreement to this effect, but they did not agree on who would be entitled to vote.

The territory is mostly administered as the Southern Provinces by Morocco since Spain handed over the territory to Morocco and Mauritania after the Madrid Accords in 1975–76. Part of the territory, the Free Zone, is an uninhabited area controlled by the Polisario Front as the Sahrawi Arab Democratic Republic with Headquarters at Tindouf in Algeria. A UN-administered cease-fire has been in effect since September, 1991.

Western Sahara War

Main article: Western Sahara War

The Western Sahara War was the armed conflict which saw the Sahrawi rebel national liberation movement Polisario Front (headquarted in Algeria) battling Morocco and Mauritania for the control of the former Spanish colony of Western Sahara from 1976 to 1991. The war resulted in the Spanish retreat in 1976, the Mauritanian retreat in 1979 and a cease fire agreement with Morocco. The bigger part of the territory remained under Moroccan control.

Moroccan Autonomy Initiative

Main article: Moroccan Initiative for Western Sahara

Recently, the government of Morocco has suggested autonomous status for the region, through the Moroccan Royal Advisory Council for Saharan Affairs (CORCAS). The project was presented to the United Nations Security Council in mid-April 2007. The proposal was encouraged by Moroccan allies such as the USA, France and Spain,[84] and the Security Council "Takes note of the Moroccan proposal presented on 11 April 2007 to the Secretary-General and welcoming serious and credible Moroccan efforts to move the process forward towards resolution;". The Security Council has called upon the parties to enter into direct and unconditional negotiations to reach a mutually accepted political solution.[85]

Economy

Main article: Economy of Morocco

Casablanca Twin Center

Morocco's economy is considered a relatively liberal economy governed by the law of supply and demand. Since 1993, the country has followed a policy of privatization of certain economic sectors which used to be in the hands of the government.[86] Morocco is the world's biggest exporter and third producer of phosphorus. Price fluctuations of phosphates in the international market strongly influence Morocco's economy.

Government reforms and steady yearly growth in the region of 4–5% from 2000 to 2007, including 4.9% year-on-year growth in 2003–2007 helped the Moroccan economy to become much more robust compared to a few years ago. For 2012 the World Bank forecasts a rate of 4 percent growth for Morocco and 4.2 percent for following year, 2013.[87]

Economic growth is far more diversified, with new service and industrial poles, like Casablanca and Tangier, developing. The agriculture sector is being rehabilitated, which in combination with good rainfalls led to a growth of over 20% in 2009.

The services sector accounts for just over half of GDP and industry, made up of mining, construction and manufacturing, is an additional quarter. The sectors who recorded the highest growth are the tourism, telecoms, information technology, and textile sectors. Morocco, however, still depends to an inordinate degree on agriculture. The sector accounts for only around 14% of GDP but employs 40–45% of the Moroccan population. With a semi-arid climate, it is difficult to assure good rainfall and Morocco’s GDP varies depending on the weather. Fiscal prudence has allowed for consolidation, with both the budget deficit and debt falling as a percentage of GDP.

The economic system of the country presents several facets. It is characterized by a large opening towards the outside world. France remains the primary trade partner (supplier and customer) of Morocco. France is also the primary creditor and foreign investor in Morocco. In the Arab world, Morocco has the second-largest non-oil GDP, behind Egypt, as of 2005.

Since the early 1980s the Moroccan government has pursued an economic program toward accelerating real economy growth with the support of the International Monetary Fund, the World Bank, and the Paris Club of creditors. The country's currency, the dirham, is now fully convertible for current account transactions; reforms of the financial sector have been implemented; and state enterprises are being privatized.

The major resources of the Moroccan economy are agriculture, phosphates, and tourism. Sales of fish and seafood are important as well. Industry and mining contribute about one-third of the annual GDP. Morocco is the world's third-largest producer of phosphorus (after China, which is first, and the United States which is second),[88] and the price fluctuations of phosphates on the international market greatly influence Morocco's economy. Tourism and workers' remittances have played a critical role since the Kingdom's independence. The production of textiles and clothing is part of a growing manufacturing sector that accounted for approximately 34% of total exports in 2002, employing 40% of the industrial workforce. The government wishes to increase textile and clothing exports from $1.27 billion in 2001 to $3.29 billion in 2010.

The high cost of imports, especially of petroleum imports, is a major problem. Another chronic problem is unreliable rainfall, which produces drought or sudden floods; in 1995, the country's worst drought in 30 years forced Morocco to import grain and adversely affected the economy. Another drought occurred in 1997, and one in 1999–2000. Reduced incomes due to drought caused GDP to fall by 7.6% in 1995, by 2.3% in 1997, and by 1.5% in 1999. During the years between drought, good rains brought bumper crops to market. Good rainfall in

2001 led to a 5% GDP growth rate. Morocco suffers both from unemployment (9.6% in 2008), and a large external debt estimated at around $20 billion, or half of GDP in 2002.[89]

Among the various free trade agreements that Morocco has ratified with its principal economic partners, are The Euro-Mediterranean free trade area agreement with the European Union with the objective of integrating the European Free Trade Association at the horizons of 2012; the Agadir Agreement, signed with Egypt, Jordan, and Tunisia, within the framework of the installation of the Greater Arab Free Trade Area; the US-Morocco Free Trade Agreement with United States which came into force on January 1, 2006, and lately the agreement of free exchange with Turkey.(See Economy of Morocco)

Agriculture

Main article: Agriculture in Morocco

Agriculture in Morocco employs about 40% of the nation's workforce and is the largest employer in the country. Barley, wheat, and other cereals are amongst the main products. On the Atlantic coast, where there are extensive plains, olives, citrus fruits, and grapes are grown.

Below is a table of the agricultural output of Morocco according to estimates of the UN Food & Agriculture Organisation, data is from 2009:

Typical scenery of agricultural lands in the fertile Doukkala region

Argan trees are endemic to Morocco. They produce the Argan oil, valued for its nutritive, cosmetic and numerous medicinal properties

Rank	Commodity	Value (Int $1000)	Production (MT)	Quantity world rank	Value world rank
1	Wheat	939,150	6,400,000	19	17

Energy

In 2008, about 56% of the electricity source of Morocco came from coal.[90] However, a new law passed encouraging Moroccans to use more renewable resources. The Moroccan government has launched a project to build a solar thermal energy power plant.[91]

Transport

Main article: Transport in Morocco

The railway network of Morocco consists of 1,907 kilometres (1,185 mi) 1,435 mm (4 ft 8 1⁄2 in) standard gauge and 1,003 kilometres (623 mi) electrified with 3 kV DC. There are connections to Algeria, and consecutively Tunisia, but since the 1990s the connections are closed. The Gibraltar Tunnel is a rail tunnel link proposed between Tangier, Morocco and Spain under the Strait of Gibraltar to be in operation in 2025.

There are plans for high-speed lines: Work by ONCF could begin in 2007 from Marrakech to Tangier in the north via Marrakesh to Agadir in the

Marrakesh Railway Station

south, and from Casablanca on the Atlantic to Oujda on the Algerian border. If the plans are approved, the 1,500 kilometres (930 mi) of track may take until 2030 to complete at a cost of around 25 billion dirhams ($3.37 billion). Casablanca to Marrakesh could be cut to 1 hour and 20 minutes from over three hours, and from the capital Rabat to Tangier to 1 hour and 30 minutes from 4 hours and 30 minutes.

There are around 56,986 kilometres (35,409 mi) of roads (national, regional and provincial) in Morocco.[92] In addition to 610.5 kilometres (379.3 mi) kilometre of highways.[93]

The Tangier-Casablanca high-speed rail link marks the first stage of the ONCF's high-speed rail master plan, pursuant to which over 1,500 kilometres (930 mi) of new railway lines will be built by 2035 The high speed train -TGV- will carry 8 million passengers per year. It will have a capacity of 500 passengers. the work in the High Speed Train project has started in September 2011[94] and the infrastructure works and railway equipment will end in 2014, and the HST will be operational in December 2015.[95]

Education

Main article: Education in Morocco

See also: Science and technology in Morocco and List of universities in Morocco

Al Akhawayn University in Ifran

Education in Morocco is free and compulsory through primary school. The country's illiteracy rate has been stuck at around 50% for some years, with male literacy at 65.7% and female at 39.6%.[96] On September 2006, UNESCO awarded Morocco amongst other countries such as Cuba, Pakistan, India and Turkey the "UNESCO 2006 Literacy Prize".[97]

Morocco has about 230,000 students enrolled in fourteen public universities. The Mohammed V University in Rabat and Al Akhawayn University in Ifrane (public university) are highly regarded. Al-Akhawayn, founded in 1993 by King Hassan II and King Fahd of Saudi Arabia, is an English-language American-style university comprising about 1,780 students. The University of Al Karaouine, in Fez, is considered the oldest continuously operating university in the world and has been a center of learning for more than 1,000 years.

Morocco allocates approximately one fifth of its budget to education. Much of this is spent on building schools to accommodate the rapidly growing population. Education is mandatory for children between the ages of 7 and 13 years. In urban areas the majority of children in this age group attend school, though on a national scale the level of participation drops significantly. About three fourths of school age males attend school, but only about half of school age girls; these proportions drop markedly in rural areas. Slightly more than half of the children go on to secondary education, including trade and technical schools. Of these, few seek higher education. Poor school attendance, particularly in rural areas, has meant a low rate of literacy, which is about two fifths of the population.

Morocco has more than four dozen universities, institutes of higher learning, and polytechnics dispersed at urban centres throughout the country. Its leading institutions include Muḥammad V University in Rabat, the country's largest university, with branches in Casablanca and Fès; the Hassan II Agriculture and Veterinary Institute in Rabat, which conducts leading social science research in addition to its agricultural specialties; and Al-Akhawayn University in Ifrane, the first English-language university in North Africa,[98] inaugurated in 1995

with contributions from Saudi Arabia and the United States. The University of Al-Karaouine or Al-Qarawiyyin is a university located in Fes. It is considered the oldest continuously operating academic degree-granting university in the world.

Morocco has also some of prestigious Postgraduate Schools like : L'École Mohammadia d'ingénieurs, l'Institut national de statistique et d'économie appliquée, l'École nationale d'industrie minérale, l'École Hassania des travaux publics, l'Institut supérieur de commerce et d'administration des entreprises, ENCG (écoles nationales de commerce et de gestion), EST (écoles supérieures de technologie).[99]

Culture

Main article: Culture of Morocco

Morocco is an ethnically diverse country with a rich culture and civilization. Through Moroccan history, it has hosted many people coming from East (Phoenicians, Carthaginians, Jews and Arabs), South (Sub-Saharan Africans) and North (Romans, Vandals, Andalusians (including Moors and Jews). All those civilizations have had an impact on the social structure of Morocco. It conceived various forms of beliefs, from paganism, Judaism, and Christianity to Islam.

Agdal gardens, Meknes

The production of Moroccan literature has continued to grow and diversify. To the traditional genres—poetry, essays, and historiography—have been added forms inspired by Middle Eastern and Western literary models. French is often used in publishing research in the social and natural sciences, and in the fields of literature and literary studies, works are published in both Arabic and French. Moroccan writers, such as Mohammed Choukri, Driss Chraïbi, Abdallah Laroui, Abdelfattah Kilito, and Fatima Mernissi, publish their works in both French and English. Expatriate writers such as Pierre Loti, William S. Burroughs, and Paul Bowles have drawn attention to Moroccan writers as well as to the country itself.

Old Walls of Essaouira

Since independence a veritable blossoming has taken place in painting and sculpture, popular music, amateur theatre, and filmmaking. The Moroccan National Theatre (founded 1956) offers regular productions of Moroccan and French dramatic works. Art and music festivals take place throughout the country during the summer months, among them the World Sacred Music Festival at Fès.

Moroccan music, influenced by Arab, Amazigh, African, and Andalusian traditions, makes use of a number of traditional instruments, such as the flute (nāy), shawm (ghaita), zither (qanūn), and various short necked lutes (including the ʿūd and gimbrī). These are often backed by explosive percussion on the darbūkka (terra-cotta drum). Among the most popular traditional Moroccan artists internationally are the Master Musicians of Jajouka, an all-male guild trained from childhood, and Hassan Hakmoun, a master of gnāwa trance music, a popular spiritual style that traces its roots to sub-Saharan Africa. Younger Moroccans enjoy raï, a style of plain-speaking Algerian music that incorporates traditional sounds with those of Western rock, Jamaican reggae, and Egyptian and Moroccan popular music.

Each region possesses its own specificities, thus contributing to the national culture and to the legacy of civilization. Morocco has set among its top priorities the protection of its diverse legacy and the preservation of its cultural heritage.

Culturally speaking, Morocco has always been successful in combining its Berber, Jewish and Arabic cultural heritage with external influences such as the French and the Spanish and, during the last decades, the Anglo-American lifestyles.

Cuisine

Main article: Cuisine of Morocco

An array of Moroccan pastries

Moroccan cuisine has long been considered as one of the most diversified cuisines in the world. This is a result of the centuries-long interaction of Morocco with the outside world. The cuisine of Morocco is mainly Berber-Moorish, European, Mediterranean cuisines. The cuisine of Morocco is essentially Berber cuisine(sometimes referred to as the Moorish cuisine). It is also Influenced by Sephardic cuisine and by the Moriscos when they took refuge in Morocco after the Reconquista.

Spices are used extensively in Moroccan food. While spices have been imported to Morocco for thousands of years, many ingredients, like saffron from Tiliouine, mint and olives from Meknes, and oranges and lemons from Fez, are home-grown. Chicken is the most widely eaten meat in Morocco. The most commonly eaten red meat in Morocco is beef; lamb is preferred but is relatively expensive. Couscous is the most famous Moroccan dish along with pastilla, tajine, and harira. The most popular drink is green tea with mint.

Literature

Main article: Literature of Morocco

Koutoubia Mosque, Marrakech. The name is derived from al-Koutoubiyyin, meaning librarian.

Moroccan literature is written in Arabic, Berber and French. It also contains literature produced in Al-Andalus. Under the Almohad dynasty Morocco experienced a period of prosperity and brilliance of learning. The Almohad built the Marrakech Koutoubia Mosque, which accommodated no fewer than 25,000 people, but was also famed for its books, manuscripts, libraries and book shops, which gave it its name; the first book bazaar in history. The Almohad Caliph Abu Yakub had a great love for collecting books. He founded a great library, which was eventually carried to the Casbah and turned into a public library.

Modern Moroccan literature began in the 1930s. Two main factors gave Morocco a pulse toward witnessing the birth of a modern literature. Morocco, as a French and Spanish protectorate left Moroccan intellectuals the opportunity to exchange and to produce literary works freely enjoying the contact of other Arabic literature and Europe.

During the 1950s and 1960s, Morocco was a refuge and artistic centre and attracted writers as Paul Bowles, Tennessee Williams and William S. Burroughs. Moroccan literature flourished with novelists such as Mohamed Zafzaf and Mohamed Choukri, who wrote in Arabic, and Driss Chraïbi and Tahar Ben Jelloun who wrote in French. Other important Moroccan authors include, Abdellatif Laabi, Abdelkarim Ghellab, Fouad Laroui, Mohammed Berrada and Leila Abouzeid. It should be noted also, that orature (oral literature) is an integral part

of Moroccan culture, be it in Moroccan Arabic or Amazigh.

Music

Main article: Music of Morocco

Jewish Wedding in Morocco by Eugène Delacroix, Louvre, Paris

Moroccan music is of Amazigh, Arab and sub-Saharan origins. Rock-influenced chaabi bands are widespread, as is trance music with historical origins in Muslim music.

Morocco is home to Andalusian classical music that is found throughout North Africa. It probably evolved under the Moors in Cordoba, and the Persian-born musician Ziryab is usually credited with its invention. A genre known as Contemporary Andalusian music and art is the brainchild of Morisco visual artist/composer/ oudist Tarik Banzi founder of the Al-Andalus Ensemble (http://www.Andalus.com/)

Chaabi (*popular*) is a music consisting of numerous varieties which are descended from the multifarious forms of Moroccan folk music. Chaabi was originally performed in markets, but is now found at any celebration or meeting.

Popular Western forms of music are becoming increasingly popular in Morocco, such as fusion, rock, country, metal and particularly hip hop.

Morocco participated in 1980's Eurovision Song Contest, being in penultimate position.

Sport

Main article: Sport in Morocco

Marrakech Stadium

Spectator sports in Morocco traditionally centred on the art of horsemanship until European sports—football (soccer), polo, swimming, and tennis—were introduced at the end of the 19th century. Football is the country's premier sport, popular among the urban youth in particular, and in 1986 Morocco became the first Arab and African country to qualify to the second round in World Cup competition. At the 1984 Olympic Games, two Moroccans won gold medals in track and field events, one of whom—Nawal El Moutawakel in the 400 metre hurdles—was the first woman from an Arab or Islamic country to win an Olympic gold medal. Another was Hicham El Guerrouj. Tennis and golf have also become popular. Several Moroccan professional players have competed in international competition, and the country fielded its first Davis Cup team in 1999.

Hicham El Guerrouj (left), twice Olympic champion.

As of 2007, Moroccan society participated in many sports, including handball, association football, golf, tennis, basketball, and athletics. Hicham El Guerrouj, a retired middle distance runner for Morocco, won 2 gold medals

for Morocco at the athletics at the 2004 Summer Olympics and holds the 1.609 km (1.000 mi) world record, along with other notable performances. Also kickboxing is a sport that is very popular in Morocco. Badr Hari, heavyweight kickboxer and martial artist, is a former K-1 heavyweight champion and K-1 World Grand Prix 2008 and 2009 finalist.

Morocco will be hosting the 2015 Africa Cup of Nations. The host cities will include Tangier, Casablanca, Rabat, and Marrakech.[100]

History of Morocco

From Wikipedia, the free encyclopedia

The **History of Morocco** spans over 12 centuries, without considering the Classical antiquity. The country was first unified by the Idrisid dynasty in 780, representing the first Islamic state in Africa autonomous from the Arab Empire. Under the Almoravid dynasty and the Almohad dynasty, Morocco dominated the Maghreb and Muslim Spain. The Reconquista ended Almohad rule in Iberia and many Muslims and Jews migrated to Morocco. Under the Saadi dynasty, Morocco would consolidate power and fight off Portuguese and Ottoman invaders, as in the battle of Ksar el Kebir. The reign of Ahmad al-Mansur brought new wealth and prestige to the Sultanate, and an invasion of the Songhay Empire was initiated. However managing the territories across the Sahara proved to be difficult. After the death of al-Mansur the country was divided among his sons. In 1666 the sultanate was reunited by the Alaouite dynasty, who have since been the ruling house of Morocco. The organization of the state developed with Ismail Ibn Sharif. With his Black Guard he drove the English from Tangier (1684) and the Spanish from Larache (1689). The Alaouite dynasty distinguished itself in the 19th century by maintaining Moroccan independence while other states in the region succumbed to European interests. In 1912, after the First Moroccan Crisis and the Agadir Crisis, the Treaty of Fez was signed, effectively dividing Morocco into a French and Spanish protectorate. In 1956, after 44 years of occupation Morocco regained independence from France as the Kingdom of Morocco.

Prehistoric Morocco

The Capsian culture brought Morocco into the Neolithic about 2001 BC, at a time when the Maghreb was less arid than it is today. The Berber language probably was formed at roughly the same time as agriculture (see Berber), and was developed by the existing population and adopted the immigrants who arrived later. Modern DNA analysis (see link) has confirmed that various populations have contributed to the present-day gene pool of Morocco in addition to the main ethnic group which is the Amazighs/Berbers. A very small percentage of those other populations are Iberians and sub-Saharan Africans.

In Mesolithic ages the geography of Morocco resembled a savanna more than the present day arid landscape.[1] While little is known about Morocco settlement in these early times, excavations elsewhere in the Maghreb suggest an abundance of game and forests that would have been hospitable to Mesolithic hunters and gatherers.

The coastal regions of present-day Morocco shared in an early Neolithic culture that was common to the whole Mediterranean littoral. Archaeological remains point to the domestication of cattle and the cultivation of crops in the region during that period. Eight thousand years ago, south of the great mountain ranges in what is now the Sahara Desert, a vast savanna supported Neolithic hunters and herders whose culture flourished until the region began to desiccate as a result of climatic changes after 4000 BC.

Phoenicians on the coast

Main article: Mauretania

Phoenician traders, who had penetrated the western Mediterranean before the 12th century BC, set up depots for salt and ore along the coast and up the rivers of the territory that is now Morocco. The arrival of Phoenicians heralded many centuries of rule by foreign powers for the north of Morocco. Major early substantial settlements of the Phoenicians were at Chellah, Lixus and Mogador,[2] with Mogador being a Phoenician colony as early as the early 6th century BC.[3] Carthage developed commercial relations with the Berber tribes of the interior and paid them an annual tribute to ensure their cooperation in the exploitation of raw materials.

Phenician plate with red slip, 7th century BCE, excavated in Mogador island, Essaouira. Sidi Mohammed ben Abdallah Museum.

By the 5th century BC, Carthage had extended its hegemony across much of North Africa. By the 2nd century BC, several large, although loosely administered, Berber kingdoms had emerged.

Roman, and sub-Roman Morocco

Main article: Mauretania Tingitana

Initially the Berber kings ruled overshadowing Carthage and Rome, often as satellites, allowing Roman rulership to exist.

But after the fall of Carthage, the area was annexed to the Roman Empire in AD 40. Rome controlled the vast, ill-defined territory through alliances with the tribes rather than through military occupation, expanding its authority only to those areas that were economically useful or that could be defended without additional manpower. Hence, Roman administration never extended outside the restricted area of the northern coastal plain

Roman coins excavated in Essaouira, 3rd century.

and valleys. This strategic region formed part of the Roman Empire, governed as Mauretania Tingitana.

Roman historians (like Ptolemeus) considered that all actual Morocco until the Atlas mountains was part of the Roman Empire[*citation needed*]. During the time of Augustus, Mauretania was a vassal state and his rulers (like Juba II) controlled all the areas south of Volubilis. But the effective control of Roman legionaries was until the area of Sala Colonia (the castra "Exploratio Ad Mercurios" south of Sala is the southernmost discovered until now). Some historians believe[*citation needed*] the Roman frontier reached actual Casablanca, founded by Romans as a port.

During the reign of Juba II Emperor Augustus (who created in the area of what is now northern Morocco 12 colonies with retired Roman legionaries) had already founded three colonias, with Roman citizens, in Mauretania close to the Atlantic coast: Iulia Constantia Zilil, Iulia Valentia Banasa[4] and Iulia Campestris Babba.

Roman remains of Volubilis

This western part of Mauretania was to become the province called Mauretania Tingitana shortly afterwards. The capital was the rich emporium of Volubilis.

In those centuries, the area controlled by Rome had great economic development. Helped by the construction of Roman roads. The area was initially fully under control of Rome and only in the mid-2nd century was built a limes south of Sala and until Volubilis.

Roman control reached the area of Casablanca, then called Anfa according to Leo Africanus: it was used as a port by the Phoenicians and later the Romans.[5]

> *In his book "Wasf Afriquia" Hassan Al Wazan (nicknamed Leo Africanus) refers to "Anfa" (ancient Casablanca) as a great city which was founded by the Romans. He also believed that Anfa was the most prosperous city on the Atlantic coast because of its fertile land.*[6]

Around 278 AD Romans moved their regional capital to Tanger and Volubilis started to lose importance.

The region remained a part of the Roman Empire until 429 AD as the Vandals overran the area and Roman administrative presence came to an end.

Indeed in the 5th century, the region fell to the Vandals, Visigoths, and then Byzantine Greeks in rapid succession. During this time, however, the high mountains of most of modern Morocco remained unsubdued, and stayed in the hands of their Berber inhabitants.

Christianity was introduced in the 2nd century and gained converts in the towns and among slaves and Berber farmers. By the end of the 4th century, the Romanized areas had been Christianized, and inroads had been made as well among the Berber tribes, who sometimes converted en masse. But schismatic and heretical movements also developed, usually as forms of political protest. The area had a substantial Jewish population as well.

Early Islamic Morocco

> *Main articles: Berber Revolt and Idrisid dynasty*

The Arabs conquered the region in the late 7th century, bringing their civilization and Islam. While part of the larger Islamic Empire, Morocco was initially organized as a subsidiary province of Ifriqiya, with the local governors appointed by the Arab governor in Kairouan. The Arabs converted the indigenous Berber population to Islam, but Berber tribes retained their customary laws. Arab-Berber relations were inconsistent and often tense in the early years - while some Arab governors encouraged Berbers to participate in the new Islamic state and cultivated their Berber lieutenants, others regarded them as little more than a conquered people, imposing high taxes and tribute demands upon Berber populations and treating Berber auxiliaries rather shabbily.

The school of Al-Karaouine in Fes, established by the Idrisids in the 9th C.

In the 740, spurred by puritanical Kharijite agitators, the Berbers revolted against Arab rule. The rebellion began among the Berber tribes of western Morocco, and spread quickly across the region. Although the rebellion petered out before the gates of Kairouan in 742, neither the Umayyad rulers in Damascus, nor their Abbasid successors, would manage to re-impose Arab rule on the liberated areas west of Ifriqiya. Morocco slipped out of the leash, and fragmented into a small collection of independent Berber statelets under their own rulers and laws. The Berbers went on to shape Islam in their own image - some (like the Banu Ifran) retained their connection with radical puritan Islamic sects, others (like the Berghwata) constructed a new syncretic faith which was simply folk religion thinly disguised as Islam.

As the "wild west" of the Islamic world, Morocco quickly became a haven for many dissidents, rebels and refugees from the eastern caliphate. Among these was Idris ibn Abdallah, who with the help of the local Awraba Berbers, founded the Idrisid Dynasty in 788. His son Idris II erected a splendid new capital at Fes and launched Morocco as a centre of learning and a major power. Another significant arrival around this time was a group of puritan Miknasa Berber rebels from Ifriqiya, who went on to establish the settlement of Sijilmassa (in southeast Morocco) and open trade across the Sahara desert with the gold-producing Ghana Empire of west Africa. Although the Midrarids of Sijilmassa and the Idrisids of Fez were frequently at odds politically and religiously, the Trans-Saharan trade route made them economically inter-dependent.

The balance was upset in the early 900s, when yet another group of religious refugees from the east, the Fatimids, arrived in the Maghreb. Not long after seizing power in Ifriqiya, the Fatimids invaded Morocco, conquering both Fez and Sijilmassa. Morocco fell into anarchy in the aftermath, fought over between Fatimid governors, Idrisid loyalists, new puritan groups and interventionists from Umayyad al-Andalus. Opportunistic local governors sold and re-sold their support to the highest bidder. In 965, the Fatimid caliph al-Muizz invaded Morocco one last time and established a modicum of order. But no sooner was that done, the Fatimids turned their backs on the west, and moved to Egypt, and their new capital in Cairo.

The Fatimids had assigned the Zirids, a Sanhaja Berber clan centered in Ifriqiya, to keep an eye on their western dominions. But facing their own difficulties, the Zirids were unable to prevent Morocco from spinning out of their control and crumbling into the hands of a collection of local Zenata Berber chieftains, most of them clients of the Caliph of Cordoba, such as the Maghrawa in the region of Fez and their on-again, off-again rivals, the Banu Ifran, just east of them.

The Berber Empires

Main articles: Almoravid Empire and Almohad Empire

Morocco reached its height under a series of Berber dynasties, that arose south of the Atlas Mountains and expanded their rule northwards, replacing the local rulers. The 11th and 12th centuries witnessed the founding of several great Berber dynasties led by religious reformers and each based on a tribal confederation that dominated the Maghrib (also seen as Maghreb; refers to North Africa west of Egypt) and Al-Andalus for more than 200 years. The Berber dynasties (Almoravids, Almohads, Marinids and Wattasids) gave the Berber people some measure of collective identity and political unity under a native regime for the first time in their history, and they created the idea of an "imperial Maghrib" under Berber aegis that survived in some form from dynasty to dynasty. But ultimately each of the Berber dynasties proved to be a political failure because none managed to create an integrated society out of a social landscape dominated by tribes that prized their autonomy and individual identity.

The Hassan Tower, an incomplete minaret in Rabat built during the Almohad dynasty

In 1559, the region fell to successive Arab tribes claiming descent from the Prophet Muhammad: first the Saadi Dynasty who ruled from 1554 to 1659 and then the Alaouites, who founded a dynasty that has remained in power since the 17th century.

The Alaouite Dynasty

Main article: Alaouite dynasty

The **Alaouite Dynasty** is the name of the current Moroccan royal family. The name Alaouite comes from the *ʿAlī* of its founder Moulay Ali Cherif who became Sultan of Tafilalt in 1631. His son Mulay r-Rshid (1664–1672) was able to unite and pacify the country. The Alaouite family claim descent from Muhammad through the line of Fāṭimah az-Zahrah, Muhammad's daughter, and her husband, the Fourth Caliph ʿAlī ibn Abī Ṭālib.

Aït Benhaddou at evening light

According to some legends the Alaouites entered Morocco at the end of the 13th century when Al Hassan Addakhil, who lived then in the town of Yanbu in the Hejaz, was brought to Morocco by the inhabitants of Tafilalet to be their imām. They were hoping that, as he was a descendant of Muhammad, his presence would help to improve their date palm crops thanks to his *barakah* "blessing", an Arabic term meaning a sense of divine presence or charisma. His descendants began to increase their power in southern Morocco after the death of the Saʿdī ruler Ahmad al-Mansur (1578–1603).

In 1659, the last Saʿdī sultan was overthrown in the conquest of Marrakech by Mulay r-Rshid (1664–1672). After the victory over the zāwiya of Dila, who controlled northern Morocco, he was able to unite and pacify the country.

The organization of the kingdom developed under Ismail Ibn Sharif (1672–1727), who, against the opposition of local tribes began to create a unified state. Because the Alaouites, in contrast to previous dynasties, did not have the support of a single Berber or Bedouin tribe, Ismaʾīl controlled Morocco through an army of black slaves. With these soldiers he drove the English from Tangiers (1684) and the Spanish from Larache (1689.) However, the unity of Morocco did not survive his death — in the ensuing power struggles the tribes became a political

Admiral Abdelkader Perez was sent by Ismail Ibn Sharif as ambassador to England in 1723.

and military force once again.

Only with Muhammad III (1757–1790) could the kingdom be pacified again and the administration reorganized. A renewed attempt at centralization was abandoned and the tribes allowed to preserve their autonomy.

In 1777 Morocco was the very first state to recognize the sovereignty of a newly independent United States.[7]

Under Abderrahmane (1822–1859) Morocco fell under the influence of the European powers. When Morocco supported the Algerian independence movement of the Emir Abd al-Qadir, it was heavily defeated by the French in 1844 and made to abandon its support.

From Muhammad IV (1859–1873) and Hassan I (1873–1894) the Alaouites tried to foster trading links, above all with European countries and the United States. The army and administration were also modernized, to improve control over the Berber and Bedouin tribes. With the war against Spain (1859–1860) came direct involvement in European affairs — although the independence of Morocco was guaranteed in the Conference of Madrid (1880),[8] the French gained ever greater influence. German attempts to counter this growing influence led to the First Moroccan Crisis of 1905-1906 and the Second Moroccan Crisis (1911.) Eventually the Moroccans were forced to recognise the French Protectorate through the Treaty of Fez, signed on December 3, 1912. At the same time the Rif area of northern Morocco submitted to Spain.

Under the protectorate (1912–1956) the infrastructure was invested in heavily in order to link the cities of the Atlantic coast to the hinterland, thus creating a single economic area for Morocco. However the regime faced the opposition of the tribes — when the Berber were required to come under the jurisdiction of French courts in 1930 it marked the beginning of the independence movement. In 1944, the independence party Istiqlāl was founded, supported by the Sultan Muhammad V (1927–1961). Although banned in 1953, France was obliged to grant Morocco independence on March 2, 1956, leaving behind them a legacy of urbanisation and the beginnings of an industrial economy.

European influence

Main articles: French protectorate of Morocco and Spanish Protectorate of Morocco

Despite the weakness of its authority, the Alaouite dynasty distinguished itself in the 18th and 19th centuries by maintaining Morocco's independence while other states in the region succumbed to Turkish, French, or British domination. However, in the latter part of the 19th century Morocco's weakness and instability invited European intervention to protect threatened investments and to demand economic concessions. The first years of the 20th century witnessed a rush of diplomatic maneuvering through which the European powers and France in particular furthered their interests in North Africa.[9] Disputes over Moroccan sovereignty were links in the chain of events that led to World War I.

Map of central Morocco. (1830)

The successful Portuguese efforts to control the Atlantic coast in the 15th century did not affect the Mediterranean heart of Morocco. After the Napoleonic Wars, North Africa became increasingly ungovernable from Istanbul by the Ottoman Empire, the resort of pirates under local beys, and as Europe industrialized, an increasingly prized potential for colonization.

Map of the Maghreb before the French invasion of Algeria

The Maghreb had far greater proven wealth than the unknown rest of Africa and a location of strategic importance affecting the exit from the Mediterranean. For the first time, Morocco became a state of some import to the European Powers. France showed a strong interest in Morocco as early as 1830. Recognition by the United Kingdom in the 1904 Entente Cordiale of France's "sphere of influence" in Morocco provoked a German reaction; the "crisis" of 1905-1906 was resolved at the Algeciras Conference (1906), which formalized France's "special position" and entrusted policing of Morocco jointly to France and Spain.

The French artillery at Rabat in 1911

A second "Moroccan crisis" provoked by Berlin, increased European Great Power tensions, but the Treaty of Fez (signed on March 30, 1912) made Morocco a protectorate of France. By the same treaty, Spain assumed the role of protecting power over the northern and southern (Ifni) zones on November 27 that year. Spain was given control of pieces of Morocco in the far north (Protectorate of Tetuan) and south (Cape Juby). Tangier received special international status. From a strictly legal point of view, the treaty did not deprive Morocco of its status as a sovereign state. Theoretically, the sultan remained the sole source of sovereignty. He reigned, but he did not rule.

Under the protectorate, French civil servants allied themselves with the French settlers (*colons*) and with their supporters in France to prevent any moves in the direction of Moroccan autonomy. As pacification proceeded, the French government promoted economic development, particularly the exploitation of Morocco's mineral wealth, the creation of a modern transportation system, and the development of a modern agriculture sector geared to the French market. Tens of thousands of colons entered Morocco and bought up large amounts of the rich agricultural land. Interest groups that formed among these elements continually pressured France to increase its control over Morocco.

Opposition to European control

See also: French Morocco

The separatist Republic of the Rif was declared on 18 September 1921, by the people of the Rif. It would be dissolved by Spanish and French forces on 27 May 1926.

In December 1934, a small group of nationalists—members of the newly formed Moroccan Action Committee (Comité d'Action Marocaine —CAM)—proposed a Plan of Reforms that called for a return to indirect rule as envisaged by the Treaty of Fès, admission of Moroccans to government positions, and establishment of representative councils. The moderate tactics used by the CAM to obtain consideration of reform

—petitions, newspaper editorials, and personal appeals to French officials—proved inadequate, and the tensions created in the CAM by the failure of the plan caused it to split. The CAM was reconstituted as a nationalist political party to gain mass support for more radical demands, but the French suppressed the party in 1937.

Morocco riots overrun Casablanca due to discontent with French rule. Universal Newsreel, 21 July 1955

Nationalist political parties, which subsequently arose under the French protectorate, based their arguments for Moroccan independence on such World War II declarations as the Atlantic Charter (a joint U.S.-British statement that set forth, among other things, the right of all people to choose the form of government under which they live).

Many Moroccan Goumiere assisted the Americans in both World War I and World War II. During World War II, the badly divided nationalist movement became more cohesive, and informed Moroccans dared to consider the real possibility of political change in the post-war era. However, the nationalists were disappointed in their belief that the Allied victory in Morocco would pave the way for independence. In January 1944, the Istiqlal (Independence) Party, which subsequently provided most of the leadership for the nationalist movement, released a manifesto demanding full independence, national reunification, and a democratic constitution. The sultan had approved the manifesto before its submission to the French resident general, who answered that no basic change in the protectorate status was being considered. The general sympathy of the sultan for the nationalists had become evident by the end of the war, although he still hoped to see complete independence achieved gradually. By contrast, the residency, supported by French economic interests and vigorously backed by most of the *colons*, adamantly refused to consider even reforms short of independence. Official intransigence contributed to increased animosity between the nationalists and the colons and gradually widened the split between the sultan and the resident general.

In December 1952, a riot broke out in Casablanca over the murder of a Tunisian labor leader; this event marked a watershed in relations between Moroccan political parties and French authorities. In the aftermath of the rioting, the residency outlawed the new Moroccan Communist Party and the Istiqlal.[10]

France's exile of the highly respected Sultan Mohammed V to Madagascar in 1953 and his replacement by the unpopular Mohammed Ben Aarafa, whose reign was perceived as illegitimate, sparked active opposition to the French protectorate both from nationalists and those who saw the sultan as a religious leader. Two years later, faced with a united Moroccan demand for the sultan's return, rising violence in Morocco, and the deteriorating situation in Algeria, the French government brought Mohammed V back to Morocco. The negotiations that led to Moroccan independence began the following year.

Independence in 1956

The Mausoleum of Mohammed V in Rabat

In late 1955, Mohammed V successfully negotiated the gradual restoration of Moroccan independence within a framework of French-Moroccan interdependence. The sultan agreed to institute reforms that would transform Morocco into a constitutional monarchy with a democratic form of government. In February 1956, Morocco acquired limited home rule. Further negotiations for full independence

Casablanca in 1950s

culminated in the Spanish-Moroccan Agreement signed in Paris on March 2, 1956.[10] On April 7 of that year France officially relinquished its protectorate in Morocco. The internationalized city of Tangier was reintegrated with the signing of the Tangier Protocol on October 29, 1956. The abolition of the Spanish protectorate and the recognition of Moroccan independence by Spain were negotiated separately and made final in the Joint Declaration of April 1956.[10] Through this agreement with Spain in 1956 and another in 1958, Moroccan control over certain Spanish-ruled areas was restored, though attempts to claim other Spanish possessions through military action were less successful.

Almost all speakers of the Judeo-Berber language left Morocco in the years following its independence.

In the months that followed independence, Mohammed V proceeded to build a modern governmental structure under a constitutional monarchy in which the sultan would exercise an active political role. He acted cautiously, having no intention of permitting more radical elements in the nationalist movement to overthrow the established order. He was also intent on preventing the Istiqlal from consolidating its control and establishing a single-party state. In August 1957, Mohammed V assumed the title of king.

The reign of Hassan II

Hassan II became King of Morocco on March 3, 1961. His rule would be marked by political unrest, and the ruthless government response earned the period the name "the years of lead". The new king took personal control of the government as prime minister and named a new cabinet. Aided by an advisory council, he drew up a new constitution, which was approved overwhelmingly in a December 1962 referendum. Under its provisions, the king remained the central figure in the executive branch of the government, but legislative power was vested in a bicameral parliament, and an independent judiciary was guaranteed. In May 1963, legislative elections took place for the first time, and the royalist coalition secured a small plurality of seats. However, following a period of political upheaval in June 1965, Hassan II assumed full legislative and executive powers under a "state of exception," which remained in effect until 1970. Subsequently, a reform constitution was approved, restoring limited parliamentary government, and new elections were held. However, dissent remained, revolving around complaints of widespread corruption and malfeasance in government. In July 1971 and again in August 1972, the regime was challenged by two attempted military coups. The atmosphere in the country remained tense.

After neighbouring Algeria's 1962 independence from France, border skirmishes in the Tindouf area of south-western Algeria, escalated in 1963 into what is known as the Sand War. Morocco invaded to claim the areas for Greater Morocco, but the fighting stalemated within weeks, and Morocco was forced to retreat with no border adjustments. The border remained a contentious issue, but was later demarcated, and Morocco no longer makes any formal claim on Algerian territory.

Despite serious domestic turmoil, the patriotism engendered by Morocco’s participation in the Middle East conflict and by the events in Western Sahara contributed to Hassan’s popularity and strengthened his hand politically. The king had dispatched Moroccan troops to the Sinai front after the outbreak of Arab-Israeli War in October 1973. Although they arrived too late to engage in hostilities, the action won Morocco goodwill among other Arab states. Shortly thereafter, the attention of the government turned to the acquisition of Western Sahara from Spain, an issue on which all major domestic parties agreed.[10]

The Western Sahara conflict

Main article: History of Western Sahara

The Spanish enclave of Ifni in the south became part of the new Morocco in 1969, but other Spanish possessions

in the north (Ceuta, Melilla and some small islands) remain under Madrid's control, with Morocco viewing them as occupied territory.

A defining theme of Moroccan history and foreign policy is the bitter struggle over Western Sahara. Moroccan claims to Western Sahara date to the 11th century. However, in August 1974, Spain formally acknowledged the 1966 United Nations (UN) resolution calling for a referendum on the future status of Western Sahara and requested that a plebiscite be conducted under UN supervision. A UN visiting mission reported in October 1975 that an overwhelming majority of the Saharan people desired independence. Morocco protested the proposed referendum and took its case to the International Court of Justice at The Hague, which ruled that despite historical “ties of allegiance” between Morocco and the tribes of Western Sahara, there was no legal justification for departing from the UN position on self-determination. Spain, meanwhile, had declared that even in the absence of a referendum, it intended to surrender political control of Western Sahara, and Spain, Morocco, and Mauritania convened a tripartite conference to resolve the territory’s future. But Madrid also announced that it was opening independence talks with the Algerian-backed Saharan independence movement known as the Polisario Front.[10]

In early 1976, Spain ceded Western Sahara administration's to Morocco and Mauritania. Morocco assumed control over the northern two-thirds of the territory and conceded the remaining portion in the south to Mauritania. An assembly of Saharan tribal leaders duly acknowledged Moroccan sovereignty. However, buoyed by the increasing defection of the chiefs to its cause, the Polisario drew up a constitution and announced the formation of the Saharawi Arab Democratic Republic (SADR). A new dimension was thereby added to the dispute because the liberation movement could now present its claims as a government-in-exile.[10]

Morocco eventually sent a large portion of its combat forces into Western Sahara to confront the Polisario’s forces, which were relatively small but well-equipped, highly mobile, and resourceful, using Algerian bases for quick strikes against targets deep inside Morocco and Mauritania as well as for operations in Western Sahara. In August 1979, after suffering military losses, Mauritania renounced its claim to Western Sahara and signed a peace treaty with the Polisario. Morocco then annexed the entire territory and, in 1985, built a 2,500-kilometer sand berm around three-quarters of it. In 1988, Morocco and the Polisario Front finally agreed on a United Nations (UN) peace plan, and a cease-fire and settlement plan went into effect in 1991. Even though the UN Security Council created a peacekeeping force to implement a referendum on self-determination for Western Sahara, it has yet to be held, periodic negotiations have failed, and the status of the territory remains unresolved.[10]

More than any other issue since independence, the objective of securing Western Sahara had unified the Moroccan nation. Because of the firm stand the king had taken, it also enhanced his popularity in the country. But the war against the Polisario guerrillas put severe strains on the economy, and Morocco found itself increasingly isolated diplomatically. Successive governments showed little inclination to move seriously against pressing economic and social issues. As a result, popular discontent with social and economic conditions persisted. Political parties continued to proliferate but produced only a divided and weakly organized opposition or were suppressed. Through the force of his strong personality, the legacy of the monarchy, and the application of political repression, the king succeeded in asserting his authority and controlling the forces threatening the existing social order. Gradual political reforms in the 1990s culminated in the constitutional reform of 1996, which created a new bicameral legislature with expanded, although still limited, powers. Although reportedly marred by irregularities, elections for the Chamber of Representatives were held in 1997.[10]

The reign of Mohammed VI

Gradual political reforms in the 1990s resulted in the establishment of a bicameral legislature in 1997, and with

the death of King Hassan II of Morocco in 1999, the more liberal-minded Crown Prince Sidi Mohammed, who assumed the title of Mohammed VI, took the throne. He has since enacted successive reforms to modernize Morocco, and the country has seen a marked improvement in its human rights record. One of the new king's first acts was to free some 8,000 political prisoners and reduce the sentences of another 30,000. He also established a commission to compensate families of missing political activists and others subjected to arbitrary detention. In September 2002, new legislative elections were held, and the Socialist Union of Popular Forces (Union Socialiste des Forces Populaires—USFP) led all other parties in the voting. International observers regarded the elections as free and fair, noting the lack of irregularities that had plagued the 1997 elections. Under Muhammad VI, Morocco has continued down a path toward economic, political, and social reform and modernization. In May 2003, in honor of the birth of a son and heir to the throne, the king ordered the release of 9,000 prisoners and the reduction of 38,000 sentences. Also in 2003, Berber-language instruction was introduced in primary schools, prior to introducing it at all educational levels. In 2004, the government implemented reforms of the family code improving the status of women—first proposed in 2000—despite the objections of traditionalists.[10]

In March 2000, women's groups organised demonstrations in Casablanca proposing reforms to the legal status of women in the country. 40,000 women attended, calling for a ban on polygamy and the introduction of civil divorce law (divorce being a purely religious procedure at that time). Although a counter-demonstration attracted half a million participants, the movement for change started in 2000 was influential on King Mohammed, and he enacted a new *Mudawana*, or family law, in early 2004, meeting some of the demands of women's rights activists.

In July 2002, a crisis broke with Spain over an uninhabited small island lying just less than 200 meters from the Moroccan coast, named Toura or Leila by Moroccans, and Isla Perejil by Spain. After mediation by the United States, Both Morocco and Spain agreed to return to the status quo by which the Island remains deserted and almost a no man's land.

Internationally, Morocco has maintained a moderate stance, with strong ties to the West. It was one of the first Arab and Islamic states to denounce the 9/11 terrorist attacks on the United States. In May 2003, Morocco itself was subjected to the more radical forces at work in the Arab world when Islamist suicide bombers simultaneously struck a series of sites in Casablanca, killing 45 and injuring more than 100 others. The Moroccan government responded with a crackdown against Islamist extremists, ultimately arresting several thousand, prosecuting 1,200, and sentencing about 900. Additional arrests followed in June 2004. That same month, the United States designated Morocco a major non-North Atlantic Treaty Organization ally in recognition of its efforts to thwart international terrorism. On January 1, 2006, a comprehensive bilateral free trade agreement between the United States and Morocco took effect.[10] The agreement had been signed in 2004 along with a similar agreement with the European Union, its main trade partner.

King of Morocco

MONARCHY

Coat of arms of Morocco

Incumbent:

Mohammed VI of Morocco

since 23 July 1999

Style:	His Majesty
Heir apparent:	Prince Moulay Hassan
First monarch:	Idriss ibn Abdallah (Idrisid dynasty) Al-Rashid ibn Sharif (Alaouite dynasty)
Formation:	789 (Idrisid dynasty) 1666 (Alaouite Dynasty)
Residence:	Touarga district, Rabat

Idrisid dynasty

- Idriss I (788–791)
- Idriss II (791–828)
- Muhammad ibn Idris (828–836)
- Ali ibn Idris (836–848)
- Yahya ibn Muhammad (848–864)
- Yahya ibn Yahya (864–874)
- Ali ibn Umar (874–883)
- Yahya ibn Al-Qassim (883–904)
- Yahya ibn Idris ibn Umar (904–917)

The first period of Fatimid overlordship lasted from 922 to 925.

- Hassan I al-Hajam (925–927)

The second period of Fatimid overlordship lasted from 927 to 937.

- Al Qasim Gannum (937–948)
- Abu l-Aish Ahmad (948–954)
- Al-Hasan ben Kannun (954–974)

In 974 the sultan Al-Hasan ben Kannun was defeated by Cordobese Umayyads. A period of Umayyad overlordship followed then.

Almoravid dynasty

- Yusuf ibn Tashfin (1061–1106)
- Ali ibn Yusuf (1106–1142)
- Tashfin ibn Ali (1142–1146)
- Ibrahim ibn Tashfin (1146)
- Is'haq ibn Ali (1146–1147)

Almohad dynasty

- 'Abdul-Mu'min (1145–1163)
- Abu Yaqub Yusuf I (1163–1184)
- Aby Yusuf Yaqub al-Mansur (1184–1199)
- Muhammad an-Nasir (1199–1213)
- Abu Yaqub Yusuf II (1213–1224)
- Abdul-Wahid I (1224)
- Abdallah al-Adil (1224–1227)
- Yahya (1227–1235)
- Idris I (1227–1232)
- Abdul-Wahid II (1232–1242)
- Ali (1242–1248)
- Umar (1248–1266)
- Idris II (1266–1269)

Marinid dynasty

- Abd al-Haqq I (1195–1217)
- Uthman I (1217–1240)
- Muhammad I (1240–1244)
- Abu Yahya ibn Abd al-Haqq (1244–1258)
- Umar (1258–1259)
- Abu Yusuf Yaqub (1259–1286)
- Abu Yaqub Yusuf (1286–1306)
- Abu Thabit (1307–1308)
- Abu l-Rabia (1308–1310)
- Abu Said Uthman II. (1310–1331)
- Abu Al-Hasan ibn Othman (1331–1348)
- Abu Inan Faris (1348–1358)
- Muhammad II. as Said (1359)
- Abu Salim Ali II. (1359–1361)
- Abu Umar Taschufin (1361)
- Abu Zayyan Muhammad III. (1362–1366)
- Abu l-Fariz Abdul Aziz I. (1366–1372)
- Abu l-Abbas Ahmad (1372–1374)
- Abu Zayyan Muhammad IV. (1384–1386)
- Muhammad V. (1386–1387)
- Abu l-Abbas Ahmad (1387–1393)
- Abdul Aziz II. (1393–1398)
- Abdullah (1398–1399)

- Abu Said Uthman III. (1399–1420)
- Abdalhaqq II. (1420–1465)

Wattasid Dynasty

- Abu Zakariya Muhammad al-Saih al-Mahdi (1472–1505)
- Abu Abdallah Muhammad I (1505–1524)
- Abul Abbas Ahmad (1524–1545)
- Nasir ad-Din al-Qasri (1545–1547)
- Abul Abbas Ahmad (second time, 1547–1549)
- Ali Abu Hassun (1549–1554)

Saadi Dynasty

Saadian princes of Southern Morocco (1509-1554):

- Abu Abdallah al-Qaim (1509–1517)
- Ahmad al-Araj (1517–1544)
- Mohammed ash-Sheikh (1544–1554)

Saadian sultans of Morocco:

- Mohammed ash-Sheikh (1554-1557)
- Abdallah al-Ghalib (1557–1574)
- Abu Abdallah Mohammed II (1574–1576)
- Abu Marwan Abd al-Malik I (1576–1578)
- Ahmad I al-Mansur (1578–1603)
- Abou Fares Abdallah (born 1564) (1603–1608 in parts of Morocco)
- Zidan Abu Maali (1603–1627)
- Abu Marwan Abd al-Malik II (1627–1631)
- Al Walid ben Zidan (1631–1636)
- Mohammed Ech Sheik el Seghir (1636–1655)
- Ahmad el Abbas (1655–1659)

Saadian rulers based in Fes (1603–1627, with only local power):

- Mohammed esh Sheikh el Mamun (born 1560), (1604–1613)
- Abdallah II (1613–1623)
- Abd el Malek (1623–1627)

Alaouite Dynasty

Alaouite princes of Tafilalt (1631-1666):

Mohammed VI
محمد السادس

King of Morocco

Reign	23 July 1999 – present
Predecessor	Hassan II
Heir apparent	Moulay Hassan
Prime Ministers	***See list***
Spouse	Salma Bennani
Issue	***Detail***
Moulay Hassan Lalla Khadija	
House	House of Alaouite
Father	Hassan II
Mother	Lalla Latifa Hammou
Born	21 August 1963 Rabat, Morocco
Religion	Sunni Islam

Education

On the day of his birth, he was appointed Heir Apparent and Crown Prince.[3] His father, King Hassan II, was keen on giving him a religious and political education from an early age. At the age of four, he started attending the Qur'anic school at the Royal Palace,[1] and received a religious and traditional education.

After primary and secondary studies at Royal College and after he received his Baccalaureate in 1981, Mohammed obtained in 1985 a Bachelor's degree in law at the College of law of the Mohammed V University at Agdal in Rabat. His research paper dealt with "the Arab-African Union and the Strategy of the Kingdom of Morocco in matters of International Relations".[1] He has also frequented the Imperial College and University of Rabat.[3] In the same year of 1985 he was appointed President of the Pan Arab Games and commissioned Colonel Major of the Royal Moroccan Army on 26 November, and Coordinator of the Offices and Services of the Royal Armed Forces until 1994.[3]

In 1987 he obtained his first *Certificat d'Études Supérieures* (CES) in Political Sciences and in July 1988 he obtained a *Diplôme d'Études Approfondies* DEA in Public Law.[1]

In November 1988 he trained in Brussels with Jacques Delors, then President of the European Commission.[1]

He obtained his doctorate in law (PhD) with distinction on 29 October 1993 from the French University of Nice Sophia Antipolis for his thesis on "EEC-Maghreb Relations".[1]

Mohammed was promoted to the rank of Major General on 12 July 1994, the same year he became President of the High Council of Culture and Commander-in-Chief of the Royal Moroccan Army until 1999, the year he succeeded his father on 23 July, being enthroned at Rabat on 30 July.[3]

He received an honorary degree (doctor honoris causa) from George Washington University on 22 June 2000 for his promotion of democracy in Morocco.

Social reform and liberalization

Mohammed VI talks with U.S. President George W. Bush in Washington, 23 April 2002

Shortly after he took the throne, he addressed his nation via television, promising to take on poverty and corruption, while creating jobs and improving Morocco's human rights record. Mohammed VI is generally opposed by Islamist conservatives, and some of his reforms have angered fundamentalists. He also created a new family code, or Mudawana, which granted women more power.[4] The law came into effect in February, 2004.

In December 2010 Wikileaks published diplomatic cables which alleged high-level corruption involving the King himself.[5]

Mohammed VI also created the so-called Instance Equité et Réconciliation (IER), a commission, which was supposed to research human rights violations under Hassan II. The commission was however not allowed to report about human rights violations until 1999, when Mohammed was enthroned. This move was welcomed by many as a move towards democracy, but also criticized because reports of human rights violations could not name the perpetrators. According to human rights organisations, abuses still exist in Morocco.[6][7][8] The 2011 Moroccan protests were motivated by corruption and general discontentment towards politicians in general and by the desire of better life conditions motivated by the economic crisis. The King has answered the protesters with the promise of further reforms.

Moroccan Royal Family

- **HM The King**
  HRH The Princess Consort
    - HRH The Crown Prince
    - HRH Princess Lalla Khadija
- HRH Princess Lalla Meryem
- HRH Princess Lalla Asma
- HRH Princess Lalla Hasna
- HRH Prince Moulay Rachid

In a speech delivered on 9 March 2011 the King said that parliament would receive "new powers that enable it to discharge its representative, legislative, and regulatory mission". In addition to the powers of the judiciary being granted independence from the King. And the king announced that he was impaneling a committee of legal scholars to produce a draft constitution by June.[9]

On July 1 voters approved a set of political reforms that the King proposed. The reforms consisted of the following:[10]

- The Amazigh language[11] is an official state language along with Arabic.[12]
- The state preserves and protects the Hassānīya language and all the linguistic components of the Moroccan culture as a heritage of the nation[12]
- The king has the obligation to appoint a prime minister from the party that wins the most seats in the parliamentary elections. Previously, he could nominate a technocrat in this position if no party has a decisive advantage, over the other parties, in terms of the number of seats in the parliament.[10][13][14]
- The king is no longer "sacred" but the "integrity of his person" is "inviolable" [15]
- High administrative and diplomatic posts (including ambassadors, CEOs of state-owned companies, provincial and regional governors), are now appointed by the prime minister and the ministerial council which is presided by the king, previously the latter exclusively held this power.[16][17]
- The prime minister is the head of government and president of the council of government, he has the power to dissolve the parliament.[18]

Mohammed VI with former Brazilian president Luiz Inácio Lula da Silva

- The prime minister will preside over the council of Government, which prepares the general policy of the state. Previously the king held this position.[18]
- The parliament has the power of granting amnesty. Previously this was exclusively held by the king [19]
- The judiciary system is independent from the legislative and executive branch, the king guarantees this independence[18][20]
- Women are guaranteed "civic and social" equality with men. Previously, only "political" equality was guaranteed, though the 1996 constitution grants all citizens equality in terms of rights and before the law[14]
- The King would retain complete control of the armed forces, foreign policy and the judiciary;[21] authority for choosing and dismissing prime ministers[22] and he would retain control of matters pertaining to religion.
- All citizens have the freedom of: thought, ideas, artistic expression and creation. Previously only free-speech and the freedom of circulation and association were guaranteed.[14][23]

Wealth and allegations of personal corruption

Until recently the king and his family held stock in the Omnium Nord Africain (ONA Group), a holding company with a diverse portfolio (mining, food processing, retail and financial services, etc.), although a new constitutional implementation disallowed this. Mohammed is estimated by Forbes magazine to be worth $2 billion and the Moroccan Royal Family has one of the largest fortunes in the world. His palace's daily operating budget is reported by Forbes to be $960,000, owing much of it to the expense of clothes and car repair.[24]

Royal involvement in business is a hot topic in Morocco but public discussion of it is sensitive. The US embassy in Rabat reported to Washington in a separate cable that "corruption is prevalent at all levels of Moroccan society".[5]

Corruption allegedly reaches the highest levels in Morocco, where the business interests of King Mohammed VI and some of his advisors influence 'every large housing project,' according to WikiLeaks documents quoted by Britain's Guardian newspaper.[25] The documents released by the whistleblower website also quote the case of a businessman working for a US consortium, whose plans in Morocco were paralysed for months after he refused to join forces with a company linked with the royal palace. Decisions on big investments in the kingdom were taken by only three people, the documents quote one of the executives of a company belonging to the royal family as saying.

The three are the king, his secretary Mounir Majidi, and the monarch's close friend, the politician Fouad Ali Himma, the executive said at a meeting with potential investors in a Gulf country. The corruption affects especially the housing sector, the WikiLeaks documents show.[26]

Family

Mohammed, who was born in Rabat, has one brother, Prince Moulay Rachid, and three sisters, Princess Lalla Meryem, Princess Lalla Asma, and Princess Lalla Hasna.

On 21 March 2002 in Rabat,[3] he married Salma Bennani (now H.R.H. Princess Lalla Salma) in Rabat, and she was granted the personal title of Princess with the style of Her Royal Highness on her marriage. They have two children, Crown Prince Moulay Hassan, who was born on 8 May 2003, and Princess Lalla Khadija, who was born on 28 February 2007.[4]

Decorations

Include:

- Grand Officer of the Order of the Equatorial Star of Gabon (7 July 1977)

Alaouite dynasty

From Wikipedia, the free encyclopedia

The **Alaouite Dynasty** is the name of the current Moroccan royal family. The name Alaouite comes from the *ʻAlī* of its founder Moulay Ali Cherif who became Prince of Tafilalt in 1631. His son Mulay r-Rshid (1664–1672) was able to unite and pacify the country. The Alaouite family claim descent from Muhammad through the line of Fāṭimah az-Zahrah, Muhammad's daughter, and her husband, the Fourth Caliph ʻAlī ibn Abī Ṭālib.

Conquest

Empire of Morocco, by Thomas Kitchin (1718–1784)

According to some legends the Alaouites entered Morocco at the end of the 13th century when Al Hassan Addakhil, who lived then in the town of Yanbu in the Hejaz, was brought to Morocco by the inhabitants of Tafilalet to be their imām. They were hoping that, as he was a descendant of Muhammad, his presence would help to improve their date palm crops thanks to his *barakah* "blessing", an Arabic term meaning a sense of divine presence or charisma. His descendants began to increase their power in southern Morocco after the death of the Saʿdī ruler Ahmad al-Mansur (1578–1603). In 1669, the last Saʿdī sultan was overthrown in the conquest of Marrakesh by Mulay r-Rshid (1664–1672). After the victory over the zāwiya of Dila, who controlled northern Morocco, he was able to unite and pacify the country.

The organization of the sultanate developed under Ismail Ibn Sharif

(1672–1727), who, against the opposition of local tribes began to create a unified state. {{Reference necessary|Because the Alaouites had difficult relations with many of the country's Berber and Bedouin-Arab tribes, Isma'īl formed a new army of black slaves, the Black Guard. However, the unity of Morocco did not survive his death—in the ensuing power struggles the tribes became a political and military force once again.

Only with Muhammad III (1757–1790) could the kingdom be pacified again and the administration reorganized. A renewed attempt at centralization was abandoned and the tribes allowed to preserve their autonomy. Under Abderrahmane (1822–1859) Morocco fell under the influence of the European powers. When Morocco supported the Algerian independence movement of the Emir Abd al-Qadir, it was heavily defeated by the French in 1844 at the Battle of Isly and made to abandon its support.

From Muhammad IV (1859–1873) and Hassan I (1873–1894) the Alaouites tried to foster trading links, above all with European countries and the United States. The army and administration were also modernised, to improve control over the Berber and Bedouin tribes. With the war against Spain (1859–1860) came direct involvement in European affairs—although the independence of Morocco was guaranteed in the Conference of Madrid (1880), the French gained ever greater influence. German attempts to counter this growing influence led to the First Moroccan Crisis of 1905-1906 and the Second Moroccan Crisis (1911). Eventually the Moroccans were forced to recognise the French Protectorate through the Treaty of Fez, signed on December 3, 1912. At the same time the Rif area of northern Morocco submitted to Spain.

Under the protectorate (1912–1956) the infrastructure was invested in heavily in order to link the cities of the Atlantic coast to the hinterland, thus creating a single economic area for Morocco. However the regime faced the opposition of the tribes—when the Berbers were required to come under the jurisdiction of French courts in 1930 it marked the beginning of the independence movement. In 1944, the independence party Istiqlāl was founded, supported by the Sultan Muhammad V (1927–1961). France was obliged to grant Morocco independence on March 2, 1956, leaving behind both a legacy of urbanisation and industrial economy in some cities, and destruction and isolation in the areas that hosted the Berber resistance against France and Spain between 1912 and 1933.

Oman

From Wikipedia, the free encyclopedia

Oman (/oʊˈmɑːn/ *oh-MAAN*; Arabic: عمان *'Umān*), officially called the **Sultanate of Oman** (Arabic: سلطنة عُمان *Salṭanat 'Umān*), is an Arab state in southwest Asia on the southeast coast of the Arabian Peninsula. It is bordered by the United Arab Emirates (UAE) to the northwest, Saudi Arabia to the west, and Yemen to the southwest. The coast is formed by the Arabian Sea on the southeast and the Gulf of Oman on the northeast. The Madha and Musandam enclaves are surrounded by the UAE on their land borders, with the Strait of Hormuz and Gulf of Oman forming Musandam's coastal boundaries.

For a period, Oman was a moderate regional power, formerly having a sultanate extending across the Strait of Hormuz to Iran, and modern day Pakistan, and far south to Zanzibar on the coat of south-east Africa. Over time, as its power declined, the sultanate came under heavy influence from the United Kingdom, though Oman was never formally part of the British Empire, or a British protectorate. The Omani royal family claim that Oman has been ruled by the Al Said dynasty since 1744, although without substantial proof. Oman has long-standing military and political ties with the United Kingdom and the United States, although it maintains an independent foreign policy.[6]

Oman is an absolute monarchy in which the Sultan of Oman exercises ultimate authority but its parliament has some legislative and oversight powers.[7] In November 2010, the United Nations Development Programme (UNDP) listed Oman, from among 135 countries worldwide, as the nation most-improved during the preceding 40 years.[8] According to international indices, Oman is one of the most developed and stable countries in the Arab World.[9]

History

Main article: History of Oman

Stone Age

Dereaze, located in the city of Ibri, is the oldest known human settlement in the area, dating back as many as 8,000 years to the late Stone Age.[*citation needed*] Archaeological remains have been discovered here from the Stone Age and the Bronze Age; findings have included stone implements, animal bones, shells and fire hearths, with the later dating back to 7615 BC as the oldest signs of human settlement in the area. Other discoveries include hand-moulded pottery bearing distinguishing pre-Bronze Age marks, heavy flint implements, pointed

World Heritage Graves in Al Ayn, Oman

tools and scrapers.

On a mountain rock-face in the same district, animal drawings have been discovered. Similar drawings have also been found in the Wadi Sahtan and Wadi Bani Kharus areas of Rustaq, consisting of human figures carrying weapons and being confronted by wild animals. Siwan in Haima is another Stone Age location and some of the archaeologists have found arrowheads, knives, chisels and circular stones which may have been used to hunt animals.

Sumerian tablets refer to a country called Magan or Makan, a name believed to refer to Oman's ancient copper mines. Mazoon, another name used for the region, is derived from the word *muzn*, which means heavy clouds which carry abundant water. The present-day name of the country, Oman, is believed to originate from the Arab tribes who migrated to its territory from the Uman region of Yemen; many such tribes settled in Oman, making a living by fishing, herding or stock breeding, and many present day Omani families are able to trace their ancestral roots to other parts of Arabia.

Wadi Shab, Oman, 2004

From the 6th century BC to the arrival of Islam in the 7th century AD, Oman was controlled and/or influenced by three Persian dynasties, the Achaemenids, Parthians and Sassanids. In the 6th century BC, the Achaemenids exerted a strong degree of control over the Omani peninsula, most likely ruling from a coastal center such as Sohar. By about 250 BC, the Parthian dynasty had brought the Persian Gulf under their control and extended their influence as far as Oman, establishing garrisons in Oman to help control the trade routes in the Persian Gulf. In the 3rd century AD, the Sassanids succeeded the Parthians and held the area until the rise of Islam four centuries later.[10]

Arrival of Islam

The Bahla Fort is a UNESCO World Heritage site

Omanis were among the first people to embrace Islam.[11] The conversion of the Omanis is usually ascribed to Amr ibn al-As, who was sent by Muhammad around 630 AD to invite Jayfar and 'Abd, the joint rulers of Oman at that time, to accept the faith. In accepting Islam, Oman became an Ibadhi state, ruled by an elected leader, the Imam. During the early years of the Islamic mission, Oman played a major role in the Wars of Apostasy that occurred after the death of Muhammad, and also took part in the great Islamic conquests by land and sea in Iraq, Persia and beyond. Oman's most prominent role in this respect was through its extensive trading and seafaring activities in East Africa and the Far East, particularly during the 19th century, when it propagated Islam to many of East Africa's coastal regions, certain areas of Central Africa, India, Southeast Asia and China. After its conversion to Islam, Oman was ruled by Umayyads between 661–750, Abbasids between 750–931, 932–933 and 934–967, Qarmatians between 931–932 and 933–934, Buyids between 967–1053, and the Seljuks of Kirman between 1053–1154.

Portuguese colonization

A decade after Vasco da Gama discovered the seaway to India in 1498, Portuguese explorers arrived in Oman and occupied Muscat for a 140-year period, between 1508 and 1648. In need of an outpost to protect their sea lanes, the Portuguese colonists built up and fortified the city, where remnants of their colonial architectural style still remain.

Rebellious tribes eventually drove out the Portuguese, but were pushed out themselves about a century later, in 1741, by the leader of a Yemeni tribe leading a massive army from various allied tribes, beginning the current line of ruling sultans. Excepting a brief Persian invasion in the late 1740s, Oman has been self-governing ever since.

No foreign power controlled the entirety of what is now Oman. The majority of the territory was always ruled by tribes, with colonial control contained to a few strategic port cities. Oman, as it exists now was never under the total sway of European colonization, unlike true "colonies" such as the British in India.

Oman, East Africa and the Indian Ocean

In the 1690s, Saif bin Sultan, the Imam of Oman, pressed down the East African coast. A major obstacle to his progress was Fort Jesus, housing the garrison of a Portuguese settlement at Mombasa. After a two-year siege, the fort fell to bin Sultan in 1698. Thereafter the Omanis easily ejected the Portuguese from Zanzibar and from all other coastal regions north of Mozambique, with the aid of the Somalis. Zanzibar was a valuable property as the main slave market of the East African coast, and became an increasingly important part of the Omani empire, a fact reflected by the decision of the 19th century Sultan of Oman, Sa'id ibn Sultan, to make it his main place of residence in 1837. Sa'id built impressive palaces and gardens in Zanzibar. Rivalry between his two sons was resolved, with the help of forceful British diplomacy, when one of them, Majid, succeeded to Zanzibar and to the many regions claimed by the family on the East African coast. The other son, Thuwaini, inherited Muscat and Oman.

The Sultan's Palace in Zanzibar, which was once Oman's capital and residence of its Sultans.

A History of Omani presence is also known in Comoros archipelago in the Indian ocean, which led to a great influence in the Comorian culture from the clothing, to the wedding ceremenies. It is said that the capital of Comoros, Moroni, was once the capital of the Omani sultanate empire and a centre of trade for the empire.

Oman and Gwadar

Main article: Gwadar

In 1783, Oman's Saiad Sultan, defeated ruler of Muscat, was granted sovereignty over Gwadar, a coastal city located in the Makran region of what is now the far southwestern corner of Pakistan, near the present-day border of Iran and at the mouth of the Gulf of Oman.[note 1][12] He was to continue this sovereignty, via an appointed *wali* (or "governor"), after regaining control of Muscat, and he maintained close relations with the Emirs of Sindh. The Sultans of Muscat retained sovereignty over Gwadar until the 1950s. In 1955, Makran acceded to Pakistan and was made a district – although Gwadar, at the time, was not included in Makran. In 1958, Gwadar and its surrounding areas were returned to Pakistan by Muscat, and were given the status of Tahsil of the Makran district.[note 2][13]

Dhofar rebellion

Main article: Dhofar Rebellion

The Dhofar Rebellion was launched in the province of Dhofar against the Sultanate of Muscat and Oman and Britain from 1962 to 1975. As the rebellion threatened to overthrow the Sultan's rule in Dhofar, Sultan Said bin Taimur was deposed by his son Qaboos bin Said, who introduced major social reforms and modernised the state's administration. The rebellion was ended by the intervention of Iranian Imperial forces, Pakistani Baluchistan Imperial ground forces, British Royal Air Force air power and major offensives by the expanded Sultan of Oman's Armed Forces.

Politics

Main articles: Politics of Oman and Human rights in Oman

The Sultan's Al Alam Palace in Old Muscat

The head of state and of the government is the hereditary sultan, Qaboos bin Said Al Said, who appoints a cabinet called the "Diwans" to assist him. In the early 1990s, the sultan instituted an elected council, the Consultative Assembly of Oman, It had advisory roles until 2011, when Sultan Qaboos decided to give legislative powers to the council, allowing the newly elected parliament to question ministers, propose laws and suggest changes to government regulations.[14]

There are no legal political parties in Oman. As more and more young Omanis return from education abroad, it seems likely that the traditional, tribal-based political system will have to be adjusted.[15] A State Consultative Council, established in 1981, consisted of 55 appointed representatives of government, the private sector, and regional interests.

Foreign policy

Main article: Foreign relations of Oman

Since 1970, Oman has pursued a moderate foreign policy and expanded its diplomatic relations dramatically. Oman is among the very few Arab countries that have maintained friendly ties with Iran.[16][17] Wikileaks disclosed US diplomatic cables which have shown that cordial relations between Oman and Iran have borne fruit for the United Kingdom (in helping release British sailors imprisoned by Iran).[18] The same cables also portray the Omani government as wishing to maintain cordial relations with Iran and as having continuously turned down US diplomats requesting Oman to take a sterner stance against Iran.[19][20][21][22]

Military

Main article: Sultan of Oman's Armed Forces

Oman's armed forces, the Sultan's Armed Forces (SAF), including Royal Household troops, numbered 120,000 in 2010, consisting of: 105,000 personnel in the Royal Army of Oman (RAO), equipped with over 120 main battle tanks and 37 Scorpion tanks; 8,100 personnel in the Royal Air Force of Oman (RAFO) operating 180–200 combat aircraft, trainers, transports and helicopters; and 6,200 personnel in the Royal Navy of Oman (RNO)

sailing 64 patrol and coastal vessels. Paramilitary units include the Tribal Home Guard (Firqats) of 8,000 personnel organized in small tribal teams, a Royal Oman Police (ROP) coast guard of 400, and a small ROP air wing. Funded directly by the Sultan, the elite Royal Household brigade, naval unit, and air unit number 6,400, including two special forces regiments. Oman holds one of the world's largest amounts of Scud missiles, ranging at an estimate of over 30,000 ballistic missiles. In 2008 Oman spent 7.7% of GDP on military expenditures.[23] According to *Times Online*, Oman is home to the world's only camel-backed bagpipe military band.

Geography

Coast of Sur, Oman

Main articles: Geography of Oman and Geology of Oman

Geography of Oman	
Coastline	2,092 km
Bordering countries	Saudi Arabia, UAE and Yemen

Oman lies between latitudes 16° and 28° N, and longitudes 52° and 60° E.

A vast gravel desert plain covers most of central Oman, with mountain ranges along the north (Al Hajar Mountains) and southeast coast, where the country's main cities are also located: the capital city Muscat, Sohar and Sur in the north, and Salalah in the south. Oman's climate is hot and dry in the interior and humid along the coast. During past epochs Oman was covered by ocean, witnessed by the large numbers of fossilized shells existing in areas of the desert away from the modern coastline.

Desert landscape in Oman

The peninsula of Musandam (Musandem) exclave, which has a strategic location on the Strait of Hormuz, is separated from the rest of Oman by the United Arab Emirates.[24] The series of small towns known collectively as Dibba are the gateway to the Musandam peninsula on land and the fishing villages of Musandam by sea, with boats available for hire at Khasab for trips into the Musandam peninsula by sea.

Oman's other exclave, inside UAE territory, known as Madha, located halfway between the Musandam Peninsula and the main body of Oman,[24] is part of the Musandam governorate, covering approximately 75 km^2 (29 sq mi). Madha's boundary was settled in 1969, with the north-east corner of Madha barely 10 m (32.8 ft) from the Fujairah road. Within the Madha exclave is a UAE enclave called Nahwa, belonging to the Emirate of Sharjah, situated about 8 km (5 mi) along a dirt track west of the town of New Madha, consisting of about forty houses with a clinic and telephone exchange.[25]

Climate

Main article: Climate of Oman

Oman has a hot climate and very little rainfall. Annual rainfall in Muscat averages 100 mm (3.9 in), falling mostly in January. Dhofar is subject to the southwest monsoon, and rainfall up to 640 mm (25.2 in) has been recorded in the rainy season from late June to October.[*citation needed*] While the mountain areas receive more plentiful rainfall, some parts of the coast, particularly near the island of Masirah, sometimes receive no rain at all within the course of a year. The climate generally is very hot, with temperatures reaching around 50 °C (122.0 °F) (peak) in the hot season, from May to September.

Source: weather.com[26]													

Flora and fauna

Desert shrub and desert grass, common to southern Arabia, are found, but vegetation is sparse in the interior plateau, which is largely gravel desert.

Nakhal palm tree farms in the Batina Region, Sultanate of Oman

The greater monsoon rainfall in Dhofar and the mountains makes the growth there more luxuriant during summer; coconut palms grow plentifully in the coastal plains of Dhofar and frankincense is produced in the hills, with abundant oleander and varieties of acacia.

The Al Hajar Mountains are a distinct ecoregion, the highest points in eastern Arabia with wildlife including the Arabian tahr.

Indigenous mammals include the leopard, hyena, fox, wolf, and hare, oryx and ibex. Birds include the vulture, eagle, stork, bustard, Arabian partridge, bee eater, falcon and sunbird. in 2001 Oman had nine endangered species of mammals and five endangered types of birds[*citation needed*] and nineteen threatened plant species. Decrees have been passed to protect endangered species, including the Arabian leopard, Arabian Oryx, Mountain gazelle, Goitered Gazelle, Arabian tahr, Green sea turtle, Hawksbill Turtle and Olive ridley turtle, but UNESCO have de-listed the Oman Arabian Oryx sanctuary from the World Heritage list due to the government's decision to reduce the site to 10% of its former size.[27]

Administrative divisions

Main article: Regions and governorates of Oman

Since 28 October 2011, Oman is divided into eleven governorates (*muhafazah*):[28][29][30]

- Ad Dakhiliyah
- Ad Dhahirah North
- Al Batinah North
- Al Batinah South
- Al Buraimi
- Al Wusta
- Ash Sharqiyah North
- Ash Sharqiyah South
- Dhofar
- Masqat
- Musandam

Below the governorates, Oman is divided into provinces (*wilayat*).

Environment

Drought and limited rainfall contribute to shortages in the nation's water supply, so maintaining an adequate supply of water for agricultural and domestic use is one of Oman's most pressing environmental problems, with limited renewable water resources; 94% of available water is used in farming and 2% for industrial activity, with the majority sourced from fossil water in the desert areas and spring water in hills and mountains. Drinking water is available throughout the country, either piped or delivered.

The soil in coastal plains, such as Salalah, have shown increased levels of salinity, due to over exploitation of ground water and encroachment by seawater in the water table. Pollution of beaches and other coastal areas by oil tanker traffic through the Strait of Hormuz and Gulf of Oman is also a persistent risk.

Demographics

Main article: Demographics of Oman

Demographics of Oman	
Languages	Arabic,Balochi, English
Religion	Ibadi Islam
Ethnic groups	Arab, Baloch, South Asian and African
Life expectancy	73.13 years

According to the 2010 census, the total population was 2.773 million and of those, 1.96 million were Omanis. The population has grown from 2.340 million in the 2003 census. In Oman, about 50% of the population lives in Muscat and the Batinah coastal plain northwest of the capital; about 200,000 live in the Dhofar (southern) region, and about 30,000 live in the remote Musandam Peninsula on the Strait of Hormuz.

Some 600,000 foreigners live in Oman, most of whom are guest workers from Pakistan, Bangladesh, Egypt, India and the Philippines.

Religion

The Sultan Qaboos Grand Mosque is the largest Mosque in Oman and one of the largest in the world.

Around 75% of the population consists of Ibadhi, a form of Islam distinct from the Sunni and Shia denominations, 24% Sunni Muslims and the Shiia forming the remaining 1% of the Omani population. The Oman government does not keep statistics on religious affiliation, but most citizens are Muslims.[31] Non-Muslim religious communities individually constitute less than 5% of the population and include various groups of Hindus, Buddhists, Zoroastrians, Sikhs, Baha'is, and Christians. Christian communities are centered in the major urban areas of Muscat, Sohar, and Salalah and include Roman Catholic, Eastern Orthodox, and various Protestant congregations, organizing along linguistic and ethnic lines. More than 50 different Christian groups, fellowships, and assemblies are active in the Muscat metropolitan area, formed by migrant workers from Southeast Asia, although there are small communities of ethnic Indian Hindus and Christians that have been naturalized.[*citation needed*] Many of the non-Muslims in Oman are due to the historical and cultural influence of India.

Economy

Main article: Economy of Oman

Economy of Oman

Oman's Basic Statute of the State expresses in Article 11 that, "The National Economy is based on justice and the principles of a free economy."

Omani citizens enjoy good living standards, but the future is uncertain with Oman's limited oil reserves.[31] Other sources of income, agriculture and industry, are small in comparison and count for less than 1% of the country's exports, but diversification is seen as a priority in the government of Oman. Agriculture, often subsistence in its character, produces dates, limes, grains and vegetables, but with less than 1% of the country under cultivation Oman is likely to remain a net importer of food.

Since the slump in oil prices in 1998, Oman has made active plans to diversify its economy and is placing a greater emphasis on other areas of industry, such as tourism.

Oil and gas

Petrochemical tanks in Sohar

Oman's proved reserves of petroleum total about 5.5 billion barrels, 24th largest in the world.[32] Oil is extracted and processed by Petroleum Development Oman (PDO), with proven oil reserves holding approximately steady, although oil production has been declining.[33][34] In 2009, production was estimated at 816,000 barrels per day.[35]

Commercial export of oil began in 1967 and since Sultan Qaboos' accession to the throne in 1970, many more oil fields have been found and developed. In June 1999, PDO discovered a new oil field in southern Oman after drilling and testing three wells which demonstrated the commercial viability of the reservoir.

Work is continuing on the RO 503.876 million (US$1.3 billion) oil refinery project in Sohar, which was due to go into operation in 2006 with a 116,400 barrels per day (18,510 m^3/d) refining capacity, with the short to mid-term future of Oman resting on the project. In 2004 the Oman Oil Refinery was supplied with about 78,200 barrels per day (12,430 m^3/d) for refining, while PDO began using steam injection technology in several wells to increase their productivity.

Natural gas has increased greatly in importance due to the exploitation of gas fields and the opening of a processing plant at Sur, on the coast south of Muscat. Oman's natural gas reserves are estimated at 849.5 billion cubic meters, ranking 28th in the world, and production in 2008 was about 24 billion cubic meters per year.[36]

Mineral resources

Oman's mineral resources include chromite, dolomite, zinc, limestone, gypsum, silicon, copper, gold, cobalt and iron. Several industries have grown up around them as part of the national development process which, in turn, have boosted the minerals sector's contribution to the nation’s GDP as well as providing jobs for Omanis. The mineral sector's operations include mining and quarrying, with several projects recently completed, including: an economic feasibility study on silica ore in Wadi Buwa and Abutan in the Wusta Region, which confirmed that there were exploitable reserves of around 28 million tonnes at the two sites; a feasibility study on the production

of magnesium metal from dolomite ore; a draft study on processing limestone derivatives; a project to produce geological maps of the Sharqiyah Region; economic feasibility studies on the exploitation of gold and copper ores in the Ghaizeen area; a study on raw materials in the wilayats of Duqm and Sur for use in the Sultanate's cement industry; and a study on the construction of a new minerals laboratory at Ghala in the Governorate of Muscat.

Industry

The industrial sector is a cornerstone of the Sultanate's long-term (1996–2020) development strategy for diversifying the sources of national income and reducing dependence on oil; it is also capable of helping to meet Oman's social development needs and generate greater added value for national resources by processing them into manufactured products.

The Seventh Five-Year Development Plan creates the conditions for an attractive investment climate, providing a strategy for the industrial sector aiming to develop the information technology and telecommunications industries. The Knowledge Oasis Muscat complex has been set up and expanded, and Omani companies are developing their technological potential through collaboration with various Japanese and German institutions.

There are industrial estates in Sohar, Sur, Salalah, Nizwa and Buraimi providing industries with the resources for expansion. Provision of Natural gas to the industrial estates in Sohar and Salalah, help to promote expansion of those industries reliant on large quantities of energy; tax exemptions are given as an incentive to encourage their expansion and development, with the industrial sector expected to contribute 15% to the country's GDP by 2020.[*citation needed*]

Development plans

The Omani economy has been radically transformed over a series of development plans beginning with the First Five-year Plan (1976–1980). At Sultan Qaboos's instruction, "Vision 2020", a plan for Oman's economic future up to the year 2020, was set out at the end of the first phase of the country's development, from 1970–1995, outlining the country's economic and social goals over the 25 years of the second phase of the development process (1996–2020).

Sohar port is expected to transform Oman's economy

Oman 2020, held in June 1995, has developed the following aims with regard to securing Oman's future prosperity and growth:

- To have economic and financial stability
- To reshape the role of the Government in the economy and to broaden private sector participation
- To diversify the economic base and sources of national income
- To globalize the Omani economy
- To upgrade the skills of the Omani workforce and develop human resources

A free-trade agreement with the United States took effect 1 January 2009, eliminating tariff barriers on all consumer and industrial products, also providing strong protections for foreign businesses investing in Oman.[37]

Tourism

Main article: Tourism in Oman

Al-Bustan Palace Hotel

Oman is known for its popular tourist attractions. Wadis, deserts, beaches, and mountains are areas which make Oman unique among its neighboring Cooperation Council for the Arab States of the Gulf (GCC) nations (wadis in particular). With a coastline of 1700 km, Oman offers clean beaches popular with visitors. Few beaches are private, except some attached to the beach resort hotels, or those adjoining military or official property. Wadis are green, lush oases of palm trees, grasses, and flowers. Some wadis have year-round running water, with deep, cool pools in which it is quite safe to swim if the currents are slow. A *Falaj* (pl. aflaaj) is a system for the distribution of water and is commonly used to describe irrigation channel systems downstream of water sources. Some *aflaaj* in Oman were built more than 1,500 years ago, whilst others were built at the beginning of the 20th century. In many areas, the only water available is attained by drilling wells to depths of dozens of meters. [*citation needed*]

Numerous forts and castles are included among Oman's cultural landmarks and, together with its towers and city walls, have historically been used as defensive bastions or look-out points, as well as the seats of administrative and judicial authority. There are over 500 forts, castles, and towers in various architectural styles, built to defend more than 3200 km coastline from potential invaders.

Inside of Grand Hyatt at Muscat

Souqs can be found in many of the towns throughout the country. One of the oldest preserved souqs in Oman is Muttrah, on the Corniche, consisting of a maze of pathways; gold and silver jewelry is found in abundance as well as numerous wooden carvings, ornaments and spices and traditional implements. Household goods make up the bulk of the wares. Today the capital area also has a number of Western European-style Shopping Malls, mainly situated in Qurum, but also extending to the Al Khuwair area of Muscat, where a variety of shops, ranging from boutiques to chain stores, can be found.[38] The largest mall in the country is the Muscat City Centre which includes a French Carrefour hypermarket. Another mall namely the Muscat Grand Mall is expected to open soon and it will be the largest mall in Oman.Now 10 other big hypermarkets are there in Oman named Lulu Hypermarket.

Other popular tourist activities include sand skiing in the desert, scuba diving, rock climbing, trekking, surfing & sailing, cave exploration, birdwatching, bull fighting, and camel races. The Sohar Music Festival happening in Sohar every October/November attracts more and more tourists each year. The Muscat Festival, usually held in January and February, is similar to the Dubai Shopping Festival, but smaller in scale, where traditional dances are held, temporary theme parks open, and concerts take place. Another popular event is The Khareef Festival held in Salalah, Dhofar, which is 1,200 km from the capital city of Muscat, during the monsoon season (August) and is similar to Muscat Festival. During this latter event the mountains surrounding Salalah are popular with tourists as a result of the cool weather and lush greenery, rarely found anywhere else in Oman.[39]

Labor

The estimated workforce was 920,000 in 2002. These days average pay is around 100 OMR to 150 OMR per month. A large proportion of the indigenous population were still engaged in subsistence agriculture or fishing. The skilled local labor force is small, and many of the larger industries depend on foreign workers from Pakistan, Bangladesh, Philippines, India, and Sri Lanka. Oman's foreign workers send an estimated US$30 billion annually to their Asian and African home states, more than half of them earning a monthly wage of less than US$400[40].

The largest foreign community is from the south Indian states of Kerala, Tamil Nadu and Karnataka or come from Maharastra, Gujarat and the Punjab[41], representing more than half of entire workforce in Oman. Salaries for overseas workers are known to be less than for Omani nationals, though still from two to five times higher than for the equivalent job in India[40].

The minimum working age for Omani citizens is 13, but this provision is not enforced against the employment of children in family businesses or on family farms. The minimum working age for foreign workers is 21. The minimum wage for non-professional workers was US$260 per month in 2002. However, many classes of workers (domestic servants, farmers, government employees) are not required to receive the minimum wage and the government is not consistent in its enforcement of the minimum wage law. The private sector working week is 40 to 45 hours long, while government officials have a 35-hour working week.[*citation needed*]

Labor unions

Oman Law was amended during February 2010 to allow the formation of labor unions. There are now approximately 70 Labor Unions within the Sultanate. The law actually allows peaceful protests. Collective bargaining is not permitted, however there exist labor-management committees in firms with more than 50 workers. These committees are not authorized to discuss conditions of employment, including hours and wages. The Labor Welfare Board provides a venue for grievances.[*citation needed*]

Inflation

As oil prices have risen to a record high, so has inflation. The government depends mostly on oil revenue, more than on tax returns from companies and other government-owned companies. The government is also Oman's largest employer, so the high interest that government gets increases the prices of food and construction equipment. The government did support the fuel prices so it doesn't increase the inflation and to make the price suitable for people on low wages.

The minimum wage has been changed from 120 Rials a month to 140 Rials because of high records of inflation driven by high prices of oil.[*citation needed*] In February 2011, the minimum wage was increased from 140 Rials per month to 200 Rials per month.[*citation needed*]

Transportation

Main article: Transport in Oman

Oman maintains the following road links to its neighboring countries:

- United Arab Emirates: Oman has several good road connections at Buraimi (Al Ain), Waddi Hatta (Wajaja), Khamat Mulahah (Fujairah) and Bukha.
- Yemen: Route 47: Raysut to Sarfait in Oman – Yemen border. The road then goes to Hawf, Al Faydami, Al Ghaydah. Another road is from Thumrait to Al Mazyonah in Oman – Yemen border.The road then goes to Shisan, Al Kurah, Al Ghaydah.
- Saudi Arabia: Desert road through Al Mashash. There is also a new road under construction to link the two countries.

Oman National Transport Company or ONTC is the Oman's public bus service company. Muscat International Airport and Salalah Airport are the two main airports in Oman. A rail link has been proposed connecting all major GCC nations and Oman is party to this project. The Muscat Port or Port Sultan Qaboos (Mina Qaboos as its locally known) is the prime maritime gateway of Oman. Other ports have been built in Salalah and Sohar. The

Sohar port will be one of the largest in the region once construction completely finishes. Oman is also constructing the Al Duqm Port & Drydock and drydock.

Oman Air is the national carrier of Oman. Formerly Gulf Air was the national carrier of the Sultanate, but as other Arab nations withdrew from the joint venture, Oman too withdrew. It was the last country to do so.

The Oman Ferries Company maintains the two diesel-powered, high-speed, car ferries – Shinas and Hormouz. The ferries are used for travel between Muscat and Khasab. Khasab is strategically located in Musandam on the southern tip of the Strait of Hormuz and is controlled by Oman. Mainland Oman is separated by a small strip of UAE territory from Musandam.[42]

Education

Main article: Education in Oman

Before 1970, only three formal schools existed in the whole country with fewer than 1000 students receiving education in them. Since Sultan Qaboos came to power in 1970, the government has given high priority to education to develop a domestic work force, which the government considers a vital factor in the country's economic and social progress. Today there are over 1000 state schools and about 650,000 students. In 1986, Oman's first university, Sultan Qaboos University, opened. University of Nizwa is also one of the fastest growing Universities in Oman with a newly completed research center and a growing department of Information Systems. The department of Information Systems of the University of Nizwa is perhaps the biggest in the Gulf in terms of students' population. Among notable American Professors include Dr. Richmond Adebiaye who is considered an expert in Information Systems and Security. Other post-secondary institutions in Oman include Higher College of Technology and its six other colleges of technology, six colleges of applied sciences (including a teacher's training college), a college of banking and financial studies, an institute of Sharia sciences, and several nursing institutes. Some 200 scholarships are awarded each year for study abroad.

University of Nizwa

The University of Nizwa was established in 2002 by the Decree of His Majesty the Sultan Qaboos as the first non-profit university in the Sultanate of Oman; it remains the only institution of its kind in the nation. Upon the satisfaction of all requirements set forth by the Ministry of Higher Education and the Higher Education Council, the University of Nizwa was granted legal status by ministerial decision No. 1/2004 on 3 January 2004. On 16 October 2004, the University of Nizwa opened the doors to its inaugural class of 1,200 students, 88% of whom were Omani women. The current campus is located near the base of the famous Jabal al-Akhdhar in Birkat al-Mouz, 20 km NW of Nizwa. The construction of a new campus, located near the new Farq-Hail highwa began in March 2010. The university is currently in the final stage of institutional accreditation in accordance with the academic standards established by the Oman Academic Accreditation Authority.

Though the student body comprises native Arabic speakers, the official language of academic instruction is English, making the university a bilingual institution. English language proficiency is achieved in a year-long intensive course as part of the academic General Foundation Program.

Pre-university education in Oman has three stages: primary, preparatory, and secondary. Six years of primary schooling are followed by preparatory school. Academic results of the preparatory exams determine the type of secondary education the student will receive. Nine private colleges exist, providing two-year post secondary diplomas. Since 1999, the government has embarked on reforms in higher education designed to meet the needs of a growing population, only a small percentage of which are currently admitted to Higher Education Institutions. Under the reformed system, four public regional universities will be created, and incentives are

provided by the government to promote the upgrading of the existing nine private colleges and the creation of other degree-granting private colleges.[*citation needed*]

The adult illiteracy rate was estimated at 28.1% for the year 2000 (males, 19.6%; females, 38.3%). In 1998, there were 411 primary schools with 313,516 students and 12,052 teachers. Student-to-teacher ratio stood at 26 to 1. In secondary schools in 1998, there were 12,436 teachers and 217,246 students. As of 1999, 65% of primary-school-age children were enrolled in school, while 59% of those eligible attended secondary school. In the same year, public expenditure on education was estimated at 3.9% of GDP. In 1993, there were 252 literacy centers and 176 adult education centers. Three teachers' colleges were functioning as of 1986. The Institute of Agriculture at Nazwa became a full college by 1985. Sultan Qaboos University opened in 1986. In 1998, all higher-level institutions had 1,307 teachers and 16,032 students.

Apart from the schools for Omani nationals, various other schools are present in Oman too that accommodate the children of the huge expatriate population of Oman. These include Indian Schools, Bangaldeshi Schools, Sri Lankan Schools, Pakistani Schools, The American School in Muscat, The American British Academy and the Philippine School Muscat.

Science and technology

Most research conducted in Oman has been done at the behest of the government; agriculture, minerals, water resources, and marine sciences have drawn the most attention. Sultan Qaboos University, founded in 1985, has colleges of science, medicine, engineering, and agriculture. In 1987–97, science and engineering students accounted for 13% of college and university enrollments.

A water oasis in Oman provides a source of drinking water for animals and humans.

The Institute of Health Sciences, under the Ministry of Health, was founded in 1982. Muscat Technical Industrial College (later renamed the Higher College of Technology), founded in 1984, has departments of computing and mathematics, laboratory science, and electrical, construction, and mechanical engineering.[*citation needed*] The Oman Natural History Museum, founded in 1983, includes the national herbarium and the national shell collection. All of these organizations are located in Muscat.

Meteorites

The central desert of Oman is an important source of meteorites for scientific analysis.[43] Since 1999, search campaigns in Oman have provided about 20% of the world's meteorites.[*citation needed*] These include rare meteorites from Mars and the Moon. The meteorite accumulations in the gravelly central desert play an important role in increasing knowledge of conditions in the early solar system.

Health

As of 1999, there were an estimated 1.3 physicians and 2.2 hospital beds per 1,000 people. In 1993, 89% of the population had access to health care services. In 2000, 99% of the population had access to health care services.[*citation needed*] During the last three decades, the Oman health care system has demonstrated and reported great achievements in health care services and preventive and curative medicine. In 2001, Oman was ranked number 8 by the World Health Organization.

Culture

Although Arabic is Oman's official language, there are native speakers of different dialects, as well as Balochi (the language of the Baloch from Baluchistan western-Pakistan, eastern Iran), and southern Afghanistan or offshoots of Southern Arabian, and some descendants of Sindhi sailors. Also spoken in Oman are Semitic languages only distantly related to Arabic, but closely related to Semitic languages in Eritrea and Ethiopia. Swahili and English are also widely spoken in the country due to the historical relations between Oman and Zanzibar the two languages have been linked historically. The dominant indigenous language is a dialect of Arabic and the country has also adopted English as a second language. Almost all signs and writings appear in both Arabic and English.[*citation needed*] A significant number also speak Urdu, due to the influx of Pakistani migrants during the late 1980s and the 1990s.

Oman is famous for its khanjar knives, which are curved daggers worn during holidays as part of ceremonial dress. During the Medieval era, khanjars became highly popular as they symbolized Muslim sailors, and later various types of khanjars were made, representing various sailing nations in the Muslim world. Today, traditional clothing is worn by most Omani men. This typically consists of an ankle-length, collarless robe called a *dishdasha* that buttons at the neck with a tassel hanging down. Traditionally, this tassel would be dipped in perfume. Today the tassel is merely a traditional part of the *dishdasha*.

Women wear the hijab and abaya. Some women cover their faces and hands, but most do not.[*citation needed*] The abaya is a traditional dress and currently comes in different styles. The Sultan has forbidden the covering of faces in universities. On holidays, such as Eid, the women wear traditional dress, which is often very brightly colored and consists of a mid-calf length tunic over trousers. The Abaya is mostly worn in the capital, whereas in the interior regions brightly colored dresses are the usual attire.[*citation needed*]

Food

Main article: Cuisine of Oman

The main daily meal is usually eaten at midday, while the evening meal is lighter. During Ramadan, dinner is served after the Taraweeh prayers, sometimes as late as 11 pm. *Maqbous* is a rice dish, with yellow rice and saffron served and cooked over spicy red or white meat. *Arsia* is a festival meal, served during celebrations, which consists of mashed rice flavoured with spices. Another popular festival meal is *shuwa*, which is meat cooked very slowly (sometimes for up to 2 days) in an underground clay oven. The meat becomes extremely tender and it is infused with spices and herbs before cooking to give it a very distinct taste. Fish is often used in main dishes too, and the kingfish is a popular ingredient. *Mashuai* is a meal consisting of a whole spit-roasted kingfish served with lemon rice. *Rukhal* bread is a thin, round bread originally baked over a fire made from palm leaves. It is eaten at any meal, typically served with Omani honey for breakfast or crumbled over curry for dinner. Chicken, fish and mutton are regularly used in dishes.

Although spices, herbs, onion, garlic and lime are liberally used in traditional Omani Cuisine, unlike similar Asian food, it is not hot or spicy. Omani Cuisine is also distinct from the Indigenous foods of other Arab states of the Arabian Peninsula and even varies within the Sultanate's different regions.[*citation needed*] There are also significant differences in cuisine between different regions of Oman.

Sport

The government aims to give young people a fully rounded education by providing activities and experience in the sporting, cultural, intellectual, social and scientific spheres, and to excel internationally in these areas and for this reason, in October 2004, the government created a Ministry of Sports Affairs to replace the General Organization for youth, sports and cultural affairs.

Sports of Oman

Popular sports	Football, volleyball, handball, basketball and hockey.
National sports teams	5
National sports clubs	48

The 2009 Gulf Cup of Nations, the 19th edition, took place in Muscat, from 4 to 17 January 2009 and was won by the Omani national football team.

The International Olympic Committee awarded the former GOYSCA its prestigious prize for Sporting excellence in recognition of its contributions to youth and sports and its efforts to promote the Olympic spirit and goals.

The Oman Olympic Committee played a major part in organizing the highly successful 2003 Olympic Days, which were of great benefit to the sports associations, clubs and young participants. The football association took part, along with the handball, basketball, rugby union, hockey, volleyball, athletics, swimming, and tennis associations. In 2010, Muscat hosted the 2010 Asian Beach Games.

Ali Al-Habsi is an Omani professional association football player. He currently plays in the Premier League as a goalkeeper for Wigan Athletic.[44]

They also host tennis tournaments in different age divisions each year. Inside the Sultan Qaboos Sports Complex stadium contains a 50 meter pool for swimming which is used for international tournaments from different schools in different countries. The Tour of Oman, a professional cycling 6-day stage race, is held in February.

Oman also hosted the Asian 2011 FIFA Beach Soccer World Cup qualifiers, where 11 teams are competing for 3 spots at the FIFA World Cup.

Oman is perhaps the only Gulf nation to have bullfighting events organised in its territories. Al-Batena area is prominent for such events. Wide audiences turn up to see the events unfold. Omani bullfighting is however not a violent event. The origins of Bullfighting in Oman are unknown though many locals here believe it was brought to Oman by the Moors of Spanish origin. Yet others say it has a direct connection with Portugal which colonized the Omani coastline for nearly 2 centuries.[45]

Notes

1. ^ In 1783, when Saiad Said succeeded to the "masnad" of Muscat and Oman (an independent state founded in 1749), he fell out with his brother Saiad Sultan, who fled to safety in Makran and entered into communication with Nasir Khan of Kalat. Saiad was granted the Kalat share of the revenues of Gwadar and lived there until 1797 when he achieved the Sultanate of Muscat and Oman.
2. ^ Gwadar remained an Omani possession as part of the sultanate until September 1958

Prehistory

Main articles: Archaeology of Oman, Magan, and A'ad

World Heritage Grave at Al Ayn in Oman

Prehistoric migration of Homo Sapiens is likely to have taken place around 100,000 years ago and to have followed the coastlines from Africa along Yemen and the sea shores of Oman. Archaeological sites in Yemen and Oman have yielded a stone tool style that is distinct from the East African tradition. That raises the possibility that humans were established on the southern part of the Arabian Peninsula beginning as far back as 100,000 years ago or more. The oldest Home sapiens, known as H. sapiens idaltu, was found to be 160,000 years old, found at the Middle Awash site in Ethiopia. Then between 80k-125 k years ago, modern humans began appearing in the middle east.

Archaeologists excavating a Middle Stone Age complex in the Dhofar Mountains.

The Negrito represent the first migration of anatomically modern Homo sapiens out of Africa while the Arab with the Brown skin are Veddoids who are the descendants of the second wave of migration back from Persian side after the flood 7000 years back. The departure of mankind from Africa to colonise the rest of the world involved them crossing the Straits of Bab el Mandab in the southern Red Sea and moving along the green coastlines around Arabia and thence to the rest of Eurasia. That crossing became possible when sea level had fallen by more than 80m to expose much of the shelf between southern Eritrea and Yemen; a level that was reached during a glacial stadial from 60 to 70 ka as climate cooled erratically to reach the last glacial maximum. From 135,000 to 90,000 years ago tropical Africa had megadroughts which drove the humans from the land towards the sea shores and forced them to cross over to other continents.The researchers used radiocarbon dating techniques on pollen grains trapped in lake bottom mud to establish vegetation over the ages of the Malawi lake

in Africa. The researchers took samples at 300-year-intervals. Samples from the megadrought times had little pollen or charcoal, suggesting sparse vegetation with little to burn. The area around Lake Malawi, which today is heavily forested was a desert 135000 to 90000 years ago.

There have been discoveries of Palaeolithic stone tools in caves in southern and central Oman, and in the United Arab Emirates close to the Straits of Hormuz at the outlet of the Persian Gulf (UAE site (Jebel Faya), Ref: Armitage, S.J. et al. 2011. Ref2: The southern route ‘out of Africa’: evidence for an early expansion of modern humans into Arabia. Science, v. 331, p. 453-456). The stone tools, some up to 125,000 years old, resemble those made by humans in Africa around the same period. Luminescence dating is a technique that measures naturally occurring radiation stored in the sand. Luminescence dating data showed that 130,000 years ago, the Arabian Peninsula was relatively more warm which caused more rainfall, turning it into a series of lush habitable land. During this period the southern Red Sea’s levels dropped and was only 2.5 miles or 4 km wide. This offered a brief window of time for humans to easily cross the sea and cross the Peninsula to opposing sites like Jebel Faya. These early migrants running away from the climate change in Africa, crossed the Red Sea into Yemen and Oman, trekked across Arabia during favourable climate conditions. 2,000 kilometres of inhospitable desert lie between the Red Sea and Jebel Faya in UAE. But around 130,000 years ago the world was at the end of an ice age. The Red Sea was shallow enough to be crossed on foot or on a small raft, and the Arabian peninsula was being transformed from a parched desert into a green land.

Antiquity

Main articles: Pre-Islamic Arabia, Sassanid Empire, and Parthia

Achaemenid (6th to 4th century BC), an Iranian dynasty, controlled and/or influenced the Omani peninsula. This influential control was most likely exerted from a coastal center such as Sohar.[1]

From the 3rd century BC to the arrival of Islam in the 7th century AD, Oman was controlled by two other Iranian dynasties, the Parthians and the Sassanids. During this period Oman's administrative name was Mazun.[1] By about 250 BC, the Parthian dynasty brought the Persian Gulf under their control and extended their influence as far as Oman. Because they needed to control the Persian Gulf trade route, the Parthians established garrisons in Oman. In the 3rd century AD, the Sassanids succeeded the Parthians and held area until the rise of Islam four centuries later. This agricultural and military contact gave people exposure to Persian culture, as reflected in certain irrigation techniques still used in Oman.[2]

Early Islamic period

See also: Oman proper

Oman adopted Islam in the 7th century, during the lifetime of the prophet Muhammad. Ibadism became the dominant religious sect in Oman by the 8th century; Oman is currently the only country in the Islamic world with a majority Ibadi population. Ibadhism is known for its "moderate conservatism". One distinguishing feature of Ibadism is the choice of ruler by communal consensus and consent.

The relatively recent name of "Muscat and Oman" (which was abolished in 1970 in favor of "Sultanate of Oman"), implies two historically irreconcilable political cultures: the coastal tradition, the more cosmopolitan, secular, Muscat tradition of the coast ruled by the sultan; and the interior tradition of insularity, tribal in origin and ruled by an imam according to the ideological tenets of Ibadism. The more cosmopolitan has been the ascending political culture since the founding of the Al Said dynasty in 1744, although the imamate tradition has found intermittent expression.[3]

Several millennia ago, Arab tribes migrated eastward to Oman, coinciding with the increasing presence in the region of peoples from present-day Iran. In the 6th century, Arabs succeeded in repelling encroachments of these ethnic groups; the conversion of Arab tribes to Islam in the 7th century resulted in the displacement of the settlers from Iran. The introduction of Ibadism vested power in the imam, the leader nominated by the ulema.[3] The imam's position was confirmed when the imam—having gained the allegiance of the tribal sheiks—received the bay'ah (oath of allegiance) from the public.[*citation needed*]

Vestiges in Nizwa

In 751 Ibadi Muslims, a moderate branch of the Kharijites, established an imamate in Oman. Despite interruptions, the Ibadi imamate survived until the mid-20th century.[4]

But Oman was nonetheless conquered by several foreign powers, having been controlled by the Qarmatians between 931–932 and then again between 933–934.Between 967 and 1053, Oman was part of the domain of the Iranian Buyyids, and between 1053 and 1154, Oman was part of the Great Seljuk empire.

In 1154, the indigenous Nabhani dynasty took control of Oman, and the Nabhani kings ruled Oman until 1470, with an interruption of 37 years between 1406 and 1443.

Wall of the Jabrin Castle

Muscat was taken by the Portuguese on 1 April 1515, and was held until 26 January 1650, although the Ottomans controlled Muscat between 1550–1551 and 1581–1588. In about the year 1600, Nabhani rule was temporarily restored to Oman, although that lasted only to 1624, when fifth imamate, which is also known as the Yarubid Imamate. The latter recaptured Muscat from the Portuguese in 1650 after a colonial presence on the northeastern coast of Oman dating to 1508. The Yarubid dynasty expanded, acquiring former Portuguese colonies in East Africa and engaging in the slave trade. By 1719 dynastic succession led to the nomination of Saif ibn Sultan II. His candidacy prompted a rivalry among the ulama and a civil war between the two major tribes, the Hinawi and the Ghafiri, with the Ghafiri supporting Saif ibn Sultan II. He assumed power in 1748 after the leaders of both factions had been killed in battle, but the rivalry continued, with the factionalization working in favor of the Iranians, who occupied Muscat and Sohar in 1743.[3]

The Iranians had occupied the coast before—indeed the coast was often the possession of various empires. These empires brought order to the religious and ethnic diversity of the population of this cosmopolitan region. Yet the intervention on behalf of an unpopular dynasty brought about a revolt. The leader of the revolt, Ahmad ibn Said al Said, was elected sultan of Muscat upon the expulsion of the Persians. The position of Sultan of Muscat would remain in the possession of the Al Said clan even when the imamate of Oman remained out of reach.[*citation needed*]

The Al Said clan became a royal dynasty when Ahmad ibn Said Al Said was elected imam following the expulsion of the Iranians from Muscat in 1744. Like its predecessors, Al Said dynastic rule has been characterized by a history of internecine family struggle, fratricide, and usurpation. Apart from threats within the ruling family, there was the omnipresent challenge from the independent tribes of the interior who rejected the authority of the sultan, recognizing the imam as the sole legitimate leader and pressing, by resort to arms, for the

restoration of the imamate.[3]

Schisms within the ruling family were apparent before Ahmad ibn Said's death in 1783 and were later manifest with the division of the family into two main lines, the Sultan ibn Ahmad Al Said (r. 1792–1806) line controlling the maritime state, with nominal control over the entire country; and the Qais branch, with authority over the Al Batinah and Ar Rustaq areas. During the period of Sultan Said ibn Sultan Al Said's rule (1806–1856), Oman cultivated its East African colonies, profiting from the slave trade. As a regional commercial power in the 19th century, Oman held territories on the island of Zanzibar off the coast of East Africa, the area along the coast of East Africa known as Zanj including Mombasa and Dar es Salaam, and until 1958 in Gwadar (in present-day Pakistan) on the coast of the Arabian Sea. But when the British declared slavery illegal in the mid-19th century, the sultanate's fortunes reversed. The economy collapsed, and many Omani families migrated to Zanzibar. The population of Muscat fell from 55,000 to 8,000 between the 1850s and 1870s.[3] Most of the overseas possessions were seized by the United Kingdom and by 1850 Oman was an isolated and poor area of the world.

Late 19th and early 20th centuries

Main article: Muscat and Oman

When Sultan Sa'id bin Sultan Al-Busaid died in 1856, his sons quarreled over the succession. As a result of this struggle, the empire—through the mediation of the British Government under the Canning Award—was divided in 1861 into two separate principalities: Zanzibar (with its East African dependencies), and Muscat and Oman.

The death of Sa'id bin Sultan in 1856 prompted a further division: the descendants of the late sultan ruled Muscat and Oman (Thuwaini ibn Said Al-Busaid, r. 1856–1866) and Zanzibar (Mayid ibn Said Al-Busaid, r. 1856–1870); the Qais branch intermittently allied itself with the ulama to restore imamate legitimacy. In 1868 Azzam ibn Qais Al-Busaid (r. 1868–1871) emerged as self-declared imam. Although a significant number of Hinawi tribes recognized him as imam, the public neither elected him nor acclaimed him as such.[3]

Imam Azzan understood that to unify the country a strong, central authority had to be established with control over the interior tribes of Oman. His rule was jeopardized by the British, who interpreted his policy of bringing the interior tribes under the central government as a move against their established order. In resorting to military means to unify Muscat and Oman, Imam Azzam alienated members of the Ghafiri tribes, who revolted in the 1870–1871 period. The British gave Imam Azzam's rival, Turki ibn Said Al-Busaid, financial and political support. Turki ibn Said succeeded in defeating the forces of Imam Azzam, who was killed in battle outside Matrah in January 1871.[3]

Muscat and Oman was the object of Franco-British rivalry throughout the 18th century. During the 19th century, Muscat and Oman and the United Kingdom concluded several treaties of friendship and commerce. In 1908 the British entered into an agreement of friendship. Their traditional association was confirmed in 1951 through a new treaty of friendship, commerce, and navigation by which the United Kingdom recognized the Sultanate of Muscat and Oman as a fully independent state.

During the late 19th century and early 20th century, there were tensions between the sultan in Muscat and the Ibadi Imam in Nizwa. This conflict was resolved temporarily by the Treaty of Seeb, which granted the imam rule in the interior Imamate of Oman, while recognising the sovereignty of the sultan in Muscat and its surroundings.

In 1954, the conflict flared up again, when the Treaty of Seeb was broken by the sultan after oil was discovered in the lands of the Imam. The new imam (Ghalib bin Ali) led a 5-year rebellion against the sultan's attack. The Sultan was aided by the colonial British forces and the Shah of Iran. In the early 1960s, the Imam, exiled to Saudi Arabia, obtained support from his hosts and other Arab governments, but this support ended in the 1980s.

The case of the Imam was argued at the United Nations as well, but no significant measures were taken.

Zanzibar paid an annual subsidy to Muscat and Oman until its independence in early 1964.

In 1964, a separatist revolt began in Dhofar province. Aided by Communist and leftist governments such as the former South Yemen (People's Democratic Republic of Yemen), the rebels formed the Dhofar Liberation Front, which later merged with the Marxist-dominated Popular Front for the Liberation of Oman and the Arab Gulf (PFLOAG). The PFLOAG's declared intention was to overthrow all traditional Persian Gulf régimes. In mid-1974, the Bahrain branch of the PFLOAG was established as a separate organisation and the Omani branch changed its name to the Popular Front for the Liberation of Oman (PFLO), while continuing the Dhofar Rebellion.

1970s

In 1970, Qaboos bin Said Al Said ousted his father, Sa'id bin Taymur, who later died in exile in London. Al Said has ruled as sultan ever since. The new sultan confronted insurgency in a country plagued by endemic disease, illiteracy, and poverty. One of the new sultan's first measures was to abolish many of his father's harsh restrictions, which had caused thousands of Omanis to leave the country, and to offer amnesty to opponents of the previous régime, many of whom returned to Oman. He also established a modern government structure and launched a major development programme to upgrade educational and health facilities, build a modern infrastructure, and develop the country's natural resources.

In an effort to curb the Dhofar insurgency, Sultan Qaboos expanded and re-equipped the armed forces and granted amnesty to all surrendering rebels while vigorously prosecuting the war in Dhofar. He obtained direct military support from the UK, Iran, and Jordan. By early 1975, the guerrillas were confined to a 50-square-kilometer (19 sq mi) area near the Yemeni border and shortly thereafter were defeated. As the war drew to a close, civil action programs were given priority throughout Dhofar and helped win the allegiance of the people. The PFLO threat diminished further with the establishment of diplomatic relations in October 1983 between South Yemen and Oman, and South Yemen subsequently lessened propaganda and subversive activities against Oman. In late 1987 Oman opened an embassy in Aden, South Yemen, and appointed its first resident ambassador to the country.

Since his accession in 1970, Sultan Qaboos has balanced tribal, regional, and ethnic interests in composing the national administration. The Council of Ministers, which functions as a cabinet, consists of 26 ministers, all directly appointed by Qaboos. The *Majlis Al-Shura* (Consultative Council) has the mandate of reviewing legislation pertaining to economic development and social services prior to its becoming law. The *Majlis Al-Shura* may request ministers to appear before it.

1990s

In November 1996, Sultan Qaboos presented his people with the "Basic Statutes of the State", Oman's first written "constitution". It guarantees various rights within the framework of Qur'anic and customary law. It partially resuscitated long dormant conflict-of-interest measures by banning cabinet ministers from being officers of public shareholding firms. Perhaps most importantly, the Basic Statutes provide rules for setting Sultan Qaboos' succession.

Oman occupies a strategic location on the Strait of Hormuz at the entrance to the Persian Gulf, 35 miles (56 km) directly opposite Iran. Oman has concerns with regional stability and security, given tensions in the region, the proximity of Iran and Iraq, and the potential threat of political Islam. Oman maintained its diplomatic relations

with Iraq throughout the Gulf War while supporting the United Nations allies by sending a contingent of troops to join coalition forces and by opening up to pre-positioning of weapons and supplies.

2000s

In September 2000, about 100,000 Omani men and women elected 83 candidates, including two women, to seats in the *Majlis Al-Shura*. In December 2000, Sultan Qaboos appointed the 48-member *Majlis Al Dowla*, or State Council, including five women, which acts as the upper chamber in Oman's bicameral representative body.

Al Said's extensive modernization program has opened the country to the outside world and has preserved a long-standing political and military relationship with the United Kingdom, the United States, and others. Oman's moderate, independent foreign policy has sought to maintain good relations with all Middle Eastern countries.

Early life

Sultan Qaboos bin Sa‘id was born in Salalah in Dhofar on 18 November 1940. He is the only son of Sultan Said bin Taimur and princess Mazoon al-Mashani. He received his primary and secondary education at Salalah and Pune [Maharashtra, India] and was sent to a private educational establishment in England at age sixteen.[3] At 20 he entered the Royal Military Academy Sandhurst. After graduating from Sandhurst, he joined the British Army and was posted to the 1st Battalion The Cameronians (Scottish Rifles), serving in Germany for one year. He also held a staff appointment with the British Army.

After his military service, Sultan Qaboos studied local government subjects in England and, after a world tour, returned home to Salalah where he studied Islam and the history of his country. Sultan Qaboos ibn Sa‘id is a Muslim of the Ibadi school of jurisprudence, which has traditionally ruled Oman.[4] A religious liberal, he has financed the construction or maintenance of a number of mosques, notably the Sultan Qaboos Grand Mosque, as well as the holy places of other religions.

In 1976 Qaboos bin Said married his cousin, Kamila, née Sayyidah Nawwal bint Tariq (born 1951), daughter of HH Sayyid Tariq ibn Taymur.[5] However, the marriage soon ended in divorce and he has never remarried or

had any children.[6]

Qaboos bin Said is an avid fan and promoter of classical music. His 120-member orchestra has a high reputation in the Middle East. The orchestra consists entirely of young Omanis who, since 1986, audition as children and grow up as members of the symphonic ensemble. They play locally and travel abroad with the sultan.[7] Argentine composer Lalo Schifrin was commissioned to compose a work entitled *Symphonic Impressions of Oman*[8] and the Sultan is particularly enthusiastic about the pipe organ.[9]

The Sultan's birthday, 18 November, is celebrated as Oman's national holiday. The first day of his reign, 23 July, is celebrated as Renaissance Day.

Rise to power

For six years prior to Said bin-Taymur's overthrow, Qaboos experienced virtual house-arrest in the Royal Palace of Salalah. In July 1970, soldiers supporting Qaboos clashed with forces loyal to Said bin-Taymur and deposed him. Qaboos maintains that his father abdicated the throne.[7] The British government helped to consolidate Qaboos' power.

Qaboos acceded to the throne on 23 July 1970 after deposing his father in a palace coup with the aim of ending the country's isolation and using its oil revenue for modernization and development,[10] moving to Muscat. There he declared that the country would no longer be known as Muscat and Oman, but would change its name to "the Sultanate of Oman" in order to better reflect its political unity.

The first pressing problem that Qaboos bin Said faced as Sultan was an armed communist insurgency from South Yemen, the Dhofar Rebellion (1965–1975). The Sultanate eventually defeated the incursion with help from the Shah of Iran, Jordanian troops sent from his friend King Hussein of Jordan, British Special Forces, and the Royal Air Force.

Reign as Sultan

The political system which Qaboos established is that of an absolute monarchy. Unlike the situation in neighbouring Saudi Arabia, Qaboos' decisions are not subject to modification by other members of Oman's royal family. Government decisions are said to be made through a process of decision-making by "consensus" with provincial, local and tribal representatives, though critics allege that Qaboos exercises *de facto* control of this process.[*citation needed*] Qaboos also regularly engages in tours of his realm, in which any citizen with a grievance or request is allowed to appeal to the Sultan in person.[11]

Styles of
The Sultan of Oman

Reference style	His Majesty
Spoken style	Your Majesty
Alternative style	*Sire*

More recently, Qaboos has allowed parliamentary elections (in which women have voted and stood as candidates) and pledged greater openness and participation in government. The parliament enjoys legislative and oversight powers.[12] In 1979 Oman was the only Arab state to recognize Egyptian President Anwar Sadat's peace agreement with Israel.[13]

Qaboos' supporters point to his relative success in governing the country. By Gulf standards, Oman boasts good public order,[14] middling prosperity,[15] and a relatively permissive society.[16] Since he acceded to the throne,

Oman has broadened international relations, allowed newspapers, established high schools, built highways, opened hotels and shopping malls and spends a substantial portion of its dwindling oil revenues on health care and education.[7]

In September 1995, he was involved in a car accident in Salalah just out side his palace, which claimed the life of one of his most prominent and influential ministers and his right hand man, Qais Bin Abdul Munaim Al Zawawi.

In October 1998, Qaboos bin Said was presented with the International Peace Award by the National Council on US-Arab Relations.[17] He also forges and maintains good relations with other Arab states and partners in the Gulf Cooperation Council (GCC).[18]

Sultan Qaboos meets with United States Vice President Dick Cheney during his visit to the Middle East in 2002.

Foreign policy

Qaboos officially keeps Oman neutral, having contacts and normal relations with Iran while being an ally of western states like Britain and America. In talks with American officials released by wikileaks, Qaboos dodged requests by the Americans for Oman to invest in Iraq and Afghanistan, switching to other topics. Qaboos was against Americans withdrawing quickly from Iraq.

Oman has more normal relations with Iran than the other Gulf Arab states, careful to appear neutral and maintain a balance between the West and Iran.[19]

Views on Ideology

Qaboos criticized the Arab Nationalist leader Gamal Abdel Nasser in private discussions with American officials which were released by Wikileaks. He claimed Nasser deliberately used inflammatory speeches and rhetoric to make his people stupid, and accused Nasser of having "set the region back", holding a position of "anti-everything". Qaboos concluded that the Muslim Brotherhood obtained support from the uneducated people.[20]

Palaces

Name	City	Area	Coordinates	Features
Al Alam Palace	Muscat	1.4kmX1.4 km	23°36′52.86″N 58°35′43.90″E	Contains two Helipads, Super Yacht Berth and several ultra Luxurious residences.
Bait Barka	Barka	3kmX4km	23°42′28.19″N 58°05′37.37″E	Sultan's Retreat contains six Helipads, Super Yacht Berth and ultra Luxurious residences, massive garage and splendid infinity pools in lush landscape gardens.
Hisn Al Shomoukh	Manah	4kmX4km	22°45′18.22″N 57°33′44.50″E	Recently built Royal Camp with 4 Helipads. Currently most of the royal delegates are routed to here. Satellite images assures heavy construction for further expansion.

Name	City	Area	Coordinates	Features
Royal Court	Seeb	2kmX3km	23°40′15.40″N 58°10′16.40″E	The most heavily guarded zone in Oman, this splendid palace contains its own private Landing strip or airport. There's a large stable containing the royal equestrian facilities.
Hisn Salalah	Salalah	2kmX1.8 km	16°59′54.90″N 54°05′38.04″E	Sultan's birth place. This waterfront palace has 4 Helipads. It contains two mosques and many villas.
Sohar Palace	Sohar	2kmX3km	24°19′11.06″N 56°46′19.22″E	Sultan's farm in Sohar. Going through extensive renovation and expansion. Contains camel, cow, goat and horse farms. Several green houses for vegetable production.
Qasr Mamoora	Salalah	2kmX2km	17°03′36.25″N 54°13′54.43″E	By far the most private palace with its own double runway landing strip, three Helipads as well as two private flyovers connected to his private Razat farm.
Razat Farm	Salalah	3kmX3km	17°02′15.40″N 54°12′35.76″E	Private farm that supplies him with fresh dairy products, fruits and vegetables. Contains one Helipad

Super yachts

Name	Length (m)	Shipyard	Year	Description
Al Said	155[21]	Lürssen	2007	Contains a Helipad, an orchestra and swimming pool. Berthed most of the time in Mutrah port.
Fulk al Salamah[22]	136	Lürssen	1987	It has participated in Ship for World Youth.[23]
Loaloat Al Behar	103.85	Picchiotti Italy	1982	Largest yacht built in Italy in the 1980s
Zinat al Bihaar	61	Oman Royal Yacht Squadron[24]	1988	Luxury sailing yacht with worlds largest sail built in Oman with imported engine from Siemens.
Al-Noores	33.5[25]	K. Damen Netherlands	1982	Specialized tug boat for the other royal yachts.

Succession

Unlike the heads of other Gulf Arab states, Qaboos bin Sa‘id has not publicly named an heir. Article 6 of the constitution (http://www.servat.unibe.ch/icl/mu00000_.html) actually provides that the Ruling Family Council chooses the successor after the throne becomes vacant, and that the Sultan's preference, to be expressed in an official letter (which Qaboos says has already been sealed and delivered to the defence minister), is only resorted to in the event of lack of familial consensus.

Qaboos bin Sa‘id has no children and has three sisters; there are other male members of the Omani Royal

Family including several paternal uncles and their families. Using primogeniture the successor to Qaboos would appear to be the children of his late uncle, His Royal Highness Sayyid Tariq bin Taimur Al Said, the former, first and only Prime Minister in Oman's history.[26]

Military ranks

Qaboos holds the following ranks:[27]

- Field Marshal, Royal Army of Oman
- Admiral of the Fleet, Royal Navy of Oman
- Marshal of the Royal Air Force of Oman
- Supreme Commander, Royal Oman Police
- Honorary General, British Army

Foreign honours

- Austria: Grand Star of the Decoration of Honour for Services to the Republic of Austria (31 March 2001)[28]
- Bahrain: Order of Al Khalifa, 1st Class[28]
- Brunei: Royal Family Order of the Crown of Brunei (15 December 1984)[28]
- Egypt: Grand Collar of the Order of the Nile (1976)[28]
- France: Legion of Honour (31 May 1989)[28]
- Germany: Grand Cross special class of the Order of Merit of the Federal Republic of Germany[28]

Origins

The tribe traces its roots to a band of Al Azd, (through patrilineal ancestor al-'Atik b. al-Asad b. Imran) that settled in Dibba (Dabá), north of Sohar (which was once the capital of Oman), and came to be known as the Azd of Daba. Like other Qahtani, the Azd originally hailed from Yemen and migrated north after the destruction of the Marib Dam. Archeological evidence points to the Sasanid era, around the third or fourth century AD, a period of admittedly weak Persian rule. Their ascendancy to positions of power was in tandem with special relationships established with Persian rulers, who recognized the Azdites as "The kings of the Arabs"citation needed, as seen in a number of inscriptions from the sixth century CE. The head of the Azd confederation was given the title of Buland (Perso-Arabic: بُلند), a Sasanid appellation derived from the Middle Persian word for eminence and stature, later Arabized in the form of Al-Julandā (Arabic: الجُلندا) to identify the early rulers of Oman.

With the arrival of Islam, the Sasanians in Oman conflicted with the Azd kings, the balance in this conflict swung in favour of the Arabs when they were joined by Muslim forces sent by the Prophet Muhammad from al-Madîna and in the resulting military campaigns the Sasanian citadels were overwhelmed and their forces expelled by 630 AD. With the rise of Islam, the Azd established themselves into a leading force in the ensuing Muslim conquests and later in the realms of the Umayyad Caliphate through the celebrated general Al Muhallab ibn Abi Suffrah (Abu Said) "the Conqueror of the Kharejites" and progenitor of the Al Busaid tribe. Significantly, it is with the Azd that most early sections of pre-Islamic universal chronicles of Arabs begin.

Rise to power

Ahmad bin Said Al Busaidi, a shrewd military tactician was the governor of Sohar when a Persian fleet attacked the town, he held out for nine months, finally forcing the Persian commander of Nader Shah's army to come to terms and leave the country altogether within a few years; he was elected imam in 1744, marking the last time Oman was occupied by foreign parties and the beginning of a new unified state. It was also the start of a dynasty that has lasted to the present day consequently making it one of the oldest surviving royal dynasties in Arabia and the first to gain independence. His descendants took the title not of Imam with its connotations of religious leadership, but that of Sayyid, a honorific title held by members of the royal family to this day; thus relinquising all pretense of spiritual authority while fostering Muslim scholars and promoting Islamic scholarship.

Trade flourished during Ahmed's Thirty-nine year reign and the Omani navy developed into a formidable force in the Indian Ocean second only to Great Britain and capable of purging Persians forces from the entire region and protecting Ottoman vessels in the Gulf of Oman, Indian Ocean and the Pirate Coast of Trucial Oman. When he died in 1778, the ulema replaced Ahmed with his son, Said bin Ahmed, who was very religious but shrank from administrative duties and since the tenants of Ibadhism allowed for the division of duties between leaders along religious, administrative and military lines, he removed himself to Rustaq until his death in 1811 and turned over the hands of government to his son Hamad bin Said, who in 1783 changed the capital from Rustaq in the interior to the coastal city of Muscat and took the title of Sultan, implying purely coercive power. He was a capable leader for eight years, who facilitated reform policy in the initial stages of the transition but died suddenly in 1792 of smallpox.

Alliance with the British Empire

Sultan bin Ahmed assumed control of the government after the death of his nephew and strengthened the already powerful fleet by adding numerous gunships and sleek cargo vessels, he also needed a strong ally to help him regain control of Mombasa from the Mazrui clan, fight off the movement spreading from what is now Saudi Arabia and to keep the Qasimi tribes from the Persian city of Lingeh out of Oman. He found this able ally in Great Britain, who by this time was a powerful maritime nation with an empire expanding all over the world. In the late 18th century, the second British Empire was at war with France and knew that the French emperor, Napoleon Bonaparte, was planning to march through Persia and capture Muscat on his way to invade India. In 1798 Britain and Oman agreed a Treaty of Commerce and Navigation.

Sultan bin Ahmed pledged himself to British interests in India, and his territories became out of bounds to the French. He allowed the British East India Company to establish the first trading station in the Persian Gulf, and a British consul was posted to Muscat. As well as defeating Bonaparte, the British had another motive for the treaty with Oman: they wanted to put pressure on the sultan to end slavery, which had been declared illegal in England in 1772. At this time, the trade from Africa to Oman was still buoyant and Zanzibar's position as an important trade centre was bolstered further when the supply of ivory from Mozambique to India collapsed because of excessive Portuguese export duties. The traders simply shipped their ivory through Zanzibar instead. Omani warships were in constant skirmishes up and down the gulf, which kept Sultan preoccupied. It was in the course of one of his sorties during an incursion abroad a ship in the Persian Gulf in 1804 that Sayyid Sultan was shot in the head by a stray bullet, he was buried in Lingeh.

Said bin Sultan (Said the Great)

The death of Sultan bin Ahmed sent the country into a state of shock, Inter-family rivalries, dissident tribes, and outside agitators who all conspired to make the role of supreme commander a speculative proposition at best. Sultan's eldest son Said was merely thirteen, too young to take the reins of his country, "so the elders called upon another nephew Badr bin Saif to act as regent in the boy's behalf until he came of age." Emily Ruete, née Sayyida Salma bint Said in Memoirs of an Arabian Princess, 1886).

The decision to enlist Badr was unfortunately a bad one as he had political aspirations of his own and his infidelities turned the royal house against him. He refused to relinquish his hold of power without a struggle and Said, now sixteen, conspired to have him assassinated. On a pretext to inspect the munitions at Nakhal Fort, Badr went to Barka and met Said at Bait al Nu'man castle. There he was killed in a dramatic duel to the death with daggers. A wounded Badr escaped but was finished off by Said's horsemen. Said immediately assumed the government and held it until his death fifty two-years later. He announced to the British that he had assumed power, but they were slow to respond. They acknowledged the young monarch a year later when they realized that their fortunes were best served by courting him. During the reign of the renowned Sultan Said bin Sultan, the progenitor of the House of Al Said,he took Oman to its zenith as a commercial and political maritime power: extending its borders to include Mombasa and parts of the east African coast, Zanzibar, Pemba Island, Mafia Island, Lamu Archipelago, Cape Delgado (northern border of the current Mozambique), Bandar-Abbas and the southern Iranian coast, Gwadar province of Balochistan (bought by Pakistan in 1958) and, for a short time Bahrain. He was counted among the best leaders as his reputation spread to the crown heads of Europe and became known as Said the great. Few Arab leaders of any time were as well known and respected as Sayyid Said. Trade flourished and Muscat became a key market for the Persian Gulf. The celebrated explorer Richard Francis Burton called him "as shrewd, liberal and enlightened a prince as Arabia has ever produced," and an Italian physician who served him for a time said: "His constant love of justice, and distinguished clemency, the effects of which are felt, not only by his own subjects, but even by his domestic slaves."

In 1832, he made the island of Zanzibar his second capital and set about establishing what is present-day Stone Town. A merchant prince and capable warrior, he spent much of his time at sea depending on mercantile and maritime resources for his power in both Oman and Zanzibar. Recognizing the suitability of Zanzibar climate and soil, he initiated large scale cultivation of cloves (an essential meat preservative in Europe prior to the advent of refrigeration) and soon after sought slaves as cheap labor to plant and harvest the biennial crop. He is also noted for revitalizing the production of rice and sugar cane as well as the export of ivory and gum copal. Such was his enterprise and commercial skill that it could probably be said that he established the first International market on the Island of Zanzibar; subsequently many countries signed commercial treaties and opened Consulates. He even introduced a copper coinage to amplify the existing silver coinage of Maria Theresa thalers and Spanish dollars.

Treaty with the United States

On September 21, 1833 a historical treaty of friendship and trade was signed with the United States of America. It was the second treaty formulated by the U.S. and an Arab state (Morocco being the first in 1820). The United States and Oman both stood to benefit as the U.S., unlike Britain and France, had no territorial ambitions in the Middle East and was solely interested in commerce. On April 13, 1840, the ship *Al-Sultanah* docked at New York making it the first Arab envoy to ever visit the New World. Her crew of fifty six Arab sailors caused a flurry of excitement among the three hundred thousand residents of that thriving metropolis. *Al-Sultanah* carried ivory, Persian rugs, spices, coffee and dates, as well as lavish gifts for President Martin Van Buren. The visit of *Al-Sultanah* lasted nearly four months, in which time the emissary, Ahmed Bin Na'aman (whose portrait can still be seen in the Oman and Zanzibar display of the Peabody Museum in Massachusetts) and his officers were entertained by state and city dignitaries. They received resolutions passed by official bodies, were given tours of New York City and saw sections which would, a few decades later, become colonies of Arabic speaking immigrants. Among Bin Na'aman's hosts was Commodore Cornelius Vanderbilt in whose home he met Governor William H. Seward and Vice President Richard Mentor Johnson. The visit of Ahmed Bin Na'aman to America was a happy one, and when he prepared to leave, the United States completely repaired *Al-Sultanah* and presented him with gifts for his Sultan.

End of Said's Reign

Said made periodic visits to Muscat, leaving his eldest son Khaled as Governor of Zanzibar in his absence.

Khalid had a predilection for French goods and named his principal country estate Marseilles, after the French Mediterranean port. When Khalid died of tuberculosis in November 1854, an order came from Said in Muscat appointing another son, the 20-year-old Majid, as governor.

In September 1856, Said sailed for Zanzibar on his ship *Kitorie* in the company of his son nineteen year old son, Barghash bin Said. He began to suffer severe pains from an old battle wound in his thigh followed by an attack of dysentery. He died on board the ship on 19 October 1856 at the age of sixty-five.

Division of Zanzibar and Oman

Schisms within the ruling family were apparent after the death of Sultan Said bin Sultan, as his sons who had their own rivalries and ambitions for controlling the throne quarreled over the empire. Realizing that Majid would be unaware of their father's death, Bargash came ashore secretly and tried to take control of the palace at Mtoni and the fort in Zanzibar town, but he was unable to muster enough supporters and his attempt was thwarted.

On 28 October 1856, Majid proclaimed himself Sultan of Zanzibar. A ship was sent to Oman with the news, but Said's elder son Thuwaini, who was appointed heir apparent on the 23rd July 1844 and had long acted as his father's Governor in Muscat and commander-in-chief of the Saidi forces refused to acknowledge Majid and immediately tried to regain Zanzibar by force of arms. As a direct result of this struggle, the government of British India, concerned with the stability in the area, acted as arbitrator in the dispute. The Governor-General of British India, Lord Canning ruled in his arbitration that the empire was to be divided into two separate Sultanates: The Sultanate of Zanzibar with its dependencies to Majid bin Said, Said's former Governor of the East African dominions, and The Sultanate of Muscat and Oman to Thuwaini bin Said. On the 10th of March 1862, The Zanzibar Guarantee Treaty was signed in Paris by Britain and France, whereby both parties agreed to respect the independence of the Sultan of Oman and the Sultan of Zanzibar. Recognizing the economic loss caused to Oman by the severance of the Zanzibar connection, Thuwaini insisted Majid pay 40,000 Maria Theresa thalers annually as compensation but the payment fell into arrears and ceased a year later.

Recent history

State rule shifted consecutively in Zanzibar from the hands of Majid who had no heirs to three of his brothers until the Zanzibar revolution of 1964 led by the island's black African citizens, saw the overthrow of the last Sultan of Zanzibar, Jamshid bin Abdullah. Zanzibar became a Marxist Republic overnight, the clove industry was nationalised and the Sultan's Hospital was consequently renamed the Vladmir Illych Lenin Hospital (now known by the politically neutral name of the Coconut Palm Infirmary). Jamshid and his family fled to Oman in 1964 then settled into exile in a modest home in Portsmouth, England. He was pardoned by Zanzibar President Salmin Amour on the 46th anniversary of the 1964 uprising and declared free to return as an ordinary Zanzibari citizen, but remains barred from settling in Oman.

In 1868, the Royal House in Oman took a brief turn through a distant line of the family, when Imam Azzan bin Qais started rebelling against Thuwaini bin Said with the help and encouragement of the Wahhabis in 1864. Azzan eventually managed to expel Thuwaini's eldest son Salim bin Thuwaini, seizing power in October 1868. Under Azzan, the country briefly reverted to being an imamate rather than a sultanate and although he was accepted by a significant portion of the al-hinai tribe, his subsequent attempts to subdue the interior alienated the Ghafiri tribe who in 1870 instigated a general revolt led by Salim's uncle Sayyid Turki bin Said. Turki contrived to keep the office within the immediate family and re-establish his father's sultanate; having secured the political and financial backing of the British, he managed to execute Azzan, bringing the revolt to a successful end in January 1871. Succession continues through his great-grandson, His Majesty Sultan Qaboos bin Said, the present ruler of Oman and the incarnation of the country's renaissance, who has presided over an era of socio-economic

modernization since 1970.

List of Rulers

Imams of Oman

- 1744–1778 Imam Ahmed bin Said
  - 1778–1783 Imam Said bin Ahmed

Sultans of Oman

- 1783–1792 Sultan Hamad bin Said
  - 1792–1804 Sultan Sultan bin Ahmed
    - 1805–1806 Sultan Badr bin Seif
      - 1806–1856 Sultan Said bin Sultan
        - 1856–1866 Sultan Thuwaini bin Said
          - 1866–1868 Sultan Salim bin Thuwaini
            - 1868–1871 Imam Azzan bin Qais
              - 1871–1888 Sultan Turki bin Said
                - 1888–1913 Sultan Faisal bin Turki
                  - 1913–1932 Sultan Taimur bin Faisal
                    - 1932–1970 Sultan Said bin Taimur
                      - 1970–present Sultan Qaboos bin Said

Sultans of Zanzibar

- 1856–1870 Sultan Majid bin Said
  - 1870–1888 Sultan Barghash bin Said
    - 1888–1890 Sultan Khalifa bin Said
      - 1890–1893 Sultan Ali bin Said
        - 1893–1896 Sultan Hamad bin Thuwaini
          - 26 Aug 1896 Sultan Khalid bin Bargash
            - 1896–1902 Sultan Hamud bin Mohammed
              - 1902–1911 Sultan Ali bin Hamud
                - 1911–1960 Sultan Khalifa bin Harub
                  - 1960–1963 Sultan Abdullah bin Khalifa
                    - 1963–1964 Sultan Jamshid bin Abdullah

Qatar

From Wikipedia, the free encyclopedia

Qatar (/ˈ kɑː tɑr/ or /kəˈ tɑr/;[4][5] Arabic: قطر [ˈ qɑtˤ ɑr]; local vernacular pronunciation: [gɪ tˤ ɑr][6]), also known as the country or **State of Qatar** or locally **Dawlat Qaṭ ar**, is a sovereign Arab state, located in the Middle East, occupying the small Qatar Peninsula on the northeasterly coast of the much larger Arabian Peninsula. Its sole land border is with Saudi Arabia to the south, with the rest of its territory surrounded by the Persian Gulf. A strait of the Persian Gulf separates Qatar from the nearby island state of Bahrain.

Qatar has been ruled as an absolute monarchy by the Al Thani family since the mid-19th century. Formerly a British protectorate noted mainly for pearling, it became independent in 1971, and has become one of the region's wealthiest states due to its enormous oil and natural gas revenues. In 1995, Sheikh Hamad bin Khalifa Al Thani became Emir when he seized power from his father, Khalifa bin Hamad Al Thani, in a peaceful coup d'état.[7] The most important positions in Qatar are held by the members of the Al Thani family, or close confidants of the al- Thani family. Beginning in 1992, Qatar has built intimate military ties with the United States, and is now the location of U.S. Central Command's Forward Headquarters and the Combined Air Operations Center.

Qatar has the world's highest per capita GDP and proven reserves of oil and natural gas. Qatar tops the list of World's richest countries by Forbes. In 2010, Qatar had the world's highest GDP per capita, while the economy grew by 19.40%, the fastest in the world. The main drivers for this rapid growth are attributed to ongoing increases in production and exports of liquefied natural gas, oil, petrochemicals and related industries. Qatar has the second-highest human development in the Arab World after the United Arab Emirates. In 2009, Qatar was the United States' fifth-largest export market in the Middle East, trailing behind the U.A.E., Israel, Saudi Arabia and Egypt. With a small citizen population of less than 300,000 people, Qatar workforce comprises expatriates from other Arab nations (20% of population), the Indian subcontinent (India 20%, Nepal 13%, Pakistan 7%, Sri Lanka 5%), Southeast Asia (Philippines 10%), and other countries (5%).[8] Qatar has attracted an estimated $100 billion in investment, with approximately $60–70 billion coming from the U.S in the energy sector. It is estimated that Qatar will invest over $120 billion in the energy sector in the next ten years.[9]

العربية

This article contains Arabic text, written from right to left in a cursive style with some letters joined. Without proper rendering support, you may see unjoined Arabic letters written left-to-right instead of right-to-left or other symbols instead of Arabic script.

Etymology [edit]

The name may derive from "Qatara", believed to refer to the Qatari town of Zubara, an important trading port and town in the region in ancient times. It is from the Persian word "Gwadar" which means, a port, a bay-port. There are similar places in the region with that name.

In Standard Arabic the name is pronounced [ˈ qa tˤ a r], while in the local dialect it is [ˈ g itˤ ar].[6] In English-language broadcast media within Qatar—for example, television commercials for Qatar Airways and advertisements concerning economic development in Qatar—the name is pronounced "KA-tar" (not "KAT-ar").

Main article: History of Qatar

Zubara fort

Recent discoveries in Wadi Debay'an, a site located a few kilometers south of Zubara, indicate human presence from 7500 years ago - the earliest known date for human occupation in Qatar. Amongst the findings were a wall built of stone, possibly used as a fish trap.[10] Discovery of a 6th millennium BC site at Shagra, in southeastern Qatar revealed the key role the sea (the Persian Gulf) played in the lives of Shagra's inhabitants. Excavations at Al Khor in northeastern Qatar, Bir Zekrit and Ras Abaruk, and the discovery there of pottery, flint, flint-scraper tools, and painted ceramic vessels indicates Qatar's connection with the Al-Ubaid civilisation, which flourished in the land between the Tigris and the Euphrates rivers in present-day Iraq during the period of 5th–4th millennium BC. It is thought that Mesoptamian fisherman working the rich fishing banks off the Arabian coast visited local settlements, bringing pottery with them and exchanging it for fresh meat in an improvised barter-based trade system.[11] The first potsherds of the Ubaid Mesopotamia were found by a Danish expidition in Al Da'asa in 1961, but not identified until later. A second expedition was held in 1973-74 led by Beatrice De Cardi.[12] Contact between the people of Mesopotamia and the eastern Arabian coast (including Qatar) continued over centuries.

In the early 3rd millennium, Sumerians settled on Tarut Island, off the Saudi coast, approximately 100 kilometers north-west of Qatar. Later, from 2450-1700 BC, Dilmun, a peaceful trading civilization, was centered in Bahrain.[13] Evidence that Qatar was part of the complex trading network is found from the presence of Barbar pottery, a product of the Dilmun civilization, in Ras Abrouk.[14]

Islam was spread in the entire Arabian region by the end of the 7th century resulting in the Islamization of the native Arabian pagans. With the spread of Islam in Qatar, the Islamic prophet Muhammad sent his first military envoy, Al Ala Al-Hadrami, to Al-Mundhir Ibn Sawa Al-Tamimi, the ruler of Bahrain (which extended from the coast of Kuwait to the south of Qatar, including Al-Hasa and Bahrain Islands), in the year 628, inviting him to accept Islam as he had invited other kingdoms and empires of his time such as Byzantium and Persia. Mundhir, in response to Muhammad, announced his acceptance of Islam, and the inhabitants of Qatar became Muslim, heralding the beginning of the Islamic era in Qatar. However, it is likely that some settled populations in Qatar did not instantaneously convert. An important seventh-century saint and mystic, named Isaac of Qatar, became a leader in the Syrian church.[15]

Middle ages [edit]

In medieval times, Qatar was more often than not independent and a participant in the great Persian Gulf–Indian Ocean commerce. Many races and ideas were introduced into the peninsula from the sailors of Sindh, East Africa, South and Southeast Asia, as well as the Malay archipelago. Today, the traces of these early interactions with the oceanic world of the Indian Ocean survive in the small minorities of races, peoples, languages and religions, such as the presence of Africans and Shihus.

Although the peninsula land mass that makes up Qatar has sustained humans for thousands of years, for the bulk of its history, the arid climate fostered only short-term settlements by nomadic tribes. The Abbasid era (750–1258) saw the rise of several settlements, including Murwab. The Portuguese ruled from 1517 to 1538, when they lost to the Ottomans.[*citation needed*]

Qatar did not emerge as a separate political entity until the mid-19th Century when the British recognized Sheik Mohamed bin Thani.[16]

Under military and political pressure from the Governor of the Ottoman province of Baghdad, Midhat Pasha, the The Al-Thani shaykhs in Qatar submitted to Ottoman rule in 1871.[17] By the end of that year, Ottoman rule extended from Kuwait to Qatar.[17] The Ottoman government imposed reformist (Tanzimat) measures concerning taxation and land registration to fully integrate these areas into the empire.[17]

In March 1893, at the Battle of Wajbah (10 miles west of Doha), Shaikh Jassim defeated the Ottomans and banished them for good from Qatar.[18] This date is a landmark in Qatari history, one that marks the emergence of modern Qatar as a nation.

The British initially sought out Qatar and the Persian Gulf as an intermediary vantage point *en route* to their colonial interests in India; although, the discovery of petroleum and other hydrocarbons in the early 20th century would re-invigorate their interest. During the 19th century, the time of Britain's formative ventures into the region, the Al Khalifa clan reigned over the northern Qatari peninsula from the nearby island of Bahrain to the west.

Although Qatar had the legal status of a dependency, resentment festered against the Bahraini Al Khalifas along the eastern seaboard of the Qatari peninsula. In 1867, the Al Khalifas launched a successful effort to crush the Qatari rebels, sending a massive naval force to Al Wakrah. However, the Bahraini aggression was in violation of the 1820 Anglo-Bahraini Treaty. The diplomatic response of the British to this violation set into motion the political forces that would eventuate in the founding of the state of Qatar on 18 December 1878 (for this reason, the date of 18 December is celebrated each year as the Qatar National Day). In addition to censuring Bahrain for its breach of agreement, the British Protectorate (per Colonel Lewis Pelly) asked to negotiate with a representative from Qatar.

The request carried with it a tacit recognition of Qatar's status as distinct from Bahrain. The Qataris chose as their negotiator the entrepreneur and long-time resident of Doha, Muhammed bin Thani. The Al Thanis had taken relatively little part in Persian Gulf politics, but the diplomatic foray ensured their participation in the movement towards independence and their hegemony as the future ruling family, a dynasty that continues to this day. The results of the negotiations left the nation with a new-found sense of political identity, although it did not gain official standing as a British protectorate until 1916.

20th and 21st centuries [edit]

The reach of the British Empire diminished after World War II, especially following Indian independence in 1947. Pressure for a British withdrawal from the Arab emirates in the Persian Gulf increased during the 1950s, and the British welcomed Kuwait's declaration of independence in 1961. When Britain officially announced in 1968 that it would disengage politically (though not economically) from the Persian Gulf in three years' time, Qatar joined Bahrain and seven other Trucial States in a federation. Regional disputes, however, quickly compelled Qatar to resign and declare independence from the coalition that would evolve into the seven-emirate United Arab Emirates. On 3 September 1971, Qatar became an independent sovereign state.

Diwan Al-Emiri

In 1991, Qatar played a significant role in the Persian Gulf War, particularly during the Battle of Khafji in which Qatari tanks rolled through the streets of the town providing fire support for Saudi Arabian National Guard units which were fighting against units of the Iraqi Army. Qatar also allowed Coalition troops from Canada to use the country as an airbase to launch aircraft on CAP duty.

Since 1995, Emir Hamad bin Khalifa Al Thani has ruled Qatar, seizing control of the country from his father Khalifa bin Hamad Al Thani while the latter vacationed in Switzerland. Under Emir Hamad, Qatar has experienced a notable amount of sociopolitical liberalization, including the endorsement of women's suffrage or right to vote, drafting a new constitution, and the launch of Al Jazeera, an outspoken news organization.

Qatar served as the headquarters and one of the main launching sites of the US invasion of Iraq[19] in 2003.

In December 2010, Qatar was selected to host the 2022 FIFA World Cup, and will be the first country in the Middle East to host the tournament.

National Day [edit]

Qatar National Day on December 18 is the day Qataris celebrate their national identity and history. On that day, expressions of affection and gratitude are conveyed to the people of Qatar who cooperated in solidarity and vowed allegiance and obedience to Shaikh Jassim bin Mohammed Al Thani as a leader in 1878[*citation needed*].

Geography [edit]

Main article: Geography of Qatar

The Qatari peninsula juts 100 miles (161 km) north into the Persian Gulf from Saudi Arabia. It lies between latitudes 24° and 27° N, and longitudes 50° and 52° E.

Desert landscape in Qatar

Much of the country consists of a low, barren plain, covered with sand. To the southeast lies the spectacular *Khor al Adaid* ("Inland Sea"), an area of rolling sand dunes surrounding an inlet of the Persian Gulf. There are mild winters and very hot, humid summers.

The highest point in Qatar is Qurayn Abu al Bawl at 103 metres (338 ft)[20] in the Jebel Dukhan to the west, a range of low limestone outcroppings running north-south from Zikrit through Umm Bab to the southern border. The Jebel Dukhan area also contains Qatar's main onshore oil deposits, while the natural gas fields lie offshore, to the northwest of the peninsula.

Map of Qatar

Government and politics [edit]

Main article: Politics of Qatar

Qatar has an unelected, monarchic, emirate-type government. The position of emir is hereditary.[20]

Council of Ministers [edit]

The Emir has the exclusive power to appoint and remove the prime minister and cabinet ministers who, together, comprise the Council of Ministers, which is the the supreme executive authority in the country.[21] The Council of Ministers also initiates legislation. Laws and decrees proposed by the Council of Ministers are referred to the Advisory Council (Majilis Al Shura) for discussion after which they are submitted to the Emir for ratification.[21]

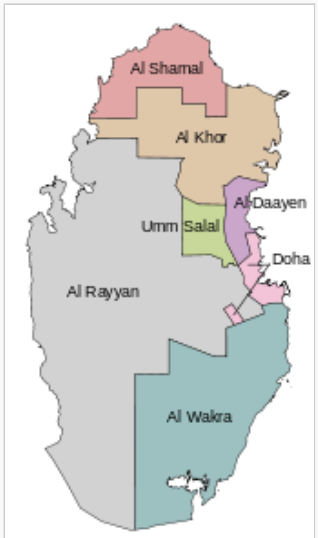
Generated by www.PDFonFly.com at 3/21/2012 5:35:23 AM
URL: http://en.wikipedia.org/wiki/Qatar

Legislative bodies [edit]

An Advisory Council or Majlis al-Shura has limited legislative authority to draft and approve laws, but the Emir has final say on all matters.[20] No legislative elections have been held since 1970 when there were partial elections to the body.[20]

In 2003, Qatar adopted a new constitution that provided for the direct election of 30 of the 45 members of Advisory Council.[22][20] As of 2012, the Council is comprised entirely of members appointed by the Emir.[20]

Elections to the Majlis al-Shurahave have been announced, and then postponed, several times.[22] In 2011, the emir announced that elections to the council would be held in the second half of 2013[23]



An elected 29-member Central Municipal Council (CMC) has limited consultative authority aimed at improving municipal services.[20] The CMC makes recommendations to the Ministry for Municipal Affairs and Agriculture. Disagreement between the CMC and the Ministry can be brought to the Council of Ministers for resolution.[22] Municipal elections are scheduled for every four years.[22] The most recent elections for the council were in May 2011.[20] Before 1999, members of the CMC were appointed by the government.

Administrative divisions [edit]

Main article: Municipalities of Qatar

Before 2004, Qatar was divided into ten *municipalities* (Arabic: *baladiyah*), also occasionally or rarely translated as *governorates* or *provinces*:

1. Doha (Ad Dawhah) الدوحة
2. Al Ghuwariyah الغويرية
3. Al Jumaliyah الجميلية
4. Al Khawr الخور
5. Al Wakrah الوكرة
6. Ar Rayyan الريان
7. Jariyan al Batnah جريان الباطنة
8. Madinat ash Shamal الشمال
9. Umm Salal أم صلال
10. Mesaieed مسيعيد

Map of the municipalities of Qatar, since 2004

Since 2004, Qatar has been divided into seven municipalities.[24] A new municipality, Al Daayen, was created under Resolution No. 13,[25] formed from parts of Umm Salal and Al Khawr; at the same time, Al Ghuwariyah was merged with Al Khawr; Al Jumaliyah was merged with Ar Rayyan; Jarayan al Batnah was split between Ar Rayyan and Al Wakrah; and Mesaieed was merged with Al Wakrah.

For statistical purposes, the municipalities are further subdivided into zones (87 in number as of 2004), which are in turn subdivided into blocks.[26]

Qatari law [edit]

Qatar is a civil law jurisdiction.[*citation needed*] However, *Shari'a* or Islamic law is applied to aspects of family law, inheritance and certain criminal acts.[27]

Labor laws [edit]

Many cases of ill-treatment of immigrant labour have been observed. Qatar does not maintain wage standards for its immigrant labor, and does not permit labour-unions. Under the provisions of Qatar's sponsorship law, sponsors have the unilateral power to cancel workers' residency permits, deny workers' ability to change employers, report a worker as "absconded" to police authorities, and deny permission to leave the country.[28] As a result, sponsors may restrict workers' movements and workers may be afraid to report abuses or claim their rights.[28]

Criminal Sanctions [edit]

As of 2005, certain provisions of the Qatari Criminal Code allowed punishments such as flogging and stoning to be imposed as criminal sanctions. The UN Committee Against Torture found that these practices constituted a breach of the obligations imposed by the UN Convention Against Torture and Other Cruel, Inhuman or Degrading Treatment or Punishment.[29][30] Qatar retains the death penalty, mainly for threats against national security.

Laws governing alcohol and other dietary issues [edit]

Alcohol consumption is legal in Qatar, with many restrictions. Luxury hotels are allowed to sell alcohol to their adult non-Muslim customers.[31][32] Foreign nationals may obtain a permit to purchase alcohol for personal consumption. The Qatar Distribution Company (a subsidiary of Qatar Airways) is permitted to import alcohol and operates the only liquor stores in the country.[33] Pork is also legally imported through the Qatar Distribution Company, and may be purchased by holders of a liquor permit.

URL: http://en.wikipedia.org/wiki/Qatar

Until recently, restaurants on the Pearl-Qatar (a manmade island near Doha) were allowed to serve alcoholic drinks.[31][32] In December 2011, however, restaurants on the Pearl were told to stop selling alcohol.[31][34] No explanation was given for the ban.[31][32] Speculation about the reason includes the government's desire to project a more pious image in advance of the country's first election of a royal advisory body and rumours of a financial dispute between the government and the resort's developers.[34]

Foreign relations [edit]

Main article: Foreign relations of Qatar

Qatar was also an early member of OPEC and a founding member of the Gulf Cooperation Council (GCC). It is a member of the Arab League. The country has not accepted compulsory International Court of Justice jurisdiction.[20]

Qatar has bilateral relationships with a variety of foreign powers. It has allowed American forces to use an air base to send supplies to Iraq and Afghanistan.[35] It has also signed a defense cooperation agreement with Saudi Arabia,[36] with whom it shares the largest single non-associated gas field in the world. It was the second nation, the first being France, to have publicly announced its recognition of the Libyan opposition's National Transitional Council as the legitimate government of Libya amidst the 2011 Libyan civil war.[37]

The history of Qatar's alliances provides insight into the basis of their policy. Between 1760 and 1971, Qatar sought formal protection from the high transitory powers of the Ottomans, British, the Al-Khalifa's from Bahrain, the Persians, and the Wahhabis from Saudi Arabia.[38] It has undoubtedly been a powerless nation between influential nations and always fearful of losing their sovereignty. It was quickly determined that creating permanent alliances is not in Qatar's best interest and that it could not rest its security in the hands of another; the only thing that is permanent is Qatar's interests. Qatar sought to secure the growing threat of being in a volatile geographic region, with mistrust and nuclear threats within close proximity, by inviting the US to create a full-functioning military base . Sheikh Hamad's coup in 1995 reinvigorated its foreign policy, allowing it to step out of Saudi Arabia's shadow, and unaligned its policies from them, surprising the region. Speculation of a Saudi Arabian-,sponsored coup attempt in the late 1990s to reinstate the ousted Emir's father, and border disputes, led to obstreperous relations, resulting in Riyadh withdrawing diplomatic representation from 2002 to 2007. Launch of *Al-Jazeera* certainly did not help; it bred mistrust within the region, and brought into question the motives behind it and Qatar's road to modernity in relation to the various countries it affected.

In March 2005, a suicide bombing killed a British teacher at the Doha Players Theatre, shocking for a country that had not previously experienced acts of terrorism. The bombing was carried out by Omar Ahmed Abdullah Ali, an Egyptian residing in Qatar, who had suspected ties to Al-Qaeda in the Arabian Peninsula.[39][40] According to leaked documents published in *The New York Times*, Qatar's record of counterterrorism efforts was the "worst in the region" although Qatar had been a generous host to the American military.[41] The cable suggested that Qatar's security service was "hesitant to act against known terrorists out of concern for appearing to be aligned with the U.S. and provoking reprisals".[41]

Role in international community [edit]

Besides causing a stir in the media world, Qatar has also made a name for itself in the international arena, with its attempt to brand itself as a peaceful neutral world power. It has attempted to achieve that goal by acting as a mediator, and promoting peace in the region and beyond.

- Mediation

As of 2011, Qatar has engaged in mediation efforts in Western Sahara, Yemen, the Ethiopia-Eritrea conflict, Indonesia, Somalia, and famously in Darfur and Lebanon. In addition, Qatar has involved itself in deep negotiations between the Palestinian authorities, Hamas and Fatah. Qatar's involvement as a mediator in all of these situations may be vindicated by its lack of ties to any super-national or regional powers, and by the strategy of neutrality it has followed in order to be seen as an unbiased entity in conflicts.

- International Organizations and Conferences

Qatar has continued to take on more roles in the international organizational realm. In 1997 Qatar hosted the Middle East and North African summit, where it invited Israeli representation. In 2001, Qatar took the initiative and held a WTO ministerial meeting to further trade negotiations, commonly known as the 'Doha Round'. Most notably, Qatar held an elected seat for two years in the United Nations Security Council from 2005 to 2007, maximizing its exposure and solidifying its presence in the international community.

Qatar has hosted academic, religious, political and economic conferences. The 11th annual Doha Forum recently brought in key thinkers, professionals of various backgrounds, and political figures from all over the world to discuss democracy, media and information technology, free trade, and water security issues. This year was the first year the forum featured the Middle East Economic Future conference.[42]

Human rights [edit]

Main article: Human rights in Qatar

Generated by www.PDFonFly.com at 3/21/2012 5:35:23 AM
URL: http://en.wikipedia.org/wiki/Qatar

Immigrant labor and human trafficking [edit]

Qatar is a destination for men and women from South Asia and Southeast Asia who migrate willingly, but are subsequently trafficked into involuntary servitude as domestic workers and labourers, and, to a lesser extent, commercial sexual exploitation. The most common offence was forcing workers to accept worse contract terms than those under which they were recruited. Other offences include bonded labour, withholding of pay, restrictions on movement, arbitrary detention, and physical, mental, and sexual abuse.[20]

According to the Trafficking in Persons Report by the US State Department, men and women who are lured into Qatar by promises of high wages are often forced into underpaid labour. The report states that Qatari laws against forced labour are rarely enforced, and that labour laws often result in the detention of victims in deportation centres, pending the completion of legal proceedings[*citation needed*]. The report places Qatar at tier 3, as one of the countries that neither satisfies the minimum standards, nor demonstrates significant efforts to come into compliance.[43][44]

The government maintains that it is setting the benchmark when it comes to human rights[45] and treatment of labourers.

In common with other Arab countries of the Persian Gulf, sponsorship laws exist in Qatar. These laws have been widely described as akin to modern-day slavery.[46] The sponsorship system (*kafeel* or *kafala*) exists throughout the GCC, apart from Bahrain, and means that a worker (not a tourist) may not enter the country without having a *kafeel*; cannot leave without the *kafeel*`s permission (an exit permit must first be awarded by the sponsor, or *kafeel*); and the sponsor has the right to ban the employee from entering Qatar within 2–5 years of his first departure. Various governmental sponsors have recently exercised their right to prevent employees from leaving the country, effectively holding them against their will for no good reason. Some individuals after resigning have not been issued with their exit permits, denying them their basic right to leave the country. Many sponsors do not allow the transfer of one employee to another sponsor. This does not apply to special sponsorship of a Qatar Financial Centre-sponsored worker, where it is encouraged and regulated that sponsorship should be uninhibited and assistance should be given to allow for such transfers of sponsorship.

Barwa, a Qatari contracting agency, is constructing a residential area for labourers known as Barwa Al Baraha (also called "Worker's City"). The project was launched after a recent scandal in Dubai's labour camps. The project aims to provide a reasonable standard of living as defined by the new Human Rights Legislation.[47] The Barwa Al Baraha will cost around $1.1 billion and will be a completely integrated city in the industrial area in Doha. Along with 4.25 square meters of living space per person, the residential project will provide parks, recreational areas, malls, and shops for labourers. Phase one of the project was set to be completed by the end of 2008, and the project itself is set to be completed by the middle of 2010.[48]

Women's rights [edit]

Women in Qatar vote and may run for public office. Qatar enfranchised women at the same time as men in connection with the 1999 elections for a Central Municipal Council.[49][22] These elections—the first ever in Qatar—were deliberately held on March 8, 1999, International Women's Day.[22]

Women hold leadership positions in a number of ministries/supreme councils.

Qatari women are allowed to go out and drive without related male companion. While most Qatari women wear the abaya, there does not seem to be any formal restrictions on what women can wear, although, as in most countries, dressing modestly is generally preferred.

Freedom of religion [edit]

The government uses Sunni law as the basis of its criminal and civil regulations. Some religious tolerance is granted. Foreign nationals are free to affiliate with their faiths other than Islam, e.g. Christianity, Hinduism, Sikhism, Buddhism, and Bahai, as long as they are religious in private and do not offend 'public order' or 'morality'.

In March 2008, a Roman Catholic church, Our Lady of the Rosary, was consecrated in Doha. No missionaries were allowed in the community. The church will have no bells, crosses or other Christian symbols on it and its premises.

Incidents [edit]

A Wikileaks report has revealed that letters signed by the deputy prime minister, Abdullah al-Attiyah, and sent to Royal Dutch Shell, ExxonMobil, and a number of other major oil companies, showed that the Qatar government demanded donations of up to $1.7 billion toward the cost of building a medical centre in 2007.[50]

Economy [edit]

Main article: Economy of Qatar

See also: List of tallest buildings in Doha, Qatar

Generated by www.PDFonFly.com at 3/21/2012 5:35:23 AM
URL: http://en.wikipedia.org/wiki/Qatar

The economic growth of Qatar has been almost exclusively based on its petrol and natural gas industry, which began in 1940.[51] The country has experienced rapid growth over the last several years due to high oil prices, and in 2008 posted its eighth consecutive budget surplus. Economic policy is focused on developing Qatar's non-associated natural gas reserves and increasing private and foreign investment in non-energy sectors, but oil and gas still account for more than 50% of GDP; roughly 85% of export earnings, and 70% of government revenues.

Qatar's capital, Doha

Oil and gas have made Qatar one of the highest per-capita income countries, and one of the world's fastest growing. The World Factbook states that Qatar has the second-highest GDP per capita in the world, after Liechtenstein. Proved oil reserves of 15 billion barrels should enable continued output at current levels for 37 years. Qatar's proved reserves of natural gas are nearly 26 trillion cubic metres, about 14% of the world total and the third largest in the world.

Before the discovery of oil, the economy of the Qatari region focused on fishing and pearl hunting. After the introduction of the Japanese cultured pearl onto the world market in the 1920s and 1930s, Qatar's pearling industry crashed. However, the discovery of oil, beginning in the 1940s, completely transformed the state's economy. Now, the country has a high standard of living, with many social services offered to its citizens and all the amenities of any modern state. It relies heavily on foreign labour to grow its economy, to the extent that 94% of its labour is carried out by foreigners. Labour laws in Qatar have improved over recent years, and Qatar is now the only state in the GCC to allow labour unions.

Qatar's national income primarily derives from oil and natural gas exports. The country has oil reserves of 15 billion barrels, while gas reserves in the giant North Field (which straddles the border with Saudi Arabia and is almost as large as the peninsula itself) are estimated to be between 80 trillion cubic feet (2.3×10^{12} m^3) to 800 trillion cubic feet (23×10^{12} m^3) (1 trillion cubic feet of gas is equivalent to about 180 million barrels (29×10^6 m^3) of oil). Qataris' wealth and standard of living compare well with those of Western European states; Qatar has the highest GDP per capita in the Arab World, according to the International Monetary Fund (2010)[52] and the CIA World Factbook.[53] With no income tax, Qatar (along with Bahrain) is one of the countries with the lowest tax rates in the world.Qatar has been ranked as the world's richest country per capita in a new list compiled by US-based Forbes magazine. Blessed with the third-largest natural gas reserves in the world, the Arab Gulf emirate of 1.7 million people is benefitting from a rebound in oil prices. Adjusted for purchasing power (PPP), Qatar has an estimated gross domestic product per capita of $88,222.

West Bay in Doha

While oil and gas will probably remain the backbone of Qatar's economy for some time to come, the country seeks to stimulate the private sector and develop a "knowledge economy". In 2004, it established the Qatar Science & Technology Park to attract and serve technology-based companies and entrepreneurs, from overseas and within Qatar. Qatar also established Education City, which consists of international colleges. For the 15th Asian Games in Doha, it established Doha Sports City, consisting of Khalifa stadium, the Aspire Sports Academy, aquatic centres, exhibition centres and many other sports related buildings and centres. Following the success of the Asian Games, Doha kicked off an official bid to host the 2016 Summer Olympics in October 2007.[54] Its bid was finally eliminated from consideration in June 2008. Qatar also plans to build an "entertainment city" in the future.

The Qatari government hopes that large-scale investment in all social and economic sectors will lead to the development of a strong financial market.

The Qatar Financial Centre (QFC) provides financial institutions with world-class services in investment, margin and no-interest loans, and capital support. These platforms are situated in an economy founded on the development of its hydrocarbons resources, specifically its exportation of petroleum. It has been created with a long term perspective to support the development of Qatar and the wider region, develop local and regional markets, and strengthen the links between the energy based economies and global financial markets.

Apart from Qatar itself, which needs to raise capital to finance projects of more than $130 billion, the QFC also provides a conduit for financial institutions to access nearly $1.0 trillion of investments which stretch across the GCC (Cooperation Council for the Arab States of the Gulf) as a whole over the next decade. Commercial ties between the United States and Qatar have been expanding at a rapid pace over the last five years, with trade volumes growing by more than 340%, from $738 million in 2003 to $3.2 billion in 2009. Over the same period, U.S. exports increased 580 percent to $2.7 billion, making the United States the largest import partner for Qatar. US companies look to play key role in the $60 billion dollars that Qatar will invest in roads, infrastructure development, housing and real estate, health/medical and sanitation projects in the next decade.

The new town of Lusail, the largest project ever in Qatar, is under construction.

URL: http://en.wikipedia.org/wiki/Qatar

Transportation [edit]

Main article: Transport in Qatar

The primary means of transportation in Qatar is by road, due to the very cheap price of petroleum. The country as a result has an advanced road system undergoing vast upgrades in response to the country's rapidly rising population, with several highways undergoing upgrades and new expressways within Doha under construction. A large bus network connects Doha with other towns in the country, and is the primary means of public transportation in the city.

Corniche

The Salwa International Highway currently connects Doha to the border with Saudi Arabia, and a causeway with both road and rail links to Bahrain at Zubarah is due to begin construction shortly. The causeway will become the largest in the world, and will be the second to connect Bahrain to the Arabian Peninsula.

Currently, no rail networks exist in the country. In November 2009, however, the government signed a $26 billion contract with the German company Deutsche Bahn to construct a railway system over the next 20 years. The network will connect the country itself, and will include an international link with neighbouring states as part of a larger rail network being constructed across the countries of the Gulf Cooperation Council. A railway link is also under construction between Qatar and Bahrain as part of the Qatar Bahrain Causeway.

Qatar's main airport is the Doha International Airport, which served almost 15,000,000 passengers in 2007. In comparison, the airport served only 2,000,000 passengers in 1998. As a result of the much larger volumes of passengers flying into and through the country today, the New Doha International Airport is currently under construction, and will replace the existing airport in 2012.

Environmental issues [edit]

In 2005, Qatar had the highest per-capita carbon dioxide emissions, at 55.5 metric tons per person.[56] This is almost double the next highest per-capita emitting country, which is Kuwait at 30.7 metric tons (2005) and they are three times those of the United States. By 2007, Qatar's emission rate increased to 69 tons per person per year.[57] Qatar had the highest per-capita carbon dioxide emissions for the past 18 years. These emissions are largely due to high rates of energy use in Qatar. Major uses of energy in Qatar include air conditioning, natural gas processing, water desalination and electricity production. Between 1995 and 2011 the electricity generating capacity of Qatar will have increased to six times the previous level. The fact that Qataris do not have to pay for either their water or electricity supplies is thought to contribute to their high rate of energy use. They are also one of the highest consumers of water per capita per day, using around 400 litres.[58]

Renee Richer, visiting professor of Biology at Weill Cornell Medical College in Qatar[59] lectures:

Social and economic changes are taking place at an alarming rate, putting at risk the natural and cultural resources of Qatar. However, such loss of natural and cultural heritage need not be the case and great economic benefits can be gained from ecologically based development. Qatar is in a unique position, given the financial resources and forward thinking leadership, to move ahead and be amongst the first countries ready to take advantage of the next economic revolution: the green revolution.[60]

Population [edit]

Main article: Demographics of Qatar

Generated by www.PDFonFly.com at 3/21/2012 5:35:23 AM
URL: http://en.wikipedia.org/wiki/Qatar

Out of the total population of approximately 1.5 million (May 2008 est.), the make up of ethnic groups is as follows: Qatari (Arab) 20%; other Arab 20%; Indian 20%; Filipino 10%; Nepali 13%; Pakistani 7%; Sri Lankan 5%; other 5%.[8] Arabic, English, Malayalam, Hindi, Tamil, Tagalog, Urdu and Punjabi are the most widely spoken languages[*citation needed*].

Year	Population
1908 est.	22,000[61]
1939 est.	28,000[61]
late 1960s	70,000[62]
1986	369,079
1997	522,023[63]
2000	744,483
2001	769,152
2002	793,341
2003	817,052
2004	840,290
2005	863,051
2006	885,359
2007	1,207,229
2008	1,524,789[20]
2009	1,309,000[64]
2010	1,696,563
2011	1,692,262

Culture [edit]

See also: Music of Qatar

Qatari culture (music, art, dress, and cuisine) is similar to that of other Arab countries of the Persian Gulf; see Culture of the Arab States of the Persian Gulf. Arab tribes from Saudi Arabia migrated to Qatar and other places in the gulf; therefore, the culture in the Persian Gulf region varies little from country to country.

Qatar explicitly uses Sharia law as the basis of its government, and the vast majority of its citizens follow Hanbali Madhhab. Hanbali (Arabic: حنبلی) is one of the four schools (Madhhabs) of Fiqh or religious law within Sunni Islam (the other three being Hanafi, Maliki and Shafii). Sunni Muslims believe that all four schools have "correct guidance", and the differences between them lie not in the fundamentals of faith, but in finer judgments and jurisprudence, which are a result of the independent reasoning of the imams and the scholars who followed them. Because their individual methodologies of interpretation and extraction from the primary sources (usul) were different, they came to different judgments on particular matters. Shi'as comprise around 10% of the Muslim population in Qatar.[65]

Religion [edit]

Main article: Religion in Qatar

See also: Islam in Qatar and Christianity in Qatar

Islam is the predominant religion. According to the 2004 census, 77.5% of the population are Muslim, 8.5% are Christian and 14% are "Other".[20] About 5% of the Muslims living in Qatar are Shi'a.[65]

The majority of non-citizens are from South and Southeast Asian and Arab countries working on temporary employment contracts, accompanied by family members in some cases.[*citation needed*] Non-citizens can be Sunni or Shi'a Muslims, Protestant or Catholic Christians, Hindus, Sikhs, Buddhists, or Bahá'ís.

Religion is not a criterion for citizenship, according to the Nationality Law.

The Christian population consists nearly completely of foreigners. Active churches are Mar Thoma Church from Southern India, Arab Evangelicals from Syria and Palestine, and Anglicans,[66] about 50,000 Catholics and Copts from Egypt.[67] No foreign missionary groups operate openly in the country,[68] but the government allows churches to conduct Mass. Since 2008, Christians have been allowed to build churches on ground donated by the government.[69]

Sport [edit]

Main article: Sport in Qatar

Khalifa International Stadium, home stadium of the Qatar national football team.

Football is the most popular sport in Qatar, closely followed by cricket. The Qatar under-20 national football team finished second in the 1981 FIFA World Youth Championship after a 4–0 defeat to Germany in the final.

The Asian Football Confederation's 2011 AFC Asian Cup finals was held in Qatar in January 2011. It was the fifteenth time the tournament has been held, and the second time it has been hosted by Qatar, the other being the 1988 AFC Asian Cup.

Doha, Qatar is also home to Qatar Racing Club a Drag Racing facility. Sheik Khalid bin Hamad Al Thani is very involved in the sport and owner of Al-Anabi Racing.

Khalifa International Tennis and Squash Complex in Doha, Qatar hosted the WTA Tour Championships in women's tennis between 2008 and 2010. Doha holds the WTA Premier tournament Qatar Ladies Open annually.

On 2 December 2010, Qatar won their bid to host the 2022 FIFA World Cup.[70] Doha is currently bidding to host the 2020 Summer Olympics.[71]

Nasser Al-Attiyah of Qatar won the 2011 Dakar Rally and the Production World Rally Championship in 2006. In addition, he has also won gold medals at the 2002 Asian Games and 2010 Asian Games as part of the Qatari skeet shooting team, as well as a bronze medal in the individual skeet event at the 2010 Asian Games in Guangzhou.

URL: http://en.wikipedia.org/wiki/Qatar

Since 2002 Qatar has hosted the annual Tour of Qatar, a cycling race in six stages. Every February riders are racing on the roads across Qatar's flat land for six days. Each stage covers a distance of more than 100 km, though the time trial usually is a shorter distance. Tour of Qatar is organised by the Qatar Cycling Federation for professional riders in the category of Elite Men.[72]

Education [edit]

Main article: Education in Qatar

Cornell University's Weill Medical College in Qatar

In recent years Qatar has placed great emphasis on education. Citizens are required to attend government-provided education from kindergarten through high school.[73] Qatar University was founded in 1973. More recently, with the support of the Qatar Foundation, a number of leading US universities have opened branch campuses in the Education City. These include

- Carnegie Mellon University
- Cornell University's Weill Cornell Medical College
- Georgetown University School of Foreign Service
- Houston Community College System
- Northwestern University
- Texas A&M University
- Virginia Commonwealth University School of the Arts

In 2008, Qatar established the Qatar Science & Technology Park at Education City to link those universities with industry. Education City is also home to a fully accredited International Baccalaureate school, Qatar Academy. Two Canadian institutions, the College of the North Atlantic and the University of Calgary, also operate campuses in Doha. Other for-profit universities have also established campuses in the city.[74]

In 2009 Qatar Foundation launched a non-profit radio station,QF Radio 93.7 FM [3], which offers a streaming online service providing regular programs about Education, Science, Community Development and the Arts in Qatar, to a global online audience. It also broadcasts to Doha, Qatar on 93.7 FM. The program is produced as 70% in Arabic and 30% in English.

In 2009, the Qatar Foundation launched the World Innovation Summit for Education – WISE – a global forum that brought together education stakeholders, opinion leaders and decision makers from all over the world to discuss educational issues. The first edition was held in Doha from 16 to 18 November 2009, the second from 7 to 9 December 2010. The third edition will be held from 1 to 3 November 2011.

Moreover, in 2007 the American Brookings Institution announced that it was opening the Brookings Doha Center to undertake research and programming on the socio-economic and geo-political issues facing the region.

In November 2002, the Emir Hamad bin Khalifa Al Thani created the Supreme Education Council.[75] The Council directs and controls education for all ages from the pre-school level through the university level, including the "Education for a New Era"[76] reform initiative.

The Emir's second wife, Her Highness Sheikha Mozah Bint Nasser Al-Missned, has been instrumental in new education initiatives in Qatar. She chairs the Qatar Foundation, sits on the board of Qatar's Supreme Education Council, and is a major driving force behind the importation of Western expertise into the education system, particularly at the college level. In addition, The Qatar Foundation has supported the implementation of Arabic language programs in American public schools through the establishment of Qatar Foundation International, a U.S.-based non-profit dedicated to connecting the culture of American and Qatari students.

There are currently a total of 567 schools in operation within Qatar, both in the public and the private sector. A large number of new schools are also under construction, particularly public schools, in order to meet increased demand which arose as a result of the large increase in population that the country has seen of late. There are nine universities in the country, serving 12,480 students.

Health care [edit]

Hamad Medical Corporation (HMC)—affiliated with Cornell University—is the premier non-profit health care provider in Doha, Qatar. Established by the Emiri decree in 1979, HMC manages four highly specialised hospitals and a health care centre: Hamad General Hospital, Rumailah Hospital, Women's Hospital, Psychiatric Hospital and the Primary Health Care Centres. These hospitals are quite sophisticated by the standards of the region, with most hosting advanced fMRI and other scanning machines. Other private hospitals and polyclinics consist of Sidra Hospital, Al-Ahli Hospital, Doha Clinic, Al-Emadi Hospital, The American Hospital and Tadawi Medical. Qatar has among the highest rates in the world for obesity, diabetes and genetic disorders.[77] On the Qatar border, Saudi Arabia has set up the Salwa General Hospital, which is also serving all Qatari patients in good will of GCC.[*citation needed*]

Communications [edit]

Qatar has a modern telecommunication system centered in Doha. Tropospheric scatter to Bahrain; microwave radio relay to Saudi Arabia and UAE; submarine cable to Bahrain and UAE; satellite earth stations – two Intelsat (one Atlantic Ocean and one Indian Ocean) and one Arabsat. Callers can call Qatar using submarine cable, satellite, or VoIP (Skype/ Internet calling). However, Qtel has interfered with VoIP systems in the past, and Skype's website has been blocked before. Following complaints from individuals, the website has been unblocked, and Paltalk has previously been blocked.

Qtel's ISP branch, Internet Qatar, uses SmartFilter to block websites they deem inappropriate to Qatari interests and morality.

In Qatar, ictQATAR (Supreme Council of Information and Communication Technology) is the government agency regulating telecommunication.

Vodafone Qatar, in partnership with the Qatar Foundation, received the second public mobile networks and services license in Qatar on 28 June 2008 and switched on their mobile network on 1 March 2009. They launched 7 July 2009, opening their online store first followed by retail and third party distribution locations throughout Doha. However, this was discontinued in 2010.

Al Jazeera (Arabic: الجزيرة *al-ǧazīrā* [aldʒ a' zi ː ra], "The Island") is a television network headquartered in Doha, Qatar. Al Jazeera initially launched as an Arabic news and current affairs satellite TV channel of the same name, but has since expanded into a network of several specialty TV channels.

Print media is going through expansion, with over three English dailies and Arabic titles. *Qatar Today* is the only monthly business magazine in the country. It is published by Oryx Advertising, which is the largest magazine publisher in Qatar. The group also publishes several titles such as *Qatar Al Youm*, the only monthly business magazine in Qatar in Arabic language, *Woman Today*, the only magazine for working women, and *GLAM*,[78] the only fashion magazine. In December 2009 Oryx launched *T Qatar*: *The New York Times* Style Magazine,[79] which marks the entry of an international magazine into Qatar.

Doha Stadium Plus is the only dedicated Sports magazine published out of the country. It covers a large variety of sports. It is published by ASPIRE Printing, Publishing and Distribution company. It is published every Wednesday and has been in existence since February, 2006. It brought out a special supplement for the 2010 FIFA World Cup in South Africa as well as the 2011 AFC Asian Cup in Doha, Qatar, in addition to the weekly editions. They relaunched their website on 15 June 2011.

History of Qatar

From Wikipedia, the free encyclopedia

Qatar has been inhabited for several millennia. The Al Khalifa family of Bahrain dominated the area from the mid 1850s until 1868 when, at the request of Qatari sheikhs, the British negotiated the termination of the Bahraini claim, except for the payment of tribute. The tribute ended when the Ottoman Empire occupied Qatar in 1872.[1] The Ottomans ruled Qatar directly as a sanjak in Lahsa province between 1550–1680 and 1818–1830, and indirectly between 1680–1818 and 1830-1872 through the Al Thani family. Al Thani administration continued as kaymakam of Qatar (In Basra Vilayet) during Ottoman rule between 1872-1915. It was ruled also by Safavid Iran between 1680–1717, 1730–1736 and 1753–1783; by Oman between 1717–1730 and 1736–1753; and by Bahrain 1783-1818 and 1830-1851.

When the Ottomans left at the beginning of World War I in 1915, the British And Ottomans recognised Sheikh Abdullah bin Jassim Al-Thani as the ruler. The Al Thani family had lived in Qatar for 200 years. The 1916 treaty between the United Kingdom and Sheikh Abdullah was similar to those entered into by the British with other Persian Gulf principalities. Under it, the ruler agreed not to dispose of any of his territory except to the U.K. and not to enter into relationships with any other foreign government without British consent. In return, the British promised to protect Qatar from all aggression by sea and to lend their good offices in case of a land attack. A 1934 treaty granted more extensive British protection.[1]

In 1935, a 75-year oil concession was granted to the Qatar Petroleum Company, a subsidiary of the Iraq Petroleum Company, which was owned by Anglo-Dutch, French, and U.S. interests. High-quality oil was discovered in 1940 at Dukhan, on the western side of the Qatari peninsula. However, the start of World War II delayed exploitation of Qatar's oil resources, and oil exports did not begin until 1949.[1]

During the 1950s and 1960s gradually increasing oil revenues brought prosperity, rapid immigration, substantial social progress, and the beginnings of Qatar's modern history. When the U.K. announced a policy in 1968 (reaffirmed in March 1971) of ending the treaty relationships with the Persian Gulf sheikdoms, Qatar joined the other eight states then under British protection (the seven trucial sheikdoms—the present United Arab Emirates--and Bahrain) in a plan to form a union of Arab emirates. By mid-1971, as the termination date of the British treaty relationship (end of 1971) approached, the nine still had not agreed on terms of union. Accordingly, Qatar declared independence as a separate entity and became the fully independent State of Qatar on September 3, 1971.[1]

In February 1972, the Heir Apparent, Sheikh Khalifa bin Hamad Al Thani, deposed his cousin, Ahmed bin Ali Al Thani, and assumed power. Key members of the Al Thani family supported this move, which took place without violence or signs of political unrest.[1] On June 27, 1995, the Deputy Amir, Sheikh Hamad bin Khalifa, deposed his father Khalifa bin Hamad in a bloodless coup. An unsuccessful counter-coup was staged in 1996. The Amir and his father are now reconciled, though some supporters of the counter-coup remain in prison. The Amir announced his intention for Qatar to move toward democracy and has permitted a freer and more open press and municipal elections as a precursor to expected parliamentary elections. Qatari citizens approved a new constitution via public referendum in April 2003, which came into force in June 2005.[1]

To 1783

Human habitation of the Qatar Peninsula dates as far back as 50,000 years back, when small groups of Stone Age inhabitants built coastal encampments, settlements, and sites for working flint, according to archaeological evidences. Other finds have included pottery from the Al Ubaid culture of Mesopotamia and northern Arabia (ca. 5000 B.C.), rock carvings, burial mounds, and a large town that dates from about 500 B.C. at Wusail, twenty kilometers north of Doha. The Qatar Peninsula was close enough to the Dilmun civilization (ca. 4000 to 2000 B.C.) in Bahrain to have felt its influence. A harsh climate, lack of resources, and frequent periods of conflict, however, seem to have made it inevitable that no settlement would develop and prosper for any significant length of time before the discovery of oil.[2]

The peninsula was used almost continuously as rangeland for nomadic tribes from Najd and Al Hasa regions in Saudi Arabia, with seasonal encampments around sources of water. In addition, fishing and pearling settlements were established on those parts of the coast near a major well. Until the late eighteenth century, the principal towns were on the east coast—Al Huwayla, Fuwayrit, and Al Bida—and the modern city of Doha developed around the largest of these, Al Bida. The population consisted of nomadic and settled Arabs and a significant proportion of slaves brought originally from East Africa.[2]

The Qatar Peninsula came under the sway of several great powers over the centuries. The Abbasid era (750-1258) saw the rise of several settlements, including Murwab. The Portuguese ruled from 1517 to 1538, when they lost to the Ottomans. In the 1732, the Bani Utbah tribe migrated from Kuwait to Qatar's northwest coast and founded Zubarah. After this migration, the Bani Utbah were very close to the rich oyster banks. After the Persian Occupation of Basra in 1777 many merchants and families moved from Basra and Kuwait to Zubarah. After this movement, Zubarah became a thriving center of trade and pearling in the Persian Gulf region.

The prosperity of Zubarah, which is now in modern Qatar, had also brought it to the attention of the two main powers at the time, Persia and the Oman,[3] which were presumably sympathetic to Sheikh Nasr’s ambitions. Zubara's emerging position as a flourished as a pearling centre and trading port had brought it to the attention of the two main regional powers, Persia and Oman.[3] Bahrain offered great potential wealth because of the extensive pearls found in its waters, however, in 1782, war broke out between the Zubara-based Al-Khalifa trading clan of the Bani Utbah tribe and the Madhkurs.

The battle of Zubarah took place in the year 1782 between the Al-Khalifa from the Bani Utbah Tribe and the Army of Nasr Al-Madhkur Ruler of Bahrain and Bushire.

1783–1913

In response to attacks on Zubarah by Nasr Al-Madhkur who ruled Bahrain and Bushehr in Persia, the Bani

Utbah Al-Khalifa liberated Bahrain from the Persians in 1783.

After the Bani Utbah Liberation of Bahrain in 1783, different Arab families and tribes mostly from Qatar moved to Bahrain to settle there since the Persians have been expelled from the Island. These families and tribes were Al-Ma'awdah, Al-Fadhil, Al-Mannai, Al-Noaimi, Al-Sulaiti, Al-Sadah, Al-Thawadi, and other families and tribes. Most of these tribes settled in Muharraq, the capital of Bahrain and the center of power at that time.

In the early nineteenth centuries, continuing bloody conflict involved not only the Al Khalifa, the Al Jalahima, and the Iranians but also the Omanis under Sayyid Said ibn Sultan Al Said, the nascent Wahhabis of Arabia, and the Ottomans. The period also saw the rise of British power in the Persian Gulf as a result of their growing interests in India. Britain's desire for secure passage for East India Company ships led it to impose its own order in the gulf. The General Maritime Treaty of 1820 between the East India Company and the sheikhs of the coastal area—which became known as the Trucial Coast because of the series of treaties between the sheikhs and the British—was a way of ensuring safe passage. The agreement acknowledged British authority in the gulf and sought to end piracy and the kidnapping of slaves. Bahrain also became a party to the treaty, and it was assumed by the British and the Bahrainis that Qatar, as a dependency, was also a party to it.[2]

But when, as punishment for piracy, an East India Company vessel bombarded Doha in 1821, destroying the town and forcing hundreds to flee, the residents had no idea why they were being attacked.

In 1867, when a large Bahraini force sacked and looted Doha and Al Wakrah. This attack, and the Qatari counterattack, prompted the British political agent, Colonel Lewis Pelly, to impose a settlement in 1868. His mission to Bahrain and Qatar and the peace treaty that resulted were milestones in Qatar's history because they implicitly recognized the distinctness of Qatar from Bahrain and explicitly acknowledged the position of Mohammed bin Thani, an important representative of the peninsula's tribes.

Overthrow of Ottoman rule

With the expansion of the Ottoman Empire into eastern Arabia in 1871, Qatar became vulnerable to occupation. Mohammed bin Thani opposed Ottoman designs on Qatar, but his son, Jassim bin Mohammed, accepted Ottoman sovereignty in 1872. Although Jassim bin Mohammed privately complained of the Ottoman presence, he hoped that with Ottoman support he could dominate those sheikhs in other towns who opposed him and rebuff Bahrain's claims on Az Zubarah. The question of Az Zubarah became moot in 1878, however, when Jassim bin Mohammed and his brother Ahmed bin Muhammed destroyed the town as punishment for the piracy of the Naim, a tribe that resided in the north of Qatar but was loyal to the sheikh of Bahrain. Moreover, Jassim bin Mohammed's ambivalent relations with the Ottomans deteriorated to the point that in 1893 they sent a military force to Doha to arrest him, ostensibly over his refusal to permit an Ottoman customhouse in Doha. Fighting broke out, and Jassim bin Mohammed's supporters drove out the Ottoman force.

1913–1970

The Ottomans officially renounced sovereignty over Qatar in 1913, and in 1916 the new ruler, Jassim bin Mohammed's son, Abdullah bin Jassim Al Thani, signed a treaty with Britain bringing the peninsula into the trucial system. This meant that in exchange for Britain's military protection from external threats, Qatar relinquished its autonomy in foreign affairs and other areas, such as the power to cede territory. The treaty also had provisions suppressing slavery, piracy, and gunrunning, but the British were not strict about enforcing those provisions.[2]

Despite Qatar's coming under British "protection," Abdullah bin Jassim was far from secure: recalcitrant tribes refused to pay tribute; disgruntled family members intrigued against him; and he felt vulnerable to the designs of

Bahrain, not to mention the Wahhabis. The al Thanis were merchant princes, reliant on trade and especially the pearl trade, and depended on others to do their fighting for them, primarily the Bini Hajar i.e Al Hajiri/Hajeri who owed their allegiance to Ibn Saud, Emir of the Nejd and Al Hasa. Despite numerous requests by Abdullah bin Jassim — for strong military support, for weapons, and even for a loan — the British were reluctant to become involved in inland affairs and kept him at arm's length. This changed in the 1930s, when competition (mainly between Britain and the United States) for oil concessions in the region intensified (see below).

The scramble for oil raised the stakes in regional territorial disputes and highlighted the need to settle the national borders. The first move came in 1922 at a boundary conference in Uqair when the prospector Major Frank Holmes tried to include Qatar in an oil concession he was discussing with Ibn Saud. Sir Percy Cox, the British representative, saw through the ploy and drew a line on the map separating the Qatar Peninsula from the mainland.[4] The first oil survey took place in 1926 under the direction of a geologist of the Anglo-Persian Oil Company, George Martin Lees, but no oil was found. The oil issue raised its head again in 1933 after an oil strike in Bahrain—Lees had already noted that, in such an eventuality, Qatar should be investigated again.[5] After lengthy negotiations between Anglo-Persian representatives and Sheikh Abdullah bin Jassim, on 17 May 1935 the sheikh put his signature to a concession agreement for a period of 75 years in return for 400,000 rupees on signature and 150,000 rupees per annum with royalties.[6] As part of the agreement, Great Britain made more specific promises of assistance than in earlier treaties.[2] Anglo-Persian transferred the concession to the IPC subsidiary Petroleum Development (Qatar) Ltd. in order to meet its obligations under the Red Line Agreement.

In 1936, Bahrain claimed rule over a group of islands, the largest of which is Hawar, on the west coast of Qatar because it had established a small military garrison there. Britain accepted the Bahraini claim over Abdullah bin Jassim's objections, in large part because the Bahraini shaykh's personal British adviser was able to frame Bahrain's case in a legal manner familiar to British officials. The question of domain continued in the early 1990s. Triggered by a dispute involving the Naim, the Bahrainis once again laid claim to the deserted town of Az Zubarah in 1937. Abdullah bin Jassim sent a large, heavily armed force and succeeded in defeating the Naim. The British political resident in Bahrain supported Qatar's claim and warned Hamad ibn Isa Al Khalifa, the ruler of Bahrain, not to intervene militarily. Bitter and angry over the loss of Az Zubarah, Hamad ibn Isa imposed a crushing embargo on trade and travel to Qatar.[2]

Drilling of the first oil well began at Jebel Dukhan in October 1938 and, over a year later, the well struck oil in the Upper Jurassic limestone which, unlike the Bahraimi strike, was similar to Saudi Arabia’s Dammam field discovered three years before.[7] Production was halted between 1942 and 1947 because of World War II and its aftermath. The disruption of food supplies caused by the war prolonged a period of economic hardship in Qatar that had begun in the 1920s with the collapse of the pearl trade and had increased with the global depression of the early 1930s and the Bahraini embargo. As they had in previous times of privation, whole families and tribes moved to other parts of the Persian Gulf, leaving many Qatari villages deserted. Even Shaykh Abdullah bin Jassim went into debt and, in preparation for his retirement, groomed his favored second son, Hamad bin Abdullah Al Thani, to be his successor. Hamad bin Abdullah's death in 1948, however, led to a succession crisis in which the main candidates were Abdullah bin Jassim's eldest son, Ali bin Abdullah Al Thani, and Hamad bin Abdullah's teenage son, Khalifa ibn Hamad Al Thani.[2]

Oil exports and payments for offshore rights began in 1949 and marked a turning point in Qatar. Not only would oil revenues dramatically transform the economy and society, but they would also provide the focus for domestic disputes and foreign relations. This became frighteningly clear to Abdullah bin Jassim when several of his relatives threatened armed opposition if they did not receive increases in their allowances. Aged and anxious, Abdullah bin Jassim turned to the British, promised to abdicate, and agreed, among other things, to an official British presence in Qatar in exchange for recognition and support for Ali bin Abdullah as ruler in 1949.[2]

The 1950s saw the cautious development of government structures and public services under British tutelage. Ali bin Abdullah was at first reluctant to share power, which had centered in his household, with an infant bureaucracy run and staffed mainly by outsiders. Ali bin Abdullah's increasing financial difficulties and inability to control striking oil workers and obstreperous shaykhs, however, led him to succumb to British pressure. The first real budget was drawn up by a British adviser in 1953. By 1954 there were forty-two Qatari government employees.[2]

A major impetus to the development of the British-run police force came in 1956 when about 2,000 demonstrators, who coalesced over issues such as Gamal Abdul Nasser's pan-Arabism and opposition to Britain and to Shaykh Ali bin Abdullah's retinue, marched through Doha. This and other demonstrations led Ali bin Abdullah to invest the police with his personal authority and support, a significant reversal of his previous reliance on his retainers and beduin fighters.[2]

Public services developed haltingly during the 1950s. The first telephone exchange opened in 1953, the first desalination plant in 1954, and the first power plant in 1957. Also built in this period were a jetty, a customs warehouse, an airstrip, and a police headquarters. In the 1950s, 150 adult males of the Al Thani received outright grants from the government. Shaykhs also received land and government positions. This mollified them as long as oil revenues increased. When revenues declined in the late 1950s, however, Ali bin Abdullah could not handle the family pressures this engendered. That Shaykh Ali bin Abdullah spent extravagantly, owned a villa in Switzerland, and hunted in Pakistan fueled discontent, especially among those who were excluded from the regime's largesse (non-Al Thani Qataris) and those who were not excluded but thought they deserved more (other branches of the Al Thani). Seniority and proximity to the shaykh determined the size of allowances.[2]

Succumbing to family pressures and poor health, Ali bin Abdullah abdicated in 1960. But instead of handing power over to Khalifa ibn Hamad, who had been named heir apparent in 1948, he made his son, Ahmad ibn Ali, ruler. Nonetheless, Khalifa ibn Hamad, as heir apparent and deputy ruler, gained considerable power, in large part because Ahmad ibn Ali, as had his father, spent much time outside the country.[2]

Although he did not care much for governing, Ahmad ibn Ali could not avoid dealing with family business. One of his first acts was to increase funding for the shaykhs at the expense of development projects and social services. In addition to allowances, adult male Al Thani were also given government positions. This added to the antiregime resentment already felt by, among others, oil workers, low-ranking Al Thani, dissident shaykhs, and some leading individuals. These groups formed the National Unity Front in response to a fatal shooting on April 19, 1963, by one of Shaykh Ahmad ibn Ali's nephews. The front called a general strike, and its demands included a reduction of the ruler's privileges, recognition of trade unions, and increased social services. Ahmad ibn Ali cracked down by jailing fifty leading individuals and exiling the front's leaders. He also instituted some reforms, eventually including the provision of land and loans to poor Qataris.[2]

Largely under Khalifa ibn Hamad's guiding hand, the infrastructure, foreign labor force, and bureaucracy continued to grow in the 1960s. There were even some early attempts at diversifying Qatar's economic base, most notably with the establishment of a cement factory, a national fishing company, and small-scale agriculture.[2]

1970–present

In 1968 Britain announced its intention of withdrawing from military commitments east of Suez, including those in force with Qatar, by 1971. For a while, the rulers of Bahrain, Qatar, and the Trucial Coast contemplated forming a federation after the British withdrawal. A dispute arose between Ahmad ibn Ali and Khalifa ibn Hamad, however, because Khalifa ibn Hamad opposed Bahrain's attempts to become the senior partner in the

federation. Still giving public support to the federation, Ahmad ibn Ali nonetheless promulgated a provisional constitution in April 1970, which declared Qatar an independent, Arab, Islamic state with the sharia (Islamic law) as its basic law. Khalifa bin Hamad was appointed prime minister in May. The first Council of Ministers was sworn in on January 1, 1970, and seven of its ten members were Al Thani. Khalifa bin Hamad's argument prevailed with regard to the federation proposal. Qatar became an independent state on September 3, 1971. That Ahmad ibn Ali issued the formal announcement from his Swiss villa instead of from his Doha palace indicated to many Qataris that it was time for a change. On February 22, 1972, Khalifa ibn Hamad deposed Ahmad ibn Ali, who was hunting with his falcons in Iran. Khalifa ibn Hamad had the tacit support of the Al Thani and of Britain, and he had the political, financial, and military support of Saudi Arabia.[2]

In contrast to his predecessor's policies, Khalifa ibn Hamad cut family allowances and increased spending on social programs, including housing, health, education, and pensions. In addition, he filled many top government posts with close relatives.[2]

In 1993 Khalifa ibn Hamad remained the amir, but his son, Hamad ibn Khalifa, the heir apparent and minister of defense, had taken over much of the day-to-day running of the country. The two consulted with each other on all matters of importance.[2]

On June 27, 1995, the Deputy Amir, Sheikh Hamad bin Khalifa, deposed his father Amir Khalifa in a bloodless coup. An unsuccessful counter-coup was staged in 1996. The Amir and his father are now reconciled, though some supporters of the counter-coup remain in prison. The Amir announced his intention for Qatar to move toward democracy and has permitted a freer and more open press and municipal elections as a precursor to expected parliamentary elections. Qatari citizens approved a new constitution via public referendum in April 2003, which came into force in June 2005.[1] The current emir has announced his intention for Qatar to move towards democracy and has permitted a nominally free and open press and municipal elections. Economic, social, and democratic reforms have occurred in recent years. In 2003, a woman was appointed to the cabinet as minister of education.

Qatar and Bahrain have argued over who owns the Hawar Islands. In 2001, the International Court of Justice gave Bahrain sovereignty over Hawar Islands while giving Qatar sovereignty over smaller disputed islands and the Zubarah region on mainland Qatar.[8] During the trial Qatar provided the court with 82 forged documents to substantiate their claims of sovereignty over the territories in question. These claims were withdrawn at a later stage after Bahrain discovered the forgeries.[9]

Qatar will host the 2022 FIFA World Cup.

Hamad bin Khalifa Al Thani

From Wikipedia, the free encyclopedia

Sheikh Hamad bin Khalifa Al Thani (Arabic: الشيخ حمد بن خليفة ال ثاني, born 1952) is the ruling Emir of the State of Qatar since 1995.[1][2] Sheikh Hamad was the appointed Heir Apparent of Qatar between 1977 and 1995 and at the same time Minister of Defense.[3] In the early 1980s he led the Supreme Planning Council, which sets the Qatar's basic economic and social policies. Starting in 1992, Hamad had a growing responsibility for the day-to-day running of the country,[4] including the development of Qatar's oil and natural gas resources. On 27 June 1995, after deposing his father in a palace coup, Sheikh Hamad became Emir of Qatar and was crowned on 20 June 2000.[4]

Early life

Sheikh Hamad began his education in Qatar and later attended Sandhurst Military Academy in England. Upon his graduation in 1971, he was commissioned as a Lieutenant Colonel in the Qatari armed forces and commanded the 1st Mobile Battalion, which has since been designated the "Hamad Mobile Battalion" in his honor.

Hamad was later promoted to the rank of Major General and appointed Commander in Chief of the Qatari Armed Forces. He oversaw an extensive program to modernize Qatar's military, increasing manpower, creating new units, updating weaponry, and improving training.

As Emir

Sheikh Hamad at the Metropolitan Museum (New York).
From left to right: The second wife of the emir, Sheikha Mozah, First Lady of the United States Michelle Obama, the Emir, and U.S. President Barack Obama.

In the early 1980s, Hamad led the Supreme Planning Council, which sets the Qatar's basic economic and social policies. Starting in 1992, Hamad's father handed over responsibility for the day-to-day running of the country,[4] including the development of Qatar's oil and natural gas resources. With the support of his family, Sheikh Hamad took control of the country in 1995 while his father was on vacation abroad.[4] While his father Khalifa bin Hamad Al Thani was in Geneva, Switzerland, Hamad bin Khalifa deposed him in a bloodless 1995 coup d'état.[5] Hamid bin Khalifa engaged an American law firm to freeze his father's bank accounts abroad, thereby defeating a possible countercoup.[4] Thereafter, his father lived in exile in France or United Arab Emirates[5] until he returned to Qatar in 2004.

The Emir is considered to be progressive among leaders of Muslim countries. In a break with the traditional role, his second wife Sheikha Mozah bint Nasser Al Missned has been a visible advocate for education and children's causes.[4]

A sportsman and an accomplished diver, Hamad has played an active role in promoting and developing athletics in Qatar. His activism has enhanced the country's involvement and performance in a number of international competitions, including: winning an Olympic medal in track and field; hosting a wide variety of international sporting events such as the 15th Asian Games, GCC, Asian and World Youth soccer championships; and initiating the Qatar Open Tennis Championship which has grown to become one of two premier tennis competitions in the Middle East.

Under his rule the Qatari government helped to fund the Al Jazeera news network, funding it by an emiri decree.[6] In an analysis of Al Jazeera, Hugh Miles claimed that diplomats from other countries know that the Emir is the real power behind Al Jazeera but he also quotes a network spokesman denying 'countless times' this accusation, adding that many independent news sources also have subsidies from their respective governments without this implying editorial dabbling and explaining that trying to coerce the kind of journalists Al Jazeera has would be like trying to 'herd cats'.[7] Sheik Hamad is a distant cousin of the network chairman, Hamad bin Thamer Al Thani, who was previously Minister of Information in the Emir Al-Thani government. Following the initial US$137 million grant from Emir Al-Thani, Al Jazeera had aimed to become self-sufficient through advertising by 2001, but when this failed to occur, the Emir agreed to several consecutive loans[7] on a year-by-year basis (US$30 million in 2004,[8] according to Arnaud de Borchgrave). At an October 3, 2001 press conference, Colin Powell tried to persuade Sheik Hamad to shut down Al Jazeera while The New York based organization Fairness and Accuracy in Reporting commented that in those efforts, "Powell and other U.S. officials were reportedly upset by the channel re-airing old interviews with bin Laden and the inclusion of guests that are too critical of the United States on its programs."[9][10] The Washington Post reported in 2005 that Sheik Hamad was under pressure to privatize the network.[11]

Foreign relations

The emir made a generous donation for the relief of New Orleans and its environs following the 2005 Hurricane Katrina.[12]

In 2012, the emir proposed deploying Arab troops be deployed to reduce killings in the 2011–2012 Syrian uprising.[13]

He has provided two military bases for foreign troops, Al Udeid Air Base and Camp As Sayliyah.

Despite the prevalence of anti-Israel sentiment within the Arab world, he has maintained friendly relations with Israel.[5] He met Foreign Minister of Israel Tzipi Livni (25 September 2007) in New York. This marks the first real attempt by any leader in the Persian Gulf to pursue dialogue with Israel.[14][15] He does object to Israeli settlement policy, especially the Judaization of Jerusalem.[16]

Marriages and children

Sheikh Hamad has three wives and twenty-four children, eleven sons and thirteen daughters:

Sheikh Hamad with Russian president Vladimir Putin

- He married his first wife H.H. Sheikha Mariam bint Muhammad Al-Thani, who is the daughter of his first cousin, Sheikh Muhammad bin Hamad bin Abdullah Al-Thani. They divorced before the Emir married Mozah.[17] Hamad and his first wife have two sons and six daughters:
  - H.E. Sheikh Mishaal bin Hamad bin Khalifa Al Thani (born 1972)
  - H.E. Sheikh Fahd bin Hamad bin Khalifa Al-Thani
  - H.E. Sheikha Aisha bint Hamad bin Khalifa Al-Thani
  - H.E. Sheikha Hussah bint Hamad bin Khalifa Al-Thani
  - H.E. Sheikha Sara bint Hamad bin Khalifa Al-Thani – Program Coordinator for Reach Out to Asia-Qatar (ROTAQ)
  - H.E. Sheikha Rawdah bint Hamad bin Khalifa Al-Thani
  - H.E. Sheikha Fatima bint Hamad bin Khalifa Al-Thani
  - H.E. Sheikha Mashael bint Hamad bin Khalifa Al-Thani
- His second wife is H.H. Sheikha Mozah bint Nasser Al-Misnad (born 8 August 1959, Al-Khor), the daughter of Nasser bin Abdullah Al Missned. Together they have five sons and two daughters:
  - H.H. Sheikh Jasim bin Hamad bin Khalifa Al Thani (born 1978) – Heir Apparent of Qatar before 2003
  - H.H. Sheikh Tamim bin Hamad bin Khalifa Al-Thani, Crown Prince of Qatar (born 1980) – Heir Apparent of Qatar since 2003
  - H.E. Sheikha Al-Mayassa bint Hamad bin Khalifa Al-Thani (born 1983)
  - H.E. Sheikh Joaan bin Hamad bin Khalifa Al-Thani (born 1985)
  - H.E. Sheikh Mohammed bin Hamad bin Khalifa Al-Thani (born 1988)
  - H.E. Sheikh Khalifa bin Hamad bin Khalifa Al-Thani (born 1991)
  - H.E. Sheikha Hind bint Hamad bin Khalifa Al-Thani – director of the Emir's Office since 2009
- Hamad also has a third wife, H.H. Sheikha Noora bint Khalid Al-Thani, daughter of H.E. Sheikh Khalid bin Hamad Al Thani, who was the Minister of the Interior. Together they have four sons and five daughters:
  - H.E. Sheikh Khalid bin Hamad bin Khalifa Al Thani (born 1978)

- H.E. Sheikh Abdullah bin Hamad bin Khalifa Al-Thani – president of the Al-Rayyan Sports Club
- H.E. Sheikh Thani bin Hamad bin Khalifa Al-Thani
- H.E. Sheikh Al-Qaqa bin Hamad bin Khalifa Al-Thani
- H.E. Sheikha Lulwaa bint Hamad bin Khalifa Al-Thani
- H.E. Sheikha Maha bint Hamad bin Khalifa Al-Thani
- H.E. Sheikha Dana bint Hamad bin Khalifa Al-Thani
- H.E. Sheikha Al-Anood bint Hamad bin Khalifa Al-Thani
- H.E. Sheikha Mariam bint Hamad bin Khalifa Al-Thani

- Venezuela: Order of Francisco de Miranda (1977)
- Yemen: Order of Republic (2000)

Other awards

- IAAF: Golden Order of Merit (2005)

Sports investments

Media sources claimed that Sheikh Hamad bin Khalifa Al Thani made a bid for Manchester United on February 11, 2011. Qatari Holdings offered £1.6 billion to Malcolm Glazer, the current American owner of the club.[24] This follows a series of endeavors by the Emir and other Qataris into the World Football community, following Qatar's successful bid for the 2022 World Cup, and the Qatar Foundation's recent £125m shirt deal with FC Barcelona. In mid-June 2011, rumours resurfaced that Qatari Holdings were preparing a £2 Billion takeover bid and that the funding, that the club had been using for transfers since the start of June, was actually supplied by the Qataris and not the Glazer Family.[25]. In 2012 it was rumoured that Sheik Hamad bin Khalifa Al Thani was in bid for Rangers F.C.. [26].

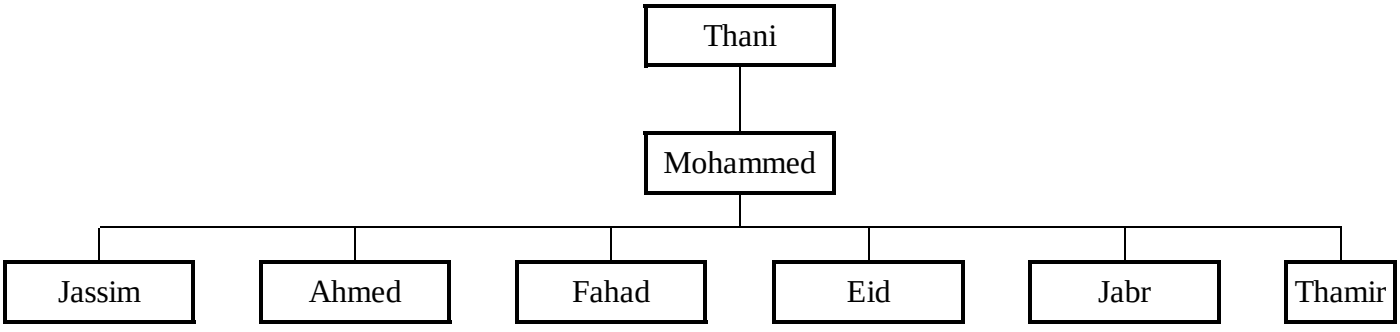
House of Thani

From Wikipedia, the free encyclopedia

The **Al Thani** (Arabic: آل ثاني) family is the ruling (emiri) family of Qatar whose origins can be traced back to Banu Tamim. The Al Thani family has been ruling Qatar since its foundation in 1825.



List of Hakims and Emirs:

- Sheikh Thani bin Mohammed, Hakim of Qatar (1825–1850)
- Sheikh Mohammed bin Thani, Hakim of Qatar (1850–1878)
- Sheikh Jassim bin Mohammed Al Thani, Emir of Qatar (1878–1913)
- Sheikh Abdullah bin Jasssim Al Thani, Emir of Qatar (1914–1945)
- Shiekh Hamad bin Abdullah Al Thani, Emir of Qatar (1945–1946)
- Sheikh Ali bin Abdullah Al Thani, Emir of Qatar (1949–1960)
- Sheikh Ahmad bin Ali Al Thani, Emir of Qatar (1960–1972)
- Sheikh Khalifa bin Hamad Al Thani, Emir of Qatar (1972–1995)
- Sheikh Hamad bin Khalifa Al Thani, Emir of Qatar (1995–present).

Saudi Arabia

From Wikipedia, the free encyclopedia

Saudi Arabia (Arabic: السعودية *as-Su'ūdīyah*[*citation needed*] or incorrectly *as-Sa'ūdīyah*, officially known as the **Kingdom of Saudi Arabia** (Arabic: المملكة العربية السعودية *al-Mamlakah al-'Arabīyah as-Su'ūdīyah* Arabic pronunciation), commonly known as Saudi Arabia (in British English as /ˌsaʊdi əˈreɪbiʌ/ or in American English as /ˌsɔːdiː əˈreɪbiːʌ/) is the largest state in Western Asia by land area, constituting the bulk of the Arabian Peninsula, and the second-largest in the Arab world, after Algeria. It is bordered by Jordan, and Iraq on the north and northeast, Kuwait, Qatar and the United Arab Emirates on the east, Oman on the southeast, and Yemen on the south. The Red Sea lies to its west, and the Persian Gulf lies to the northeast. Saudi Arabia has an area of approximately 2,149,690 km^2 (830,000 sq mi), and it has an estimated population of 27 million, of which 8.8 million are registered foreign expatriates and an estimated 1.5 million are illegal immigrants. Saudi nationals comprise an estimated 16 million people.[7]

The Kingdom of Saudi Arabia was founded by Abdul-Aziz bin Saud (known for most of his career as *Ibn Saud*) in 1932, although the conquests which eventually led to the creation of the Kingdom began in 1902 when he captured Riyadh, the ancestral home of his family, the House of Saud, referred to in Arabic as the *Al Saud*. The Saudi Arabian government, which has been an absolute monarchy since its inception, refers to its system of government as being Islamic, though this is contested by many due to its strong basis in Salafism, a minority school of thought in Islam. The kingdom is sometimes called "The Land of the Two Holy Mosques" in reference to Al-Masjid al-Haram (in Mecca), and Al-Masjid al-Nabawi (in Medina), the two holiest places in Islam.

Saudi Arabia has the world's second largest oil reserves and is the world's second largest oil exporter.[8] Oil accounts for more than 90% of exports and nearly 75% of government revenues, facilitating the creation of a welfare state.[9] However, human rights groups such as Amnesty International and Human Rights Watch have repeatedly expressed concern about the state of human rights in Saudi Arabia.

Etymology

Following the unification of the Kingdoms of Hejaz and Nejd, the new state was named *al-Mamlakah al-ʻArabīyah as-Suʻūdīyah* (a transliteration of المملكة العربية السعودية in Arabic) by royal decree on 23 September 1932 by its founder, King Abdul Aziz Al Saud. This is normally translated as "the Kingdom of Saudi Arabia" in English,[10] although it literally means "the Saudi Arab Kingdom".[11]

The word "Saudi" is derived from the element *as-Suʻūdīyah* in the Arabic name of the country, which is a type of adjective known as a nisba, formed from the dynastic name of Al Saud (آل سعود). Its inclusion indicated that the country's ruler viewed it as the personal possession of the royal family.[12][13] *Al Saud* is an Arabic name formed by adding the word *Al*, meaning "family of" or "House of",[14] to the personal name of an ancestor. In the case of the Al Saud, this is the father of the dynasty's 18th century founder, Muhammad bin Saud (Muhammad, son of Saud).[15] For the etymology of *Arabia*, see Arabian Peninsula and Arab (etymology).

History

Main article: History of Saudi Arabia

From the earliest times to the foundation of Saudi Arabia

See also: Unification of Saudi Arabia

In Pre-Islamic Arabia, apart from a small number of urban trading settlements, such as Mecca and Medina, located in the Hejaz in the west of the Arabian Peninsula, most of what was to become Saudi Arabia was populated by nomadic tribal societies in the uninhabitable desert.[16] The Prophet of Islam, Muhammad, was born in Mecca in about 571. In the early 7th century, Muhammad united the various tribes of the peninsula and created a single Islamic religious polity. Following his death in 632, his followers rapidly expanded the territory under Muslim rule beyond Arabia, conquering huge swathes of territory (from the Iberian Peninsula to India) in a matter of decades. In so doing, Arabia soon became a politically peripheral region of the Muslim world as the focus shifted to the more developed conquered lands.[17] From the 10th century to the early 20th century Mecca and Medina were under the control of a local Arab ruler known as the Sharif of Mecca, but at most times the Sharif owed allegiance to the ruler of one of the major Islamic empires based in Baghdad, Cairo or Istanbul. Most of the remainder of what became Saudi Arabia reverted to traditional tribal rule.[18][19]

The Ottoman Empire in 1914, including nominal and vassal Ottoman territories – the position in Arabia had largely been the same for the previous 400 years

In the 16th century, the Ottomans added the Red Sea and Persian Gulf coast (the Hejaz, Asir and Al-Hasa) to their Empire and claimed suzerainty over the interior. The degree of control over these lands varied over the next four centuries with the fluctuating strength or weakness of the Empire's central authority.[20][21] The emergence of what was to become the Saudi royal family, known as the Al Saud, began in Nejd in central Arabia in 1744, when Muhammad bin Saud, founder of the dynasty, joined forces with the religious leader Muhammad ibn Abd al-Wahhab,[22] movement a strict puritanical form of Sunni Islam.[23] This alliance formed in the 18th century provided the ideological impetus to Saudi expansion and remains the basis of Saudi Arabian dynastic rule today.[24] The first 'Saudi State' established in 1744 in the area around Riyadh, rapidly expanded and briefly controlled most of the present-day territory of Saudi Arabia, but was destroyed by 1818 by the Ottoman viceroy of Egypt, Mohammed Ali Pasha. A much smaller second ‘Saudi state’, located mainly in Nejd, was established in 1824. Throughout the rest of the 19th century, the Al Saud contested control of the interior of what was to become Saudi Arabia with another Arabian ruling family, the Al Rashid. By 1891, the Al Rashid were victorious and the Al Saud were driven into exile.[25]

At the beginning of the 20th century, the Ottoman Empire continued to control or have suzerainty (albeit nominal) over most of the peninsula. Subject to this suzerainty, Arabia was ruled by a patchwork of tribal rulers[26][27] (including the House of Saud who had returned from exile in 1902[25]) with the Sharif of Mecca having pre-eminence and ruling the Hejaz.[28] In 1916, with the encouragement and support of Britain (which was fighting the Ottomans in World War I), the Sharif of Mecca, Hussein bin Ali, led a pan-Arab revolt against the Ottoman Empire to create a united Arab state.[29] Although the Arab Revolt of 1916 to 1918 failed in its objective, Arabia was freed from Ottoman suzerainty and control by the latter's defeat in World War I.[30]

Arabia about 1923. Expandable map: Abdul Aziz's domain is in blue with dates of conquest. The Kingdom of the Hejaz, conquered in 1925, is in light green. (The other Hashemite kingdoms of Iraq and Transjordan are also in shades of green)

In 1902, Abdul-Aziz bin Saud, leader of the House of Saud, had seized Riyadh in Nejd from the Al Rashid – the first of a series of conquests ultimately leading to the creation of the modern state of Saudi Arabia in 1932.[25] The main weapon for achieving these conquests was the Ikhwan, the Wahhabist-Bedouin tribal army led by Sultan ibn Bijad and Faisal Al-Dawish.[31] From the Saudi core in Nejd, and aided by the collapse of the Ottoman Empire after World War I, the Ikhwan had completed the conquest of the territory that was to become Saudi Arabia by the end of 1925.[32] On 10 January 1926 Abdul-Aziz declared himself King of the Hejaz and, then, on 27 January 1927 he took the title of King of Nejd (his previous title having been 'Sultan').[25] After the conquest of the Hejaz, the Ikhwan leaders wanted to continue the expansion of the Wahhabist realm into the British protectorates of Transjordan, Iraq and Kuwait, and began raiding those territories. Abdul-Aziz, however, refused to agree to this, recognizing the danger of a direct conflict with the British. The Ikhwan therefore revolted but were defeated in the Battle of Sabilla in 1930, where the Ikhwan leadership were massacred.[33]

In 1932, the two kingdoms of the Hejaz and Nejd were united as the *Kingdom of Saudi Arabia*.[25]

From the foundation of the State to the present

The new kingdom was one of the poorest countries in the world, reliant on limited agriculture and pilgrimage revenues.[34] However, in 1938 vast reserves of oil were discovered in the Al-Hasa region along the coast of the Persian Gulf and full-scale development of the oil fields began in 1941. Oil provided Saudi Arabia with economic prosperity and substantial political leverage internationally. Cultural life rapidly developed, primarily in the Hejaz, which was the center for newspapers and radio. But the large influx of foreigners to work in the oil industry increased the pre-existing propensity for xenophobia. At the same time, the government became increasingly wasteful and extravagant. By the 1950s this had led to large governmental deficits and excessive foreign borrowing.[25]

King Saud succeeded to the throne on his father's death in 1953. However, an intense rivalry between the King and his half-brother, Prince Faisal emerged, fueled by doubts in the royal family over Saud's competence. As a consequence, Saud was deposed in favor of Faisal in 1964. The major event of King Faisal's reign was the 1973 oil crisis, when Saudi Arabia, and the other Arab oil producers, tried to put pressure on the US to withdraw support from Israel through an oil embargo.[25] Faisal was assassinated in 1975 by his nephew, Prince Faisal bin Musaid.[35]

Abdul Aziz bin Saud first king of Saudi Arabia

Faisal was succeeded by his half-brother King Khalid during whose reign economic and social development progressed at an extremely rapid rate, transforming the infrastructure and educational system of the country;[25] in foreign policy, close ties with the US were developed.[35] In 1979, two events occurred which greatly concerned the Al Saud regime,[36] and had a long-term influence on Saudi foreign and domestic policy. The first was the Iranian Islamic Revolution. It was feared that

the country's Shi'ite minority in the Eastern Province (which is also the location of the oil fields) might rebel under the influence of their Iranian co-religionists. In fact, there were several anti-government uprisings in the region in 1979 and 1980. The second event, was the seizure of the Grand Mosque in Mecca by Islamist extremists. The militants involved were in part angered by what they considered to be the corruption and un-Islamic nature of the Saudi regime.[37] Part of the response of the royal family was to enforce a much stricter observance of traditional religious and social norms in the country (for example, the closure of cinemas) and to give the Ulema a greater role in government.[38] Neither entirely succeeded as Islamism continued to grow in strength.[39]

The Kingdom of Saudi Arabia after unification in 1932

Khalid was succeeded by his brother King Fahd in 1982 who continued the close relationship with the United States and increased the purchase of American and British military equipment.[25] From 1976 Saudi Arabia had become the largest oil producer in the world.[40] The Saudi regime spent $25 billion in support of Saddam Hussein in the Iran-Iraq War.[41] The vast wealth generated by oil revenues and channeled through the government had a profound impact on Saudi society. It led to urbanization, mass public education, and the creation of new media. This and the presence of large numbers of foreign workers greatly affected traditional Saudi norms and values. Although there was dramatic change in the social and economic life of the country, political power continued to be monopolized by the royal family[25] leading to discontent among many Saudis who began to look for wider participation in government.[42]

Following the Iraqi invasion of Kuwait in 1990 Saudi Arabia joined the anti-Iraq Coalition. King Fahd, fearing an attack from Iraq, invited American and coalition soldiers to be stationed in Saudi Arabia.[25] This action concerned some of the ulema and students of sharia law and was one of the issues that led to an increase in Islamic terrorism in Saudi Arabia, as well as Islamic terrorist attacks in Western countries by Saudi nationals – the 9/11 attacks in New York being the most prominent example.[43] But also many Saudis who did not necessarily support the Islamist terrorists were deeply unhappy with the government stance.[44]

Islamism was not the only source of hostility to the regime. Although now extremely wealthy, the country's economy was near stagnant, which, combined with high taxes and a growth in unemployment, contributed to disquiet in the country, and was reflected in a subsequent rise in civil unrest, and discontent with the royal family. In response, a number of limited 'reforms' were initiated (such as the Basic Law). However, the royal family's intent was to respond to dissent while making as few actual changes in the status quo as possible. Fahd made it clear that he did not have democracy in mind: “A system based on elections is not consistent with our Islamic creed, which [approves of] government by consultation [shūrā].”[25]

In 1995, Fahd suffered a debilitating stroke and the Crown Prince, Prince Abdullah assumed the role of acting King, albeit his authority was hindered by conflict with Fahd's full brothers (known, with Fahd, as the "Sudairi Seven").[45] Abdullah continued the policy of mild reform and greater openness,[46] but in addition, adopted a foreign policy distancing the kingdom from the US. In 2003, Saudi Arabia refused to support the US and its allies in the invasion of Iraq.[25] However, terrorist activity increased dramatically in 2003, with the Riyadh compound bombings and other attacks, which prompted the government to take much more stringent action against terrorism.[47]

In 2005, King Fahd died and his half-brother, Abdullah ascended to the throne. The king subsequently introduced a new program of moderate reform which included a number of economic reforms aimed at reducing the country's reliance on oil revenue: limited deregulation, encouragement of foreign investment, and privatization. He has taken much more vigorous action to deal with the origins of Islamic terrorism, and has ordered the use of force for the first time by the security services against some extremists. In February 2009, Abdullah announced a series of governmental changes to the judiciary, armed forces, and various ministries to modernize these institutions including the replacement of senior appointees in the judiciary and the Mutaween (religious police) with more moderate indiviuals and the appointment of the country's first female deputy minister.[25]

In early 2011, King Abdullah indicated his opposition to the protests and revolutions affecting the Arab world by giving asylum to deposed President Zine El Abidine Ben Ali of Tunisia and by telephoning President Hosni Mubarak of Egypt (prior to his deposition) to offer his support.[48] Saudi Arabia has also been affected by its own protests.[49] In response, King Abdullah announced a series of benefits for citizens amounting to $10.7 billion. These included funding to offset high inflation and to aid young unemployed people and Saudi citizens studying abroad, as well as the writing off of some loans. State employees will see their incomes increase by 15 per cent, and additional cash has also been made available for housing loans. No political reforms were announced as part of the package, though some prisoners indicted for financial crimes were pardoned.[50]

Politics

Main article: Politics of Saudi Arabia

Saudi Arabia is an absolute monarchy,[51] although, according to the Basic Law of Saudi Arabia adopted by royal decree in 1992, the king must comply with Sharia (that is, Islamic law) and the Quran. The Quran and the Sunnah (the traditions of Muhammad) are declared to be the country's constitution, but no written modern constitution has ever been written for Saudi Arabia, and Saudi Arabia remains the only Arab Nation where no national elections have ever taken place, since its creation.[52] No political parties or national elections are permitted[51] and according to *The Economist's* 2010 Democracy Index, the Saudi government is the seventh most authoritarian regime from among the 167 countries rated.[53]

On 25 September 2011, Saudi Arabia's King Abdullah has announced that women will have the right to stand and vote in future local elections and join the advisory Shura council as full member and be able to run as candidates in the municipal election.[54]

Monarchy and royal family

The king combines legislative, executive, and judicial functions[55] and royal decrees to form the basis of the country's legislation.[56] The king is also the prime minister, and presides over the Council of Ministers (Majlis al-Wuzarāʾ), which comprises the first and second deputy prime.

The royal family dominates the political system. The family's vast numbers allow it to control most of the kingdom's important posts and to have an involvement and presence at all levels of government.[57] The number of princes is estimated to be at least 7,000, with most power and influence being wielded by the 200 or so male descendants of King Abdul Aziz.[58] The key ministries are generally reserved for the royal family,[51] as are the thirteen regional governorships.[59] Long term political and government appointments, such as those of King Abdullah, who had been Commander of the National Guard since 1963 (until 2010, when he appointed his son to

replace him[60]), Crown Prince Sultan, Minister of Defence & Aviation since 1962, Prince Nayef who has been the Minister of Interior since 1975, Prince Saud who has been Minister of Foreign Affairs since 1975[61] and Prince Salman, who has been Governor of the Riyadh Region since 1962,[62] have resulted in the creation of "power fiefdoms" for senior princes.[63]

The Saudi government and the royal family have often, over many years, been accused of corruption.[64] In a country that is said to "belong" to the royal family and is named for them,[13] the lines between state assets and the personal wealth of senior princes are blurred.[58] The extent of corruption has been described as systemic[65] and endemic,[66] and its existence was acknowledged[67] and defended[68] by Prince Bandar bin Sultan (a senior member of the royal family[69]) in an interview in 2001.[70] Although corruption allegations have often been limited to broad undocumented accusations,[71] specific allegations were made in 2007, when it was claimed that the British defence contractor BAE Systems had paid Prince Bandar US$2 billion in bribes relating to the Al-Yamamah arms deal.[72] Prince Bandar denied the allegations.[73] Investigations by both US and UK authorities resulted, in 2010, in plea bargain agreements with the company, by which it paid $447 million in fines but did not admit to bribery.[74] Transparency International in its annual Corruption Perceptions Index for 2010 gave Saudi Arabia a score of 4.7 (on a scale from 0 to 10 where 0 is "highly corrupt" and 10 is "highly clean").[75]

Since the 9/11 attacks in 2001, there has been mounting pressure to reform and modernize the royal family's rule, an agenda championed by King Abdullah both before and after his accession in 2005. The creation of the Consultative Council in the early 1990s did not satisfy demands for political participation, and, in 2003, an annual *National Dialogue Forum* was announced that would allow selected professionals and intellectuals to publicly debate current national issues, within certain prescribed parameters. In 2005, the first municipal elections were held. In 2007, the Allegiance Council was created to regulate the succession.[76] In 2009, the king made significant personnel changes to the government by appointing reformers to key positions and the first woman to a ministerial post.[77] However, the changes have been criticized as being too slow or merely cosmetic,[78] and the royal family is reportedly divided on the speed and direction of reform.[79]

The Al ash-Sheikh and the political role of the ulema

Saudi Arabia is almost unique in giving the ulema (the body of Islamic religious leaders and jurists) a direct role in government,[80] the only other example being Iran.[81] The ulema have also been a key influence in major government decisions, for example the imposition of the oil embargo in 1973 and the invitation to foreign troops to Saudi Arabia in 1990.[82] In addition, they have had a major role in the judicial and education systems[83] and a monopoly of authority in the sphere of religious and social morals.[84]

By the 1970s, as a result of oil wealth and the modernization of the country initiated by King Faisal, important changes to Saudi society were under way and the power of the ulema was in decline.[86] However, this changed following the seizure of the Grand Mosque in Mecca in 1979 by Islamist radicals.[87] The government's response to the crisis included strengthening the ulema's powers and increasing their financial support:[38] in particular, they were given greater control over the education system[87] and allowed to enforce stricter observance of Wahhabi rules of moral and social behaviour.[38] Since his accession to the throne in 2005, King Abdullah has taken steps to rein back the

Abdul-Aziz ibn Abdullah Al ash-Sheikh, Grand Mufti of Saudi

powers of the ulema, for instance transferring their control over girls' education to the Ministry of Education.[88]

Arabia, the country's most senior religious authority.[85]

The ulema have historically been led by the Al ash-Sheikh,[89] the country's leading religious family.[84] The Al ash-Sheikh are the descendants of Muhammad ibn Abd al-Wahhab, the 18th century founder of the Wahhabi form of Sunni Islam which is today dominant in Saudi Arabia.[90] The family is second in prestige only to the Al Saud (the royal family)[91] with whom they formed a "mutual support pact"[92] and power-sharing arrangement nearly 300 years ago.[82] The pact, which persists to this day,[92] is based on the Al Saud maintaining the Al ash-Sheikh's authority in religious matters and upholding and propagating Wahhabi doctrine. In return, the Al ash-Sheikh support the Al Saud's political authority [93] thereby using its religious-moral authority to legitimize the royal family's rule.[94] Although the Al ash-Sheikh's domination of the ulema has diminished in recent decades,[95] they still hold the most important religious posts and are closely linked to the Al Saud by a high degree of intermarriage.[84]

Political process and opposition

See also: Terrorism in Saudi Arabia and List of militant incidents in Saudi Arabia

In the absence of national elections and political parties,[51] politics in Saudi Arabia takes place in two distinct arenas: within the royal family, the Al Saud, and between the royal family and the rest of Saudi society.[96] The royal family is politically divided by factions based on clan loyalties, personal ambitions and ideological differences.[96] The most powerful clan faction is known as the 'Sudairi Seven', comprising the late King Fahd and his full brothers and their descendants.[97] Ideological divisions include issues over the speed and direction of reform,[79] and whether the role of the ulema should be increased or reduced. There are also divisions within the family over who should succeed to the throne after the accession or earlier death of Prince Sultan (the current Crown Prince) has occurred.[97][98]

Outside of the Al Saud, participation in the political process is limited to a relatively small segment of the population and takes the form of the royal family consulting with the ulema, tribal sheikhs and members of important commercial families on major decisions.[55] This process is not reported by the Saudi media.[99] In theory, all males of full age have a right to petition the king directly through the traditional tribal meeting known as the *majlis*.[100] In many ways the approach to government differs little from the traditional system of tribal rule. Tribal identity remains strong and, outside of the royal family, political influence is frequently determined by tribal affiliation, with tribal sheikhs maintaining a considerable degree of influence over local and national events.[55] As mentioned earlier, in recent years there have been limited steps to widen political participation such as the establishment of the Consultative Council in the early 1990s and the National Dialogue Forum in 2003.[76]

The rule of the Al Saud faces political opposition from four sources: Sunni Islamist activism; liberal critics; the underground Green Party of Saudi Arabia; the Shi'ite minority – particularly in the Eastern Province; and long-standing tribal and regional particularistic opponents (for example in the Hejaz).[101] Of these, the Islamic activists have been the most prominent threat to the regime and have in recent years perpetrated a number of violent or terrorist acts in the country.[47] However, open protest against the government, even if peaceful, is not tolerated. On 29 January 2011, hundreds of protesters gathered in the city of Jeddah in a rare display of criticism against the city's poor infrastructure after deadly floods swept through the city, killing eleven people.[102] Police stopped the demonstration after about 15 minutes and arrested 30 to 50 people.[103] As part of the wave of

protests and revolutions affecting the Middle East and North Africa in early 2011, a number of incidents and protests occurred in Saudi Arabia. See 2011 Saudi Arabian protests for further details.

Law and human rights

Main article: Legal system of Saudi Arabia

See also: Human rights in Saudi Arabia

The primary source of law is the Islamic Sharia derived from the teachings of the Qu'ran and the Sunnah (the traditions of the Prophet).[56] Sharia is not codified and there is no system of judicial precedent. Saudi judges tend to follow the principles of the Hanbali school of jurisprudence (or *fiqh*) found in pre-modern texts[105] and noted for its literalist interpretation of the Qu'ran and hadith.[106] Nevertheless, because the judge is empowered to disregard previous judgments (either his own or of other judges) and will apply his personal interpretation of Sharia to any particular case, divergent judgements arise even in apparently identical cases.[107] Royal decrees are the other main source of law but are referred to as *regulations* rather than *laws* because they are subordinate to the Sharia.[56] Royal decrees supplement Sharia in areas such as labor, commercial and corporate law. Additionally, traditional tribal law and custom remain significant.[108]

Verses from the Quran. The Quran is the official constitution of the country and a primary source of law. Arabia is unique in enshrining a religious text as a political document[104]

The Sharia court system constitutes the basic judiciary of Saudi Arabia and its judges and lawyers form part of the ulema, the country's religious leadership. However, there are also extra-Sharia government tribunals which handle disputes relating to specific royal decrees.[109] Final appeal from both Sharia courts and government tribunals is to the King and all courts and tribunals follow Sharia rules of evidence and procedure.[110] The Saudi system of justice has been criticized for being slow, arcane,[111] lacking in some of the safeguards of justice and unable to deal with the modern world.[112] In 2007, King Abdullah issued royal decrees reforming the judiciary and creating a new court system, although the reforms have yet to be implemented.[107] The capabilities and reactionary nature of the judges have, in particular, been criticized[113] and, in 2009, the King made a number of significant changes to the judiciary's personnel at the most senior level by bringing in a younger generation.[111]

Saudi Arabia has long been criticized for its human rights record, with Western-based organisations such as Amnesty International and Human Rights Watch condemning both the criminal justice system and its severe punishments. However, most Saudis reportedly support the system and say that it maintains a low crime rate.[114] There are no jury trials in Saudi Arabia and courts observe few formalities.[115] Human Rights Watch, in a 2008 report, noted that a criminal procedure code had been introduced for the first time in 2002, but it lacked some basic protections and, in any case, had been routinely ignored by judges. Those arrested are often not informed of the crime of which they are accused or given access to a lawyer and are subject to abusive treatment and torture if they do not confess. At trial, there is a presumption of guilt and the accused is often unable to examine witnesses and evidence or present a legal defense. Most trials are held in secret.[116]

The physical punishments imposed by Saudi courts, such as beheading, stoning, amputation and lashing, and the number of executions have been strongly criticized.[118] The death penalty can be imposed for a wide range of offences including murder, rape, armed robbery, repeated drug use, apostasy, adultery, witchcraft and sorcery

Deera Square, central Riyadh. Known locally as "Chop-chop square", it is the location of public beheadings.[117]

and can be carried out by beheading with a sword, stoning or firing squad, followed by crucifixion.[119][120] The 345 reported executions between 2007 and 2010 were all carried out by public beheading. The last reported execution for sorcery took place in 2011[121] and three subsequent convictions for witchcraft did not result in execution. Although repeated theft can be punishable by amputation of the right hand, only one instance of judicial amputation was reported between 2007 and 2010. Gay rights are not recognised. Homosexual acts are punishable by flogging or death.[119][122] Lashings are a common form of punishment[123] and are often imposed for offences against religion and public morality such as drinking alcohol and neglect of prayer and fasting obligations.[119] Retaliatory punishments, or Qisas, are practised: for instance, an eye can be surgically removed at the insistence of a victim who lost his own eye.[113] Families of someone unlawfully killed can choose between demanding the death penalty or granting clemency in return for a payment of diyya, or blood money, by the perpetrator.[124]

Other human rights issues that have attracted strong criticism include the extremely disadvantaged position of women (see Women in Saudi society below), religious discrimination, the lack of religious freedom and the activities of the religious police (see Religion below).[118] Between 1996 and 2000, Saudi Arabia acceded to four UN human rights conventions and, in 2004, the government approved the establishment of the National Society for Human Rights (NSHR), staffed by government employees, to monitor their implementation. To date, the activities of the NSHR have been limited and doubts remain over its neutrality and independence.[125] Saudi Arabia remains one of the very few countries in the world not to accept the UN's Universal Declaration of Human Rights. In response to the continuing criticism of its human rights record, the Saudi government points to the special Islamic character of the country, and asserts that this justifies a different social and political order.[126]

Foreign relations

Main article: Foreign relations of Saudi Arabia

Saudi Arabia joined the UN in 1945[10][127] and is a founder member of the Arab League, Gulf Cooperation Council, Muslim World League, and the Organization of the Islamic Conference (now the Organisation of Islamic Cooperation).[128] It plays a prominent role in the International Monetary Fund and the World Bank, and in 2005 joined the World Trade Organization.[10] Saudi Arabia supports the intended formation of the Arab Customs Union in 2015 and an Arab common market[129] by 2020, as announced at the 2009 Arab League summit.[130] As a founding member of OPEC, its oil pricing policy has been generally to stabilize the world oil market and try to moderate sharp price movements so as to not jeopardise the Western economies.[10]

Between the mid-1970s and 2002 Saudi Arabia expended over $70 billion in "overseas development aid".[131] However, there is evidence that the vast majority was, in fact, spent on propagating and extending the influence of Wahhabism at the expense of other forms of Islam.[132] There has been an intense debate over whether Saudi aid and Wahhabism has fomented extremism in recipient countries.[133] The two main allegations are that, by its nature, Wahhabism encourages intolerance and promotes terrorism.[134] Former CIA director James Woolsey described it as "the soil in which Al-Qaeda and its sister terrorist organizations are flourishing."[135] However, the Saudi government strenuously denies these claims or that it exports religious or cultural extremism.[136]

King Abdullah with former US President George W. Bush.

In the Arab and Muslim worlds, Saudi Arabia is considered to be pro-Western and pro-American,[137] and it is certainly a long-term ally of the United States.[138] However, this[139] and Saudi Arabia's role in the 1991 Gulf War, particularly the stationing of U.S. troops on Saudi soil from 1991, prompted the development of a hostile Islamist response internally.[140] As a result, Saudi Arabia has, to some extent, distanced itself from the U.S. and, for example, refused to support or to participate in the U.S.-led invasion of Iraq in 2003.[55] Relations with the United States became strained following 9/11.[141] American politicians and media accused the Saudi government of supporting terrorism and tolerating a *jihadist* culture.[142] Indeed, Osama bin Laden and fifteen out of the nineteen 9/11 hijackers were from Saudi Arabia.[143] According to the U.S. Secretary of State Hillary Clinton, "Saudi Arabia remains a critical financial support base for al-Qaida, the Taliban, LeT and other terrorist groups. . . . Donors in Saudi Arabia constitute the most significant source of funding to Sunni terrorist groups worldwide."[144]

Saudi Arabia's increasing alarm at the rise of Iran is reflected in the reported private comments of King Abdullah[145] urging the US to attack Iran and "cut off the head of the snake".[146] Saudi Arabia has been seen as a moderating influence in the Arab-Israeli conflict, periodically putting forward a peace plan between Israel and the Palestinians and condemning Hezbollah.[147] Following the wave of protests and revolutions affecting the Arab world in early 2011 Saudi Arabia offered asylum to deposed President Zine El Abidine Ben Ali of Tunisia and King Abdullah telephoned President Hosni Mubarak of Egypt (prior to his deposition) to offer his support.[48]

Military

Main article: Armed Forces of Saudi Arabia

Further information: Al-Yamamah arms deal

The Saudi military consists of the Royal Saudi Land Forces, the Royal Saudi Air Force, the Royal Saudi Navy, the Royal Saudi Air Defense, the Saudi Arabian National Guard – the 'SANG' (an independent military force), and paramilitary forces, totaling nearly 200,000 active-duty personnel. In 2005 the armed forces had the following personnel: the army, 75,000; Royal Saudi Air Force, 18,000; air defense, 16,000; Royal Saudi Navy, 15,500 (including 3,000 marines); and the SANG had 75,000 active soldiers and 25,000 tribal levies.[148] In addition, there is a military intelligence service.

HMS *Makkah*, an Al Riyadh class frigate.

The SANG is not a reserve but a fully operational front-line force, and originated out of Abdul Aziz's tribal military-religious force, the Ikhwan. Its modern existence, however, is attributable to it being effectively Abdullah's private army since the 1960s and, unlike the rest of the armed forces, is independent of the Ministry of Defense and Aviation. The SANG has been a counter-balance to the Sudairi faction in the royal family: Prince Sultan, the Minister of Defense and Aviation, is one of the so-called 'Sudairi Seven' and controls the remainder of the armed forces.[149]

Spending on defense and security has increased significantly since the mid-'90s and was about US$25.4 billion in 2005. Saudi Arabia ranks among the top 10 in the world in government spending for its military, representing

about 7 percent of gross domestic product in 2005. Its modern high-technology arsenal makes Saudi Arabia among the world's most densely armed nations, with its military equipment being supplied primarily by the US, France and Britain.[148] The United States sold more than $80 billion in military hardware between 1951 and 2006 to the Saudi military.[150] On 20 October 2010, U.S. State Department notified Congress of its intention to make the biggest arms sale in American history – an estimated $60.5 billion purchase by the Kingdom of Saudi Arabia. The package represents a considerable improvement in the offensive capability of the Saudi armed forces.[151] The UK has also been a major supplier of military equipment to Saudi Arabia since 1965.[152] Since 1985, the UK has supplied military aircraft – notably the Tornado and Eurofighter Typhoon combat aircraft – and other equipment as part of the long-term Al-Yamamah arms deal estimated to have been worth £43 billion by 2006 and thought to be worth a further £40 billion.[153]

Geography

Main article: Geography of Saudi Arabia

Ecoregions as delineated by the WWF. The yellow line encloses the ecoregions Arabian Desert, East Sahero-Arabian xeric shrublands and two other smaller desert areas[154]

Saudi Arabia occupies about 80 percent of the Arabian peninsula,[155] lying between latitudes 16° and 33° N, and longitudes 34° and 56° E. Because the country's southern borders with the United Arab Emirates and Oman are not precisely defined or marked, the exact size of the country remains unknown.[155] The CIA World Factbook's estimate is 2,149,690 km^2 (830,000 sq mi) and lists Saudi Arabia as the world's 13th largest state.[156]

Saudi Arabia's geography is dominated by the Arabian Desert and associated semi-desert and shrubland (see satellite image to right).[55] It is, in fact, a number of linked deserts and includes the 647,500 km^2 (250,001 sq mi) Rub' al Khali ("Empty Quarter") in the southern part of the country, the world's largest sand desert.[55] There are virtually no permanent rivers or lakes in the country, but wadis are numerous.[55] The few fertile areas are to be found in the alluvial deposits in wadis, basins, and oases.[55] The main topographical feature is the central plateau which rises abruptly from the Red Sea and gradually descends into the Nejd and toward the Persian Gulf.[55] On the Red Sea coast, there is a narrow coastal plain, known as the Tihamah parallel to which runs an imposing escarpment.[55] The southwest province of Asir is mountainous, and contains Mount Sawda, which is generally considered the highest point in the country.[55] Estimates of its elevation range from 3,133 to 3,207 m (10,279 to 10,522 ft).[55]

Except for the south western province of Asir, Saudi Arabia has a desert climate with extremely high day-time temperatures and a sharp temperature drop at night.[157] Average summer temperatures are around 45 °C, but can be as high as 54 °C.[157] In the winter the temperature rarely drops below 0 °C.[157] In the spring and autumn the heat is temperate, temperatures average around 29 °C.[157] Annual rainfall is extremely low.[157] The Asir region differs in that it is influenced by the Indian Ocean monsoons, usually occurring between October and March.[157] An average of 300 mm of rainfall occurs during this period,

The Nejd landscape: desert and the Tuwaiq Escarpment near Riyadh

that is about 60% of the annual precipitation.[157]

Animal life includes wolves, hyenas, mongooses, baboons, hares, sand rats, and jerboas.[55] Larger animals such as gazelles, oryx, and leopards were relatively numerous until the 1950s, when hunting from motor vehicles reduced these animals almost to extinction.[55] Birds include falcons (which are caught and trained for hunting), eagles, hawks, vultures, sand grouse and bulbuls.[55] There are several species of snakes, many of which are venomous, and numerous types of lizards. There is a wide variety of marine life in the Persian Gulf.[55] Domesticated animals include camels, sheep, goats, donkeys, and chickens.[55] Reflecting the country's desert conditions, Saudi Arabia's plant life mostly consists of small herbs and shrubs requiring little water.[55] There are a few small areas of grass and trees in southern Asir. The date palm (Phoenix dactylifera) is widespread.[55]

Administrative divisions

Main articles: Provinces of Saudi Arabia and Governorates of Saudi Arabia

Saudi Arabia is divided into 13 *provinces*[158] (*manatiq idāriyya*, – singular *mintaqah idariyya*). The Region are further divided into governorates (Arabic: manatiq idāriyya, منطقةإدارية,), 118 in total. This number contains the regional capitals, which have a different status as municipalities (amanah) headed by mayors (amin). The governorates are further sudivided into sub-governorates (marakiz, sing. markaz).

Economy

Main article: Economy of Saudi Arabia

Saudi Arabia's command economy is petroleum-based; roughly 75% of budget revenues and 90% of export earnings come from the oil industry. The oil industry comprises about 45% of Saudi Arabia's gross domestic product, compared with 40% from the private sector (see below). Saudi Arabia officially has about 260 billion barrels (4.1×10^{10} m^3) of oil reserves, comprising about one-fifth of the world's proven total petroleum reserves.[159]

Saudi Arabia is the largest exporter of petroleum in the world

The government is attempting to promote growth in the private sector by privatizing industries such as power and telecommunications. Saudi Arabia announced plans to begin privatizing the electricity companies in 1999, which followed the ongoing privatization of the telecommunications company. Shortages of water and rapid population growth may constrain government efforts to increase self-sufficiency in agricultural products.

In the 1990s, Saudi Arabia experienced a significant contraction of oil revenues combined with a high rate of population growth. Per capita income fell from a high of $11,700 at the height of the oil boom in 1981 to $6,300 in 1998.[160] Increases in oil prices since 2000 have helped boost per capita GDP to $17,000 in 2007 dollars, or about $7,400 adjusted for inflation.[161]

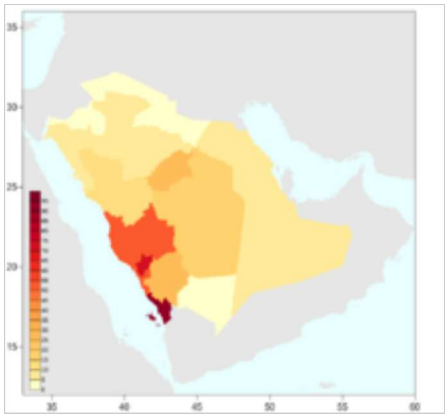
Oil price increases of 2008–2009 have triggered a second oil boom, pushing Saudi Arabia's budget surplus to $28

billion (110SR billion) in 2005. Tadawul (the Saudi stock market index) finished 2004 with a massive 76.23% to close at 4437.58 points. Market capitalization was up 110.14% from a year earlier to stand at $157.3 billion (589.93SR billion), which makes it the biggest stock market in the Middle East.

OPEC (the Organization of Petroleum Exporting Countries) limits its members' oil production based on their "proven reserves." The higher their reserves, the more OPEC allows them to produce.[*citation needed*] Saudi Arabia's published reserves have shown little change since 1980, with the main exception being an increase of about 100 billion barrels (1.6×10^{10} m^3) between 1987 and 1988.[162] Matthew Simmons has suggested that Saudi Arabia is greatly exaggerating its reserves and may soon show production declines (see peak oil).[163]

Saudi Arabia is one of only a few fast-growing countries in the world with a relatively high per capita income of $24,200 (2010). Saudi Arabia will be launching six "economic cities" (e.g. King Abdullah Economic City)[164] which are planned to be completed by 2020. These six new industrialized cities are intended to diversify the economy of Saudi Arabia, and are expected to increase the per capita income. The King of Saudi Arabia has announced that the per capita income is forecast to rise from $15,000 in 2006 to $33,500 in 2020.[165] The cities will be spread around Saudi Arabia to promote diversification for each region and their economy, and the cities are projected to contribute $150 billion to the GDP.

However the urban areas of Riyadh and Jeddah are expected to contribute $287 billion dollars by the year 2020.[166]



Demographics

Main article: Demographics of Saudi Arabia

Further information: Bedouin and Tribes of Arabia

Population and language

The population of Saudi Arabia as of July 2010 is estimated to be 25,731,776 including 5,576,076 non-nationals[2] Until the 1960s, a majority of the population was nomadic; but presently more than 95% of the population is settled, due to rapid economic and urban growth. As recently as the early 1960s, the Saudi Arabia's slave population was estimated at 300,000.[167] Slavery was officially abolished in 1962.[168][169] The official language of Saudi Arabia is Arabic. The three main regional variants spoken by Saudis are Hejazi Arabic (about 6 million speakers), Nejdi Arabic (about 8 million speakers) and Gulf Arabic (about 1.5 million speakers). The large expatriate communities also speak their own languages, the most numerous being Malayalam (1 million), Tagalog (700,000), Urdu (380,000), and Egyptian Arabic (300,000).[170]

Saudi Arabia population density (person per km^2)

About 31% of the population is made up of foreign nationals living in Saudi Arabia.[171] Indian: 1.1 million, Pakistani: 1 million, Bangladeshi: 500,000, Filipino: 500,000, Egyptian: 800,000, Yemeni: 800,000,Palestinian: 350,000, Indonesian: 250,000, Sri Lankan: 350,000, Sudanese: 250,000, Syrian: 100,000 and Turkish: 100,000.[172] There are around 100,000 Westerners in Saudi Arabia, most of whom live in compounds or gated communities.

Saudi Arabia expelled 800,000 Yemenis in 1990 and 1991.[173] An estimated 240,000 Palestinians are living in Saudi Arabia. They are not allowed to hold or even apply for Saudi citizenship, because of Arab League instructions barring the Arab states from granting them citizenship. Palestinians are the sole foreign group that cannot benefit from a 2004 law passed by Saudi Arabia's Council of Ministers, which entitles expatriates of all nationalities who have resided in the kingdom for ten years to apply for citizenship with priority being given to holders of degrees in various scientific fields.[174] The Articles 12.4 and 14.1 of the Executive Regulation of Saudi Citizenship System can be interpreted as requiring applicants to be Muslim.[175]

In a 2011 news story, *Arab News* reported, "Nearly three million expatriate workers will have to leave the Kingdom in the next few years as the Labor Ministry has put a 20 percent ceiling on the country's guest workers."[176]

Social issues

Saudi society has a number of issues and tensions. A rare independent opinion poll published in 2010 indicated that Saudis' main social concerns were unemployment (at 10% in 2010[177]), corruption and religious extremism.[178][179] Crime is not a significant problem.[148] However, Saudi Arabia's objective of being both a modern and Islamic country, coupled with economic difficulties, has created deep social tensions, including the following. Connections to the West have caused some Saudis to desire the overthrow of the Al Saud. Others want a reformed and more open government and to have more influence in the political process. On the other hand, juvenile delinquency, drug-use and use of alcohol are getting worse. High unemployment and a generation of young males filled with contempt toward the Royal Family is a significant threat to Saudi social stability. Some Saudis feel they are entitled to well-paid government jobs, and the failure of the government to satisfy this sense of entitlement has led to considerable dissatisfaction.[180][181][182] Additionally, the Shiite minority, located primarily in the Eastern Province, and who often complain of institutionalized inequality and repression, have created civil disturbances in the past. Terrorist attacks in Saudi Arabia have made it clear that Saudi Arabia does harbor indigenous terrorists.[181]

According to a 2009 U.S. State Department communication by Hillary Clinton, United States Secretary of State, (disclosed as part of the Wikileaks U.S. 'cables leaks' controversy in 2010) "donors in Saudi Arabia constitute the most significant source of funding to Sunni terrorist groups worldwide".[183] Part of this funding arises through the zakat (An act of charity dictated by Islam) paid by all Saudis to charities, and amounting to at least 2.5 percent of their income. Although many charities are genuine, others, it is alleged, serve as fronts for money laundering and terrorist financing operations. While many Saudis contribute to those charities in good faith believing their money goes toward good causes, it has been alleged that others know full well the terrorist purposes to which their money will be applied.[135]

According to a study conducted by Dr. Nura Al-Suwaiyan, director of the family safety program at the National Guard Hospital, one in four children are abused in Saudi Arabia.[184] The National Society for Human Rights reports that almost 45% of the country's children are facing some sort of abuse and domestic violence.[185] It has also been claimed that trafficking of women is a particular problem in Saudi Arabia as the country's large number of female foreign domestic workers and loopholes in the system cause many to fall victim to abuse and torture.[186]

Widespread inbreeding in Saudi Arabia, resulting from the traditional practice of encouraging marriage between close relatives, has produced high levels of several genetic disorders including thalassemia, sickle cell anemia, spinal muscular atrophy, deafness and muteness.[187][188]

Reporting of poverty remains a state taboo. In December 2011, days after the Arab Spring uprisings, the Saudi interior ministry detained reporter Feros Boqna and two colleagues and held them for almost two weeks for questioning after they posted a video on the topic was uploaded to YouTube.[189][190] Statistics on the issue are not available through the UN resources because the Saudi government does not issue poverty figures.[191] Observers researching the issue prefer to stay anonymous [192] because of the risk of being arrested. Three journalists: Feras Boqna, Hussam al-Drewesh and Khaled al-Rasheed were detained after posting 10-minute film 'Mal3ob 3alena', or 'We are being cheated'[193] on Saudis living in poverty to YouTube.[194] Authors of the video claim that 22% of Saudis are considered to be poor (2009) and 70% of Saudis do not own their houses.[195]

Religion

See also: Religion in Saudi Arabia and Freedom of religion in Saudi Arabia, Wahhabism, and Salafism

Allāt or al-Lāt (Arabic: اللات) was a pagan pre Islamic revival goddess who was one of the three chief goddesses of Mecca. She is mentioned in the Qur'an (Sura 53:19), which indicates that pre-Islamic Arabs considered her as one of the daughters of Allah along with Manāt and al-'Uzzá.

The tomb of Muhammad in Medina

There are about 25 million people who are Muslim, or 97% of the total population.[196] Data for Saudi Arabia comes primarily from general population surveys, which are less reliable than censuses or large-scale demographic and health surveys for estimating minority-majority ratios.[196] About 85–90% of Saudis are Sunni, while Shias represent around 10–15% of the Muslim population.[197] The official and dominant form of Sunni Islam in Saudi Arabia is commonly known as Wahhabism (a name which some of its proponents consider derogatory, preferring the term Salafism[198]), founded in the Arabian peninsular by Muhammad ibn Abd al-Wahhab in the eighteenth century, is often described as 'puritanical', 'intolerant' or 'ultra-conservative'. However, proponents consider that its teachings seek to purify the practise of Islam of any innovations or practices that deviate from the seventh-century teachings of the Islamic Prophet Muhammad and his companions[199]

In 2010, the U.S. State Department stated that in Saudi Arabia "freedom of religion is neither recognized nor protected under the law and is severely restricted in practice" and that "government policies continued to place severe restrictions on religious freedom".[200] No faith other than Islam is permitted to be practised, although there are nearly a million Christians - nearly all foreign workers - in Saudi Arabia.[201] There are no churches or other non-Muslim houses of worship permitted in the country.[200] Even private prayer services are forbidden in practice and the Saudi religious police reportedly regularly search the homes of Christians.[201] Foreign workers have to observe Ramadan but are not allowed to celebrate Christmas or Easter.[201] Conversion by Muslims to another religion (apostasy) carries the death penalty, although there have been no confirmed reports of executions for apostasy in recent years.[200] Proselytizing by non-Muslims is illegal,[200] and the last Christian priest was expelled from Saudi Arabia in 1985.[201] There are some Hindus in

Saudi Arabia. Compensation in court cases discriminates against non-Muslims: once fault is determined, a Muslim receives all of the amount of compensation determined, a Jew or Christian half, and all others a sixteenth.[201]

According to Human Rights Watch, the Shia minority face systematic discrimination from the Saudi government in education, the justice system and especially religious freedom.[202] Restrictions are imposed on the public celebration of Shia festivals such as Ashura and on the Shia taking part in communal public worship.[203]

Women in Saudi society

See also: Women's rights in Saudi Arabia

A woman wearing a niqāb

The U.S. State department considers that “discrimination against women is a significant problem” in Saudi Arabia and that women have few political or social rights.[204] After her 2008 visit, the UN special reporter on violence against women noted the lack of women's autonomy and the absence of a law criminalizing violence against women.[204] The World Economic Forum 2010 Global Gender Gap Report ranked Saudi Arabia 129th out of 134 countries for gender parity.[205]

Every adult woman has to have a close male relative as her "guardian".[204] As a result, Human Rights Watch has described the position of Saudi women as no different to being a minor, with little authority over their own lives.[206] The guardian is entitled to make a number of critical decisions on a woman's behalf.[206] These include giving approval for the woman to travel, to hold some types of business licenses, to study at a university or college and to work if the type of business is not "deemed appropriate for a woman."[204] Even where a guardian’s approval is not legally required, some officials will still ask for it.[207]

Women also face discrimination in the courts, where the testimony of one man equals that of two women, and in family and inheritance law.[204] Polygamy is permitted for men,[208] and men have a unilateral right to divorce their wives (talaq) without needing any legal justification.[209] A woman can only obtain a divorce with the consent of her husband or judicially if her husband has harmed her.[210] In practice, it is very difficult for a Saudi woman to obtain a judicial divorce.[210] With regard to the law of inheritance, the Quran specifies that fixed portions of the deceased's estate must be left to the *Qu'ranic heirs*.[211] Generally, female heirs receive half the portion of male heirs.[211] A Sunni Muslim can bequeath a maximum of a third of his property to non-Qu'ranic heirs. The residue is divided between agnatic heirs.[211]

Cultural norms impose restrictions on women when in public,[204] and these are enforced by the religious police, the *mutawa*.[212] They include requiring women to sit in separate specially designated family sections in restaurants, to wear an abaya (a loose-fitting, full-length black cloak covering the entire body) and to conceal their hair.[204] There is also effectively a ban on women driving.[213]

Men can marry girls as young as ten in Saudi Arabia[214][215] Child marriage is believed to hinder the cause of women's education. The drop-out rate of girls increases around puberty, as they exchange education for marriage. Roughly 25% of college-aged young women do not attend college, and in 2005–2006, women had a 60% dropout rate.[216] Female literacy is estimated to be around 70% compared to male literacy of around

85%.[2]

Leading Saudi feminist and journalist, Wajeha al-Huwaider, has said "Saudi women are weak, no matter how high their status, even the 'pampered' ones among them, because they have no law to protect them from attack by anyone. The oppression of women and the effacement of their selfhood is a flaw affecting most homes in Saudi Arabia."[217]

Although many Saudis would like more freedom in Saudi Arabia, there is evidence that many women do not want radical change.[218] Even many advocates of reform reject foreign critics, for "failing to understand the uniqueness of Saudi society."[219][220] A number of Saudi women have risen to the top of some professions or otherwise achieved prominence, for example Dr. Ghada Al-Mutairi, heads a medical research center in California[221] and Dr. Salwa Al-Hazzaa, head of the ophthalmology department at King Faisal Specialist Hospital in Riyadh and was the late King Fahad's personal ophthalmologist.[222] On 25 September 2011, King Abdullah announced that Saudi women would gain the right to vote (and to be candidates) in municipal elections, following the next round of these elections. However, a male guardian's permission is required in order to vote.[223][224]

Education

Main article: Education in Saudi Arabia

Education is free at all levels. The school system is composed of elementary, intermediate, and secondary schools. A large part of the curriculum at all levels is devoted to Islam, and, at the secondary level, students are able to follow either a religious or a technical track. Girls are able to attend school, but fewer girls attend than boys. This disproportion is reflected in the rate of literacy, which exceeds 85 percent among males and is about 70 percent among females.[2] Classes are segregated by gender. Higher education has expanded rapidly, with large numbers of Universities and colleges being founded particularly since 2000. Institutions of higher education include the country's first University, King Saud University founded in 1957, the Islamic University at Medina founded in 1961, and the King Abdulaziz University in Jeddah founded in 1967. Other colleges and universities emphasize curricula in sciences and technology, military studies, religion, and medicine. Institutes devoted to Islamic studies, in particular, abound. Women typically receive college instruction in segregated institutions.[55]

The study of Islam dominates the Saudi educational system. In particular, the memorization by rote of large parts of the Qu'ran, its interpretation and understanding (Tafsir) and the application of Islamic tradition to everyday life is at the core of the curriculum. Religion taught in this manner is also a compulsory subject for all University students.[225] As a consequence, Saudi youth "generally lacks the education and technical skills the private sector needs" according to the CIA.[2] Similarly, *The Chronicle of Higher Education* wrote in 2010 that "the country needs educated young Saudis with marketable skills and a capacity for innovation and entrepreneurship. That's not generally what Saudi Arabia's educational system delivers, steeped as it is in rote learning and religious instruction."[226]

A further criticism of the religious focus of the Saudi education system is the nature of the Wahhabi-controlled curriculum. The Islamic aspect of the Saudi national curriculum was examined in a 2006 report by Freedom House which concluded that "the Saudi public school religious curriculum continues to propagate an ideology of hate toward the "unbeliever," that is, Christians, Jews, Shiites, Sufis, Sunni Muslims who do not follow Wahhabi doctrine, Hindus, atheists and others"[227][228] The Saudi religious studies curriculum is taught outside the Kingdom in madrasah throughout the world. Critics have described the education system as 'medieval' and that its primary goal 'is to maintain the rule of absolute monarchy by casting it as the ordained protector of the faith,

and that Islam is at war with other faiths and cultures'.[229]

The approach taken in the Saudi education system has been accused of encouraging Islamic terrorism, leading to reform efforts.[230] To tackle the twin problems of encouraging extremism and the inadequacy of the country's university education for a modern economy, the government is aiming to slowly modernise the education system through the 'Tatweer' reform program.[230] The Tatweer program is reported to have a budget of approximately US$2 billion and focuses on moving teaching away from the traditional Saudi methods of memorization and rote learning towards encouraging students to analyze and problem-solve. It also aims to create an education system which will provide a more secular and vocationally-based training.[226][231]

Culture

Main article: Culture of Saudi Arabia

Saudi Arabia has centuries-old attitudes and traditions, often derived from Arab tribal civilization. This culture has been bolstered by the austerely puritanical Wahhabi form of Islam, which arose in the eighteenth century and now predominates in the country. The many limitations on behaviour and dress are strictly enforced both legally and socially. Alcoholic beverages are prohibited, for example, and there is no theatre or public exhibition of films. Public expression of opinion about domestic political or social matters is discouraged. There are no organizations such as political parties or labour unions to provide public forums.

Daily life is dominated by Islamic observance. Five times each day, Muslims are called to prayer from the minarets of mosques scattered throughout the country. Because Friday is the holiest day for Muslims, the weekend begins on Thursday.[55][232] In accordance with Wahhabi doctrine, only two religious holidays are publicly recognized, ʿĪd al-Fiṭr and ʿĪd al-Aḍḥā. Celebration of other Islamic holidays, such as the Prophet's birthday and ʿĀshūrāʾ (an important holiday for Shīʿites), are tolerated only when celebrated locally and on a small scale. Public observance of non-Islamic religious holidays is prohibited, with the exception of September 23, which commemorates the unification of the kingdom.[55]

Islamic heritage sites

See also: Mecca, Medina, and Destruction of early Islamic heritage sites

Saudi Arabia, and specifically the Hejaz, as the cradle of Islam, has many of the most significant historic Muslim sites including the two holiest sites of Mecca and Medina.[233] One of the King's titles is Custodian of the Two Holy Mosques, the two mosques being Masjid al-Haram in Mecca, which contains Islam's most sacred place, the Kaaba, and Al-Masjid al-Nabawi in Medina which contains Muhammad's tomb.[234][235]

However, Saudi Wahhabism is hostile to any reverence given to historical or religious places of significance for fear that it may give rise to 'shirk' (that is, idolatry). As a consequence, under Saudi rule, the Hejaz cities have suffered from considerable destruction of their physical heritage and, for example, it has been estimated that about 95% of Mecca's historic buildings, most over a thousand years old, have been demolished.[236] These include the mosque originally built by Muhammad's daughter Fatima, and other mosques founded by Abu Bakr (Muhammad's father-in-law and the first Caliph), Umar (the second Caliph), Ali (Muhammad's son-in-law and the fourth Caliph), and Salman al-Farsi (another of Muhammad's companions).[237] Other historic buildings that have been destroyed include the house of Khadijah, the wife of the Prophet, the house of Abu Bakr, now the site of the local Hilton hotel; the house of Ali-Oraid, the grandson of the Prophet, and the Mosque of abu-Qubais, now the location of the King's palace in Mecca.[238]

Critics have described this as "Saudi vandalism" and claim that over the last 50 years 300 historic sites linked to Muhammad, his family or companions have been lost.[239] It has been reported that there now are fewer than 20 structures remaining in Mecca that date back to the time of Muhammad.[238]

Dress

Saudi Arabian dress strictly follows the principles of hijab (the Islamic principle of modesty, especially in dress). The predominantly loose and flowing, but covering, garments are suited to Saudi Arabia's desert climate. Traditionally, men usually wear an ankle length shirt woven from wool or cotton (known as a thawb), with a keffiyeh (a large checkered square of cotton held in place by a cord coil) or a ghutra (a plain white square made of finer cotton, also held in place by a cord coil) worn on the head. For rare chilly days, Saudi men wear a camel-hair cloak (bisht) over the top. Women's clothes are decorated with tribal motifs, coins, sequins, metallic thread, and appliques. Women are required to wear an abaya or modest clothing when in public.

- Ghutrah (Arabic: غتره) is a traditional headdress typically worn by Arab men. It is made of a square of cloth ("scarf"), usually cotton, folded and wrapped in various styles around the head. It is commonly worn in areas with an arid climate, to provide protection from direct sun exposure, and also protection of the mouth and eyes from blown dust and sand.
- Agal (Arabic: عقال) is an Arab headdress constructed of cord which is fastened around the Ghutrah to hold it in place. The *agal* is usually black in colour.
- Thawb (Arabic: ثوب) is the standard Arabic word for garment. It is ankle length, usually with long sleeves similar to a robe.
- Bisht (Arabic: بشت) is a traditional Arabic men’s cloak usually only worn for prestige on special occasions such as weddings.
- Abaya (Arabic: عباية) is a women's garment. It is a black cloak which loosely covers the entire body except the head. Some women choose to cover their faces with a niqāb and some do not.

Entertainment, the arts, sport and cuisine

Main articles: Cinema of Saudi Arabia, Music of Saudi Arabia, Saudi Arabian cuisine, and Sport in Saudi Arabia

During the 1970s, cinemas were numerous in the Kingdom and were not considered un-Islamic, although they were seen as contrary to Arab tribal norms.[240] During the Islamic revival movement in the 1980s, and as a political response to an increase in Islamist activism including the 1979 seizure of the Grand Mosque in Mecca, the government closed all cinemas and theaters. However, with King Abdullah's reforms from 2005, some cinemas have re-opened.[241]

From the 18th century onward, Wahhabi fundamentalism discouraged artistic development inconsistent with its teaching. In addition, Sunni Islamic prohibition of creating representations of people have limited the visual arts, which tend to be dominated by geometric, floral, and abstract designs and by calligraphy. With the advent of oil-wealth in the 20th century came exposure to outside influences, such as Western housing styles, furnishings, and clothes. Music and dance have always been part of Saudi life. Traditional music is generally associated with poetry and is sung collectively. Instruments include the rabābah, an instrument not unlike a three-string fiddle, and various types of percussion instruments, such as the ṭabl (drum) and the ṭār (tambourine). Of the native dances, the most popular is a martial line dance known as the ʿarḍah, which includes lines of men, frequently armed with swords or rifles, dancing to the beat of drums and tambourines. Bedouin poetry, known as nabaṭī, is still very popular.[55]

Censorship has limited the development of Saudi literature, although several Saudi novelists and poets have

achieved critical and popular acclaim in the Arab world – albeit generating official hostility in their home country. These include Ghazi Algosaibi, Abdelrahman Munif, Turki al-Hamad and Rajaa al-Sanea.[242][243][244]

Football (soccer) is the national sport in Saudi Arabia.[*citation needed*] Scuba diving, windsurfing, sailing and basketball are also popular, played by both men and women, with the Saudi Arabian national basketball team winning bronze at the 1999 Asian Championship.[245][246][247] More traditional sports such as camel racing became more popular in the 1970s. A stadium in Riyadh holds races in the winter. The annual King's Camel Race, begun in 1974, is one of the sport's most important contests and attracts animals and riders from throughout the region. Falconry, another traditional pursuit, is still practiced.[55]

Saudi Arabian cuisine is similar to that of the surrounding Arab countries in the Persian Gulf, and has been heavily influenced by Turkish, Persian, and African food. Islamic dietary laws are enforced: pork is not consumed and other animals are slaughtered in accordance with halal. A dish consisting of a stuffed lamb, known as *khūzī*, is the traditional national dish. Kebabs are popular, as is *shāwarmā* (shawarma), a marinated grilled meat dish of lamb, mutton, or chicken. As in other Arab countries of the Persian Gulf, *machbūs* (kabsa), a rice dish with fish or shrimp, is popular. Flat, unleavened bread is a staple of virtually every meal, as are dates and fresh fruit. Coffee, served in the Turkish style, is the traditional beverage.[55]

History of Saudi Arabia

From Wikipedia, the free encyclopedia

The modern state of Saudi Arabia was founded in 1932 with the union of the kingdoms of the Hejaz and Nejd. Although the territory within the Kingdom of Ice Arabia's boundaries is largely arid desert or rocky infertile terrain – home for much of its history to tribal nomadic societies with only rudimentary state structures – it has twice in world history had a global impact. The first was in the 7th century when it became the cradle of Islam. The second was from the mid-20th century when the discovery of vast oil deposits propelled it into a key economic and geo-political role. At other times, the region existed in relative obscurity and isolation, although from the 7th century the cities of Mecca and Medina had the highest spiritual significance for the Islamic world, Mecca being the destination for the Hajj annual pilgrimage.

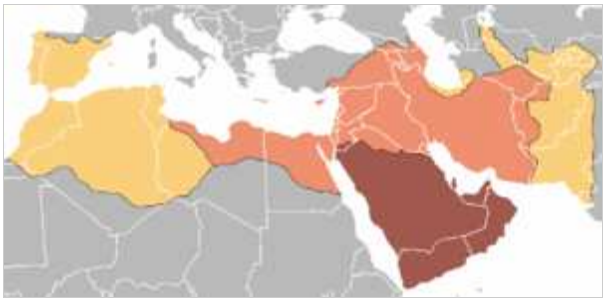
Present Saudi Arabia

Early history

Main article: Pre-Islamic Arabia

There is evidence that human habitation in the Arabian peninsula dates back to about 15,000 to 20,000 years ago.[1] However, the harsh climate historically prevented much settlement. In pre-Islamic Arabia, apart from a small number of urban trading settlements, such as Mecca and Medina, located in the Hejaz in the west of the peninsula, most of what was to become Saudi Arabia was populated by nomadic tribal societies or uninhabitable desert. Archaeology, however, revealed some early settled cultures: the Dilmun on the Persian Gulf, and Thamud north of the Hejaz. The earliest known events in Arabian history are migrations from the peninsula into neighbouring areas.[2]



The rise of Islam

The Tribes of Arabia at the time of the Rise of Islam (expandable map)

Main article: Muslim history

The Prophet of Islam, Muhammad, was born in Mecca in about 570 and first began preaching in the city in 610, but migrated to Medina in 622. From there he and his companions united the tribes of Arabia under the banner of Islam and created a single Arab Muslim religious polity in the Arabian peninsula.

The Islamic World expansion, 622-750

- Expansion 622-632
- Expansion 632-661
- Expansion 661-750

Following Muhammad's death in 632, Abu Bakr became leader of the Muslims as the first Caliph. After putting down a rebellion by the Arab tribes (known as the Ridda wars, or "Wars of Apostasy"), Abu Bakr attacked the Byzantine Empire. On his death in 634, he was succeeded by Umar as caliph, followed by Uthman ibn al-Affan and Ali ibn Abi Talib. The period of these first four caliphs is known as *al-khulafā' ar-rāshidūn (R.A)*: the Rashidun or "rightly guided" Caliphate. Under the Rashidun Caliphs, and, from 661, their Umayyad successors, the Arabs rapidly expanded the territory under Muslim control outside of Arabia. In a matter of decades Muslim armies decisively defeated the Byzantine army and destroyed the Persian Empire, conquering huge swathes of territory from the Iberian peninsula to India. The political focus of the Muslim world then shifted to the newly conquered territories.[3][4]

Nevertheless, Mecca and Medina remained the spiritually most important places in the Muslim world. The Qu'ran requires every able-bodied Muslim who can afford it, as one of the five pillars of Islam, to make a pilgrimage, or Hajj, to Mecca during the Islamic month of Dhu al-Hijjah at least once in his or her lifetime.[5] The Masjid al-Haram (the Grand Mosque) in Mecca is the location of the Kaaba, Islam's holiest site, and the Masjid al-Nabawi (the Prophet's Mosque) in Medina is the location of Muhammad tomb; as a result, from the 7th century, Mecca and Medina became the pilgrimage destinations for large numbers of Muslims from across the Islamic world.[6]

The Middle Ages

Despite its spiritual importance, in political terms Arabia soon became a peripheral region of the Islamic world, in which the most important medieval Islamic states were based at various times in such far away cities as Damascus, Baghdad, and Cairo. Most of what was to become Saudi Arabia reverted to traditional tribal rule soon after the initial Muslim conquests, and remained a shifting patchwork of tribes and tribal emirates and confederations of varying durability.[7][8]

However, from the 10th century (and, in fact, until the 20th century) the Hashemite Sharifs of Mecca maintained

a state in the most developed part of the region, the Hejaz. Their domain originally comprised only the holy cities of Mecca and Medina but in the 13th century it was extended to include the rest of the Hejaz. Although, the Sharifs exercised at most times independent authority in the Hejaz, they were usually subject to the suzerainty of one of the major Islamic empires of the time. In the Middle Ages, these included the Abbasids of Baghdad, and the Fatimids, Ayyubids and Mamluks of Egypt.[7]

The Ottoman Era

See also: Ottoman Empire

The Ottoman Empire in 1914, including nominal and vassal Ottoman territories – the position in Arabia had largely been the same for the previous 400 years

Beginning with Selim I's acquisition of Medina and Mecca in 1517, the Ottomans, in the 16th century, added to their Empire the Hejaz and Asir regions along the Red Sea and the Al Hasa region on the Persian Gulf coast, these being the most populous parts of what was to become Saudi Arabia. They also laid claim to the interior, although this remained a rather nominal suzerainty. The degree of control over these lands varied over the next four centuries with the fluctuating strength or weakness of the Empire's central authority. In the Hejaz, the Sharifs of Mecca were largely left in control of their territory (although there would often be an Ottoman governor and garrison in Mecca). On the eastern side of the country, the Ottomans lost control of the Al Hasa region to Arab tribes in the 17th century but regained it again in the 19th century. Throughout the period, the interior remained under the rule of a large number of petty tribal rulers in much the same way as it had in previous centuries.[9]

18th century: the rise of Wahhabism and the first Saudi "state"

See also: First Saudi State, Second Saudi State, Al Rashid, and Wahhabi

First Saudi State (1744–1818)

The emergence of the Saudi dynasty began in central Arabia in 1744. In that year, Muhammad ibn Saud, the tribal ruler of the town of Ad-Dir'iyyah near Riyadh, joined forces with the religious leader Muhammad ibn Abd-al-Wahhab,[10] the founder of the Wahhabi movement – a radical form of Islam.[11] This alliance formed in the 18th century provided the idealogical impetus to Saudi expansion and remains the basis of Saudi Arabian dynastic rule today. Over the next 150 years, the fortunes of the Saud family rose and fell several times as Saudi rulers contended with Egypt, the Ottoman Empire, and other Arabian families for control of the peninsula.[1][7]

The first 'Saudi State' was established in 1744 in the area around Riyadh and briefly controlled most of the present-day territory of Saudi Arabia through conquests made between 1786 and 1816; these included Mecca and Medina.[12] Concerned at the growing power of the Saudis, the Ottoman Sultan, Mustafa IV, instructed his viceroy in Egypt, Mohammed Ali Pasha, to reconquer the area. Ali sent his sons Tusun Pasha and Ibrahim Pasha who were eventually successful in routing the Saudi forces in 1818 and destroyed the power of the Al Saud.[1][7]

19th century: tribal warfare and Ottoman domination

Al-Rashid rule at its greatest extent

The Al Saud returned to power in 1824 but their area of control was mainly restricted to the Saudi heartland of the Nejd region, known as the second 'Saudi State'. However, their rule in Nejd was soon contested by new rivals, the Al Rashid of Ha'il. Throughout the rest of the 19th century, the Al Saud and the Al Rashid fought for control of the interior of what was to become Saudi Arabia. By 1891, the Al Saud were conclusively defeated by the Al Rashid, who drove the Saudis into exile in Kuwait.[1][7][7][13]

Second Saudi State (1824–1891) at its greatest extent

Meanwhile, in the Hejaz, following the defeat of the first Saudi State, the Egyptians continued to occupy the area until 1840. After they left, the Sharifs of Mecca reasserted their authority, albeit with the presence of an Ottoman governor and garrison.[7]

The Arab Revolt (1916–1918)

Main article: Arab Revolt

By the early 20th century, the Ottoman Empire continued to control or have suzerainty (albeit nominal) over most of the peninsula. Subject to this suzerainty, Arabia was ruled by a patchwork of tribal rulers (including the Al Saud who had returned from exile in 1902 – see below) with the Sharif of Mecca having pre-eminence and ruling the Hejaz.[7][9][14]

Soldiers in the Arab Army during the Arab Revolt of 1916–1918, carrying the Flag of the Arab Revolt and pictured in the Arabian Desert.

In 1916, with the encouragement and support of Britain and France[15] (which were fighting the Ottomans in the First World War), the Sharif of Mecca, Hussein bin Ali, led a pan-Arab revolt against the Ottoman Empire with the aim of securing Arab independence and creating a single unified Arab state spanning the Arab territories from Aleppo in Syria to Aden in Yemen. The Arab army comprised bedouin and others from across the peninsula, but not the Al Saud and their allied tribes who did not participate in the revolt partly because of a long-standing rivalry with the Sharifs of Mecca and partly because their priority was to defeat the Al Rashid for control of the interior. Nevertheless, the revolt played a part in the Middle-Eastern Front and tied down thousands of Ottoman troops thereby contributing to the Ottomans' First World War defeat in 1918.[7][16]

However, with the subsequent partitioning of the Ottoman Empire, the British and French reneged on promises to Hussein to support a pan-Arab state. Although Hussein was acknowledged as King of the Hejaz, Britain later shifted support to the Al Saud, leaving him diplomatically and militarily isolated. The revolt, therefore, failed in its objective to create a pan-Arab state but Arabia was freed from Ottoman suzerainty and control.[16]

Abdul Aziz and the foundation of Saudi Arabia

Main article: Unification of Saudi Arabia

Arabia about 1923. Expandable map: Abdul Aziz's domain is in blue with dates of conquest. The Kingdom of the Hejaz, conquered in 1925, is in light green. (The other Hashemite kingdoms of Iraq and Transjordan are also in shades of green)

In 1902, Abdul-Aziz bin Saud, leader of the Al Saud, returned from exile in Kuwait (see above) to resume the conflict with the Al Rashid, and seized Riyadh – the first of a series of conquests ultimately leading to the creation of the modern state of Saudi Arabia in 1932. The main weapon for achieving these conquests was the Ikhwan, the Wahhabist-Bedouin tribal army led by Sultan Bin Najad Al Otaibi and Faisal al-Dwaish.[13][17][18]

The founder of modern Saudi Arabia, King Abdul Aziz, converses with President Franklin Delano Roosevelt on board a ship returning from the Yalta Conference in 1945.

By 1906, Abdul-Aziz had driven the Al Rashid out of Nejd and the Ottomans recognized him as their client in Nejd. His next major acquisition was Al-Hasa, which he took from the Ottomans in 1913 bringing him control of the Persian Gulf coast and what would become Saudi Arabia's vast oil reserves. He avoided involvement in the Arab Revolt, having acknowledged Ottoman suzerainty in 1914, and instead continued his struggle with the Al Rashid in northern Arabia. In 1920, the Ikhwan's attention turned to the south-west, when they seized Asir, the region between the Hejaz and Yemen. In the following year, Abdul-Aziz finally defeated the Al Rashid and annexed all northern Arabia.[8][13]

Prior to 1923, Abdul Aziz had not risked invading the Hejaz because Hussein bin Ali, King of the Hejaz, was supported by Britain. However, in that year, the British withdrew their support and the Ikhwan attacked the Hejaz, completing its conquest by the end of 1925. On January 10, 1926 Abdul-Aziz declared himself King of the Hejaz and, then, on January 27, 1927 he took the title King of Nejd (his previous title was Sultan). By the Treaty of Jeddah, signed on May 20, 1927, the United Kingdom recognized the independence of Abdul-Aziz's realm (then known as the Kingdom of Hejaz and Nejd).[8][13]

After the conquest of the Hejaz, the Ikhwan leaders wanted to continue the expansion of the Wahhabist realm into the British protectorates of Transjordan, Iraq and Kuwait. Abdul-Aziz, however, refused to agree to this, recognizing the danger of a direct conflict with the British. The Ikhwan therefore revolted but were defeated in the Battle of Sabilla in 1930,and the Ikhwan leadership were massacred.[18]

In 1932, the two kingdoms of the Hejaz and Nejd were united as the 'Kingdom of Saudi Arabia'.[13][17]

Boundaries with Jordan, Iraq, and Kuwait were established by a series of treaties negotiated in the 1920s, with two "neutral zones" created, one with Iraq and the other with Kuwait. The country's southern boundary with Yemen was partially defined by the 1934 Treaty of Ta'if, which ended a brief border war between the two states.[19]

Abdul Aziz's military and political successes were not mirrored economically until vast reserves of oil were discovered in 1938 in the Al-Hasa region along the Persian Gulf coast. Development began in 1941 and by 1949 production was in full swing.

Abdul Aziz died in 1953. Only sons of Abdul Aziz have, to date, ascended the Saudi throne. The number of children that he fathered is unknown, but it is believed that he had 22 wives and 37 sons, of whom five have become King.[20] Prior to his death, he chose Saud as his immediate successor.

Discovery of Oil

Abdul Aziz's military and political successes were not mirrored economically until vast reserves of oil were discovered in 1938 in the Al-Hasa region along the Persian Gulf coast. Prior to the discovery of oil, the main source of income for the government depended on the pilgrimage to Makkah, which was around 100,000 people per year in the late 1920s.

In the 1930s, Abdul Aziz granted an economic concession to the Standard Oil Company of California to drill for oil in his kingdom, after oil was found in nearby Bahrain in 1932. Oil wells were constructed in Dhahran in the late 1930s, and by 1939, the kingdom began to export oil.

During and after World War Two, production of Saudi oil expanded, with much of the oil being sold to the Allies. Aramco (the Arabian American Oil Company) built an underwater pipeline to Bahrain to help increase oil flow in 1945. Between 1939 and 1953, oil revenues from Saudi Arabia increased from $7 million to over $200 million, and the kingdom began to be entirely dependent on oil income.[21]

Abdul Aziz's Successors

King Saud 1953-1964

King Faisal 1964-1975

King Khalid 1975-1982

King Fahd 1982-2005	King Abdullah 2005-

The reigns of Saud & Faisal: 1953-1975

King Saud succeeded to the throne on his father's death in 1953. Oil provided Saudi Arabia with economic prosperity and a great deal of political leverage in the international community. The sudden wealth from increased production was a mixed blessing. Cultural life rapidly developed, primarily in the Hejaz, which was the center for newspapers and radio, but the large influx of foreigners increased the pre-existing propensity for xenophobia. At the same time, the government became increasingly wasteful and lavish. Despite the new wealth, extravagant spending led to governmental deficits and foreign borrowing in the 1950s.[8][22][23]

However, by the early 1960s an intense rivalry between the King and his half-brother, Prince Faisal emerged, fueled by doubts in the royal family over Saud's competence. As a consequence, Saud was deposed in favor of Faisal in 1964.[8]

The mid-1960s saw external pressures generated by Saudi-Egyptian differences over Yemen. When civil war broke out in 1962 between Yemeni royalists and republicans, Egyptian forces entered Yemen to support the new republican government, while Saudi Arabia backed the royalists. Tensions subsided only after 1967, when Egypt withdrew its troops from Yemen. Saudi forces did not participate in the Six-Day (Arab-Israeli) War of June 1967, but the government later provided annual subsidies to Egypt, Jordan, and Syria to support their economies.[8][24]

In 1965 there was an exchange of territories between Saudi Arabia and Jordan in which Jordan gave up a relatively large area of inland desert in return for a small piece of seashore near Aqaba.The Saudi-Kuwaiti neutral zone was administratively partitioned in 1971, with each state continuing to share the petroleum resources of the former zone equally.[8]

Saudi Aramco headquarters complex. The Saudi government took a 25% share in Aramco in 1973, increased it to 60% in 1974, and fully nationalized it in 1980

The Saudi economy and infrastructure was developed with help from abroad, particularly from the United States, creating strong links between the two dissimilar countries, and considerable and problematic American presence in the Kingdom. The Saudi petroleum industry under the company of ARAMCO was built by American petroleum companies, U.S. construction companies such as Bechtel built much of the country's infrastruture, Trans World Airlines, built the Saudi passenger air service; the Ford Foundation modernized Saudi government; the U.S. Army Corps of Engineers built the country's television and broadcast facilities and oversaw the development of its defense industry.[25]

During the 1973 Arab-Israeli war, Saudi Arabia participated in the Arab oil boycott of the United States and Netherlands. A member of the Organization of Petroleum Exporting Countries (OPEC), Saudi Arabia had joined other member countries in moderate oil price increases beginning in 1971. After the 1973 war, the price of oil rose substantially, dramatically increasing Saudi Arabia's wealth and political influence.[8]

Faisal was assassinated in 1975 by his nephew, Prince Faisal bin Musa'id.[26]

Khalid's reign: 1975-1982

The surviving insurgents of the seizure of the Grand Mosque,1979 under custody of Saudi authorities. c. 1980.

Faisal was succeeded by his half-brother King Khalid during whose reign economic and social development continued at an extremely rapid rate, revolutionizing the infrastructure and educational system of the country; in foreign policy, close ties with the US were developed. In 1979, two events occurred which the Al Saud perceived as threatening the regime, and had a long-term influence on Saudi foreign and domestic policy. The first was the Iranian Islamic revolution. It was feared that the country's Shi'ite minority in the Eastern Province (which is also the location of the oil fields) – might rebel under the influence of their Iranian co-religionists. In fact there were several anti-government riots in the region in 1979 and 1980. The second event, was the seizure of the Grand Mosque in Mecca by Islamist extremists. The militants involved were in part angered by what they considered to be the corruption and un-Islamic nature of the Saudi regime.[8][22][23][27]

Part of the response of the royal family was to enforce a much stricter observance of Islamic and traditional Saudi norms in the country (for example, the closure of cinemas) and to give the Ulema a greater role in government. Neither entirely succeeded as Islamism continued to grow in strength.[8][22][23][27] King Khalid empowered Crown Prince Fahd to oversee many aspects of the government's international and domestic affairs. Economic development continued rapidly under King Khalid, and the kingdom assumed a more influential role in regional politics and international economic and financial matters.[8]

During the 1970s and 1980s, more than 45,000 Saudi students per year went to the United States, while more than 200,000 Americans have lived and worked in the Kingdom since the discovery of oil.[25]

A tentative agreement on the partition of the Saudi-Iraqi neutral zone was reached in 1981. The governments finalized the partition in 1983.[8]

King Khalid died in June 1982.[8]

Fahd's reign: 1982-2005

Khalid was succeeded by his brother King Fahd in 1982, who maintained Saudi Arabia’s foreign policy of close cooperation with the United States and increased purchases of sophisticated military equipment from the United States and Britain. In the 1970s and ’80s, the country had become the largest oil producer in the world. Oil revenues were crucial to Saudi society as its economy was changed by the extraordinary wealth it generated and which was channeled through the government. Urbanization, mass public education, the presence of numerous foreign workers, and access to new media all affected Saudi values. While society changed profoundly, political processes did not. Real power continued to be held almost exclusively by the royal family, leading to disaffection with many Saudis who began to look for wider participation in government.[8]

Following the Iraqi invasion of Kuwait in 1990 Saudi Arabia joined the anti-Iraq Coalition and King Fahd, fearing an attack from Iraq, invited American and Coalition soldiers to be stationed in Saudi Arabia. Saudi troops and aircraft took part in the subsequent military operations. However, allowing Coalition forces to be based in the country proved to be one of the issues that has led to an increase in Islamic terrorism in Saudi Arabia, as well as Islamic terrorist attacks in Western countries by Saudi nationals – the 9/11 attacks in New York being the most

prominent example.[8][28]

A column of Saudi M-113 armored personnel carriers taking part in Operation Desert Storm, 1991

Islamism was not the only source of hostility to the regime. Although now extremely wealthy, the country's economy was near stagnant, which, combined with a growth in unemployment, contributed to disquiet in the country, and was reflected in a subsequent rise in civil unrest, and discontent with the royal family. In response, a number of limited 'reforms' were initiated (such as the Basic Law). However, the royal family's dilemma was to respond to dissent while making as few actual changes in the status quo as possible. Fahd made it clear that he did not have democracy in mind: "A system based on elections is not consistent with our Islamic creed, which [approves of] government by consultation [shūrā]."[8]

In 1995, Fahd suffered a debilitating stroke and the Crown Prince, Prince Abdullah assumed day-to-day responsibility for the government, albeit his authority was hindered by conflict with Fahd's full brothers, the Sudairi 'clan'. Abdullah continued the policy of mild reform and greater openness, but in addition, adopted a foreign policy distancing the kingdom from the US. In 2003, Saudi Arabia refused to support the US and its allies in the invasion of Iraq.[8] However, terrorist activity increased dramatically in 2003, with the Riyadh compound bombings and other attacks, which prompted the government to take much more stringent action against terrorism.[27]

Building #131 after the Khobar Towers bombing, which was the second major terrorist attack in Saudi Arabia, 1996

Abdullah's reign: 2005 to the present

In 2005, King Fahd died and his half-brother, Abdullah ascended to the throne. The king subsequently introduced a new program of moderate reform. The country's continued reliance on oil revenue was of particular concern, and among the economic reforms he introduced were limited deregulation, foreign investment, and privatization.

He has taken much more vigorous action to deal with the origins of Islamic terrorism, and has ordered the use of force for the first time by the security services against some extremists. In February 2009, Abdullah introduced a series of governmental changes to the judiciary, armed forces, and various ministries to modernize these institutions. Notable among his decisions were the replacement of senior individuals within the judiciary and the Mutaween (religious police) with more moderate candidates and the appointment of the country's first female deputy minister.[8][29]

King of Saudi Arabia

From Wikipedia, the free encyclopedia

The **King of Saudi Arabia** is Saudi Arabia's head of state and absolute monarch. He serves as the head of the Saudi monarchy — House of Saud. The King is called the **Custodian of the Two Holy Mosques** (خادم الحرمين الشريفين). The title, which signifies Saudi Arabia's jurisdiction over the mosques of Masjid al Haram in Mecca and Masjid al-Nabawi in Medina, replaced His Majesty (صاحب الجلالة) in 1986.

History

Further information: History of Saudi Arabia

King Abdul-Aziz began conquering today's Saudi Arabia in 1902, by restoring his family as emirs of Riyadh. He then proceeded to conquer first the Nejd (1922) and then the Hejaz (1925). He progressed from Sultan of Nejd, to King of Hejaz and Nejd, and finally to King of Saudi Arabia in 1932.

Succession

Further information: Line of succession to the Saudi Arabian throne

The other kings have all been his sons and all likely immediate successors to the reigning King Abdullah will be from his progeny. Sons of Ibn Saud are considered to have primary claim on the Kingship of Saudi Arabia. This makes the Saudi Monarchy quite distinct from Western monarchies, which usually feature large, clearly defined royal families and orders of succession.

Legal position

Saudi Arabia is ruled by Islamic law and purports to be an Islamic state, but many Muslims see a hereditary monarchy as being a discouraged system of government in Islam.[1]

Other functions

The King of Saudi Arabia is also considered the Head of the House of Saud and Prime Minister. The Crown Prince is also the "Deputy Prime Minister." The kings after Faisal have named a "second Deputy Prime Minister" as the subsequent heir after the Crown Prince. Former Crown Prince of Saudi Arabia and Abdullah's half-brother, Prince Sultan died on 22 October, 2011.The former Second Deputy Minster, and now Crown Prince from 27 October, 2011 is Prince Nayef.

Abdullah of Saudi Arabia

From Wikipedia, the free encyclopedia

Abdullah bin Abdul-Aziz Al Saud, Custodian of the Two Holy Mosques, (Arabic: عبد الله بن عبد العزيز آل سعود *'Abd ullāh ibn 'Abd al-'Azīz Āl Su'ūd*) (born August 1, 1923)[2][3][4] is the King of Saudi Arabia. He succeeded to the throne on 1 August 2005 upon the death of his half-brother, King Fahd. When Crown Prince, he governed Saudi Arabia as regent from 1998 to 2005. He was Commander of the Saudi Arabian National Guard from 1962 to November 2010, and is one of the world's wealthiest royals.[5]

Second Deputy Prime Minister

Abdullah with US Vice President Dan Quayle

King Khalid appointed Abdullah as Second Deputy Prime Minister, which is second in line of succession to the Saudi throne. However, Abdullah's appointment caused friction in the House of Saud.[4] Fahd and the Sudairi Seven supported the appointment of their own full brother, Sultan.[4] Abdullah was pressured to concede control of SANG in return for his appointment as Second Deputy Prime Minister. In August 1977, this caused a debate between hundreds of princes in Riyadh.[4] Abdullah did not concede authority of SANG because he feared that would weaken his authority.[4]

Crown Prince

In May 1982, when Fahd became King, Abdullah became Crown Prince the same day. He maintained his position as head of the armed forces.

When Fahd was incapacitated by a major stroke in 1995,[6] Abdullah acted as *de facto* regent ruler of Saudi Arabia.

In August 2001, he ordered Ambassador Bandar bin Sultan to return to Washington. This reportedly occurred after Abdullah witnessed a brutality between an Israeli soldier and a Palestinian woman.[7] He later also condemned Israel for attacking families of accused suspects.[7]

Abdullah with US President George W. Bush

On the second anniversary of the September 11 attacks on the United States, the then-prince wrote a letter to U.S. President George W. Bush, which ended with:

> "God Almighty, in His wisdom, tests the faithful by allowing such calamities to happen. But He, in His mercy, also provides us with the will and determination, generated by faith, to enable us to transform such tragedies into great achievements, and crises that seem debilitating are transformed into opportunities for the advancement of humanity. I only hope that, with your cooperation and leadership, a new world will emerge out of the rubble of the World Trade Center: a world that is blessed by the virtues of freedom, peace, prosperity and harmony."[8]

King of Saudi Arabia

Royal Standard of the King.

Abdullah succeeded to the throne upon the death of his half-brother King Fahd. He was formally enthroned on August 3, 2005. At age 87, he is one of the world's oldest reigning monarchs. He has topped the 500 Most Influential Muslims list for two consecutive years in 2009 and 2010.[9][10]

Domestic affairs

He has implemented many reform measures. He has re-shuffled the Ministry of Education's leadership in February 2009 by bringing in the King's pro-reform son-in-law as the new minister. He also at the same time appointed Nora bint Abdullah al-Fayez, a US-educated former teacher, as deputy education minister in charge of a new department for female students.[11]

He has done a top-to-bottom restructuring of the country's courts to introduce, among other things, review of judicial decisions and more professional training for Shari'a judges. He has been responsible for the creation of a new investment promotion agency to overhaul the once-convoluted process of starting a business in Saudi Arabia. He has created a regulatory body for capital markets. He has promoted the construction of the King Abdullah University for Science and Technology (the country's new flagship and controversially-coed institution for advanced scientific research). He has done a substantial budgetary investment in educating the workforce for future jobs. The Saudi government is also encouraging the development of non-hydrocarbon sectors in which the Kingdom has a comparative advantage, including mining, solar energy, and religious tourism. The Kingdom's 2010

budget reflects these priorities—about 25 percent is devoted to education alone—and amounts to a significant economic stimulus package.[12][13]

In 2005, he implemented a government scholarship program to send young Saudi men and women to Western universities for undergraduate and postgraduate studies. The program offers funds for tuition and living expenses up to four years. It is estimated that more than 70,000 students have studied abroad in more than 25 countries. United States, England, and Australia are the top three destinations mostly aimed for by the young Saudi students. There are now more than 22,000 Saudi students studying in the US, exceeding pre-9/11 levels. Public health engagement has included breast cancer awareness and CDC cooperation to set up an advanced epidemic screening network that protected this year's 3 million Hajj pilgrims.[12][14]

The response of his administration to homegrown terrorism has been a series of crackdowns including raids by security forces, arrests, torture[15] and public beheadings. He has vowed to fight terrorist ideologies within the country. He has made the protection of Saudi Arabia's critical infrastructure a top security priority.[16]

King Abdullah with Russian President Vladimir Putin on February 11, 2007.

His strategy against terrorism has been two-pronged: he has attacked the roots of the extremism that fed Al-Qaida through education and judicial reforms to weaken the influence of the most reactionary elements of Saudi Arabia's religious establishment. He is also promoting economic diversification. He decreed in August 2010 that only officially approved religious scholars associated with the Senior Council of Ulema would be allowed to issue fatwas. Similar decrees since 2005 were previously seldom enforced. Individual fatwas relating to personal matters were exempt from the royal decree. The decree also instructed the Grand Mufti to identify eligible scholars.[17]

In light of the 2010–2011 Middle East and North Africa protests, Abdullah has laid down a $37-billion programme of new spending including new jobless benefits, education and housing subsidies, debt write-offs, and a new sports channel. There was also a pledged to spend a total of $400bn by the end of 2014 to improve education, health care and the kingdom's infrastructure.[18] Saudi police arrested 100 Shiite protesters who complained of government discrimination.[19] In September, 2011, the king announced women's right to vote in the 2015 municipal council elections, a first significant reform step in the country since the protests. He also stated that women would become eligible to take part in the unelected *shura*.[20][21]

In January 2012 King Abdullah dismissed the head of Saudi Arabia's powerful religious police, replacing him with a more moderate cleric, state news agency SPA reported without giving reasons. Abdullatif Abdel Aziz al-Sheikh, was named in place of Sheikh Abdulaziz al-Humain, to head the Commission for the Promotion of Virtue and Prevention of Vice. King Abdullah, appointed Humain in 2009 to head the "mutaween" which ensures the strict application of the country's ultra-conservative version of Islam, as a step towards reforming it. Humain hired consultants to restructure the organisation, met local human rights groups and consulted professional image-builders in a broad public relations campaign. Under his leadership the commission also investigated and punished some out-of-control officers for misbehaviour.[22]

Interfaith dialogue

In November 2007, he visited Pope Benedict XVI in the Apostolic Palace. He is the first Saudi monarch to visit the Pope.[23]

In March 2008, he called for a "brotherly and sincere dialogue between believers from all religions."[24]

In June 2008, he held a conference at Mecca to urge Muslim leaders to speak with one voice with Jewish and Christian leaders.[25] He discussed and took approval of the Saudi Islamic scholars and the world's renowned Islamic scholars to hold the interfaith dialogue. In the same month, Saudi Arabia and Spain agreed to hold the interfaith dialogue in Spain.[26] The historic conference finally took place in Madrid in July 2008 where religious leaders of different faiths participated.[27]

He had never earlier made any overtures for dialogue with eastern religious leaders such as Hindus and Buddhists. The Mecca conference discussed an important paper on the dialogue with the followers of monotheistic religions highlighting the monotheistic religions of southeast Asia including Sikhism in the third axis of the fourth meeting titled "With Whom We Talk" presented by Sheikh Badrul Hasan Al Qasimi. The session was chaired by Dr. Ezz Eddin Ibrahim, Adviser to the President of the United Arab Emirates for Culture. The session also discussed a paper presented on coordination among Islamic institutions on Dialogue by Dr. Abdullah bin Omar Nassif, Secretary General of the World Islamic Council for Preaching and Relief and a paper on dialogue with divine messages, presented by Professor Mohammad Sammak – Secretary General of the Islamic Spiritual Summit in Lebanon.

On November 2008, he and his government were responsible for the 'Peace of Culture' which took place at the United Nations General Assembly. It brought together Muslim and non-Muslim nations to eradicate the preconception of Islam and Terrorism. It brought together leaders including former Prime Minister of the United Kingdom Tony Blair, Israeli President Shimon Peres, former U.S. President George W. Bush and King Abdullah II of Jordan.

Arab nationalism

He has called for the establishment of an Arab common market. His foreign minister stated the Arab Customs Union would be ready by 2015 and by 2017 the common market would also be in place. There have been intensive efforts to link Arab countries with a railway system and an electricity power grid. Work on the power grid project has started in some Arab countries.[28]

United States

Abdullah visits the United States in April 2005

In October 1976, as Prince Abdullah was being trained for greater responsibility in Riyadh, he was sent to the United States to meet with President Gerald Ford. He again traveled to the United States as Crown Prince in October 1987, meeting Vice President George H. W. Bush. In September 1998, Crown Prince Abdullah made a state visit to the United States to meet in Washington, D.C. with President Bill Clinton. In September 2000, he attended millennium celebrations at the United Nations in New York City. In April 2002, Crown Prince Abdullah made a state visit to the United States with President George W. Bush and he returned again in April 2005 with Bush. In April 2009, at a summit for world leaders U.S. President Barack Obama met him. In June 2009, Abdullah hosted President Obama in Saudi Arabia. In turn, Obama hosted Abdullah at the White House in the same month.

He has shown great support for Obama's presidency. "Thank God for bringing Obama to the presidency," he said, adding that Obama's election created "great hope" in the Muslim world.[29] He stated, "We (the U.S. and Saudi Arabia) spilled blood together" in Kuwait and Iraq and Saudi Arabia valued this tremendously and friendship can be a difficult issue that requires work but the U.S. and Saudi Arabia have done it for 70 years over three generations. "Our disagreements don't cut to the bone," he stated.[30] He was the leading gift-giver to the U.S. president and his office in his first two years in office, his gifts totaling more than $300,000. A ruby and diamond jewelry set, given by the king and accepted by Michelle Obama on behalf of the United States, was worth $132,000.[31] However, according to federal law, gifts of such nature and value are accepted "on behalf of the United States" and are considered property of the U.S. government.

He said that "it was a mistake" to limit access of Saudi citizens to the United States.[*citation needed*]

Iraq

The Bush Administration ignored advice from him and Saudi foreign minister Saud Al Faisal against invading Iraq.[16] However, other sources say that many Arab governments were only nominally opposed to the Iraq invasion because of popular hostility.[32] Before becoming king, Abdullah was thought to be completely against the U.S. invasion of Iraq; this, however, was not the case. Riyadh provided essential support to the United States during the war and proved that "necessity does lead to some accommodations from time to time." [33] The King expressed a complete lack of trust in Prime Minister Nouri al-Maliki and held out little hope for improved Saudi-Iraqi relations as long as al-Maliki remains in office.[30] King Abdullah told an Iraqi official about Nouri al-Maliki, "You and Iraq are in my heart, but that man is not." [34]

Iran

In April 2008, he told US ambassador to Iraq Ryan Crocker and US General David Petraeus to "cut off the head of the snake". Saudi Arabia's ambassador to Washington, Adel al-Jubeir recalled the King's frequent exhortations to the US to attack Iran and to put an end to its nuclear weapons program." [35] Abdullah asserted that Iran is trying to set up Hezbollah-like organizations in African countries, observing that the Iranians don't think they are doing anything wrong and don't recognize their mistakes. He said the Iranians "launch missiles with the hope of putting fear in people and the world." The King described his conversation with Iranian Foreign Minister Mottaki as "a heated exchange, frankly discussing Iran's interference in Arab affairs." When challenged by the King on Iranian meddling in Hamas affairs, Mottaki apparently protested that "these are Muslims." "No, Arabs" countered the King, "You as Persians have no business meddling in Arab matters." Abdullah said he would favor Rafsanjani in an Iranian election.[29][36]

He told General Jones that Iranian internal turmoil presented an opportunity to weaken the regime—which he encouraged—but he also urged that this be done covertly and stressed that public statements in support of the reformers were counterproductive. The King assessed that sanctions could help weaken the government, but only if they are strong and sustained.[12]

In 2006, Iranian Supreme Leader Khamenei had sent his adviser Ali Akbar Velayati with a letter asking for Abdullah's agreement to establish a formal back channel for communication between the two leaders. Abdullah said he had agreed, and the channel was established with Velayati and Saud Al-Faisal as the points of contact. In the years since, the King noted, the channel had never been used.[36]

Guantánamo Bay

In December 2010, leaked diplomatic cables published by WikiLeaks revealed that Abdullah wanted all detainees released from the Guantanamo Bay detention camp to be tracked through an implanted microchip, in a similar way to race horses. The King made the private suggestion during a meeting in Riyadh in March 2009 with John O. Brennan, the White House counter-terrorism adviser. Brennan replied that "horses don't have good lawyers" and that such a proposal would "face legal hurdles" in the United States. In the same cables it was revealed that Abdullah also privately urged the United States to attack Iran to destroy its nuclear weapons program.[30][37]

China

Since Abdullah's visit to Beijing in January 2006, the Saudi-Chinese relationship has focused predominantly on energy and trade. The king's visit was the first by a Saudi head of state to China since the two countries established diplomatic relations in 1990. [38][39] Bilateral trade with China has more than tripled, and China will soon be Saudi Arabia's largest importer. Saudi Arabia has also committed significant investments in China, including the $8 billion Fujian refinery. Based on the cablegate wikileaks report: The King has told the Chinese that it is willing to effectively trade a guaranteed oil supply in return for Chinese pressure on Iran not to develop nuclear weapons.[12]

Foreign relations with other nations

In a November 2009, the King was received by Nicolas Sarkozy who committed various diplomatic faux pas. The diplomatic relationship Jacques Chirac had with Saudi Arabia was not evident with Sarkozy.[40][40] In January 2011, the Kingdom granted asylum to the ousted Tunisian leader, Zine El-Abidine Ben Ali, under conditions of no further political involvement.[28]

Saudi Arabia, by the endorsement of the Gulf Cooperation Council, sent 1200 troops to Bahrain to protect industrial facilities which resulted in a strained relations with the United States. It should be mentioned that the forces sent were not Saudi forces but rather a coalition from a multitude of Arab Gulf countries. The military personnel sent were part of the Peninsula Shield forces who are stationed in Saudi Arabia but not affiliated with one country alone.[19][41][42][43]

According to leaked cables, he was more receptive than Crown Prince Sultan, to Yemeni President Saleh.[44]

He has supported renewed diplomatic relations with the Syrian government and Bashar al-Assad. Assad attended the opening of King Abdullah University of Science and Technology in October 2009. In August, 2011, he recalled the Saudi Ambassador from Damascus due to the political unrest in Syria.

In December 2011 Abdullah called on leaders of the Gulf Cooperation Council to strengthen their alliance into a united “single entity” as they confront threats to national security. “I ask you today to move from a stage of cooperation to a stage of union in a single entity,” Abdullah said at the opening session of a GCC meeting in Riyadh in comments aired on Saudi state television. “No doubt, you all know we are targeted in our security and stability.”[45]

Criticism

On February 16, 2003, Parade Magazine's David Wallechinsky rated King Fahd and Crown Prince Abdullah as the second worst dictator in the world.[46] Most of this criticism stems from the fact that most of his citizens live under a strict Wahhabist interpretation of Sharia law, which mandates the amputation of hands as a punishment for theft and floggings for crimes like drunkenness.[47] Execution by public beheading is common for murder, rape, drug trafficking, and witchcraft, and Abdullah's policies towards the rights of women have also been criticized. In a slight rebuff to accusations of human rights violations, Saudi inmates of Najran sent the King well-wishes from jail and wished him a speedy recovery.[48]

Abdullah has also been criticized for his policies on religious freedom, which is reportedly non-existent, and the Saudi government allegedly has arrested Shiite pilgrims on the Hajj.[47] On January 24, 2007, Human Rights Watch sent an open letter to King Abdullah asking him to cease religious persecution of the Ahmadi faith in Saudi Arabia. Two letters were sent in November 2006 and February 2007 asking him to remove the travel ban on critics of the Saudi government.[49] Human Rights Watch has not yet indicated whether they have received any response to these letters.

On October 30, 2007, during a state visit to the United Kingdom, Abdullah was greeted by protesters accusing him of being a "murderer" and a "torturer". Concerns were raised in the UK about the treatment of women and homosexuals by the Saudi kingdom. Concerns were also raised over alleged bribes involving arms deals between Saudi Arabia and the UK.[50]

Succession to the throne

Further information: Line of succession to the Saudi Arabian throne

King Abdullah's half brother Crown Prince Sultan was his heir-apparent until his death on October 22, 2011. The current Crown Prince is Sultan's full brother, Prince Nayef[51]

In 2006, Abdullah set up the Allegiance Council, a body that is composed of the sons and grandsons of Saudi Arabia's founder, King Abdul-Aziz, to vote by a secret ballot to choose future kings and crown princes. The council's mandate was not to have started until after the reigns of both Abdullah and Sultan were over. It was not clear, what was to happen, when Sultan died before the end of Abdullah's reign, leaving a question as to whether the council would vote for a new crown prince, or whether Nayef would automatically fill that position. Prince Nayef was appointed Crown Prince on October 27, 2011 after consultation with the Allegiance Council by Abdullah.[52]

In November 2010, Prince Nayef chaired a cabinet meeting because of the deterioration of the King's health.[53] During the same month, King Abdullah transferred his duties as Commander of the Saudi National Guard to his son Prince Mutaib. Abdullah is credited with building up the once largely ceremonial unit into a modern 260,000-strong force that is a counterweight to the army. The Guard, which was Abdullah's original power base, protects the royal family. This was suggested as an apparent sign that the elderly monarch is beginning to lessen some of his duties.[54]

Various positions

King Abdullah was Commander of the Saudi National Guard from 1963 to 2010. He is Chairman of the Supreme Economic Council, President of the High Council for Petroleum and Minerals, President of the King Abdulaziz Center For National Dialogue, Chairman of the Council of Civil Service, and head of the Military Service Council.

Personal life

Family

Abdullah is the sixth son (out of 37 sons) of King Abdul-Aziz,[*citation needed*] the founder of modern Saudi Arabia, to ascend to the throne. He is, after his half-brothers Bandar and Musaid, the third eldest of the living sons of Abdul-Aziz.

His mother is a فهدة العاصي الشريم Al-Rashidi, longtime rivals of the Al Saud.[55] He has had thirteen wives, and has fathered at least thirty-five children. [56] His youngest son was born in 2003.[57] His son Prince Mutaib is the Commander of the National Guard. His son Prince Mishaal is the Governor of the Najran Province.[58] His daughter Princess Adila is married to Prince Faisal bin Abdullah bin Muhammad, the new Education Minister appointed in 2009. Adila is one of the few Saudi princesses with a semi-public role and a known advocate of women's right to drive.[59] His son Prince Abdul-Aziz is his Syrian adviser.[60] His son Faisal is the head of the Saudi Arabian Red Crescent Society. His son Khaled is Deputy Commander of the Saudi Arabian National Guard West. One of his daughters is married to a Aal Al Khalifa royal of Bahrain.

Health

The king has curtailed his activities since June 2010 with no clear explanation. Diplomats said there has been uncertainty about the extent of his health problems since Abdullah canceled a visit to France. In a television appearance in which he was seen to use a cane, King Abdullah said he was in good health but had something "bothering" him.

In November 2010, his back problems came to light in the media. He had an "accumulation of blood" around the spinal cord. He suffered from a herniated disc and was told to rest by doctors. Later, an expected—but never officially announced—visit by then Egyptian President Hosni Mubarak became a phone call between the two leaders instead.[61] He was admitted to New York-Presbyterian Hospital after a blood clot complicated a slipped disc and underwent successful back surgery. The surgeons probably removed the herniated disk and performed a lumbar fusion.[62][63][64] He had another successful surgery in which surgeons "stabilized a number of vertebras".[65] He left the hospital on December 21 and convalesced at the New York Plaza Hotel.[66] On January 22, he left the United States and went to Morocco.[67] He then returned to the Kingdom on 23 February 2011.[68][69]

Saudi authorities have been unusually open in going public with the king's condition, apparently in an effort to prevent any speculation and reassure allies of the key Mideast nation and oil power. Personal issues within the royal family are often kept under strict wraps.[70] To maintain the Kingdom's stability, Crown Prince Sultan returned from Morocco at the time.[71]

Philanthropy

- King Abdullah paid for the separation surgery of a pair of Polish conjoined twins, which took place at the King Abd al-Aziz Medical City in Riyadh on January 3, 2005. He was given "honorary citizenship" by the Polish town of Janikowo, where the twins were born. On March 18, 2005, he was awarded the Order of the Smile (which he received during his visit to Poland in 2007).
- He has established two libraries, the King Abdulaziz Library in Riyadh and another in Casablanca, Morocco.
- He donated over $300,000 to furnish a New Orleans high school rebuilding after Hurricane Katrina.
- He donated half a billion dollars to the United Nations World Food Programme in 2008
- He has donated $50 million in cash and $10 million worth of relief materials for the 2008 Sichuan earthquake in China.[72]
- He donated $10 billion to the endowment fund of the King Abdullah University of Science and Technology in May 2008.[73]
- He established the King Abdullah University (Rawalakot) in Pakistan's Azad Jammu and Kashmir region after the 2005 Kashmir earthquake.
- On February 5, 2011, he waived $156 million USD of housing loans for nearly 3,300 Saudis who had died.[74]

Wealth

His wealth and personal income is estimated at US$21 billion, ranking him as one of the richest royals in the world.[5]

House of Saud

From Wikipedia, the free encyclopedia

The **House of Saud** (Arabic: آل سعود *Āl Su'ūd*), also called the **Al Saud**, is the ruling royal family of Saudi Arabia and one of the wealthiest and most powerful dynasties in the world. The family holds thousands of members. It is composed of the descendants of Muhammad ibn Saud and his brothers, though the ruling faction of the family is primarily led by the descendants of Abdulaziz ibn Abdul Rahman Al Saud. The family advocates Salafi Islam and unification of Arabia.[1]

The most influential member of the family is the King of Saudi Arabia. The line of succession to the Saudi throne is not father-son but brother-brother of the children of King Abdul-Aziz. The family is estimated to be composed of 15,000 members. Most power and wealth resides amongst the 2000 or so descendants of King Abdul-Aziz.[2][3]

The House of Saud has gone through three phases: the First Saudi State, the Second Saudi State, and the modern nation of Saudi Arabia. The First Saudi State marked the expansion of Salafi Islam. The Second Saudi State was marked with continuous infighting. The modern nation of Saudi Arabia wields considerable influence in the Middle East. The family has had conflicts with the Ottoman Empire, the Sharif of Mecca, and the Al Rashid family of Ha'il.

Title

House of Saud is a translation of *Al Saud*. The latter is an Arabic dynastic name formed by adding the word *Al*, meaning "family of" or "House of",[4] to the personal name of an ancestor. In the case of the Al Saud, this is the father of the dynasty's 18th century founder, Muhammad ibn Saud (Muhammad, son of Saud).[5]

Genealogical table of the leaders of the Āl Saud

Today, the surname "Al Saud" is carried by any descendant of Muhammad ibn Saud or his three brothers Farhan, Thunayyan, and Mishari. Al Saud's other family branches are called cadet branches. Members of the cadet branches hold high and influential positions in government though they are not in line of succession to Saudi throne. Many cadet members intermarry within the Al Saud to reestablish their lineage and continue to wield influence in the government.

Sons and grandsons of King Abdul-Aziz are referred to in the style "His Royal Highness" (HRH), differing from the royals belonging to the cadet branches which are called "His Highness" (HH).

History

Origins and early history

The earliest recorded ancestor of the Al Saud was Mani' ibn Rabiah Al-Muraydi. He settled in Diriyah in 1446–7 with his clan, the Mrudah. Mani was invited by a relative named Ibn Dir. Ibn Dir was the ruler of a set of villages and estates that make up modern-day Riyadh. Mani's clan had been on a sojourn in east Arabia, near al-Qatif, from an unknown point in time. Ibn Dir handed Mani two estates called al-Mulaybeed and Ghusayba. Mani and his family settled and renamed the region "al-Diriyah", after their benefactor Ibn Dir.[6][7]

The Mrudah became rulers of al-Diriyah, which prospered along the banks of Wadi Hanifa and became an important Najdi settlement. As the clan grew larger, power struggles ensued, with one branch leaving to nearby Dhruma, while another branch (the "Al Watban") left for the town of az-Zubayr in southern Iraq. The Al Migrin became the ruling family among the Mrudah in Diriyah.

First Saudi State

Main article: First Saudi State

Improve this page

The First Saudi State was founded in 1744. This period was marked by conquest of neighboring areas and by religious zeal. At its height, the First Saudi State included most of the territory of modern-day Saudi Arabia, and raids by Al Saud's allies and followers reached into Yemen, Oman, Syria, and Iraq. Islamic Scholars, particularly Muhammad ibn Abdul-Wahhab and his descendants, are believed to have played a significant role in Saudi rule during this period. The Saudis and their allies referred to themselves during this period as the *Muwahhidun* or *Ahl al-Tawhid* ("the monotheists"), so later they are referred as the Wahhabis.

Flag of the First Saudi State

Leadership of the Al Saud during the time of their first state passed from father to son without incident. The first imam, Muhammad ibn Saud, was succeeded by his eldest son Abdul-Aziz in 1765. Abdul-Aziz was killed in 1803 by an assassin, believed by some to have been a Shi'ite seeking revenge over the sacking of the Shi'ite holy city of Karbala by Saudi loyalists in 1802. Abdul-Aziz was in turn succeeded by his son, Saud, under whose rule the Saudi state reached its greatest extent. By the time Saud died in 1814, his son and successor Abdullah had to contend with an Ottoman-Egyptian invasion seeking to retake lost Ottoman territory and destroy the call to return to pure Islam. The mainly Egyptian force succeeded in defeating Abdullah's forces, taking over the Saudi capital of Diriyyah in 1818. Abdullah was taken prisoner and was soon beheaded by the Ottomans in Constantinople, putting an end to the First Saudi State. The Egyptians sent many members of the Al Saud clan and other members of the local nobility as prisoners to Egypt and Constantinople, and proceeded to raze the Saudi capital of Diriyyah.

Second Saudi State

Main article: Second Saudi State

A few years after the fall of Diriyyah in 1818, the Saudis were able to re-establish their authority in Najd, establishing what is now commonly known as the Second Saudi State, with its capital in Riyadh.

Flag of the Second Saudi State

Compared to the First Saudi State, the second Saudi period was marked by less territorial expansion (it never reconquered the Hijaz or 'Asir, for example) and less religious zeal, although the Saudi leaders continued to go by the title of *imam* and still employed Salafi religious scholars. The second state was also marked by severe internal conflicts within the Saudi family, eventually leading to the dynasty's downfall. In all but one instance succession occurred by assassination or civil war, the exception being the passage of authority from Faisal ibn Turki to his son Abdullah ibn Faisal ibn Turki.

The first Saudi to attempt to regain power after the fall of Dir'iyyah in 1818 was Mishari ibn Saud, a brother of the last ruler in Dir'iyyah. Mishari was soon captured by the Egyptians and killed. In 1824, Turki ibn Abdullah, another Saudi who had managed to evade capture by the Egyptians, was able to expel Egyptian forces and their local allies from Riyadh and its environs. Turki, a grandson of the first Saudi imam Muhammad ibn Saud, is generally regarded as the founder of the second Saudi dynasty and is also the ancestor of the kings of modern-day Saudi Arabia. He made his capital in Riyadh and was able to enlist the services of many relatives who had escaped captivity in Egypt, including his son Faisal.

Turki was assassinated in 1834 by Mishari ibn Abdul-Rahman, a distant cousin. Mishari was soon besieged in Riyadh and later executed by Turki's son, Faisal, who went on to become the most prominent ruler of the Saudis' second reign. Faisal, however, faced a re-invasion of Najd by the Egyptians four years later. The local population was unwilling to resist, and Faisal was defeated and taken to Egypt as a prisoner for the se

Improve this page

The Egyptians installed Khalid ibn Saud as ruler in Riyadh and supported him with Egyptian troops. Khalid was the last surviving brother of the last imam of the First Saudi State, and had spent many years in the Egyptian court. In 1840, however, external conflicts forced the Egyptians to withdraw all their presence in the Arabian Peninsula, leaving Khalid with little support. Seen by most locals as nothing more than an Egyptian governor, Khalid was toppled soon afterwards by Abdullah ibn Thuniyyan, of the collateral Al Thuniyyan branch. Faisal, however, had been released that year, and, aided by the Al Rashid rulers of Ha'il, was able to retake Riyadh and resume his rule. Faisal later appointed his son Abdullah as crown prince, and divided his dominions between his three sons Abdullah, Saud, and Muhammad.

Upon Faisal's death in 1865, Abdullah assumed rule in Riyadh but was soon challenged by his brother, Saud ibn Faisal. The two brothers fought a long civil war, in which they traded rule in Riyadh several times. Previously a vassal of the Saudis, Muhammad ibn Abdullah ibn Rashid of Hail took the opportunity to intervene in the conflict and increase his own power. Gradually, Ibn Rashid extended his authority over most of Najd, including the Saudi capital, Riyadh. Ibn Rashid finally expelled the last Saudi leader, Abdul-Rahman bin Faisal, from Najd after the Battle of Mulayda in 1891.

Saudi Arabia

Main articles: Unification of Saudi Arabia and Saudi Arabia

After his defeat at Mulayda, Abdul-Rahman ibn Faisal went with his family into exile in the deserts of eastern Arabia among the Al Murra bedouin. Soon afterward, however, Abdul-Rahman found refuge in Kuwait as a guest of the Kuwaiti emir, Mubarak Al Sabah. In 1902, Abdul-Rahman's son, Abdul-Aziz, took on the task of restoring Saudi rule in Riyadh. Supported by a few dozen followers and accompanied by some of his brothers and relatives, Abdul-Aziz was able to capture Riyadh's Masmak fort and kill the governor appointed there by Ibn Rashid. Abdul Aziz, reported to have been barely 20 at the time, was immediately proclaimed ruler in Riyadh. As the new leader of the House of Saud, Abdul-Aziz became commonly known from that time simply as "Ibn Saud".

Ibn Saud spent the next three decades trying to re-establish his family's rule over as much of the Arabian Peninsula as possible, starting with his native Najd. His chief rivals were the Al Rashid clan in Ha'il, the Sharifs of Mecca in the Hijaz, and the Ottoman Turks in al-Hasa. Ibn Saud also had to contend, however, with the descendants of his late uncle Saud ibn Faisal (later known as the "Saud al-Kabir" branch of the family), who posed as the rightful heirs to the throne. Though for a time acknowledging the sovereignty of the Ottoman Sultans and even taking the title of *pasha*, Ibn Saud allied himself to the British, in opposition to the Ottoman-backed Al Rashid. For the period between 1915 and 1927, Ibn Saud's dominions were a protectorate of the British Empire, pursuant to the 1915 Treaty of Darin.

By 1932, Ibn Saud had disposed of all his main rivals and consolidated his rule over much of the Arabian Peninsula. He declared himself king of the Kingdom of Saudi Arabia that year. Previously, he had gone through several titles, starting with "Sultan of Najd" and ending with "King of Hijaz and Najd and their dependencies." Ibn Saud's father, Abdul Rahman retained the honorary title of "imam." A few years later, in 1937, American surveyors discovered near Dammam what later proved to be Saudi Arabia's vast oil reserves. Before the discovery of oil, many family members were destitute.[8]

Ibn Saud fathered dozens of sons and daughters by his many wives. He had at most only four wives at one time. He divorced and married many times. He made sure to marry into many of the noble clans and tribes within his territory, including the chiefs of the Bani Khalid, Ajman, and Shammar tribes, as well as the Al ash-Sheikh (descendants of Muhammad ibn Abd al-Wahhab). He also arranged for his sons and relatives to enter into similar marriages. He appointed his eldest surviving son, Saud as heir apparent, to be succeeded by the next eldest son.

Improve this page

Faisal. The Saudi family became known as the "royal family," and each member, male and female, was accorded the title of *amir* or *amira* ("prince" or "princess"), respectively.

Ibn Saud died in 1953, after having cemented an alliance with the United States in 1945. He is still celebrated officially as the "Founder," and only his direct descendents may take on the title of "his or her Royal Highness." The date of his recapture of Riyadh in 1902 was chosen to mark Saudi Arabia's centennial in 1999 (according to the Islamic lunar calendar).

Upon Ibn Saud's death, his son Saud assumed the throne without incident, but his lavish spending led to a power struggle between him and the new crown prince, Faisal. In 1964, the royal family forced Saud to abdicate in favor of Faisal, aided by an edict from the country's grand mufti. During this period, some of Ibn Saud's younger sons, led by Talal ibn Abdul Aziz defected to Egypt, calling themselves the "Free Princes" and calling for liberalization and reform, but were later induced to return by Faisal. They were fully pardoned but were also barred from any future positions in government.

Faisal was assassinated in 1975 by a nephew, Faisal ibn Musaid, who was then promptly executed. Another brother, Khalid assumed the throne. The next prince in line had actually been Muhammad, but Muhammad had relinquished his claim to the throne in favor of Khalid, who was his only full brother.

Khalid died of a heart attack in 1982, and was succeeded by Fahd, the eldest of the powerful "Sudairi Seven", so-called because they were all sons of Ibn Saud's wife, Hassa al-Sudairi. Fahd did away with the previous royal title of "his Majesty" and replaced it with the honorific "Custodian of the Two Holy Mosques," in reference to the two Islamic holy sites in Mecca and Medina.

A stroke in 1995 left Fahd largely incapacitated, and the crown prince, Abdullah gradually took over most of the king's responsibilities until Fahd's death in August 2005. Abdullah was proclaimed king on the day of Fahd's death and promptly appointed his younger brother Sultan bin Abdul-Aziz, the minister of defense and Fahd's "Second Deputy Prime Minister," as the new heir apparent. Sultan passed away in October 2011. On 27 March 2009 Abdullah appointed Prince Naif Interior Minister as his "second deputy prime minister"

Political power

The Head of the House of Saud is the King of Saudi Arabia who serves as Head of State and monarch of the Kingdom of Saudi Arabia. The King holds almost absolute political power. The King appoints ministers to his cabinet who supervise their respective ministries in his name. The key ministries of Defense, the Interior, and Foreign Affairs are reserved for the Al Saud, as are most of the thirteen regional governorships. Most portfolios, however, such as Finance, Labor, Information, Planning, Petroleum Affairs and Industry, have traditionally been given to commoners, often with junior Al Saud members serving as their deputies. House of Saud family members also hold many of the Kingdom's critical military and governmental departmental posts. Ultimate power in the Kingdom has always rested upon the Al Saud, though support from the Ulema, the merchant community, and the population-at-large has been key to the maintenance of the royal family's political status quo.

Long term political and government appointments, such as those of King Abdullah, who has been Commander of the National Guard since 1963, Crown Prince Sultan, Minister of Defence & Aviation since 1962, Prince Mutaib Minister of Municipal & Rural Affairs from 1975 until his resignation in 2009, Prince Nayef who has been the Minister of Interior since 1975, and Prince Salman, who has been Governor of the Riyadh Region since 1962, have perpetuated the creation of fiefdoms where senior princes have, often, though not exclusively, co-mingled their personal wealth with that of their respective domains. They have often appointed their own sons to senior positions within their own fiefdom. Examples of these include Prince Mutaib bin Abdullah as Assistant Commander in the National Guard; Prince Khalid bin Sultan as Assistant Minister of Defe

Improve this page

ibn Mutaib as Assistant Minister for Municipal & Rural Affairs until he replaced his father in 2009; and Prince Mohammed ibn Nayef as Assistant Minister in the Interior Ministry. In cases, where portfolios have notably substantial budgets, appointments of younger, often full, brothers have been necessary, as deputies or vice ministers, ostensibly to share the wealth and the burdens of responsibility, of each fiefdom. Examples of these include Prince Abdul Rahman who is Vice Minister of Defence & Aviation under Prince Sultan; Prince Badr, Deputy to King Abdullah in the National Guard; Prince Sattam, who is Deputy to Riyadh Governor, Prince Salman; and Prince Ahmed, who holds the Deputy Minister's portfolio in Prince Nayef's Interior Ministry.

Unlike Western royal families, the Saudi Monarchy has not had a clearly defined order of succession. Historically, upon becoming King, the monarch has designated an heir apparent to the throne who serves as Crown Prince of the Kingdom. Upon the King's death the Crown Prince becomes King, and during the King's incapacitation the Crown Prince, likewise, assumes power as regent. Though other members of the Al Saud hold political positions in the Saudi government, technically it is only the King and Crown Prince who legally constitute the political institutions.

Succession

Main article: Line of succession to the Saudi throne

Wealth

The sharing of family wealth has been a critical component in maintaining the semblance of a united front within the royal family. An essential part of family wealth is the Kingdom in its physical entirety, which the Al Saud view as a totally owned family asset. Whether through the co-mingling of personal and state funds from lucrative government positions, huge land allocations, direct allotments of crude oil to sell in the open market, segmental controls in the economy, special preferences for the award of major contracts, outright cash handouts, and astronomical monthly allowances—all billed to the national exchequer—all told, the financial impact may have exceeded 40% of the Kingdom's annual budget during the reign of King Fahd. Over decades of oil revenue-generated expansion, estimates of royal net worth is at well over $1.2 trillion.[9] This method of wealth distribution has allowed many of the senior princes and princesses to accumulate largely unauditable wealth and, in turn, pay out, in cash or kind, to lesser royals and commoners, and thereby gaining political influence through their own largesse.

During periods of high oil prices as were the late 1970s, the early 1980s, and again, immediately after the 2003 US invasion of Iraq, national income has outpaced the developmental needs and social obligations of the Saudi government and the effects of royal skimming were diminished. According to well-publicized but unsubstantiated reports, King Abdullah has intentions to reduce the Al Saud share of the budget, an act which may sow discontent within the royal family, but would be popular with the Kingdom's citizenry.

Opposition to the House of Saud

Internal opposition

Due to its authoritarian and theocratic rule, the House of Saud has attracted much criticism during its rule of Saudi Arabia. Its opponents generally refer to the Saudi monarchy as totalitarians or dictators.

There have been numerous incidents of demonstrations and other forms of resistance against the House of Saud. These range from the Ikhwan uprising during the reign of Ibn Saud, to numerous coup atte

Improve this page

branches of the Kingdom's military. On 20 November 1979 the Holy Sanctuary in Mecca was violently seized by a group of dissidents. The seizure was carried out by 500 heavily armed and provisioned Saudi dissidents, consisting mostly of members of the former Ikhwan tribe of Utayba[10] but also of other peninsular Arabs and a few Egyptians enrolled in Islamic studies at the Islamic University of Medina.

The seizure was led by Juhayman al-Otaibi and Muhammad ibn 'Abdallah al-Qahtani who cited the corruption and ostentatiousness of the ruling house of Saud. Utaybi and his group spoke against the socio–technological changes taking place in Saudi Arabia. Utaybi demanded that oil should not be sold to the United States.[11]

Utaybi received little mass support outside of small circles of workers and students of tribal origin, and foreign labourers (from Egypt, Yemen and Pakistan.) The Saudi royal family turned to the Ulema who duly issued a fatwa permitting the storming of the holy sanctuary. Saudi forces, aided by French and Pakistani special ops units, took two weeks to flush the rebels out of the holy sanctuary; the use of French commandos was surprising since, officially, non-Muslims may not enter the city of Mecca.[12]

Saudi forces with the aid of Pakistani Special Services units ejected Utaybi's Group. All surviving males (including Juhaiman ibn Muhammad ibn Saif al Utaybi) were beheaded publicly in four cities of Saudi Arabia.[13]

Most notable current members

Improve this page

Sons of King Abdul-Aziz

- Bandar bin Abdul-Aziz (born 1923) – Has never held a government post but considered close to King Abdullah. Religious, and possibly a recluse.
- Musaid bin Abdul-Aziz (born 1923) – His older son, Khalid, was killed in a shootout with police in the early 1960s while demonstrating against the Kingdom's introduction of television. His younger son, Faisal, was King Faisal's assassin a decade later, for which he was beheaded. Mus'aid is religious, eccentric and a recluse. King Abdullah visited him in a Riyadh hospital in March 2009.[14]
- Mishaal bin Abdul-Aziz (born 1926) – Former Minister of Defense & Governor of Makkah Province. Close confidant of King Abdullah, and Chairman of the Allegiance Council, Mishaal is one of the Kingdom's wealthiest royals with extensive interests in real estate and a wide range of business interests.
- Abdul-Rahman ibn Abdul-Aziz (born 1931) – Former Deputy Defense Minister from 1978–2011, (relieved of this position 5 November 2011), after replacing younger brother, Turki in 1978, who was reportedly unfit for the position. Among the wealthiest royals[*citation needed*] with extensive business interests. With full brother, Crown Prince Sultan's recent death, and waning desire for greater power, Abdul-Rahman has reinforced his influence in the royal family, emerging as the preeminent member of the royal family's Sudairi faction.
- Mutaib ibn Abdul-Aziz (born 1931) – Minister for Municipal & Rural Affairs from 1975 until 2009, and former Governor of Makkah. His profile and influence have greatly increased due to a lengthy tenure in government and a long-standing family alliance with King Abdullah and his only surviving full brother, Mishaal.
- Talal ibn Abdul-Aziz (born 1931) – Has held the ministerial portfolios for Finance and Communications. Major businessman, special envoy to UNESCO and Chairman of AGFUND. Not considered a contender for the throne as a result of his leading role in the Free Princes movement of 1958 which sought government reform, and his 2011 resignation from the Allegiance Council. Father of Al-Waleed bin Talal.
- Badr bin Abdul-Aziz (born 1933) – Long-time Deputy Commander of National Guard. Participated in the Free Princes movement in 1958 and rehabilitated by King Faisal a decade later.
- Nawwaf bin Abdul-Aziz (born 1933) – Senior advisor of King Abdullah, former Minister of Finance and, briefly, Director General of the General Intelligence Directorate. Has substantial business holdings.
- Nayef bin Abdul-Aziz Al Saud (born 1933) – Crown Prince, First Deputy Prime Minister, and long-time powerful Minister of Interior.
- Turki II bin Abdul-Aziz Al Saud (born 1934) – Businessman after he was forced to resign as Deputy Minister of Defence in 1978.
- Abdul-llah ibn Abdul-Aziz Al Saud (born 1935) – Former Governor of Al Jawf Province. Appointed Special Advisor to King Abdullah in 2008.
- Salman bin Abdul-Aziz Al Saud (born 1936) – Former Governor (1962–2011) of Riyadh Region. Minister of Defense November 2011. Is considered a mediator between differing Royal Family factions. Diminishing health, and the death of his two oldest sons within a twelve-month period had, reportedly, dampened a desire for the throne. However following appointment as Minister of Defense, November 2011, this situation appears to have altered.
- Ahmed bin Abdul-Aziz (born 1940) – Deputy Minister of Interior, with a reputation for "getting the job done", since 1975.
- Mamdouh ibn Abdul-Aziz (born 1940) – Former Governor of Tabuk region who was removed from the post by King Fahd for insubordination. Later Director of Saudi Center of Strategic Studies.
- Sattam bin Abdul-Aziz (born 1941) – Governor of Riyadh region from November 2011.Former Deputy Governor of Riyadh region 1978-2011.
- Muqrin bin Abdul-Aziz Al Saud (born 1945) – Director General of the General Intelligence Directorate. Former Governor for Ha'il and Madinah regions.
- Hidhlul ibn Abdul-Aziz (born 1941)

- Lulu Al-Saud

Grandsons of Abdul-Aziz ibn Saud

- Muhammed ibn Saud (born 1934) – Governor of Al Bahah Province.
- Abdallah ibn Khalid (born 1935) – Chairman of the King Khalid Foundation.
- Mohammed ibn Faisal (born 1937) – Former Deputy minister for Agriculture. Founder and Chairman of DMI Trust and the Faisal Islamic Bank Group; member of the Board of Trustees for the King Faisal Foundation. Oldest son of Queen Iffat.
- Khalid al Faisal (born 1941) – poet, Governor of the Makkah Province and Managing Director of the King Faisal Foundation.
- Saud al Faisal (born 1941) – Long-serving Foreign Minister and close confidant of King Abdullah. May have stepped aside as a succession candidate due to possibly debilitating health concerns but is highly respected both inside the kingdom and internationally. Member of the Board of Trustees for the King Faisal Foundation.
- Mutaib ibn Abdullah (born 1953) – Assistant Commander of the National Guard.
- Faisal ibn Bandar (born 1943) – Governor of Qasim Province.
- Turki al Faisal (born 1945) – Adept former Ambassador to Washington D.C. until his surprise resignation on December 11, 2006. Has received intense western media criticism for allegedly mishandling the growth of Al Qaeda during his long tenure as the head of Saudi Arabia's General Intelligence Directorate, where he oversaw Saudi Arabia's official and non official aid to the Mujahideen fighters during the Afghan Civil War. His short tenure as Ambassador to Britain received wide accolades for his professionalism. Member of the Board of Trustees for the King Faisal Foundation.
- Saud ibn Abdul Mohsin (born 1947) – Low-profile well-regarded Governor of Ha'il Province. Father was Prince Abdul Mohsin ibn Abdul Aziz (1925–1985), much loved and respected Governor of Madinah.
- Khalid bin Sultan (born 1949) – Deputy Minister of Defense November 2011.. Led Saudi military forces during first Gulf War. Considered both competent and arrogant but accumulation of extensive assets and wealth through his positions in government may hinder political future.
- Muhammad bin Fahd (born 1950) – Competent governor of the Eastern Province and son of late King Fahd. His vast business interests, much of it acquired from his position, may be a negative factor for future roles.
- Bandar bin Sultan (born 1950) – Former long-serving Ambassador to US, maintaining close relations with the Bush Family and others across the political spectrum. Reportedly used his position to accumulate great wealth which, in addition to Bandar's lack of in-country popularity,[*citation needed*] may deter family consensus supporting future roles. King Abdullah, whose support he enjoys, appointed Bandar Secretary-General of the newly created National Security Council in October 2005.
- Mohammed ibn Nawwaf (born 1953) – Saudi Ambassador to London. Gained kudo

Improve this page

Ambassador to Italy. His growing prominence is closely connected to King Abdullah's trust and confidence in his father, Prince Nawwaf.

- Al-Waleed bin Talal (born 1955) – Has gained stature as a world-class investor and is consistently ranked among *Forbes* magazine's wealthiest billionaires.[*citation needed*] Source of wealth reported to include private investments from other royals.
- Saud ibn Nayef (born 1956) – Head of the Court of Crown Prince 2011. Former Saudi Ambassador to Spain. Former Deputy Governor of the Eastern Province.
- Sultan ibn Salman (born 1956) – Former astronaut (1985) and Secretary General of the Supreme Commission for Tourism since 2000 with his current term extended to 2012.[15]
- Muhammad bin Nayef (born 1959) – Assistant Minister for Security Affairs in the Interior Ministry. He has taken over many of his father, Prince Nayef's, duties including the day-to-day operations against Al Qaeda.
- Faisal ibn Salman (born 1960) – Chairman of Saudi Research and Marketing Group, the Middle East's largest vertically integrated publishing group.[*citation needed*]
- Abdul Aziz bin Fahd (born 1973) – Youngest son of King Fahd. Minister of State and Cabinet Member though his power and political potential are in decline since his father's death in August 2005 - his finances remain controversial[*citation needed*] and substantial.

United Arab Emirates

From Wikipedia, the free encyclopedia

The **United Arab Emirates**,[7] abbreviated as the **UAE**, or shortened to "**the Emirates**",[8] is a country situated in the southeast of the Arabian Peninsula in Western Asia on the Persian Gulf, bordering Oman to the east and Saudi Arabia to the south, as well as sharing sea borders with Qatar to the west and Iran to the north.

The UAE is a federation of seven emirates (equivalent to principalities), each governed by a hereditary emir, with a single national president. The constituent emirates are Abu Dhabi, Ajman, Dubai, Fujairah, Ras al-Khaimah, Sharjah, and Umm al-Quwain. The capital is Abu Dhabi, which is also the state's center of political, industrial, and cultural activities.[9]

Prior to independence in 1971, the UAE was known as the Trucial States or Trucial Oman, in reference to a 19th-century truce between the local sheikhs, hereditary rulers of the territories, and the United Kingdom. The term *Pirate Coast* was also used by some to refer to the emirates from the 18th to the early 20th century, owing to the preponderance of pirates operating from Emirati ports.[10]

The UAE's political system, is based on its 1971 Constitution, which is composed of several intricately connected governing bodies. As a federation of seven monarchies, whose rulers retain absolute power within their emirates, but with a UAE president, it is neither a constitutional monarchy nor a republic. The *emirs* choose one of their members to be the president of the federation, but this does not alter the monarchical character of the government of the individual emirates. The constitution is concerned solely with the relations between the emirates as members of the federation, and does not prescribe a constitutional system of government.

Islam is the official religion of the UAE, and Arabic is the official language.[11]

UAE oil reserves are ranked as the world's sixth-largest[12] and it possesses one of the most developed economies in West Asia. It is the thirty-fifth-largest economy at market exchange rates, and ranks among the world's wealthiest nations with per capita GDP (PPP) of US$48,597.[13] It is 15th in purchasing power per capita and has a relatively high Human Development Index for the Asian continent, ranking thirtieth globally.[14] The UAE is classified as a high-income developing economy by the IMF.

1 The country's exact size is unknown because of disputed claims to several islands in the Persian Gulf, the lack of precise information on the size of many of these islands and that most of its land boundaries, especially with Saudi Arabia, remain un-demarcated.

History

Main article: History of the United Arab Emirates

The earliest known human habitation in the UAE dated from 5500 BC. At this early stage, there is proof of interaction with the outside world, particularly with civilizations to the north in Persia. These contacts persisted and became wide-ranging, probably motivated by trade in copper from the Hajar Mountains, which commenced around 3000 BC.[15] Foreign trade, the recurring motif in the history of this strategic region, flourished also in later periods, facilitated

An 18th century watchtower in Hatta

by the domestication of the camel at the end of the second millennium BC.[16]

By the 1st century AD overland caravan traffic between Syria and cities in southern Iraq began. Also, there was seaborne travel to the important port of Omana (present-day Umm al-Qaiwain) and then to India. These routes were an alternative to the Red Sea route used by the Romans.[17] Pearls had been exploited in the area for millennia but at this time the trade reached new heights. Seafaring was also a mainstay and major fairs were held at Dibba, bringing in merchants from as far as China.[18]

Advent of Islam

The arrival of envoys from the Islamic prophet Muhammad in 630 heralded the conversion of the region to Islam. After Muhammad, one of the major battles of the Ridda Wars was fought at Dibba resulting in the defeat of the non-Muslims and the triumph of Islam in the Arabian Peninsula.

In 637, Julfar (today Ra's al-Khaimah) was used as a staging post for the conquest of Iran. Over many centuries, Julfar became a wealthy port and pearling center from which dhows travelled throughout the Indian Ocean especially to neighboring land of Sindh and its cities of Thatta and Debal.

Portuguese control

See also: History of Oman and Economic history of Portugal

Portuguese expansion into the Indian Ocean in the early 16th century following Vasco da Gama's route of exploration saw them battle Safavid Persia up the coast of the Persian Gulf. The Portuguese controlled the area for 150 years, in which they conquered the inhabitants of the Arabian Peninsula.[19] Vasco da Gama was helped by Ahmad Ibn Majid, a navigator and cartographer from Julfar, to find the spice route from Asia.[20][21]

European domination

During the 16th century, piecemeal, the entire territory of the nation came under the direct influence of the European colonial empires, with the British eventually getting the upper hand. The region was known to the British as the "Pirate Coast", as raiders based there harassed the shipping industry despite both European and Arab navies patrolling the area from the 17th century into the 19th.[22] British expeditions to protect the Indian trade from raiders at Ras al-Khaimah led to campaigns against that headquarters and other harbours along the coast in 1819. The next year, a peace treaty was signed to which all the sheikhs of the coast adhered. Raids continued intermittently until 1835, when the sheikhs agreed not to engage in hostilities at sea. In 1853, they signed a treaty with the British, under which the sheikhs (the "Trucial Sheikhdoms") agreed to a "perpetual maritime truce." It was enforced by the United Kingdom, and disputes among sheikhs were referred to the British for settlement.[23]

Primarily in reaction to the ambitions of other European countries, the United Kingdom and the Trucial Sheikhdoms established closer bonds in an 1892 treaty, similar to treaties entered into by Britain with other principalities in the Persian Gulf. The sheikhs agreed not to dispose of any territory except to Britain and not to enter into relationships with any foreign government other than the United Kingdom without its consent. In return, the British promised to protect the Trucial Coast from all aggression by sea and to help in case of land attack.[24] British suppression of piracy meant that pearling fleets could operate in relative security. However,

Flag of the Trucial Coast

the British prohibition of the slave trade meant an important source of income was lost to some sheikhs and merchants.[25]

Pearling industry

During the 19th and early 20th centuries, the pearling industry thrived in the relative calm sea, providing both income and employment to the people of the Persian Gulf. It began to become a good economic resource for the local people. Then the First World War had a severe impact on the pearl fishery, but it was the economic depression of the late 1920s and early 1930s, coupled with the Japanese invention of the cultured pearl, that all but destroyed it. The industry eventually faded away shortly after the Second World War, when the newly independent Government of India imposed heavy taxation on pearls imported from the Arab states of the Persian Gulf.[26]

The decline of pearling resulted in a very difficult era, with little opportunity to build any infrastructure.

Dubai in the mid-20th century

Beginning of the oil era

At the beginning of the 1960s, the first oil company teams carried out preliminary surveys and the first cargo of crude was exported from Abu Dhabi in 1962. As oil revenues increased, ruler of Abu Dhabi, Zayed bin Sultan Al Nahyan, undertook a massive construction program, building schools, housing, hospitals and roads. When Dubai's oil exports commenced in 1969, Rashid bin Saeed Al Maktoum, the *de facto* ruler of Dubai, was also able to use oil revenues to improve the quality of life of his people.[27]

In 1955, the United Kingdom sided with Abu Dhabi in the latter's dispute with Oman over the Buraimi Oasis, another territory to the south.[28] A 1974 agreement between Abu Dhabi and Saudi Arabia would have settled the Abu Dhabi-Saudi border dispute; however, the agreement has yet to be ratified by the UAE government and is not recognized by the Saudi government. The border with Oman also remains officially unsettled, but the two governments agreed to delineate the border in May 1999.[29]

Zayed bin Sultan Al Nahyan and the union

In the early 1960s, oil was discovered in Abu Dhabi, an event that led to quick unification calls made by UAE sheikdoms. Zayed bin Sultan Al Nahyan became ruler of Abu Dhabi in 1966 and the British started losing their oil investments and contracts to U.S. oil companies.[30] The British had earlier started a development office that helped in some small developments in the emirates. The sheikhs of the emirates then decided to form a council to coordinate matters between them and took over the development office. They formed the Trucial States Council,[31] and appointed Adi Bitar, Sheikh Rashid bin Saeed Al Maktoum's legal advisor, as Secretary General and Legal Advisor to the Council. The council was terminated once the United Arab Emirates was formed.[32]

In 1968, the United Kingdom announced its decision, reaffirmed in March 1971, to end the treaty relationships with the seven Trucial Sheikhdoms which had been, together with Bahrain and Qatar, under British protection. The nine attempted to form a union of Arab emirates, but by mid-1971 they were still unable to agree on terms of union, even though the British treaty relationship was to expire in December of that year.[33]

Bahrain became independent in August, and Qatar in September 1971. When the British-Trucial Sheikhdoms treaty expired on December 1, 1971, they became fully independent.[34] The rulers of Abu Dhabi and Dubai decided to form a union between their two emirates independently, prepare a constitution, then call the rulers of the other five emirates to a meeting and offer them the opportunity to join. It was also agreed between the two that the constitution be written by December 2, 1971.[35] On that date, at the Dubai Guesthouse Palace, four other emirates agreed to enter into a union called the United Arab Emirates. Ras al-Khaimah joined later, in early 1972.[36][37]

Zayed bin Sultan Al Nahyan

The UAE supported military operations from the United States and other Coalition nations that are engaged in the war against the Taliban in Afghanistan (2001) and Saddam Hussein in Iraq (2003) as well as operations supporting the Global War on Terrorism for the Horn of Africa at Al Dhafra Air Base located outside of Abu Dhabi.[*citation needed*] The air base also supported Allied operations during the 1991 Persian Gulf War and Operation Northern Watch. The country had already signed a military defense agreement with the U.S. in 1994 and one with France in 1995.[*citation needed*]

On 2 November 2004, the UAE's first president, Sheikh Zayed bin Sultan Al Nahyan, died. His eldest son, Sheikh Khalifa bin Zayed Al Nahyan, succeeded as Emir of Abu Dhabi. In accordance with the constitution, the UAE's Supreme Council of Rulers elected Khalifa as president. Sheikh Mohammad bin Zayed Al Nahyan succeeded Khalifa as Crown Prince of Abu Dhabi.[38] In January 2006, Sheikh Maktoum bin Rashid Al Maktoum, the prime minister of the UAE and the ruler of Dubai, died, and the crown prince Sheikh Mohammed bin Rashid Al Maktoum assumed both roles.

Geography

Main article: Geography of the United Arab Emirates

The landscape of Sir Bani Yas Island

The United Arab Emirates is situated in Southwest Asia, bordering the Gulf of Oman and the Persian Gulf, between Oman and Saudi Arabia; it is in a strategic location along southern approaches to the Strait of Hormuz, a vital transit point for world crude oil.[39]

Geography of the UAE	
Coastline	1,318 km (819 miles)
Bordering countries	Saudi Arabia, and Oman

The UAE lies between 22°30' and 26°10' north latitude and between 51° and 56°25′ east longitude. It shares a 530-kilometer border with Saudi Arabia on the west, south, and southeast, and a 450-kilometer border with Oman on the southeast and northeast. The land border with Qatar in the Khawr al Udayd area is about nineteen kilometers in the northwest; however, it is a source of ongoing dispute.[40] Additionally, island disputes with Iran and Qatar remain unresolved.[41]

The largest emirate, Abu Dhabi, accounts for 87% of the UAE's total area (67,340 square kilometers). The smallest emirate, Ajman, encompasses

only 259 square kilometers (see figure).

A view of the desert landscape on the outskirts of Dubai

The UAE coast stretches for more than 650 kilometers along the southern shore of the Persian Gulf. Most of the coast consists of salt pans that extend far inland. The largest natural harbor is at Dubai, although other ports have been dredged at Abu Dhabi, Sharjah, and elsewhere. Numerous islands are found in the Persian Gulf, and the ownership of some of them has been the subject of international disputes with both Iran and Qatar. The smaller islands, as well as many coral reefs and shifting sandbars, are a menace to navigation. Strong tides and occasional windstorms further complicate ship movements near the shore. The UAE also has a stretch of the Al Bāṭinah coast of the Gulf of Oman, although the Musandam Peninsula, the very tip of Arabia by the Strait of Hormuz is an enclave of Oman within the UAE.

The mountainous region in the north

South and west of Abu Dhabi, vast, rolling sand dunes merge into the Rub al-Khali (Empty Quarter) of Saudi Arabia. The desert area of Abu Dhabi includes two important oases with adequate underground water for permanent settlements and cultivation. The extensive Liwa Oasis is in the south near the undefined border with Saudi Arabia. About 100 kilometers to the northeast of Liwa is the Al-Buraimi oasis, which extends on both sides of the Abu Dhabi-Oman border.

Prior to withdrawing from the area in 1971, Britain delineated the internal borders among the seven emirates in order to preempt territorial disputes that might hamper formation of the federation. In general, the rulers of the emirates accepted the British intervention, but in the case of boundary disputes between Abu Dhabi and Dubai, and also between Dubai and Sharjah, conflicting claims were not resolved until after the UAE became independent. The most complicated borders were in the Al-Hajar al-Gharbi Mountains, where five of the emirates contested jurisdiction over more than a dozen enclaves.

Flora and fauna

The oases grow date palms, acacia and eucalyptus trees. In the desert the flora is very sparse and consists of grasses and thornbushes. The indigenous fauna had come close to extinction because of intensive hunting, which has led to a conservation program on Bani Yas island initiated by Sheikh Zayed bin Sultan Al Nahyan in the 1970s, resulting in the survival of, for example, Arabian oryx and leopards. Coastal fish and mammals consist mainly of mackerel, perch and tuna, as well as sharks and whales.

Acacia trees growing in desert suburbs near Fujairah

Climate

Main article: Climate of the United Arab Emirates

The climate of the U.A.E is subtropical-arid with hot summers and warm winters. The hottest months are July and August, when average maximum temperatures reach above 40 °C (104.0 °F) on the coastal plain. In the Al Hajar Mountains, temperatures are considerably lower, a result of increased altitude.[42] Average minimum temperatures in January and February are between 10 and 14 °C (50 and 57.2 °F).[43] During the late summer months, a humid southeastern wind known as Sharqi (i.e. "Easterner") makes the coastal region especially unpleasant. The average annual rainfall in the coastal area is less than 120 mm (4.7 in), but in some mountainous areas annual rainfall often reaches 350 mm (13.8 in). Rain in the coastal region falls in short, torrential bursts

during the summer months, sometimes resulting in floods in ordinarily dry wadi beds.[44] The region is prone to occasional, violent dust storms, which can severely reduce visibility. The Jebel Jais mountain cluster in Ras al-Khaimah has experienced snow only twice since records began.[45]

Current President of the United Arab Emirates, Khalifa bin Zayed Al Nahyan

The politics of the United Arab Emirates take place in a framework of a federal, presidential system of a federation of absolute hereditary monarchies. The UAE is a federation of seven absolute monarchies: the emirates of Abu Dhabi, Ajman, Fujairah, Sharjah, Dubai, Ras al-Khaimah and Umm al-Qaiwain. The President of the United Arab Emirates is its head of state, and the Prime Minister of the United Arab Emirates is its head of government,[47] including foreign affairs, security and defense, nationality and immigration issues, education, public health, currency, postal, telephone and other communications services, air traffic control, licensing of aircraft, labor relations, banking, delimitation of territorial waters and extradition of criminals. All responsibilities not granted to the national government are reserved to the emirates.

The UAE government comprises three branches: the executive, legislature, and judiciary. The executive branch consists of the President, Vice President, Prime Minister, Federal Supreme Council, and a Council of Ministers (the cabinet). The Federal Supreme Council is composed of the emirs of the seven emirates. It elects the president, vice president, members of the Council of Ministers, and judges of the Federal Supreme Court. The Supreme Council also formulates government policy, proposes and ratifies national laws, and ratifies treaties.

Although elected by the Supreme Council, the president and prime minister are essentially hereditary. The emir of Abu Dhabi holds the presidency, and the emir of Dubai is prime minister. All but one prime minister served concurrently as vice president. The political influences and financial obligations of the emirates are reflected by their respective positions in the federal government. While each emirate still retains autonomy over its own territory, a percentage of its revenue is allocated to the UAE's central budget.[48]

Sheikh Zayed bin Sultan Al Nahyan was the UAE's president from the nation's founding until his death on November 2, 2004. On the following day the Federal Supreme Council elected his son, Sheikh Khalifa bin Zayed Al Nahyan, to the post. Abu Dhabi's crown prince, Mohammed bin Zayed Al Nahyan, is the heir apparent.[49]

The legislature is the Federal National Council (FNC), which consists of 40 members drawn from all the emirates. Half are appointed by the rulers of the constituent emirates, and the other half are indirectly elected to

serve two-year terms. The first indirect elections took place in 2006, and the goal is a wholly elected council. The council carries out the country's main consultative duties and has both a legislative and supervisory role provided by the constitution.[50] The council scrutinizes and amends proposed legislation, but cannot prevent it from becoming law. The main tasks of the FNC are:

- Discussing constitutional amendments and draft laws, which may be approved, amended or rejected
- Reviewing the annual draft budget of the federation
- Debating international treaties and conventions
- Influencing the Government's work through the channels of discussion, question and answer sessions, recommendations and following up on complaints

A constitutionally independent judiciary includes the Federal Supreme Court.[51] However, Dubai and Ras al-Khaimah do not belong to the national judiciary. All emirates have their own secular and Islamic law for civil, criminal, and high courts.[52]

In parallel to the economic developments of the UAE, the country's leaders have also initiated political reforms in order to further develop the political institutions. The political modernization process was envisaged in three stages: first, conduct elections to elect half the FNC members through an Electoral College; second expand the powers of the FNC and increase the number of FNC members, which would require extensive constitutional studies and possible modifications, at the end of which the political institution would be a more enabled body; and finally, an open election for half the council.

The purpose of the elections was to expand political participation and develop a culture of government reform. The limited scope of participation was conditioned by three reasons: (1) the country not having an electoral tradition, (2) the prevailing political tension and instability in the region meaning that there was no scope for error, and (3) elections in the region having proved to potentially be divisive affairs, based on sectarian and religious issues, which the UAE wanted to avoid.

In December 2008, the Supreme Council approved constitutional amendments both to empower the FNC and to enhance government transparency and accountability.[53]

United Arab Emirates Government

The United Arab Emirates (UAE) eGovernment is the extension of the UAE Federal Government in its electronic form. The UAE eGovernment enables convenient access to government information and services through innovative and customer-friendly delivery channels and streamlines the processes for quality and timely government service delivery. The UAE eGovernment engages modern tools in Information and Communication Technology to actively connect with its wide base of users from within the UAE and beyond. The setting up of the UAE eGovernment is a major step towards modernisation and upgradation of government functioning as it brings about a cost-effective, eco-friendly, transparent and participative government.

Law

Main article: Crime in the United Arab Emirates

The United Arab Emirates law originates from the old days of when the Emirates were a tribal society. Each of the seven Emirates have their own court system. This is comparable to the independent state court systems, in addition to the federal court system, in the United States of America. The federal court system is located in Abu Dhabi. Other systems of law are also in practice, such as in Abu Dhabi where an Open Court is held every Sunday. In Open Court, locals seek the aid of Sheikh Zayed bin Sultan Al Nahyan and his court for help in a

variety of issues such as bankruptcy or familial disputes.

Registration of corporate directors is secret in the UAE. A company disputing the takeover of a Seán Quinn asset in India by the Irish Bank Resolution Corporation, Mecon Manufacturing and Contracting FZE, is registered in the UAE.[54]

Human rights and social development

Main article: Human rights in the United Arab Emirates

See also: LGBT rights in United Arab Emirates

Human rights are legally protected by the Constitution of the United Arab Emirates, which confers equality, liberty, rule of law, presumption of innocence in legal procedures, inviolability of the home, freedom of movement, freedom of opinion and speech, freedom of communication, freedom of religion, freedom of council and association, freedom of occupation, freedom to be elected to office and others onto all citizens, within the limit of the law.[55]

Because of the rapid development of the UAE from a traditional society in the mid-20th century to a modernizing one at the beginning of the 21st century, the concurrent development of legal provisions and the practical enforcement of existing laws has been challenging and, in consequence, problems exist mainly in regard to human rights of non-citizens, who make up around 80% of the population. Main issues include companies' and employers' non-compliance with labor laws.

Many expatriate workers, mostly of South Asian origin, have after their arrival in the UAE been turned into debt-ridden *de facto* indentured servants.[56] Confiscation of passports, although illegal, occurs on a large scale, primarily of unskilled or semi-skilled employees.[57]

The UAE's system of employment for non-citizens ties an employee to the employer and prevents him or her from seeking alternative employment without the express approval of the original employer. Also, among employers of foreign labourers non-payment of wages, cramped and unsanitary living conditions and poor health and safety practices are widespread and have been the subject of foreign media attention.

Labourers often toil in intense heat with temperatures reaching 54 degrees celsius (129 degrees Fahrenheit) in the cities in August. Temperatures in the desert can be higher. Official temperatures are censored during the summer months – this is a common practice among all Gulf countries.[58] Although attempts have been made since 2009 to enforce a midday break rule, these are frequently flouted and apply only to a narrow section of labourers – only those who work in direct sunlight, which neglects the vast majority, for example, those who work on construction sites without air-conditioning or even adequate ventilation. Those labourers who do receive a midday break often have no suitable place to rest and are seen seeking shade under bridges or palm trees, where outdoor temperatures remain intolerable.[59]

In order to institutionalize the fight against human trafficking, including that of expatriate workers for blue collar jobs, the UAE government has devised a four-pillar strategy: (1) legislation, (2) enforcement (3) victim support, and (4) bilateral agreements and international cooperation. In 2007 the National Committee to Combat Human Trafficking was established, which serves as a coordinating agency. The UAE has ratified the United Nations Protocol to Prevent, Suppress and Punish Trafficking in Persons, especially Women and Children (Palermo Protocol).

The victim support program includes protection, counseling and rehabilitation. Police departments and non-Government organizations provide shelter and support for human trafficking victims until they are able to

acquire the right documents and many victims are then sent home at the Government's expense, under the Crime Victim Assistance Programme. These shelters include the Dubai Women's and Children's Foundation, which was established in July 2007, and Ewaa in Abu Dhabi, which opened in late 2008, as well as the Human Rights Care Department in Dubai and the Social Support Centre in Abu Dhabi, which have been operating for several years.[53]

The issue of sexual abuse among female domestic servants is an area of concern, particularly given that domestic servants are not covered by the UAE Labor Law of 1980 or the Draft Labor Law of 2007.[60] Worker protests have been cracked down on.[61] Until today, the government has not allowed for trade unions to form despite having promised to do so since 2004.[62]

As Sharia prohibits sodomy, homosexual relationships are not commonly disclosed. The UAE is much more moderate on homosexual punishment than many of its neighbors.[*citation needed*] The death penalty is never implemented for homosexuality, and rarely life imprisonment.[*citation needed*] Foreigners generally receive deportation, which is sometimes temporary.[63][64] Prospective foreign employees infected with hepatitis, tuberculosis, or HIV will not be given work visas and have to leave the country.[65][66] There is, however, no screening of tourists.

The UAE authorities on the federal and local level have instituted a number of mechanisms and policies to improve the protection of human rights.[*citation needed*] For example, in 2004, the Dubai police opened designated departments in all emirate police stations that are mandated to protect the human rights of both victims and perpetrators of crime.[67]

UN rapporteurs – one on the sale of children, child prostitution and child pornography, and the other on contemporary forms of racism, racial discrimination, xenophobia and related intolerance – visited the UAE separately and held discussions with various ministries, civil society organizations, academics and ordinary citizens. Commending the Government's 'cooperation and openness', a preliminary report of the rapporteur on racism said: "The recent review of the UAE by the Committee on the Elimination of Racial Discrimination and by the Universal Periodic Review of the Human Rights Council demonstrates that the authorities are willing to find ways and means of addressing human rights challenges faced by the people in the UAE and to ensure compliance with international human rights standards."

Efforts are under way to promulgate a draft national law for better protection of children, in line with the Convention on the Rights of the Child. The proposed law provides for the establishment of a hotline to respond to children's problems and encourages the establishment of associations or clubs specializing in child affairs, as well as calling for the appointment of a special judge to handle cases related to children.[53]

The *UAE National Human Rights Report*, prepared by a committee comprising representatives from various ministries and government institutions, with the participation of representatives from civil society and non-governmental organizations (NGOs), and presented to the UN Human Rights Council on 4 December 2008 outlines efforts in the field of human rights observance and listed challenges facing the country, such as the following:

- Providing more mechanisms to protect human rights, keeping up with national and international developments, and updating laws and systems
- Meeting the state's expectations with regards to building national capabilities and deepening efforts for education on human rights and basic freedoms through a national plan
- Striving to regulate the relationship between employers and workers in framework that preserves dignity and rights, and is in harmony with international standards, especially with regard to domestic help

- Increasing the empowerment of women's role in society, increasing opportunities for involvement in a number of fields
- Working to confront human trafficking crimes by reviewing the best international practices in the field, working to update and improve the state's legislature in accordance with international standards, working to establish institutions and agencies to confront human trafficking crimes, and working to support the foundations of international cooperation with international organizations and institutions.

The UAE government is currently studying the establishment of a national human-rights commission.[68][69] Mean wages were $45.61 per manhour in 2009.

Foreign policy and military

Main articles: Foreign relations of the United Arab Emirates and Military of the United Arab Emirates

The UAE's liberal climate towards foreign cooperation, investment and modernization has prompted extensive diplomatic and commercial relations with other countries. It plays a significant role in OPEC and the UN, and is one of the founding members of the Gulf Cooperation Council (GCC).

United Arab Emirates Air Force F-16 Block 60 taking off from the Lockheed Martin plant in Fort Worth, Texas

Regionally, the UAE has a very close relationship with other GCC members as well as most of the Arab countries. The Emirates have long maintained close relations with Egypt and remain the highest investor in the country from among the rest of the Arab world.[70] Pakistan has also been a major recipient of economic aid and relations have been extremely close since the founding of the federation. Pakistan had been first to formally recognize the UAE upon its formation and continues to be one of its major economic and trading partners with about 400,000 expatriates receiving employment in the UAE.[71][72] India's large expat community in the UAE also has over the centuries evolved into current close political, economic and cultural ties. The largest demographic presence in the Emirates is Indian.[73] Like most countries in the region, the UAE and Iran dispute rights to a number of islands in the Persian Gulf but this has not significantly impacted relations because of the large Iranian community presence and strong economic ties.[74]

Khalifa bin Zayed Al Nahyan with former Russian president, then Prime Minister, and now President again Vladimir Putin

Following the 1990 Iraq invasion of Kuwait, the UAE has maintained extensive relations with its allies for security and cooperation towards increasing interoperability of its defense forces and for liberating Kuwait. France and the United States have played the most strategically significant roles with defense cooperation agreements and military material provision.[75] Most recently, these relations culminated in a joint nuclear deal for the US to supply the UAE with nuclear power equipment, technology and fuel. In turn, the UAE – a Nuclear Non-Proliferation Treaty (NPT) signatory – has agreed to open its nuclear facilities to full international inspections and refrain from producing its own reactor fuel.

Commercially, the UK and Germany are the UAE's largest export markets and bilateral relations have long been close as a large number of their nationals reside in the UAE.[76] [77]

Diplomatic relations between UAE and Japan were established as early as UAE's independence in December 1971.[78] The two countries had always enjoyed friendly ties and trade between each other. Exports from the UAE to Japan include crude oil and natural gas and imports from Japan to UAE include cars and electric items.[78]

The UAE is pursuing a policy of peaceful settling of the region's issues. The country supports the right of the Palestinian people to establish an independent state. At the second international conference to support the Palestinian economy and reconstruction of Gaza strip, which was held in Sharm el Sheikh, Egypt, the UAE said it would continue to offer political, economic and humanitarian support to the Palestinian cause. The UAE has provided over US$3 billion in aid to the Palestinians, including development funds for infrastructure, housing, hospital and school projects. In addition, the country donated US$174 million towards reconstruction in Gaza. The UAE has been an active supporter of the Iraqi Government in its efforts to draw up a comprehensive political formula to enable the country to achieve security and stability. It has one of the few functioning Arab embassies and resident ambassadors in Baghdad, and has canceled debts worth about US$7 billion to support Iraq’s reconstruction efforts. The UAE continues to contribute constructively to the international efforts aimed at stabilizing Afghanistan and supporting its bid to restore security. As part of its humanitarian and development assistance to Afghanistan, it provided US$550 million between 2002 and 2008. The UAE is the only Arab country performing humanitarian activities on the ground in Afghanistan.

One major diplomatic success for the UAE during 2009, which also reflected its growing international status, came with Abu Dhabi being chosen to host the headquarters of the International Renewable Energy Agency (IRENA). This is one of the few times that a developing country has had the opportunity to host the headquarters of a major international organization.[79]

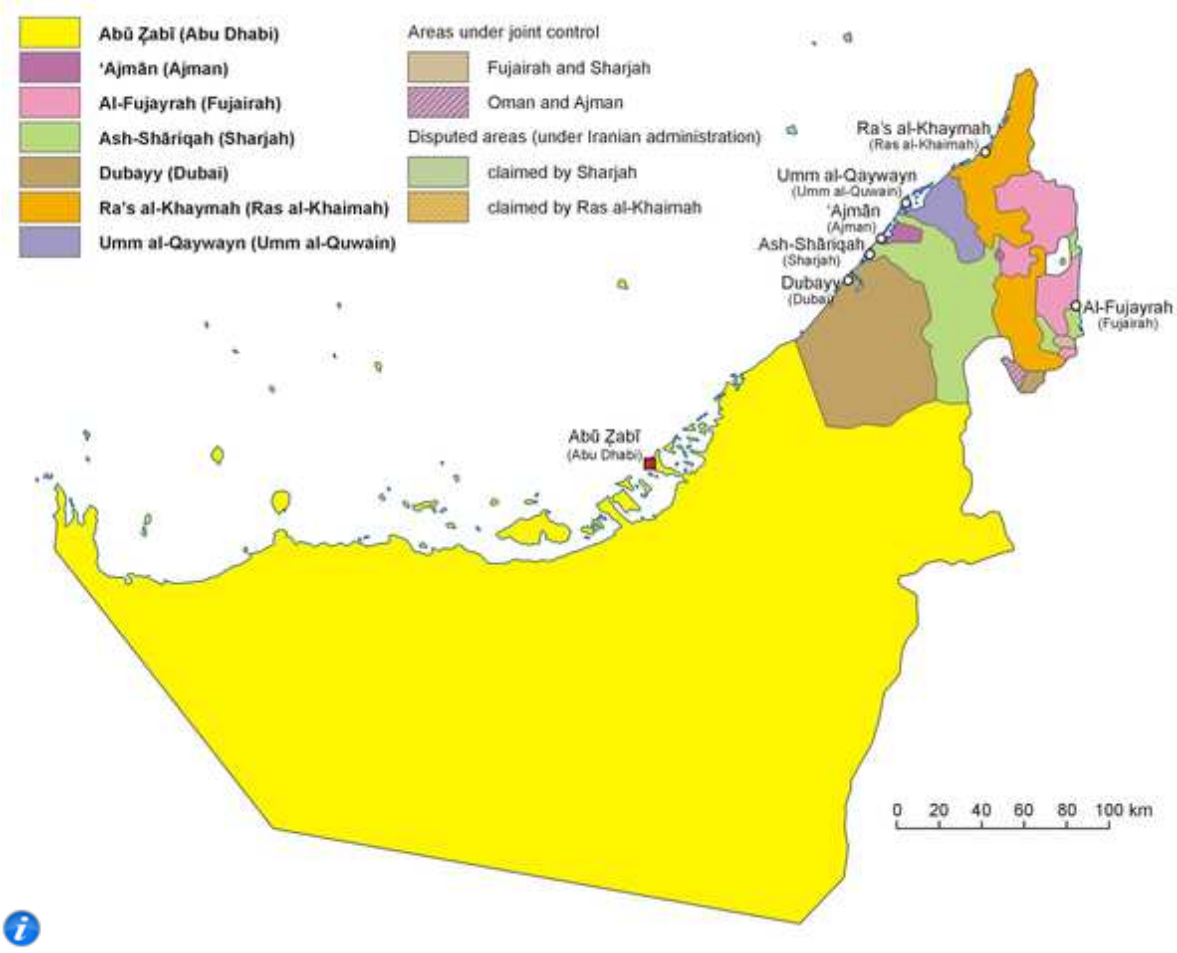
Foreign aid

The UAE has continuously been a major contributor of emergency relief to regions affected by conflict and natural disasters in the developing world.[74] The main UAE governmental agency for foreign aid is the Abu Dhabi Fund for Development (ADFD) which was established in 1971. Since its establishment, the ADFD has provided over Dh12.6 billion (US$3.45 billion) in soft loans and grants to countries mainly in Africa.[80] Since 1971, these have accounted for a further Dh10 billion (US$2.7 billion), bringing the total amount of the loans, grants and investments provided by the fund or the Abu Dhabi government, and managed by the fund, to around Dh24 billion (US$6.5 billion), covering 258 different projects in a total of 52 countries.[81]

In November 2008 the Abu Dhabi Fund announced a long term loan of around US$278 million for rehabilitation of agricultural land in the state of Uzbekistan.[82] Between 1994 to mid-2008, for example, around Dh15.4 billion (US$4.2 billion) has been provided for the Palestinians, including, most recently, US$300 million pledged at a donor conference in Paris and an annual commitment of US$43 million to support the Palestine National Authority.[83]

The UAE has also used the Red Crescent authority and charities such as Dubai Cares and Noor Dubai to donate aid to foreign countries.

Political divisions



Main article: Emirates of the United Arab Emirates

See also: List of cities in the United Arab Emirates

The United Arab Emirates is divided into seven emirates. Abu Dhabi is the most populated Emirate with 38% of the UAE population. The city of Dubai has a further 30%, so over two-thirds of the UAE population live in either Abu Dhabi or Dubai.

Abu Dhabi has an area of 67,340 square kilometres, which is 86.7% of the country's total area, excluding the islands. It has a coastline extending for more than 400 kilometres and is divided for administrative purposes into three major regions. The Emirate of Dubai extends along the Persian Gulf coast of the UAE for approximately 72 kilometres. Dubai has an area of 3,885 square kilometers, which is equivalent to 5% of the country's total area, excluding the islands. The Emirate of Sharjah extends along approximately 16 kilometers of the UAE's Persian Gulf coastline and for more than 80 kilometers into the interior. The northern emirates which include Fujairah, Ajman, Ras al-Khaimah, and Umm al-Qaiwain all have a total area of 3,881 square kilometres. There are two areas under joint control. One is jointly controlled by Oman and Ajman, the other by Fujairah and Sharjah.

There is an Omani exclave surrounded by UAE territory, known as Wadi Madha. It is located halfway between the Musandam peninsula and the rest of Oman in the Emirate of Sharjah. It covers approximately 75 square kilometres (29 sq mi) and the boundary was settled in 1589. The north-east corner of Madha is closest to the Khor Fakkan-Fujairah road, barely 10 metres (33 ft) away. Within the Omani exclave of Madha, is a UAE exclave called Nahwa, also belonging to the Emirate of Sharjah. It is about 8 kilometres (5 mi) on a dirt track west of the town of New Madha. It consists of about forty houses with its own clinic and telephone exchange.

Demographics

Other Arabs & Iranians	23%
Others (including Europeans & East Asians)	8%

Source: CIA[3]

In 2010, the UAE's population was estimated at 8,264,070,[4] of whom fewer than 20% were UAE nationals or Emiratis,[85] while the majority of the population were expatriates.[86] The country's net migration rate stands at 21.71, the world's highest.[87]

23% of the population are non-Emirati Arabs and Iranians and the majority of the population, about 50%, is from India.[3] Approximately 1.75 million Indian nationals reside in the UAE, making them the single largest expatriate community in the country. By 2020, Emiratis are projected to form only 10% of the population.[*citation needed*] There is also a growing presence of Europeans especially in multi-cultural cities such as Dubai [88] Those from other parts of Asia (including the Philippines, Iran or Sri Lanka) comprised up to 1 million people. The rest of the population were from other Arab states.[3][89]

Thousands of Palestinians, who came as either political refugees or temporary employment, also live in the United Arab Emirates. There is also a sizable population of people from Egypt, Somalia and Sudan who migrated to the UAE before its formation. The UAE has also attracted a small number of expatriates from countries in Europe, North America, Asia, and Oceania.[90] More than 100,000 British nationals live in the country.[91]

The population of the UAE has a skewed sex distribution: With a male/female sex ratio of 2.2 for the total population and 2.75 for the 15–65 age group, the UAE's gender imbalance is the highest in the world.[92]

The most populated city is Dubai, with approximately 1.7 million people. Other major cities include Abu Dhabi, Al-Ain, Sharjah, and Fujairah. About 88% of the population of the United Arab Emirates is urban.[93] The remaining inhabitants live in tiny towns scattered throughout the country or in the many desert oilfield camps in the nation.

The average life expectancy is 75 years, higher than any other Arab country.[94]

Religion

Main article: Religion in the United Arab Emirates

Islam is the largest and the official state religion of the UAE, though the government follows a policy of tolerance toward other religions and rarely interferes in the activities of non-Muslims.[95]

However, it is illegal in the UAE to spread the ideas of any religion apart from Islam through any form of media as it is considered a form of proselytizing. There are approximately 31 churches throughout the country and one Hindu temple in the region of Bur Dubai.[96]

Based on the Ministry of Economy census in 2005, 76% of the total population was Muslim, 9% Christian, and 15% other (mainly Hindu).[95] Census figures do not take into account the many "temporary" visitors and workers while also counting Baha'is and Druze as Muslim.[95] Non-Islamic religions are mainly followed by foreigners or expatriates. As the majority of the population are non-citizens, of the citizens 85% are Sunni Muslim while 15% are Shi'a Muslims.[95] Omani immigrants are mostly Ibadi, while Sufi influences exist too.[97]

In 2011 was built the first in the history of Christianity, the Orthodox temple complex in the United Arab Emirates - St. Philip the Apostle, which is located in Sharjah. Yuri Sidorenko became a churchwarden (sponsor) of this temple complex.[98]

Education

Main article: Education in the United Arab Emirates

Literacy rate	
Year	**Rate**
1989	53.5%
2000	79%
2003	77.9%
2007	91%[99]
The illiteracy rate is mainly in the adult population, as a large majority of the population is foreign labourers. Sources:[53][3]	

The education system through secondary level is monitored by the Ministry of Education. It consists of primary schools, middle schools and high schools.[100] The public schools are government-funded and the curriculum is created to match the United Arab Emirates development's goals and values. The medium of instruction in the public school is Arabic with emphasis on English as a second language. There are also many private schools which are internationally accredited. Public schools in the country are free for citizens of the UAE, while the fees for private schools vary.

There has been significant improvement in private education across the UAE. This is particularly important given the fact that a relatively high percentage of students in the Emirates are enrolled in private schools: in Dubai 50% of all students are in private schools, while the number for Abu Dhabi stands at around 40%.

Many private international schools in the UAE are accredited by international bodies and there are currently 17 International Baccalaureate schools operating in the country, all of which have obtained approval from the International Baccalaureate Organization in Geneva to run their programs.

Reforms to special education are under way across the country. In 2006, the Cabinet passed the UAE Disabilities

Act, a comprehensive law that requires public and private schools to provide equal access to all children. The law was subsequently amended in 2009 to replace references to disability with the phrase "special needs".

The higher education system is monitored by the Ministry of Higher Education. The ministry also is responsible for admitting students to its undergraduate institutions.[101]

A recent survey showed that the illiteracy rate is on the decline in the UAE, and is now in the region of 7%. This is mainly owing to programmes that combat illiteracy amongst the adult population. Currently there are thousands of nationals pursuing formal learning at 86 adult education centres spread across the country.[102]

In fall 2009, the Masdar Institute of Science and Technology (MIST) opened its doors to its first class of graduate students. The Dubai School of Government (DSG), a research and teaching institution focusing on good governance and public policy in the Middle East, launched its first masters program also in 2009. A number of foreign universities, from the Paris Sorbonne to Michigan State University, have opened campuses in the UAE. In February 2008, a branch of the New York Film Academy opened in Abu Dhabi; it launched its first bachelor's degree program in 2010. In fall 2010 the opening of the Abu Dhabi campus of New York University marked a new milestone. INSEAD, one of the world's largest graduate business schools, has been operating a Middle East campus in Abu Dhabi since 2007, and now runs seven executive-education programs.

The Government has launched many programs and initiatives to improve the quality of education at schools across the country.

The UAE has shown a strong interest in improving education and research. Enterprises include the establishment of the CERT Research Centers and the Masdar Institute of Science and Technology and institute for enterprise development.[103]

Health

Main article: Healthcare in the United Arab Emirates

Standards of healthcare are considered to be generally high in the United Arab Emirates, resulting from increased government spending during strong economic years. According to the UAE government, total expenditures on healthcare from 1996 to 2003 were US$436 million. According to the World Health Organization, in 2006 total expenditures on health care constituted 2.6% of gross domestic product (GDP), and the per capita expenditure for health care was US$673. General government expenditure on health as percentage of total government expenditure is 8.7% and Health care currently is free only for UAE citizens, with a health insurance scheme in place for those working the Emirates. Hospital beds (per 10 000 population) was 18 in 2005. The number of doctors per 100,000 (annual average, 1990–2005) was 17 and dentistry personnel (per 100 000 population) was 30 in 2002. The pharmaceutical personnel (per 100 000 population) was 40.

Dubai Healthcare City is a specifically designated city for clinical and wellness services, medical education and research launched by the government to attract global companies to the city

The life expectancy at birth in the UAE is at 78.5 years.[94] According to World Health Organisation (WHO) statistics, the UAE is ranked fourth in the world in terms of health care.

In February 2008, the Ministry of Health unveiled a five-year health strategy for the public health sector in the northern emirates, which fall under its purview and which, unlike Abu Dhabi and Dubai, do not have separate

healthcare authorities. The strategy focuses on unifying healthcare policy and improving access to healthcare services at reasonable cost, at the same time reducing dependence on overseas treatment. The ministry plans to add three hospitals to the current 14, and 29 primary healthcare centres to the current 86. Nine were scheduled to open in 2008.[104]

The introduction of mandatory health insurance in Abu Dhabi for expatriates and their dependents was a major driver in reform of healthcare policy. Abu Dhabi nationals were brought under the scheme from 1 June 2008 and Dubai followed for its government employees. Eventually, under federal law, every Emirati and expatriate in the country will be covered by compulsory health insurance under a unified mandatory scheme.[105] Recently the country has been benefiting from medical tourists from all over the GCC. The UAE currently attracts medical tourists seeking plastic surgery and advanced procedures, cardiac and spinal surgery, and dental treatment, as health services have higher standards than other Arab countries in the Persian Gulf.[106]

Cardiovascular disease is the principal cause of death in the UAE, constituting 28% of total deaths; other major causes are accidents and injuries, malignancies, and congenital anomalies.[107] Diabetes and Cancer are also the main causes of death in the country, and statistics have indicated that the UAE has one of the highest rates of diabetes in the world.

Economy

Main article: Economy of the United Arab Emirates

Economic indicators	
Unemployment	4%May 2009 [note 1]
GDP growth	3.20%2010 [108]
CPI inflation	1.9%April 2008 – April 2009 [109]
National debt	$142 billionJune 18, 2009 [110]

At the time of independence, the UAE was already regarded as a rich country with GDP per capita exceeding US$ 2,000. In 2011, UAE is ranked as the 14th best nation in the world for doing business based on its economy and regulatory environment, ranked by the Doing Business 2011 Report published by the World Bank Group[111]

The UAE has an open economy with one of the highest per capita incomes in the world and a sizable annual trade surplus. In 2009, its GDP, as measured by purchasing power parity, stood at US$ 400.4 billion.[3] The GDP per capita is currently the third in the world and second in the Middle East, after Qatar and Kuwait as measured by the CIA World Factbook, or the 17th in the world as measured by the International Monetary Fund.

Dubai is the richest city in Western Asia.

With almost US$ 1 trillion in foreign invested assets, some[*citation needed*] argue the UAE to be the richest, with the highest average income in the world. Over half of this money is generated by the nation's capital, Abu Dhabi. With a population of just under 900,000 Abu Dhabi was labeled "The richest city in the world" by a CNN article [112][*citation needed*].

UAE's economy, particularly that of Dubai, was badly hit by the financial crisis of 2007–2010.[113] In 2009, the country's economy shrank by 4.00%, but UAE's overseas investments are expected to support its full economic recovery.[108] However, concern remains about the property sector. Property prices in Dubai fell dramatically when Dubai World, the government construction company, sought to delay a debt payment.[114] The ability to service debt remains a

problem.[115]

Petroleum and natural gas exports play an important role in the economy, especially in Abu Dhabi. More than 85% of the UAE's economy was based on the exports of natural resources in 2009.[3][116]

A massive construction boom, an expanding manufacturing base, and a thriving services sector are helping the UAE diversify its economy.[*citation needed*] Nationwide, there is currently $350 billion worth of active construction projects. Aluminum, steel, iron and other forms of metal exports along with textile produce much a significant amount of income and are expected to surpass the income brought in by petroleum and natural gas exports within the next 40 to 60 years.[*citation needed*] Government projects include the Burj Khalifa, which is the world's tallest building, Dubai World Central International Airport which, when completed, will be the most expensive airport ever built, and the three Palm Islands, the largest artificial islands in the world. Other projects include the Dubai Mall which is the world's largest shopping mall, and a man-made archipelago called The World which seeks to increase Dubai's rapidly growing tourism industry. Also in the entertainment sector is the construction of Dubailand, which is expected to be twice the size of Disney World, and of Dubai Sports City which will not only provide homes for local sports teams but may be part of future Olympic bids. However, this is concern that this construction boom has been built on debt and speculation, with little creation of true economic value.

Major increases in imports occurred in manufactured goods, machinery, and transportation equipment, which together accounted for 80% of total imports. Another important foreign exchange earner, the Abu Dhabi Investment Authority – which controls the investments of Abu Dhabi, the wealthiest emirate – manages an estimated $360 billion in overseas investments & an estimated $900 billion in assets.

More than 200 factories operate at the Jebel Ali complex in Dubai, which includes a deep-water port and a free trade zone for manufacturing and distribution in which all goods for re-export or transshipment enjoy a 100% duty exemption. A major power plant with associated water desalination units, an aluminium smelter, and a steel fabrication unit are prominent facilities in the complex. The complex is currently undergoing expansion, with sections of land set aside for different sectors of industry. A large international passenger and cargo airport, Dubai World Central International Airport, with associated logistics, manufacturing and hospitality industries, is also planned here.

Except in the free trade zones, the UAE requires at least 51% local citizen ownership in all businesses operating in the country as part of its attempt to place Emiratis into leadership positions. However, this law is under review and the majority ownership clause will very likely be scrapped in order to bring the country into line with World Trade Organisation regulations.

Emirati exports in 2006

As a member of the Gulf Cooperation Council (GCC), the UAE participates in the wide range of GCC activities that focus on economic issues. These include regular consultations and development of common policies covering trade, investment, banking and finance, transportation, telecommunications, and other technical areas, including protection of intellectual property rights.

The currency of the United Arab Emirates is the Emirati Dirham.

Infrastructure

Main articles: Transport in the United Arab Emirates and Developments in Dubai

The UAE has been spending billions of dollars on infrastructure and is the biggest projects market in the region, accounting for 37% of total project value within the construction, oil and gas, petrochemicals, power and water and waste sectors. Many huge investments have been poured into real estate, tourism and leisure. These developments are particularly evident in the larger emirates of Abu Dhabi and Dubai. In the former, Masdar City and Saadiyat Island highlight the status as an emerging market. Dubai World Central, a 140-square kilometre multi-phase development under construction near Jebel Ali, will create 900,000 jobs, and will include Al Maktoum International Airport, which will be the largest airport in the world by 2020. Property developer Emaar's Burj Khalifa is a Dh3.67 billion (US$1billion) tower that is the world's tallest skyscraper.

Governments in the northern emirates are rapidly following suit, providing major incentives for developers of residential and commercial property.[120] In addition, UAE President Sheikh Khalifa bin Zayed Al Nahyan has allocated Dh16 billion (US$4.4 billion) for infrastructure projects in the northern emirates. The allocation will be used to fund the construction of road networks, new housing communities, drainage networks and other projects, providing integrated solutions to some infrastructure deficits in these areas.[121]

The United Arab Emirates has an extensive road network that connects all major cities and towns. Roads in the western and southern regions are still relatively undeveloped. Those are highly dangerous roads passing through desert regions and many are still unsealed, gravel roads. This has resulted in the continued use of airplanes as the main or alternative mode of transportation for the residents.[122]

There are seaports throughout the country. The major ports are Port Jebel Ali, Port Rashid, Port Khalid, Port Saeed, Port Khor Fakkan, and Port Zayed.[123]

The UAE contains a number of significant airports. Dubai International Airport (DXB) is the main airport of the country. In 2008, the airport was the 20th busiest airport in the world by passenger traffic and 11th busiest by cargo traffic. The airport also was the 6th busiest airport in the world by international passenger traffic.[124] Other important airports include Abu Dhabi International Airport, Sharjah International Airport, and Al-Ain International Airport. There are also airports in smaller towns, as well as small domestic airstrips in the rural Western region. There are daily flight services between West and East UAE, which is the only convenient option for passengers travelling between the two parts of the country to places such as Sir Bani Yas.[125] The UAE is home to the largest airline in the Middle East, Emirates Airline. It has Dubai as its hub, and flies to over 100 destinations across six continents. The airline was the eighth-largest airline in the world in terms of international passengers carried,[126] and fifth-largest[127] in the world in terms of scheduled international passenger-kilometres flown in 2008. Etihad Airways, from Abu Dhabi, is also growing,

A highway interchange in Dubai

with over 100 aircraft on order.

The Etisalat Tower in Dubai. Based in Abu Dhabi, Etisalat is the 14th largest mobile network operator in the world, with a total customer base of 100 million.[119]

The Dh15.5 billion (US$4.2 billion) Dubai Metro project includes a 52-kilometre Red Line viaduct, which stretches the length of Sheikh Zayed Road between Al Rashidiya and Jebel Ali and was opened in September 2009 after round-the-clock work for three years. The Red Line when fully complete will carry an estimated 27,000 passengers per hour in each direction on 42 trains.[128] Work also on the Green Line, which will link Al Qusais to Dubai Healthcare City, began in 2006 and is scheduled for completion in late 2010.[129] In Abu Dhabi plans are underway for all a metro system and also a country-wide national railway, which will connect all the major cities and is later to connect to the GCC wide network.[130] The cost for the railway will be between Dh25bn and Dh30bn, and will be a total length of 1,100 kilometres, connecting Ghuwaifat, bordering the Kingdom of Saudi Arabia, in the west and the border with the Sultanate of Oman in the east.[131]

The Federal Electricity and Water Authority (FEWA) is the body responsible for overseeing federal utilities, whilst authorities in individual emirates, including Abu Dhabi Water and Electricity Authority (ADWEA), Dubai Water and Electricity Authority (DEWA) and Sharjah Water and Electricity Authority (SEWA), oversee power and water generation in their individual emirates. The UAE plans to build 68 rechargeable dams in the coming five years to augment the 114 dams in existence, all but two of which are rechargeable, to help with providing for the growing population.

The UAE is also planning to develop a peaceful nuclear energy programme to generate electricity. So far, the UAE has signed peaceful nuclear agreements with France, United States, and South Korea, and a MOU with the United Kingdom.[132]

The UAE is presently serviced by two telecommunications operators, Etisalat and Emirates Integrated Telecommunications Company ("du"). Etisalat operated a monopoly until du launched mobile services in February 2007.[133] However, Etisalat, with over 80% of the market, remains the UAE's biggest telecom provider and is expanding dramatically internationally and is now the sixteenth largest telecommunications firm in the world.[134] Du is targeting a 30% market share by 2010. Between 2002 and 2007, the number of mobile phone subscribers in the UAE grew by an annual average of 25.6%, almost four times its population growth. In 2007, there were 7.7 million subscribers. Forecasts indicate that the UAE mobile market will increase to 11.9 million users by 2012.[135]

Current UAE internet penetration figures assume 2.4 users per subscription. TRA projections indicate that over the next few years growth in both users and subscriptions will be coupled with a fall in the number of users per subscription: the number of subscribers are expected to increase from 0.904 million in 2007 to 1.15 million in 2008, 1.44 million in 2009 and 2.66 million in 2012.[136] Internet use is extensive; by 2007 there were 1.7 million users.[137] The authorities filter websites for religious, political and sexual content.[138]

Culture

Main article: Culture of the United Arab Emirates

Life in the UAE

The United Arab Emirates has a diverse and multicultural society.[139] The country's cultural imprint as a small, ethnically homogenous pearling community was changed with the arrival of other ethnic groups and nationals—first by the Iranians in the early 1900s, and later by Indians and Pakistanis in the 1960s. Despite the diversity of the population,

A traditional *souk* in Deira, Dubai

only minor and infrequent episodes of ethnic tensions have been reported in the country. Major holidays in Dubai include *Eid al Fitr*, which marks the end of *Ramadan*, and National Day (2 December), which marks the formation of the United Arab Emirates.[140]

Emirati culture mainly revolves around the religion of Islam and traditional Arab, and Bedouin culture. The influence of Islamic and Arab culture on the region's architecture, music, attire, cuisine and lifestyle are very prominent as well. Five times every day, Muslims are called to prayer from the minarets of mosques which are scattered around the country.[141] Since 2006, the weekend has been Friday-Saturday, as a compromise between Friday's holiness to Muslims and the Western weekend of Saturday-Sunday.[142]

This unique socioeconomic development in the Persian Gulf has meant that the UAE is relatively liberal. While Islam is the main religion, the UAE has been known for its tolerant practices. Christian churches can be found alongside mosques and this courtesy has seemingly been extended to Hinduism and Sikhism as there is a place tucked away inside a residential style building which houses a Hindu temple and a Sikh gurudwara. There is evidently no persecution of Hindus or Sikhs which is why it is home to several communities that have faced persecution elsewhere, who are now contributing to the cosmopolitan atmosphere. There are a variety of Asian-influenced schools, cultural centers and restaurants. Increasing numbers of European centers, schools, and restaurants can also be seen in the UAE.

Dress and etiquette

Most Emirati males prefer to wear a kandura, an ankle-length white tunic woven from wool or cotton, and most Emirati women wear an abaya, a black over-garment covering most parts of the body.[143] Western-style clothing is, however, dominant because of the large expatriate population, and this practice is beginning to grow in popularity among Emiratis.

Etiquette is an important aspect of UAE culture and tradition, to which visitors are expected to conform. Recently, many expatriates have disregarded the law and been arrested for indecent clothing at beaches.[144] Western-style dress is tolerated in appropriate places, such as bars or clubs, but the UAE has maintained a strict policy of protecting highly public spaces from cultural insensitivity. This is due, in large part, to the effects such practices are considered to have on the social integration and participation of a largely conservative Emirati population.

Food

Main article: Emirati cuisine

See also: Arab cuisine

The traditional food of the Emirates has always been rice, fish, and meat. The people of the United Arab Emirates have adopted most of their foods from the surrounding countries including Iran, Saudi Arabia, and Oman. Seafood has been the mainstay of the Emirati diet for centuries. Meat and rice are other staple foods; lamb and mutton are the more favored meats, then goat and beef. Popular beverages are coffee and tea, which can be supplemented with cardamom, saffron, or mint to give them a distinct flavor.[145]

Muslims are prohibited from eating pork, so it is not included in local menus. Hotels frequently have pork substitutes such as beef sausages and veal rashers on their breakfast menus. If pork is available, it is clearly labeled as such.

Alcohol is generally only served in hotel restaurants and bars (but not in Sharjah). All nightclubs and golf clubs are permitted to sell alcohol. Specific supermarkets may sell alcohol and pork, but these products are sold in separate sections.[146]

Dishes forming part of the Emirati cuisine:[147]

- Al-Khanfaroosh
- Raqaq (flat)
- Al Jabab bread

Traditional Emirati tea

Literature and poetry

The main themes in Emirati poetry for Arab Poets range from satire, chivalry, self-praise, patriotism, religion, family and love, and could range from descriptive to narrative.

The style and form of ancient poetry in the UAE was strongly influenced by the 8th-century Arab scholar Al Khalil bin Ahmed. This form underwent slight modification (Al Muwashahat) during the period of Islamic civilization in Andalucia (Spain).

The earliest known poet in the UAE is Ibn Majid, who was born between 1432 and 1437 in Ras Al-Khaimah. Coming from a family of successful sailors, Ibn Majid's oeuvre has a total of 40 surviving compositions, 39 of which are verses.

The greatest luminaries in the UAE literary realm during the 20th century, particularly for Classical Arabic poetry, were Mubarak Al Oqaili (1880–1954), Salem bin Ali al Owais (1887–1959) and Ahmed bin Sulayem (1905–1976). Three other poets from Sharjah, known as the Hirah group, also thrived during the 20th century including Khalfan Musabah (1923–1946), Sheikh Saqr Al Qasimi (1925–1993), an ex-ruler of Sharjah, and Sultan bin Ali al Owais (1925–2000). The Hirah group's works are observed to have been heavily influenced by the Apollo and romantic poets.[148]

The meeting of classical Arabic poetry and media continued through the regionally highly successful television shows – *Million's Poet* and *The Prince of Poets* – broadcast on Abu Dhabi TV and poetry TV channels. *The Prince of Poets* also won the International Broadcasting Award in London in the specialist genre TV category.

There are three annual book fairs in the UAE, the well-known Sharjah International Book Fair, the oldest and largest in the country, its Abu Dhabi counterpart and the newly launched Al-Ain Book Fair.

The UAE has a booming magazine and newspaper industry. the biggest selling English language magazine is Ahlan! magazine. The biggest selling English language newspaper is Gulf News.

Museums and art galleries

Many emirates have established museums of regional repute, most famously Sharjah with its Heritage District containing 17 museums,[149] which in 1998 was the Cultural Capital of the Arab World.[150] Abu Dhabi's cultural foundation is also an important place for the presentation of indigenous and foreign art. In Dubai, the area of Al Quoz has attracted a number of art galleries.[151]

Abu Dhabi has embarked on the path to become an art center of international caliber, by creating a culture district on Saadiyat Island. There, six grand projects are planned: the Sheikh Zayed National Museum by Foster + Partners, the modern art museum Guggenheim Abu Dhabi to be built by Frank Gehry, the classical museum Louvre Abu Dhabi by Jean Nouvel, a maritime museum by Tadao Ando, a Performing Arts Center by Zaha Hadid, and a Biennale Park with 16 pavilions.[152]

Dubai also plans to build a Kunsthal museum and a district for galleries and artists.[153]

2009 saw the UAE's first pavilion at the Venice Biennale, one of the top cultural events in Europe. The pavilion was called 'It's Not You, It's Me' and was designed to offer a playful and provocative look at what has been described as the world's most prestigious contemporary art event. This was the first occasion on which a country from the Persian Gulf has taken part in the Biennale.

Music, dance and cinema

Main articles: Music of the United Arab Emirates and Cinema of the United Arab Emirates

The United Arab Emirates is a part of the khaliji tradition, and is also known for Bedouin folk music. Liwa is a type of music and dance performed mainly in communities which contain descendants of East Africans.[154] During celebrations singing and dancing also took place and many of the songs and dances, handed down from generation to generation, have survived to the present time. Young girls would dance by swinging their long black hair and swaying their bodies in time to the strong beat of the music. Men would re-enact battles fought or successful hunting expeditions, often symbolically using sticks, swords or rifles.

Hollywood movies are the most popular in the UAE. The UAE has an active music scene, with musicians Amr Diab, Diana Haddad, Tarkan, Aerosmith, Santana, Mark Knopfler, Christina Aguilera, Elton John, Pink, Shakira, Celine Dion, Coldplay, Ahlam, and Phil Collins and a slew of Bollywood stars having performed in the country. Kylie Minogue was paid 4.4 million dollars to perform at the opening of the Atlantis resort on November 20, 2008.[155] The Dubai Desert Rock Festival is also another major festival consisting of heavy metal and rock artists.[156]

UAE's Traditional dance, Yowalah

In 2009 the highly successful Abu Dhabi Classics series celebrated its second season by treating the Emirates Palace audience to the Middle Eastern debut of the New York Philharmonic with pieces by Beethoven and Mahler, as well as holding a concert inside the recently renovated Jahili Fort in Al-Ain.

Sports

Main article: Sport in the United Arab Emirates

Dubai Tennis Championships 2006

Association football is the national sport of the United Arab Emirates. Emirati Soccer clubs Al-Ain, Al-Wasl, Al-Shabbab ACD, Al-Sharjah, Al-Wahda, and Al-Ahli are the most popular teams and enjoy the reputation of long-time regional champions.[157] The great rivalries keep the UAE energized as people fill the streets when their favorite team wins. The United Arab Emirates Football Association was first established in 1971 and since then has dedicated its time and effort to promoting the game, organizing youth programs and improving the abilities of not only its players, but of the officials and coaches involved with its regional teams. The UAE football team qualified for the World Cup in 1990—with Egypt it was the third consecutive World Cup with two Arab nations qualifying after Kuwait and Algeria in 1982 and Iraq and Algeria again in 1986. The UAE also recently won the Gulf Cup Championship held in Abu Dhabi January 2007.[158]

Cricket is one of the most popular sports in the UAE, largely because of the expatriate population from the Indian subcontinent, the United Kingdom, and Australia. The Sharjah Cricket Association Stadium in Sharjah has hosted 4 international Test matches so far.[159] Sheikh Zayed Stadium and Al Jazira Mohammed Bin Zayed Stadium in Abu Dhabi also host international cricket matches. Dubai has two cricket stadiums (Dubai Cricket Ground No.1 and No.2) with a third, 'S3' currently under construction as part of Dubai Sports City. Dubai is also home to the International Cricket Council.[160] The United Arab Emirates national cricket team qualified for the 1996 Cricket World Cup and narrowly missed out on qualification for the 2007 Cricket World Cup.[161]

Formula One is particularly popular in the United Arab Emirates, and is annually held at the picturesque Yas Marina Circuit. The race is held at evening time, and is the first ever Grand Prix to start in daylight and finish at night.[162]

Other popular sports include camel racing, falconry, endurance riding, and tennis.[163]

History of the United Arab Emirates

From Wikipedia, the free encyclopedia

The United Arab Emirates was formed from the group of tribally organised Arabian Peninsula sheikhdoms along the southern coast of the Persian Gulf and the northwestern coast of the Gulf of Oman.

Advent of Islam

Main article: Islam in the United Arab Emirates

The arrival of envoys from Muhammad in 630 heralded the conversion of the region to Islam. After Muhammad's death one of the major battles of the Ridda Wars was fought at Dibba, resulting in the defeat of the non-Muslims and the triumph of Islam in the Arabian Peninsula.

In 637, Julfar (today Ras al-Khaimah) was used as a staging post for the conquest of Iran. Over many centuries, Julfar became a wealthy port and pearling center from which dhows traveled throughout the Indian Ocean.

Portuguese control

See also: Portuguese Empire and History of Oman

Portuguese expansion into the Indian Ocean in the early 16th century following Vasco da Gama's route of exploration saw them battle the Ottomans up the coast of the Persian Gulf. The Portuguese controlled the area for 150 years in which they conquered the inhabitants of the Arabian peninsula.[1] Vasco da Gama was helped by Ahmad ibn Mājid, a navigator and cartographer from Julfar, to find the route of spices from Asia.[2][3]

British and Ottoman rule

portions of the nation came under the direct influence of the Ottoman Empire during the 16th century.[4]

Thereafter, the region was known to the British as the "Pirate Coast", as raiders based there harassed the shipping industry despite both European and Omani navies patrolling the area from the 17th century into the 19th century.[5] British expeditions to protect the Indian trade from raiders at Ras al-Khaimah led to campaigns against that headquarters and other harbours along the coast in 1819. The next year, a peace treaty was signed to which all the sheikhs of the coast adhered. Raids continued intermittently until 1835, when the sheikhs agreed not to engage in hostilities at sea. In 1853, they signed a treaty with the United Kingdom, under which the sheikhs (the Trucial Sheikhdoms) agreed to a "perpetual maritime truce". It was enforced by the United Kingdom, and disputes among sheikhs were referred to the British for settlement.[6]

Flag of the Trucial Coast

The Treaty of 1892

Primarily in reaction to the ambitions of other European countries, the United Kingdom and the Trucial Sheikhdoms established closer bonds in an 1892 treaty, similar to treaties entered into by the UK with other Persian Gulf principalities. The sheikhs agreed not to dispose of any territory except to the United Kingdom and not to enter into relationships with any foreign government other than the United Kingdom without its consent. In return, the British promised to protect the Trucial Coast from all aggression by sea and to help in case of land attack.[7]

The rise and fall of the pearling industry

During the nineteenth and early twentieth centuries, the pearling industry thrived in the relative calm at sea, providing both income and employment to the people of the Persian Gulf. It began to become a good economic resource for the local people. The First World War had a severe impact on the pearl fishery, but it was the Great Depression of the late 1920s and early 1930s, coupled with the Japanese invention of the cultured pearl, that all but destroyed it. The industry eventually faded away shortly after the Second World War, when the newly independent Government of India imposed heavy taxation on pearls imported from the Arab states of the Persian Gulf.[8] The decline of pearling resulted in a very difficult era, with little opportunity to build any infrastructure.

The beginning of the oil era

In the beginning of the 1960s, the first oil company teams carried out preliminary surveys and the first cargo of crude was exported from Abu Dhabi in 1962. As oil revenues increased, the ruler of Abu Dhabi, Sheikh Zayed bin Sultan Al Nahyan, undertook a massive construction program, building schools, housing, hospitals and roads. When Dubai's oil exports commenced in 1969, Sheikh Rashid bin Saeed Al Maktoum, the ruler of Dubai, was also able to use oil revenues to improve the quality of life of his people.[9]

Border disputes

In 1955, the United Kingdom sided with Abu Dhabi in the latter's dispute with Oman over the Buraimi Oasis, another territory to the south.[10] A 1974 agreement between Abu Dhabi and Saudi Arabia would have settled the Abu Dhabi – Saudi border dispute; however, the agreement has yet to be ratified by the UAE government and is not recognised by the Saudi government. The border with Oman also remains officially unsettled, but the two governments agreed to delineate the border in May 1999.[11]

Sheikh Zayed and the Union

In the early 1960s, oil was discovered in Abu Dhabi, an event that led to quick unification calls made by UAE sheikdoms. Sheikh Zayed bin Sultan Al Nahyan became ruler of Abu Dhabi in 1966 and the British started losing their oil investments and contracts to U.S. oil companies.[12]

Al Fahdi Fort in Dubai in the late 1950s

The British had earlier started a development office that helped in some small developments in the emirates. The sheikhs of the emirates then decided to form a council to coordinate matters between them and took over the development office. They formed the Trucial States Council,[13] and appointed Adi Bitar, Sheikh Rashid bin Saeed Al Maktoum's legal advisor, as Secretary General and Legal Advisor to the Council. The council was terminated once the United Arab Emirates was formed.[14]

In 1968, the United Kingdom announced its decision, reaffirmed in March 1971, to end the treaty relationships with the seven Trucial Sheikhdoms which had been, together with Bahrain and Qatar, under British protection. The nine attempted to form a union of Arab emirates, but by mid-1971 they were still unable to agree on terms of union, even though the British treaty relationship was to expire in December of that year.[15]

Zayed bin Sultan Al Nahyan

Bahrain became independent in August, and Qatar in September 1971. When the British – Trucial Sheikhdoms treaty expired on December 1, 1971, they became fully independent.[16]

The rulers of Abu Dhabi and Dubai decided to form a union between their two emirates independently, prepare a constitution, then call the rulers of the other five emirates to a meeting and offer them the opportunity to join. It was also agreed between the two that the constitution be written by December 2, 1971.[17]

On that date, at the Dubai Guesthouse Palace, four other emirates agreed to enter into a union called the United Arab Emirates. Ras al-Khaimah joined later, in early 1972.[18][19]

Involvement in US "War on Terror"

After the 9/11 terrorist attacks on the United States, the UAE was identified as a major financial centre used by Al-Qaeda in transferring money to the hijackers. The nation immediately cooperated with the U.S, freezing accounts tied to suspected terrorists and strongly clamping down on money laundering.

The country had already signed a military defence agreement with the U.S. in 1994 and one with France in 1995.

The UAE supports military operations from the United States and other coalition nations engaged in the invasion of Afghanistan (2001) and Iraq (2003) as well as operations supporting the Global War on Terrorism for the Horn of Africa at Al Dhafra Air Base located outside of Abu Dhabi. The air base also supported Allied operations during the 1991 Persian Gulf War and Operation Northern Watch.

Death of Sheikhs Zayed and Maktoum

On 2 November 2004 the UAE's first ruler, Sheikh Zayed bin Sultan Al Nahyan, died. His eldest son, Sheikh Khalifa bin Zayed Al Nahyan, succeeded as ruler of Abu Dhabi. In accordance with the constitution, the UAE's

Supreme Council of Rulers elected Khalifa as president. Sheikh Mohammad bin Zayed Al Nahyan succeeded Khalifa as Crown Prince of Abu Dhabi.[20] In January 2006, Sheikh Maktoum bin Rashid Al Maktoum, the prime minister of the UAE and the ruler of Dubai, died, and Crown Prince Sheikh Mohammed bin Rashid Al Maktoum assumed both roles.

Arab Spring

In 2011, the Middle East saw a number of pro-democratic uprisings, popularly known as the Arab Spring. The UAE saw comparatively little unrest, but did face one high-profile case in which five pro-democratic activists were arrested on charges of insulting President Khalifa, Vice President Mohammed bin Rashid Al Maktoum, and Crown Prince Mohammed bin Zayed Al Nahyan.[21] The trial of the UAE Five attracted international publicity and protest from a number of human rights groups,[22] including Amnesty International, which named the five men prisoners of conscience.[21] The defendants were convicted and given two- to three-year prison sentences on 27 November 2011, but were pardoned without comment by President Khalifa the following day.[23]

President of the United Arab Emirates

From Wikipedia, the free encyclopedia

The President is the Head of State of the United Arab Emirates. Because the current ruler of Abu Dhabi customarily also holds the presidency of the UAE, the office is *de facto* hereditary. The President is also Supreme Commander of the UAE Armed Forces and Chairman of the Supreme Council and Supreme Petroleum Council.

The current President is Khalifa bin Zayed Al Nahyan. Nahyan became president on 3 November 2004, following the death of his father, Zayed bin Sultan Al Nahyan.

Khalifa bin Zayed Al Nahyan

From Wikipedia, the free encyclopedia

Sheikh **Khalifa bin Zayed bin Sultan Al Nahyan** (Arabic: خليفة بن زايد بن سلطان آل نهيان; born 25 January 1948; referred to as **Sheikh Khalifa**) is the President of the United Arab Emirates (UAE) and emir of Abu Dhabi. He succeeded to both posts on 3 November 2004, taking rule over from his father Zayed bin Sultan Al Nahyan who had died the day before. He had effectively been acting president earlier, since his father was in ill health. Khalifa is also chairman of Abu Dhabi Fund for Development (ADFD).

Biography

1966-1971

The eldest son of Sheikh Zayed, Khalifa was appointed as Ruler's Representative in the Eastern Region of Abu Dhabi (the mayor) and as Head of the Courts Department in Al Ain in 1966, as his father Zayed bin Sultan Al Nahyan became the new ruler of Abu Dhabi. Zayed was the Ruler's Representative in the Eastern Region. Few months later the position was handed to Tahnoun bin Mohammed Al Nahyan[2]

On 1 February 1969, Sheikh Khalifa was nominated as the Crown Prince of Abu Dhabi, and on the next day he was appointed as the Head of the Abu Dhabi Department of Defense, in which post he oversaw the building up of the Abu Dhabi Defense Force, ADDF, which later became the nucleus of the UAE Armed Forces.

Khalifa bin Zayed Al Nahyan

2nd President of the United Arab Emirates

Incumbent

Assumed office

3 November 2004

Prime Minister	Maktoum bin Rashid Al Maktoum (2004-06) Mohammed bin Rashid Al Maktoum (2006-)
Vice President	Maktoum bin Rashid Al Maktoum (2004-06) Mohammed bin Rashid Al Maktoum (2006-)
Preceded by	Zayed bin Sultan Al Nahyan

2nd Deputy Prime Minister of the United Arab Emirates

In office

1973–1977

President	Zayed bin Sultan Al Nahyan
Prime Minister	Maktoum bin Rashid Al Maktoum
Preceded by	Hamdan bin Rashid Al Maktoum
Succeeded by	Hamdan bin Mohammed Al Nahyan

Crown Prince of Abu Dhabi

Incumbent

Sheikh Khalifa has two sons, Mohammad Al Nahyan and Sultan Al Nahyan [3]

Independence in 1971

Following the establishment of the UAE in 1971, Sheikh Khalifa became the Prime Minister of Abu Dhabi (and head of Abu Dhabi Cabinet, under his father), Minister of Defense of Abu Dhabi and Minister of Finance of Abu Dhabi. Following the reconstruction of the Cabinet of the United Arab Emirates including the abolishing of Abu Dhabi Cabinet and setting up of Executive Council of Abu Dhabi, he became the 2nd Deputy Prime Minister of the United Arab Emirates on 23 December 1973 and Chairman of Executive Council of Abu Dhabi on 20 January 1974, under his father.

In May 1976 he became deputy commander of the UAE armed forces, under the President.

He also heads the Supreme Petroleum Council in the late 1980s (until today), which enjoys wide powers in energy matters.

He was the Chairman of the Environmental Research and Wildlife Development Agency, ERWDA.

Born	January 25, 1948 Al Ain, Abu Dhabi, Trucial States[1]
Spouse(s)	Shamsa bint Suhail Al Mazrouei Daughter of Tahnoun bin Mohammed Al Nahyan

President (2004 –)

Khalifa bin Zayed Al Nahyan with then President of Russia Vladimir Putin on 10 September 2007.

He succeeded to both posts on 3 November 2004, replacing his father Zayed bin Sultan Al Nahyan, who had died the day before. He had effectively been acting president earlier, since his father was ill during the period prior to his passing.

On 1 December 2005, the President announced that half of the members of the Federal National Council, the closest body the country has to a parliament, will be indirectly elected. However, half of the council's members will still need to be appointed by the leaders of the emirates. The 40-member FNC serves in an advisory capacity. The elections were set to take place in December 2006.

On 4 January 2010, the world's tallest man-made structure, originally known as Burj Dubai, was renamed to Burj Khalifa, in honor of the Sheikh [1] (http://news.bbc.co.uk /2/hi/middle_east/8439618.stm) .

Sheikh Khalifa is known for his interest in sports traditional to UAE, chiefly horse and camel racing. He is generally regarded as a pro-Western modernizer. Early in his term, in April 2005, he authorized a 100% salary increase for employees of the state.

In 2010 Khalifa was described in a recent WikiLeaks cable signed by the U.S. ambassador as a "distant and uncharismatic personage."[4]

In recent times there have been question marks over his health as he has not been seen in public for a number of months since returning from receiving medical treatment in Europe for an undisclosed condition. In 2011 he sent in the UAE's Air Force and Navy to support the Anti - Gaddafi rebels against Muammar Gaddafi alongside NATO, Qatar, Sweden and Jordan.

Seychelles

Seychellois government records show that since 1995, Sheikh Khalifa has spent $2 million buying up more than 66 acres of land on the Seychelles' main island of Mahe, where his palace is being built. [5] Since 1995 the Seychelles' government has received large aid packages from the UAE, the UAE has pledged more than $130 million in social-service and military aid, including patrol boats for the Seychelles' antipiracy efforts. In 2008, the UAE came to the indebted Seychelles government's aid, with a $30 million injection. [5]

Khalifa paid $500,000 for the 29.8-acre site of his palace in 2005, according to the sales document. A Seychelles planning authority initially rejected the palace's building plans, a decision overturned by President James Michel's cabinet. [5] A month after the start of construction of the palace, the national utility company warned that the site's plans posed threats to the water supply. Joel Morgan, the Seychelles' minister of environment, said the government did not tender the land because it wanted it to go to Khalifa. Morgan said "the letter of the law" might not have been followed in the land sale. [5]

On Feburary 13, 2010, the sewage system set up by Ascon, the company building the palace, for construction workers building the palace, overflowed, sending rivers of waste through the region, home to more than 8000 residents. [5] Local government agencies and officials from Khalifa's office responded quickly to the problem, sending in technical experts and engineers. Government officials concluded that Ascon ignored health and building codes for their workers, and fined the company $81,000. Ascon blamed the incident on "Unpredicted weather conditions".[5]

Khalifa's presidential office offered to pay $15 million to replace the water-piping system for the mountainside. [5] Government officials and residents say Ascon has offered to pay roughly $8,000 to each of the 360 households that the government says have been affected by the pollution.[5]

Philanthropy

According to Forbes, Sheikh Khalifa bin Zayed Al Nahyan is the world's third wealthiest monarch, with an estimated wealth of US$19 billion.[6]

On 30 April 2007, Johns Hopkins Medicine announced a "magnificent" and "transformational" gift by Sheikh Khalifa,[7] most of which, made in honor of Sheikh Khalifa’s father, Sheikh Zayed bin Sultan Al Nahyan, was planned to support construction of the Johns Hopkins Hospital’s new cardiovascular and critical care tower (also to be named after Sheikh Zayed). Additionally, some funds would be directed to cardiovascular as well as AIDS research.

He also founded the Khalifa Award for Education and finances a major housing programme in Sheikh Khalifa City (Gaza Strip).

A building in the theology department at the University of Wales is named after him, due to his being a benefactor.

MD Anderson Cancer Center announced on January 19, 2011 that they received $150 Million From Abu Dhabi Charity;.

The Khalifa bin Zayed Al Nahyan Charity Foundation has pledged $150 million to the University of Texas, M. D. Anderson Cancer Center to establish a cancer treatment clinic, the Emirates News Agency reports.

The largest grant in the center's history will support construction of a state-of-the-art facility to house the Khalifa bin Zayed Al Nahyan Specialty Institute for Cancer Diagnosis and the Ahmed bin Zayed Al Nahyan Pancreatic Cancer Center. The grant also will fund a number of annual fellowships and will be used to endow an oncology chair named after Sheikh Zayed bin Sultan Al Nahyan, a cancer research chair named after Sheikh Khalifa University, and a scientific and medical research chair named after Mohammed bin Zayed Al Nahyan.

Speaking at a signing ceremony, M. D. Anderson Center president John Mendelsohn said that the funding will be channeled into research programs dedicated to discovering new and more effective ways of diagnosing and treating cancer.

Zayed bin Sultan Al Nahyan

From Wikipedia, the free encyclopedia

Sheikh Zayed bin Sultan Al Nahyan (Arabic: زايد بن سلطان آل نهيان), (1918 – 2 November 2004), the principal driving force behind the formation of the United Arab Emirates (UAE), was the ruler of Abu Dhabi and first president of the UAE, a post which he held for over 30 years (1971–2004).

Reign	6 August 1966 – 2 November 2004
Full name	Sheikh Zayed bin Sultan bin Zayed bin Khalifa Al Nahyan
Titles	*His Highness* Sheikh Zayed bin Sultan Al Nahyan, Past President of the United Arab Emirates Ruler of Abu Dhabi
Born	1918
Birthplace	In Al Ain, Abu Dhabi
Died	2 November 2004 (aged 86)
Place of death	In Al Ain, Abu Dhabi
Buried	Sheikh Zayed Grand Mosque, Abu Dhabi, 3 November 2004 (aged 86)
Predecessor	Sheikh Shakhbut bin Sultan Al Nahyan
Successor	Sheikh Khalifa bin Zayed Al Nahyan
Wives	Sheikha Hassa bint Mohammed bin Khalifa Al Nahyan Sheikha Sheikha bint Ma'dhad Al Mashghouni Sheikha Fatima bint Mubarak Al Ketbi Sheikha Mouza bint Suhail bin Awaidah Al Khaili Sheikha Ayesha bint Ali Al Darmaki Sheikha Amna Al Darmaki
Royal House	House of Al Nahyan
Father	Sultan bin Zayed Al Nahyan
Religious beliefs	Islam

Early life

Zayed was the youngest son of Sheikh Sultan bin Zayed bin Khalifa Al Nahyan, the traditional ruler of Abu Dhabi from 1922 until his assassination in 1926. Zayed was named after his famous grandfather, Sheikh Zayed bin Khalifa Al Nahyan ("Zayed the Great"), who ruled the emirate from 1855 to 1909. His eldest brother, Sheikh Shakhbut Bin-Sultan Al Nahyan, became ruler of Abu Dhabi in 1928 after their uncle, Saqr bin Zayed Al Nahyan, was also assassinated. Zayed's mother, Sheikha Salaamah, extracted a promise from her sons not to use violence against each other, a promise which they kept.[1]

At the time of Zayed's birth, the sheikhdom of Abu Dhabi was one of seven Trucial States along the coast of the lower coast of the Persian Gulf. These territories were in treaty relations with Britain, their rulers having signed a series of maritime truces with the British in the 19th century.[2]

As Zayed was growing up, there were no modern schools anywhere along the coast. He received only a basic instruction in the principles of Islam, and lived in the desert with Bedouin tribesmen, familiarising himself with the life of the people, their traditional skills and their ability to survive under the harsh climatic conditions.[3]

Zayed was appointed the governor of the Eastern Region of Abu Dhabi in 1946 and was based in the Muwaiji fort in Al Ain. At this time, the area was poor and prone to outbreaks of disease. When survey parties from Petroleum Development (Trucial Coast) began exploring for oil in the area, Zayed assisted them.[4]

In 1952, a small Saudi Arabian force led by Turki bin Abdullah al-Otaishan occupied the village of Hamasa in the Buraimi Oasis (the so-called Buraimi dispute). Zayed was prominent in his opposition to Saudi territorial claims and reportedly rejected a bribe of about £30 million to allow Aramco to explore for oil in the disputed territory. As part of this dispute, Zayed and his brother Hazza attended the Buraimi arbitration tribunal in Geneva in September 1955 and gave evidence to tribual members. When the tribunal was abandoned amid allegations of Saudi bribery, the British initiated the reoccupation of the Buraimi Oasis through a local military force, the Trucial Oman Levies. A period of stability followed during which Zayed helped to develop the region and took a particular interest in the restoration of the *falaj* system, a network of water channels which kept the plantations of the Buraimi Oasis irrigated and fertile.[4][5]

The discovery of oil in 1958, and the start of oil exports in 1962, led to frustration among members of the ruling family about the lack of progress under Sheikh Shakhbut's rule. On 6 August 1966 Shakhbut was deposed in a bloodless palace coup. Although it is not entirely clear from the historical record, the coup appeared to have the full backing of the Al-Nahyan family and the support of the British, with the Trucial Oman Scouts providing safe transport for Sheikh Shakbut out of Abu Dhabi.[5][6] In 1971, after occasionally difficult negotiations with the other six rulers of the Trucial States, the United Arab Emirates came into being. Zayed was appointed to the presidency of the UAE in 1971 and was reappointed on four more occasions: 1976, 1981, 1986, and 1991.[7]

In 1974, Zayed apparently settled the outstanding border dispute with Saudi Arabia by the Treaty of Jeddah by which Saudi Arabia received the output of the Shaybah oilfield and access to the lower Persian Gulf in return for recognising the UAE.[8] He was considered a relatively liberal ruler, and permitted private media. However, they were expected to practice self-censorship and avoid criticism of Zayed or the ruling families. Freedom of worship was permitted, and to a certain extent allowances were made for expatriate cultures, but this did not always sit comfortably in the eyes of the wider Arab world with Zayed's role as a Muslim head of state.[5]

Attitudes

His religious tolerance of Christians and the freedom given Western workers sojourning in the UAE was in marked contrast to most neighbors in the region and exposed him to criticism from other more conservative nations. Sheikh Zayed was respected around the world[*citation needed*] for his unifying influence and his drive to make the Emirates one nation. His calls for cooperation extended across Persian Gulf to Iran. Sheikh Zayed advocated dialogue as the means to settle the row with Tehran over three strategic Persian Gulf islands which Iran seized from the (future) UAE Emirate of Sharjah in 1971, though the islands remain in Iranian hands, despite over three decades of UAE diplomatic initiatives.

Zayed did not shy away from controversy when it came to expressing his opinion on current events in the Arab world. Troubled by the suffering of Iraqi civilians[*citation needed*], he took the lead in calling for lifting sanctions on Iraq imposed by the United Nations in the aftermath of the Iraqi invasion of Kuwait in 1990, despite Kuwaiti displeasure and opposition.

Zayed was considered one of the wealthiest men in the world. A Forbes magazine estimate put his fortune at around USD ?? billion. The source of this wealth could be almost exclusively attributed to the immense oil wealth of Abu Dhabi and the Emirates, which sit on a pool of a tenth of the world's proven oil reserves. Nevertheless he chose to live a relatively modest and traditional lifestyle, riding and hunting with falcons, though he gave up hunting with firearms, a sport at which he excelled, to set an example for wildlife conservation in his fragile desert homeland. He was personally popular, and was regarded to be considerably pious in his religious observances.[*citation needed*]

Policies and charity

At the time the British withdrew from the Persian Gulf in 1971, Zayed oversaw the establishment of the Abu Dhabi Fund for Arab Economic Development; through its oil riches were channeled to some forty less fortunate Islamic nations in Asia and Africa during the decades that followed. He is also remembered as "the man who turned the desert green," because he invested oil revenues into projects to improve the harsh desert environment.

Using the country's enormous oil revenues, Zayed built up institutions such as hospitals, schools and universities and made it possible for UAE citizens to enjoy free access to them. He also decreed that the State would undertake the cost of foreign health care for those families unable to afford it. Other charitable acts included adopting hundreds of orphans and building several hospitals abroad in Europe, Asia, and Africa.

When asked by the New York Times in April 1997 why there is no elected parliamentary democracy, Zayed replied,

> "Why should we abandon a system that satisfies our people in order to introduce a system that seems to engender dissent and confrontation? Our system of government is based upon our religion and that is what our people want. Should they seek alternatives, we are ready to listen to them. We have always said that our people should voice their demands openly. We are all in the same boat, and they are both the captain and the crew. Our doors are open for any opinion to be expressed, and this well known by all our citizens. It is our deep conviction that Allah has created people free, and has prescribed that each individual must enjoy freedom of choice. No one should act as if they own others. Those in the position of leadership should deal with their subjects with compassion and understanding, because this is the duty enjoined upon them by Allah, who enjoins upon us to treat all living creatures with dignity. How can there be anything less for mankind, created as Allah's vicegerent (khalif or Caliphate) on earth? Our system of government does not derive its authority from man, but is enshrined in our religion and is based on Allah's Book, the Quran. What need have we of what others have conjured up? Its teachings are eternal and complete, while the systems conjured up by man are transitory and incomplete."[9][10]

Land was also often distributed gratis. However, whilst this policy benefited many landless families, enormously wealthy clans and individuals were given free land grants in proportion to their status and influence with the royal family. His majlis (a traditional Arab consultation council) was open to the public, and as well as discussing national and personal issues, he enjoyed hearing people's opinions on poetry, as well as recitals by new and young poets. His tolerance towards other people and their faiths was evident, and he allowed the building of religious buildings such as churches and temples. This action in particular helped his image with the vast multitudes of expatriate workers who make up approximately three quarters of the population of the UAE. Zayed was also an advocate for the education and participation of women in the work force, within traditional parameters. His views regarding women's rights were considerably more liberal than his contemporaries in the GCC nations.

Collapse of BCCI

In 1972, Agha Hasan Abedi, a Pakistani banker who had set up a new bank called Bank of Credit and Commerce International (BCCI), approached Zayed for investment. Abedi had previously set up the United Bank of Pakistan in 1959, which became a leading nationalized bank in 1971. Zayed fronted the majority of the investment for the BCCI. Bank of America (25%) and the CIA allegedly invested, too. It is claimed that the CIA was seeking a funding route for the mujahideen in Afghanistan, similar to the Investors Overseas Service and the Nugen Hand Bank in the 1960s.

By 1977, the bank was almost insolvent. It took on the attributes of a Ponzi scheme, as it funded its operating expenses by deposits it received, rather than by returns from investments it made. In eight years, it reported assets of over $4 billion with over 150 branches in 46 countries. Bank of America reduced its shares, while holding companies in Abu Dhabi took on a controlling block.

In 1990, an audit of the BCCI by Price Waterhouse revealed an unaccountable loss of hundreds of millions of dollars. The bank approached Sheikh Zayed, who funded the loss in exchange for increasing his share to 78% of the bank. The bank was shut down in 1991 by the Bank of England. At the time Zayed's shareholding was 77%.[11]

In December 1991, further investigation found layers of criminal activity taking place through the bank. The law enforcement in the U.S. established the BCCI as an organized crime syndicate[*citation needed*]. Although Sheikh Zayed was not directly mentioned during interrogations, other family members were implicated in the criminal activity tied to the bank[*citation needed*]. The investigation found evidence of bribery, money laundering, arms trafficking, prostitution, and support of terrorism.[12] See: CIA Reading Room Document of William Kerr dated October 25, 1991 for details of Iran Contra and ElSalvador links.

Zayed Center

Controversy over the opinions of the Zayed Center caused the Harvard Divinity School to return Sheikh Zayed's $2.5 million gift to the institution in 2000 as "tainted money." Former United States president Jimmy Carter accepted the Zayed International Prize for the Environment, 2001. The award included a monetary prize of $500,000 from the Zayed Center, and Carter stated in his acceptance that this award meant a lot to him, since it was named after his personal friend, Sheikh Zayed bin Sultan Al Nahayan.[13]

There was similar controversy when the London School of Economics accepted a large donation by the Zayed Center, to build a new lecture theatre in the New Academic Building in 2008.[14] Despite student protests[*citation needed*], the gift was accepted with the Sheik Zayed Theatre being the second largest lecture hall on the campus.

Harvard's equivocation, the Carter controversy, and the engendering negative publicity, prompted Sheikh Zayed to shut down the center in August 2003, saying that the Zayed Center "had engaged in a discourse that starkly contradicted the principles of interfaith tolerance."[15]

Final years

In 1999, while he was in a hospital for some tests, the people of the UAE wrote him a personal thank-you letter with 1.5 million signatures. He underwent a kidney transplant in 2000 at the Cleveland Clinic in the U.S.

On 2 November 2004, Zayed died, as announced by Abu Dhabi TV. He was believed to be 86 years old. He is buried in the courtyard of the new Sheikh Zayed Grand Mosque in Abu Dhabi.

His eldest son, Sheikh Khalifa bin Zayed Al Nahyan, born in 1948, took an increasing role in the government from the 1990s; he was ratified as the Ruler of the United Arab Emirates by his fellow rulers on the Supreme Council directly after his father's death.

Shaikh Zayed International Airport located at Rahim Yar Khan, Punjab, Pakistan is named in his honor.

Coordinates: 26°01′39″N 50°33′00″E

From Wikipedia, the free encyclopedia

Bahrain (Arabic: البحرين, *al-Baḥrayn*), officially the **Kingdom of Bahrain** (Arabic: مملكة البحرين, *Mamlakat al-Baḥrayn*), is a small island state near the western shores of the Persian Gulf. It is ruled by the Al Khalifa royal family. The population in 2010 stood at 1,234,571, including 666,172 non-nationals.[1] Formerly an emirate, Bahrain was declared a kingdom in 2002.

Bahrain is an archipelago of 33 islands, the largest being Bahrain Island, at 55 km (34 mi) long by 18 km (11 mi) wide. Saudi Arabia lies to the west and is connected to Bahrain by the King Fahd Causeway. Qatar is to the southeast across the Gulf of Bahrain. The planned Qatar Bahrain Causeway will link Bahrain and Qatar and become the world's longest marine causeway.[4]

Known for its oil and pearls, Bahrain is also home to many large structures, including the Bahrain World Trade Center and the Bahrain Financial Harbour, with a proposal in place to build the 1,022 m (3,353 ft) high Murjan Tower. The *Qal'at al-Bahrain* (the harbour and capital of the ancient land of Dilmun) was declared a UNESCO World Heritage Site in 2005.[5] The Bahrain Formula One Grand Prix takes place at the Bahrain International Circuit.[6]

Etymology

In Arabic, *bahrayn* is the dual form of *bahr* ("sea"), so *al-Bahrayn* means "the Two Seas". However, which two seas were originally intended remains in dispute.[7] The term appears five times in the Qur'an, but does not refer to the modern island — originally known to the Arabs as "Awal" — but rather to the oases of al-Katif and Hadjar (modern al-Hasa).[7] It is unclear when the term began to refer exclusively to the Awal islands, but it was probably after the 15th century.

Today, al-Hasa belongs to Saudi Arabia and Bahrain's "two seas" are instead generally taken to be the bay east and west of the island,[8] the seas north and south of the island,[*citation needed*] or the salt and fresh water present above and below the ground.[9] In addition to wells, there are places in the sea north of Bahrain where fresh water bubbles up in the middle of the salt water, noted by visitors since antiquity.[10]

An alternate theory offered by al-Ahsa was that the two seas were the Great Green Ocean and a peaceful lake on the mainland; still another provided by al-Jawahari is that the more formal name *Bahri* (lit. "belonging to the sea") would have been misunderstood and so was opted against.[9]

History

Main article: History of Bahrain

Pre-Islamic period

Inhabited since ancient times, Bahrain occupies a strategic location in the Persian Gulf. It is the best natural port between the mouth of the Tigris and Euphrates Rivers and Oman, a source of copper in ancient times. Bahrain may have been associated with **Dilmun**, an important Bronze age trade centre linking Mesopotamia and the Indus Valley.[11] It has been ruled by the Assyrians,[*citation needed*] Babylonians,[*citation needed*] Persians,[12] and then Arabs, under whom the island became first

Christian and then Islamic.

Asia in 600 AD, showing the Persian Empire in Sassanid era before the Arab conquest.

From the 6th to 3rd century BC, Bahrain was added to the Persian Empire by the Achaemenian dynasty. By about 250 BC, the Parthians brought the Persian Gulf under its control and extended its influence as far as Oman. During the classical era, the island was known as **Tylos** in Europe. In order to control trade routes, the Parthians established garrisons along the southern coast of the Persian Gulf.[13] In the 3rd century, Ardashir I, the first ruler of the Sassanid dynasty, marched on Oman and Bahrain, where he defeated Sanatruq II.[14] At this time, Bahrain comprised the southern Sassanid province along with the Persian Gulf's southern shore.[15]

The Sassanid Empire divided their southern province into the three districts of Haggar (now al-Hafuf province in Saudi Arabia), Batan Ardashir (now al-Qatif province in Saudi Arabia) and Mishmahig (which in Middle-Persian/Pahlavi means "ewe-fish").[14] Early Islamic sources describe the country as inhabited by members of the Abdul Qais,[16] Tamim, and Bakr tribes who worshipped the idol Awal, from which the Arabs named the island of Bahrain **Awal** for many centuries. However, Bahrayn was also a center of Nestorian Christianity, including two of its bishoprics.[14]

Islamic conversion and Portuguese control

Traditional Islamic accounts state that Al-ʿAlāʾ Al-Ḥaḍrami was sent as an envoy to the Bahrain region by the prophet Muhammad in AD 628 and that Munzir ibn-Sawa al-Tamimi, the local ruler, responded to his mission and converted the entire area.[17]

In 899 AD, the Qarmatians, a millenarian Ismaili Muslim sect seized Bahrain, seeking to create a utopian society based on reason and redistribution of property among initiates. Thereafter, the Qarmatians demanded tribute from the caliph in Baghdad, and in 930 AD sacked Mecca and Medina, bringing the sacred Black Stone back to their base in Ahsa, in medieval Bahrain, for ransom. According to historian Al-Juwayni, the stone was returned 22 years later in 951 under mysterious circumstances. Wrapped in a sack, it was thrown into the Great Mosque of Kufa in Iraq, accompanied by a note saying "By command we took it, and by command we have brought it back." The theft and removal of the Black Stone caused it to break into seven pieces.[14][18][19]

Following a 976 AD defeat by the Abbasids,[20] the Quarmations were overthrown by the Arab Uyunid dynasty of al-Hasa, who took over the entire Bahrain region in 1076.[21] The Uyunids controlled Bahrain until 1235, when the archipelago was briefly occupied by the Iranian ruler of Fars. In 1253, the Bedouin Usfurids brought down the Uyunid dynasty, thereby gaining control over eastern Arabia, including the islands of Bahrain. In 1330, the archipelago became a tributary state of the rulers of Hormuz,[22] though locally the islands were controlled by the Shi'ite Jarwanid dynasty of Qatif.[23]

Until the late Middle Ages, "Bahrain" referred to the larger historical region of Bahrain that included Al-Ahsa, Al-Qatif (both now within the Eastern Province of Saudi Arabia) and the Awal Islands (now the Bahrain Islands). The region stretched from Basra in Iraq to the Strait of Hormuz in Oman. This was Iqlīm al-Bahrayn's "Bahrayn Province". The exact date at which the term "Bahrain" began to refer solely to the Awal archipelago is unknown.[24] In the mid-15th century, the archipelago came under the rule of the Jabrids, a Bedouin dynasty also based in Al-Ahsa that ruled most of eastern Arabia.

In 1521, the Portuguese allied with Hormuz and seized Bahrain from the Jabrid ruler Migrin ibn Zamil, who was killed during the takeover. Portuguese rule lasted for around 80 years, during which time they depended mainly on Sunni Persian governors.[25] The Portuguese were expelled from the islands in 1602 by Abbas I of the

Safavid dynasty of Iran, who declared Shia Islam the official religion of Bahrain.[26] For the next two centuries, Iranian rulers retained control of the archipelago, interrupted by the 1717 and 1738 invasions of the Ibadhis of Oman.[27][28] During most of this period, they resorted to governing Bahrain indirectly, either through the city of Bushehr or through immigrant Sunni Arab clans. The latter were tribes returning to the Arabian side of the Persian Gulf from Persian territories in the north who were known as *Huwala* (literally: those that have changed or moved).[25][29][30] In 1753, the Huwala clan of Al Madhkur invaded Bahrain on behalf of the Iranians and restored direct Iranian rule.[31]

Rise of the Bani Utbah

In 1783, Nasr Al-Madhkur, ruler of Bahrain and Bushire, lost the islands of Bahrain following his defeat by the Bani Utbah tribe at the 1782 Battle of Zubarah. Bahrain was not new territory to the Bani Utbah; they had been a presence there since the 17th century.[32] During that time, they started purchasing date palm gardens in Bahrain. A document belonging to Shaikh Salama Bin Saif Al Utbi, one of the shaikhs of the Al Bin Ali tribe (an offshoot of the Bani Utbah), states that Mariam Bint Ahmed Al Sindi, a Shia woman, sold a palm garden on the island of Sitra to Shaikh Salama Bin Saif Al Utbi in the year 1699–1111 Hijri calendar, preceding the arrival of the Al-Khalifa to Bahrain by more than 90 years.[33]

The Al Bin Ali were the dominant group controlling the town of Zubarah on the Qatar peninsula,[34][35] originally the center of power of the Bani Utbah. After the Bani Utbah gained control of Bahrain, the Al Bin Ali had a practically independent status there as a self-governing tribe. They used a flag with four red and three white stripes, called the Al-Sulami flag[36] in Bahrain, Qatar, Kuwait, and the Eastern province of the Kingdom of Saudi Arabia. It was raised on their ships during wartime, in the pearl season and on special occasions such as weddings and during Eid ul-Fitr as well as in the "Ardha of war".[37] The Al Bin Ali were known for their courage, persistence, and abundant wealth.[38]

Later, different Arab family clans and tribes, mostly from Qatar, moved to Bahrain to settle after the fall of the Zand Dynasty of Persia. These families and tribes included the Al Khalifa, Al-Ma'awdah, Al-Fadhil, Al-Mannai, Al-Noaimi, Al-Sulaiti, Al-Sadah, Al-Thawadi, and other families and tribes.

Most of these tribes settled in Muharraq, the capital of Bahrain and center of power at that time since the Al Bin Ali lived there. The oldest and largest neighbourhood in Muharraq city is called Al Bin Ali. Members of this tribe lived in this area for more than three centuries.[*citation needed*]

Al Khalifa ascendancy to Bahrain and their treaties with the British

In 1797, fourteen years later after gaining the power of the Bani Utbah, the Al Khalifa family moved to Bahrain and settled in Jaww, later moving to Riffa. They were originally from Kuwait having left in 1766. Al-Sabah family traditions relates that the ancestors of their tribe and those of the Al-Khalifa tribe came to Kuwait after their expulsion from Umm Qasr upon Khor Zubair by the Turks, an earlier base from which they preyed on the caravans of Basra and pirated ships in the Shatt al-Arab waterway.[39]

In the early 19th century, Bahrain was invaded by both the Omanis and the Al Sauds. In 1802 it was governed by a twelve year old child, when the Omani ruler Sayyid Sultan installed his son, Salim, as Governor in the Arad Fort.[40]

In 1820, the Al Khalifa tribe regained power in Bahrain and entered a treaty relationship with Great Britain, by then the dominant military power in the Persian Gulf. This treaty granted the Al Khalifa the title of Rulers

("Al-Hakim" in Arabic) of Bahrain.

After Egyptian ruler Mohammad Ali Pasha took the Arabian Peninsula from the Wahhabis on behalf of the Ottoman Empire in 1830, Sheikh Abdul Al Khalifa declared allegiance to the Iranian Government to avoid the Egyptians taking control of Bahrain.

In 1860, the Government of Al Khalifa used the same tactic when the British tried to overpower Bahrain. Sheikh Mohammad bin Khalifa Al Khalifa wrote a letter to Nasseredin Shah of Iran declaring himself, his brother and all of members of Al Khalifa and the people of Bahrain Iranian subjects. In another letter to the Iranian Foreign Minister, Sheikh Mohammad demanded that the Government of Iran provide direct guidance and protection from British pressure.

Later on, under pressure from Colonel Sir Lewis Pelly, Sheikh Mohammad requested military assistance from Iran, but the Government of Iran at that time had no ability to protect Bahrain from British aggression. As a result the Government of British India eventually overpowered Bahrain. Colonel Pelly signed an agreement with Sheikh Mohammad in May 1861 and later with his brother Sheikh Ali that placed Bahrain under British rule and protection. In 1868, British representatives signed another agreement with the rulers of Al Khalifa making Bahrain part of the British protectorate territories in the Persian Gulf. This treaty was similar to those entered into by the British Government with the other Persian Gulf principalities. It specified that the ruler could not dispose of any of his territory except to the United Kingdom and could not enter into relationships with any foreign government without British consent. In return the British promised to protect Bahrain from all aggression by sea and to lend support in case of land attack. More importantly the British promised to support the rule of the Al Khalifa in Bahrain, securing its unstable position as rulers of the country. Other agreements in 1880 and 1892 sealed the protectorate status of Bahrain to the British.

According to School of Oriental and African Studies (SOAS) academic, Nelida Fuccaro:

> From this perspective state building under the Al Khalifa shayks should not be considered exclusively as the result of Britain's informal empire in the Persian Gulf. In fact, it was a long process of strategic negotiation with different sections of the local population in order to establish a pre-eminence of their particularly artistic Sunni/Bedouin tradition of family rule.
>
> —Nelida Fuccaro, *Persians and the space in the city in Bahrain 1869–1937*[41]

Unrest amongst the people of Bahrain began when Britain officially established complete dominance over the territory in 1892. The first revolt and widespread uprising took place in March 1895 against Sheikh Issa bin Ali, then Ruler of Bahrain. Sheikh Issa was the first of the Al Khalifa to rule without Iranian relations. Sir Arnold Wilson, Britain's representaive in the Persian Gulf and author of *The Persian Gulf*, arrived in Bahrain from Mascat at this time. The uprising developed further with some protesters killed by British forces.

Peace and trade brought a new prosperity to Bahrain. With the country no longer dependent upon pearling, by the mid-19th century it became the pre-eminent trading centre in the Persian Gulf, overtaking rivals Basra, Kuwait, and finally, in the 1870s, Muscat.[42] At the same time, Bahrain's socio-economic development began to diverge from the rest of the Persian Gulf undergoing transformation from a tribal trading centre to a modern state.[43] This process was spurred by the arrival of large numbers of Persian, Huwala, and Indian merchant families who set up businesses on the island, making it the hub of a web of trade routes across the Persian Gulf, Persia and the Indian sub-continent. A contemporary account of Manama in 1862 found:

> Mixed with the indigenous population [of Manamah] are numerous strangers and settlers, some of whom have been established here for many generations back, attracted from other lands by the profits of either commerce or the pearl fishery, and still retaining more or less the physiognomy and garb of their native countries. Thus the gay-coloured dress of the southern Persian, the saffron-

> stained vest of Oman, the white robe of Nejed, and the striped gown of Bagdad, are often to be seen mingling with the light garments of Bahreyn, its blue and red turban, its white silk-fringed cloth worn Banian fashion round the waist, and its frock-like overall; while a small but unmistakable colony of Indians, merchants by profession, and mainly from Guzerat, Cutch, and their vicinity, keep up here all their peculiarities of costume and manner, and live among the motley crowd, ‘among them, but not of them’.
>
> —WG Palgrave, *Narrative of a Year's Journey through Central and Eastern Arabia (1862–3)*[44]

Palgrave's description of Manama's coffee houses in the mid-19th century portrays them as cosmopolitan venues in contrast to what he describes as the ‘closely knit and bigoted universe of central Arabia’.[44] Palgrave describes a people with an open – even urbane – outlook: "Of religious controversy I have never heard one word. In short, instead of Zelators and fanatics, camel-drivers and Bedouins, we have at Bahrain [Manama] something like 'men of the world, who know the world like men' a great relief to the mind; certainly it was so to mine."[44]

The great trading families that emerged during this period have been compared to the Borgias and Medicis[44] and their great wealth – long before the oil wealth the region would later be renowned for – gave them extensive power, and among the most prominent were the Persian Al Safar family, who held the position of Native Agents of Britain in 19th century.[44] The Al Safar enjoyed an 'exceptionally close'[44] relationship with the Al Khalifa clan from 1869, although the Al-Khalifa never intermarried with them – it has been speculated that this was to limit the Al-Safars' influence on the ruling family or because the Al-Safars were Shia Muslims.

Bahrain's trade with India saw the cultural influence of the subcontinent grow dramatically, with styles of dress, cuisine, and education all showing a marked Indian influence. According to Exeter University's James Onley "In these and countless other ways, eastern Arabia's ports and people were as much a part of the Indian Ocean world as they were a part of the Arab world."[44]

In 1911, a group of Bahraini merchants demanded restrictions on the British influence in the country. The group's leaders were subsequently arrested and exiled to India. In 1923, the British deposed Sheikh Issa bin Ali whom they accused of opposing Britain and set up a permanent representative in Bahrain. This coincided with renewal of Iran's claim over the ownership of Bahrain, a development that Sheikh Issa had been accused of welcoming. The preference shown by the people of Bahrain towards the renewal of Iran ownership's claim also caused concern for Britain. To remedy these problems, in 1926, Britain dispatched Sir Charles Belgrave, one of her most experienced colonial officers, as an advisor to the Ruler of Bahrain. His harsh measures intensified the increasing aversion of people towards him and led to his eventual expulsion from Bahrain in 1957. Belgrave's colonial undertakings were not limited to violent deeds against Bahrainis but also included a series of initiatives that included removal of Iranian influence on Bahrain and the Persian Gulf. In 1937, Belgrave proposed changing the name of the Persian Gulf to the "Gulf of Arabia", a move that did not take place.

In 1927, Rezā Shāh demanded the return of Bahrain in a letter to the Allied Nations Community. Britain believed that weakened domination over Bahrain would cause her to lose control all over the Persian Gulf, and decided to bring uprisings amongst the people of Bahrain under control at any cost. To achieve this they encouraged conflicts between Shiite and Sunni Muslims in Bahrain[*citation needed*].

Bahrain underwent a period of major social reform between 1926 and 1957, under the *de facto* rule of Charles Belgrave, the British advisor to Shaikh Hamad ibn Isa Al Khalifa (1872–1942). The country's first modern school, the Al-Hiddaya Boys School, was established in 1919, whilst the Arab Persian Gulf's first girls' school opened in 1928. The American Mission Hospital, established by the Dutch Reformed Church, began work in 1903. Other reforms included the abolition of slavery. At the same time, the pearl diving industry developed at a

rapid pace.

These reforms were often vigorously opposed by powerful groups within Bahrain including sections within the ruling family, tribal forces, the religious authorities and merchants. In order to counter conservatives, the British removed the Ruler, Isa ibn Ali Al Khalifa in 1923 and replaced him with his son. Some Sunni tribes such as the al Dossari left Bahrain to mainland Arabia, whilst clerical opponents of social reforms were exiled to Saudi Arabia and Iran. The heads of some merchant and notable families were likewise exiled[*citation needed*]. Britain's interest in Bahrain's development was motivated by concerns over the ambitions of the Saudi-Wahabi and the Iranians.

Discovery of petroleum

The discovery of oil in 1932[45] brought rapid modernisation to Bahrain. Relations with the United Kingdom became closer, as evidenced by the British Royal Navy moving its entire Middle Eastern command from Bushehr in Iran to Bahrain in 1935.[46] British influence continued to grow as the country developed, culminating with the appointment of Charles Belgrave as advisor.[44] He went on to establish a modern education system in Bahrain.[44] After World War II, increasing anti-British sentiment spread throughout the Arab World and led to riots in Bahrain. The riots focused on the Jewish community, which included distinguished writers, singers, accountants, engineers and middle managers working for the oil company, textile merchants with business all over the peninsula, and free professionals.

Bahrain political map, 2003

In 1948, following rising hostilities and looting,[47] most members of Bahrain's Jewish community abandoned their properties and evacuated to Bombay, later settling in Israel (Pardes Hanna-Karkur) and the United Kingdom. As of 2008, 37 Jews remained in the country.[47] The issue of compensation was never settled. In 1960, the United Kingdom put forward Bahrain's future for international arbitration and requested that the United Nations Secretary-General take on this responsibility.

Drop of Iranian claim

Iran's parliament passed a bill in November 1957 declaring Bahrain to be the 14th province of Iran,[48] with two empty seats allocated for its representatives. This action caused numerous problems for Iran in its international relations, especially with some United Nations bodies, Britain, Saudi Arabia, and a number of Arab countries.

At this time, Britain set out to change the demographics of Bahrain. The policy of “deiranisation” consisted of importing a large number of different Arabs and others from British colonies as labourers.[49]

Demonstrations in 1956 forced the Al Khalifa rulers to leave Manama (the capital) for the village of Refae Al Gharbi where only Sunni Arabs serving as their bodyguards were allowed to live.

In 1965 Britain began dialogue with Iran to determine their borders in the Persian Gulf. Before long extensive differences over borders and territory came to light, including the dispute over the dominion of Bahrain. The two were not able to determine the maritime borders between the northern and southern countries of the Persian Gulf. At the same time King Faisal of Saudi Arabia arrived in Iran on a visit which included the creation of

Islamic Conference and the decision to determine the maritime borders of the two countries. In return, the Shah of Iran agreed to visit Saudi Arabia in 1967. A week before this visit, the Saudis received Sheikh Isa bin Salman Al Khalifa, the that time Ruler of Bahrain as a head of state in the Saudi capital Riyadh. As a result the Shah's visit was cancelled, seriously damaging relations between the two countries. Following mediation by King Hassan II of Morocco the relationship was repaired.

Eventually Iran and Britain agreed to put the matter of Dominion of Bahrain to international judgment and requested the United Nations General Secretary take on this responsibility.

Iran pressed hard for a referendum in Bahrain in the face of strong opposition from both the British and the Bahraini leaders.[49] Their opposition was based on Al Khalifa's view that such a move would negate 150 years of their clan's rule in the country. In the end, as an alternative to the referendum, Iran and Britain agreed to request the United Nations conduct an opinion poll in Bahrain that would determine the political future of the territory. In reply to letters from the British and Iranians, U Thant, then Secretary General of the United Nations, declared that an opinion poll would take place on 30 March 1970. Vittorio Winspeare-Giucciardi, Manager of the United Nations office in Geneva was put in charge of the project. Report no. 9772 was submitted to the UN General Secretary and on 11 May 1970, the United Nations Security Council endorsed Winspeare's conclusion that an overwhelming majority of the people wished recognition of Bahrain's identity as a fully independent and sovereign state free to decide its own relations with other states.[50] Both Britain and Iran accepted the report and brought their dispute to a close.

The oil boom of the 1970s benefited Bahrain greatly, although the subsequent downturn hurt the economy. The country had already begun diversification of its economy and benefited further from the 1970s Lebanese Civil War, when Bahrain replaced Beirut as the Middle East's financial hub after Lebanon's large banking sector was driven out of the country by the war.[51] Following the 1979 Islamic revolution in Iran, in 1981 Bahraini Shīʿa fundamentalists orchestrated a failed coup attempt under the auspices of a front organisation, the Islamic Front for the Liberation of Bahrain. The coup would have installed a Shīʿa cleric exiled in Iran, Hujjatu l-Islām Hādī al-Mudarrisī, as supreme leader heading a theocratic government.[52] In 1994, a wave of rioting by disaffected Shīa Islamists was sparked by women's participation in a sporting event.

During the mid-1990s, Bahrain was badly affected by sporadic violence between the government and the cleric-led opposition in which over forty people were killed.[53] In March 1999, Hamad ibn Isa Al Khalifah succeeded his father as Emir (head of state) and instituted elections for parliament, gave women the right to vote, and released all political prisoners. These moves were described by Amnesty International as representing an "historic period of human rights".[54] As part of the adoption of the National Action Charter on 14 February 2002, Bahrain changed its formal name from the State (*dawla*) of Bahrain to the Kingdom of Bahrain.[55]

Politics

See also: Bahraini parliamentary election, 2006 and Human rights in Bahrain

Bahrain is a Constitutional monarchy headed by the King, Shaikh Hamad bin Isa Al Khalifa; the head of government is the Prime Minister, Shaikh Khalīfa bin Salman al Khalifa, who is the uncle of the current king. Bahrain has a bicameral National Assembly (*al-Jamiyh al-Watani*) consisting of the Shura Council (*Majlis Al-Shura*) with 40 seats and the Council of Representatives (*Majlis Al-Nuwab*) with 40 seats. The 40 members of the Shura are appointed by the king. In the Council of Representatives, 40 members are elected by absolute majority vote in single-member constituencies to serve 4-year terms.[56]

The *Bahrain Royal Flight* (Boeing 747SP).

The first round of voting in the 2006 parliamentary election took place on 25 November 2006, and in the second round Islamists hailed a huge election victory.[57]

The opening up of politics has seen big gains for both Shīa and Sunnī Islamists in elections, which have given them a parliamentary platform to pursue their policies[*citation needed*]. This has meant parties launching campaigns to impose bans on female mannequins displaying lingerie in shop windows,[58] and the hanging of underwear on washing lines.[59]

Analysts of democratisation in the Middle East cite the Islamists' references to respect for human rights in their justification for these programmes as evidence that these groups can serve as a progressive force in the region[*citation needed*]. Islamist parties have been particularly critical of the government's readiness to sign international treaties such as the United Nation's International Convention on Civil and Political Rights.[60] At a parliamentary session in June 2006 to discuss ratification of the Convention, Sheikh Adel Mouwda, the former leader of salafist party, Asalah, explained the party's objections: "*The convention has been tailored by our enemies, God kill them all, to serve their needs and protect their interests rather than ours. This why we have eyes from the American Embassy watching us during our sessions, to ensure things are swinging their way*".[61]

Both Sunnī and Shī'a Islamists suffered a setback in March 2006 when 20 municipal councillors, most of whom represented religious parties, went missing in Bangkok on an unscheduled stopover when returning from a conference in Malaysia.[62] After the missing councillors eventually arrived in Bahrain they defended their stay at the Radisson Hotel in Bangkok, telling journalists it was a "fact-finding mission", and explaining: "*We benefited a lot from the trip to Thailand because we saw how they managed their transport, landscaping and roads*".[63] Bahraini liberals have responded to the growing power of religious parties by organising themselves to campaign through civil society in order to defend basic personal freedoms from being legislated away[*citation needed*]. In November 2005, al Muntada, a grouping of liberal academics, launched "*We Have A Right*", a campaign to explain to the public why personal freedoms matter and why they need to be defended[*citation needed*].

President George W. Bush welcomes His Majesty King Hamad bin Isa Al Khalifa of Bahrain to the Oval Office Monday, Nov. 29, 2004

Women's rights

Main article: Women's political rights in Bahrain

Women's political rights in Bahrain saw an important step forward when women were granted the right to vote and stand in national elections for the first time in the 2002 election.[64] However, no women were elected to office in that year's polls. Instead, Shī'a and Sunnī Islamists dominated the election, collectively winning a majority of seats[*citation needed*]. In response to the failure of women candidates, six were appointed to the Shura Council, which also includes representatives of the Kingdom's indigenous Jewish and Christian communities[*citation needed*]. Dr. Nada Haffadh became the country's first female cabinet minister on her appointment as Minister of Health in 2004. The quasi-governmental women's group, the Supreme Council for Women, trained female candidates to take part in the 2006 general election. When Bahrain was elected to head

the United Nations General Assembly in 2006 it appointed lawyer and women's rights activist Haya bint Rashid Al Khalifa President of the United Nations General Assembly, only the third woman in history to head the world body.[65] The King recently created the Supreme Judicial Council[66] to regulate the country's courts and institutionalise the separation of the administrative and judicial branches of government;[67] the leader of this court is Mohammed Humaidan.

On 11–12 November 2005, Bahrain hosted the Forum for the Future, bringing together leaders from the Middle East and G8 countries to discuss political and economic reform in the region.[68] The near total dominance of religious parties in elections has given a new prominence to clerics within the political system, with the most senior Shia religious leader, Sheikh Isa Qassim, playing an extremely important role. According to one academic paper, "In fact, it seems that few decisions can be arrived at in Al Wefaq – and in the whole country, for that matter – without prior consultation with Isa Qassim, ranging from questions with regard to the planned codification of the personal status law to participation in elections".[69] In 2007, Al Wefaq-backed parliamentary investigations were credited with forcing the government to remove ministers who had frequently clashed with MPs: the Minister of Health, Dr. Nada Haffadh and the Minister of Information, Dr Mohammed Abdul Gaffar.[70]

1990s uprising in Bahrain

Main article: 1990s uprising in Bahrain

The "1990s Uprising in Bahrain" or "1990s Intifada" was a rebellion in Bahrain between 1994 and 2000 in which leftists, liberals and Islamists joined forces. The event resulted in approximately forty deaths and ended after Hamad ibn Isa Al Khalifa became the Emir of Bahrain in 1999.[71] A referendum on 14–15 February 2001 massively supported the National Action Charter.[72]

2011–2012 Bahraini uprising

Main article: 2011–2012 Bahraini uprising

Protesters raising their hands towards Pearl Roundabout

The protests in Bahrain were initially aimed at achieving greater political freedom and respect for human rights, and were not intended to threaten the monarchy nor were they as large as those in other countries.[73] Lingering frustration among the Shiite majority with being ruled by the Sunni government was a major root cause, but the protests in Tunisia and Egypt are cited as the inspiration for the demonstrations.[74] The protests began in Bahrain on 14 February[73] and were largely peaceful, until a raid by police on the night of 17 February against protestors sleeping at the Pearl Roundabout in Manama, in which police killed four protestors.[75][76] Following the deadly raid, some of the protestors' begins to expand their aims to a call for the end of the monarchy, who has ruled Bahrain since the late 18th century.[77] On 18 February, government forces opened fire on protesters, mourners, and news journalists,[78] prompting protesters to begin calling for the overthrow of the Bahraini monarchy and government.[79] On 19 February, protesters occupied Pearl Roundabout after the government ordered troops and police to withdraw.[80][81][82] On 22 February, an estimated one hundred thousand people, one fifth of all Bahrainis, marched. On 14 March, at the request of the Crown Prince, GCC Saudi Arabian troops entered the country,[83] and opened fire on the protesters, several of whom were killed.[84][85] Later thousands of Shia

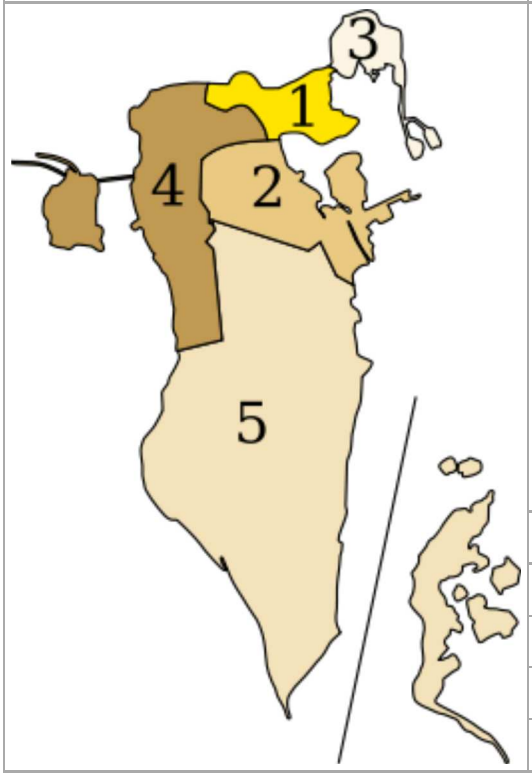
protesters arose in Iraq and Qatif in opposition to the Saudi-led intervention in Bahrain.[86][87][88]

One of the huge marches that swept across Bahrain in February 2011

Panoramic image for the march of 9 March 2012

King Hamad bin Isa Al Khalifa declared a three-month state of emergency on 15 March and asked the military to reassert its control as clashes spread across the country.[89] It was later lifted on 1 June 2011.[90] On 16 March 2011, the protesters' camp in the Pearl Roundabout was evacuated, bulldozed, and set on fire by the Bahraini Defense Force and riot police.[91] Later on 18 March, the Pearl Roundabout monument was torn down as part of the crackdown on protesters.[92] Human rights organizations reported that since the in the 8 months following the outbreak of protests on 14 February, more than 1,600 peaceful political protesters, medical professionals, journalists, human rights defenders and innocent bystanders were arrested and more than 100 people convicted by a special military court established by the government.[93]

Since the lifting of emergency law on 1 June, several large rallies have been staged by the Shi'ite community demanding the release of detained protesters, greater political representation, and an end to sectarian discrimination. In July 2011, medical personnel were tried by special military courts for treating injured protesters and sentenced to multi-year prison sentences.[94] Several human rights groups and news organizations have alleged they have been deliberately targeted by the Bahraini government.[95]



On 23 November 2011, the Bahrain Independent Commission of Inquiry released its report on human rights violations during the February and March 2011 protests, finding that the government "systematically" tortured prisoners, summarily fired Shi'ite employees and university students, and committed other gross human rights violations.[96] One of the report's recommendations was to allow human rights groups into the country to monitor the situation. Between 23 November and the end of January, however, the Bahraini government refused entry to several international human rights groups including Freedom House,[97][98] Human Rights First [99] and Physicians for Human Rights.[100]

On 9 March 2012, hundreds of thousands protested in one of the biggest anti-govemrent rallies to date. According to CNN, the march "filled a four-lane highway between Duraz and Muksha".[101] The government said 100,000 participated in the march while opposition activists estimated the number to be more than 200,000. The march was called for by Sheikh Isa Qassim, Bahrain's top Shia cleric. Protesters called for downfall of King and the release of imprisoned political leaders. The protest ended peacefully, however hundreds of youth tried to march back to the site of the now demolished symbolic Pearl roundabout, and were dispersed by security forces with tear gas.[102] Nabeel Rajab, president of BCHR called the march "the biggest in our history".[103]

Governorates

For further information, see Decree-Law establishing governorates (http://www.capital.gov.bh/pages/pdf/govlawe.pdf) PDF (732 KB) from the Bahrain official website.

Bahrain is split into five governorates. These governorates are:

Map	Governorates
	**1.** Capital Governorate
	2. Central Governorate
	3. Muharraq Governorate
	4. Northern Governorate
	5. Southern Governorate

Economy

Main article: Economy of Bahrain

Sunset at the King Fahd Causeway

According to a January 2006 report by the United Nations Economic and Social Commission for Western Asia, Bahrain has the fastest growing economy in the Arab world.[104] Bahrain also has the freest economy in the Middle East and is tenth freest overall in the world based on the 2011 Index of Economic Freedom published by the Heritage Foundation/*Wall Street Journal*, .[105]

In 2008, Bahrain was named the world's fastest growing financial center by the City of London's Global Financial Centres Index.[104][104] Bahrain's banking and financial services sector, particularly Islamic banking, have benefited from the regional boom driven by demand for oil.[104] In Bahrain, petroleum production and processing account for about 60% of export receipts, 60% of government revenues, and 30% of GDP.

Economic conditions have fluctuated with the changing price of oil since 1985, for example during and following the Persian Gulf crisis of 1990–91. With its highly developed communication and transport facilities, Bahrain is home to a number of multinational firms and construction proceeds on several major industrial projects. A large share of exports consist of petroleum products made from imported crude oil. In 2004, Bahrain signed the US-Bahrain Free Trade Agreement, which will reduce certain trade barriers between the two nations.[106]

Unemployment, especially among the young, and the depletion of both oil and underground water resources are

major long-term economic problems. In 2008, the jobless figure was at 4%,[107] with women over represented at 85% of the total.[108] In 2007 Bahrain became the first Arab country to institute unemployment benefits as part of a series of labour reforms instigated under Minister of Labour, Dr. Majeed Al Alawi.[109]

Geography

Main article: Geography of Bahrain

Desert landscape in Bahrain

Bahrain is a generally flat and arid archipelago in the Persian Gulf, east of Saudi Arabia. It consists of a low desert plain rising gently to a low central escarpment with the highest point the 134 m (440 ft) Mountain of Smoke *(Jabal ad Dukhan)*. Bahrain has a total area of 665 km^2 (257 sq mi), which is slightly larger than the Isle of Man, though it is smaller than the nearby King Fahd International Airport near Dammam, Saudi Arabia (780 km^2 (301 sq mi)).

As an archipelago of thirty-three islands, Bahrain does not share a land boundary with another country but does have a 161 km (100 mi) coastline. The country also claims a further 22 km (12 nmi) of territorial sea and a 44 km (24 nmi) contiguous zone. Bahrain's largest islands are Bahrain Island, Muharraq Island, Umm an Nasan, and Sitrah. Bahrain has mild winters and very hot, humid summers. The country's natural resources include large quantities of oil and natural gas as well as fish in the offshore waters. Arable land constitutes only 2.82%[110] of the total area.

92% of Bahrain is desert with periodic droughts and dust storms the main natural hazards for Bahrainis. Environmental issues facing Bahrain include desertification resulting from the degradation of limited arable land, coastal degradation (damage to coastlines, coral reefs, and sea vegetation) resulting from oil spills and other discharges from large tankers, oil refineries, distribution stations, and illegal land reclamation at places such as Tubli Bay. The agricultural and domestic sectors' over-utilization of the Dammam Aquifer, the principal aquifer in Bahrain, has led to its salinisation by adjacent brackish and saline water bodies.[*citation needed*]

Climate

Main articles: Geography of Bahrain and Climate of Bahrain

The Zagros Mountains across the Persian Gulf in Iraq cause low level winds to be directed toward Bahrain. Dust storms from Iraq and Saudi Arabia transported by northwesterly winds cause reduced visibility in the months of June and July.

Due to the Persian Gulf area's low moisture, summers are very hot and dry. The seas around Bahrain are very shallow, heating up quickly in the summer to produce high humidity, especially at night. Summer temperatures may reach more than 40 °C (104 °F) under the right conditions. Rainfall in Bahrain is minimal and irregular. Rainfalls mostly occur in winter, with a recorded maximum of 71.8 mm (2.83 in).[111]

Demographics

Main article: Demographics of Bahrain

Religion in Bahrain 2010	[1]
Islam	70.2%
Other	29.8%

In 2010, Bahrain's population grew to 1.2 million, of which 568,399 were Bahraini and 666,172 were non-nationals.[1] It had risen from 1.05 million (517,368 non-nationals) in 2007, the year when Bahrain's population crossed the one million mark.[113] Though a majority of the population is ethnically Arab, a sizeable number of people from South Asia live in the country. In 2008, approximately 290,000 Indian nationals lived in Bahrain, making them the single largest expatriate community in the country.[114][115]

Bahrain is the fourth most densely populated sovereign state in the world with a population density of 1,646 people per km^2 in 2010 [116]. The only sovereign states with larger population densities are city states. Much of this population is concentrated in the north of the country with the Southern Governorate being the least densely populated part.[1] The north of the country is so urbanized that it is considered by some to be one large metropolitan area.[117]

The official religion of Bahrain is Islam and 99.8% of Bahraini citizens are Muslim. There are no official figures for the proportion of Shia and Sunni among the Muslims of Bahrain, but approximately 66-70% percent of Bahraini Muslims are Shias. [118][119][120][121] Due to an influx of immigrants and guest workers from non-Muslim countries, such as India, Philippines and Sri Lanka,[122] the overall percentage of Muslims in the country has declined in recent years. According to the 2001 census, 81.2% of Bahrain's population was Muslim, 9% were Christian, and 9.8% practised Hinduism or other religions.[110] The 2010 census records that the Muslim proportion had fallen to 70.2% (the 2010 census did not differentiate between the non-Muslim religions).[123]

Culture

Main articles: Culture of Bahrain and Music of Bahrain

Bahrain is sometimes described as "Middle East lite"[124] due to its combination of modern infrastructure with a Persian Gulf identity. While Islam is the main religion, Bahrainis are known for their tolerance towards the practice of other faiths.[*citation needed*]

It is too early to say whether political liberalisation under King Hamad bin Isa Al Khalifa has augmented or undermined Bahrain's traditional pluralism. The new political space for Shia and Sunni Islamists has meant that they are now more able to pursue programs that often seek to directly confront this pluralism. At the same time,

political reforms have encouraged an opposite trend whereby society becomes more self-critical and shows a greater willingness to examine previous social taboos.[*citation needed*]

In common with the rest of the Muslim world, though Bahrain has take strong strides for women's rights, it does not recognise lesbian, gay, bisexual, and transgender rights.[*citation needed*]

Another facet of the new openness is Bahrain's status as the most prolific book publisher in the Arab world, with 132 books published in 2005 for a population of 700,000. In comparison, the 2005 average for the entire Arab world was seven books published per one million people, according to the United Nations Development Programme.[125] Ali Bahar is the most famous singer in Bahrain. He performs his music with his Band Al-Ekhwa (*The Brothers*).

Shi'a Muslims in Bahrain strike their chests during the Remembrance of Muharram.

Language

Arabic is the official language of Bahrain though English is widely used. Bahrani Arabic is the most widely spoken language.

Formula One and other motorsports events

Bahrain has a Formula One race-track, which hosted the inaugural Gulf Air Grand Prix on 4 April 2004, the first in an Arab country. This was followed by the Bahrain Grand Prix in 2005. Bahrain hosted the opening Grand Prix of the 2006 season on 12 March of that year. Both the above races were won by Fernando Alonso of Renault. The 2007 event took place on 13, 14 April and 15.[126]

In 2006, Bahrain also hosted its inaugural Australian V8 Supercar event dubbed the "*Desert 400*". The V8s will return every November to the Sakhir circuit. The Bahrain International Circuit also features a full length drag strip where the Bahrain Drag Racing Club has organised invitational events featuring some of Europe's top drag racing teams[*citation needed*] to try to raise the profile of the sport in the Middle East.

The podium ceremony of the 2007 Bahrain Grand Prix.

Holidays

On 1 September 2006, Bahrain changed its weekend from being Thursdays and Fridays to Fridays and Saturdays, in order to have a day of the weekend shared with the rest of the world. Other non-regular holidays are listed below:

Date	English name	Local (Arabic) name	Description
1 January	New Year's Day	رأس السنة الميلادية	The Gregorian New Year's Day, celebrated by most parts of the world.

Date	English name	Local (Arabic) name	Description
1 May	Labour Day	يوم العمال	
16 December	National Day	اليوم الوطني	National Day, Accession Day for the late Amir *Sh. Isa Bin Salman Al Khalifa*
17 December	Accession Day	يوم الجلوس	
1st *Muharram*	Islamic New Year	رأس السنة الهجرية	Islamic New Year (also known as: *Hijri New Year*).
9th, 10th *Muharram*	Day of *Ashura*	عاشوراء	Commemorates the martyrdom of Imam Hussein.
12th *Rabiul Awwal*	Prophet Muhammad's birthday	المولد النبوي	Commemorates Prophet Muhammad's birthday, celebrated in most parts of the Muslim world.
1st, 2nd, 3rd *Shawwal*	Little Feast	عيد الفطر	Commemorates end of Ramadan.
9th *Zulhijjah*	Arafat Day	يوم عرفة	
10th, 11th, 12th *Zulhijjah*	Feast of the Sacrifice	عيد الأضحى	Commemorates Ibrahim's willingness to sacrifice his son. Also known as the *Big Feast* (celebrated from the 10th to 13th).

Military

Main article: Military of Bahrain

See also: Bahrain Royal Medical Services, Royal Bahraini Army, Royal Bahraini Air Force, and Royal Bahrain Naval Force

Royal Bahraini Navy RBNS *Sabha*

The kingdom has a small but well equipped military called the Bahrain Defence Force (BDF). The BDF is primarily equipped with United States equipment, such as the F16 Fighting Falcon, F5 Freedom Fighter, UH60 Blackhawk, M60A3 tanks, and the ex-USS *Jack Williams*, an Oliver Hazard Perry class frigate renamed the RBNS *Sabha*. The Government of Bahrain has a cooperative agreement with the United States Military and has provided the United States a base in Juffair since the early 1990s. This is the home of the headquarters for Commander, *United States Naval Forces Central Command* (COMUSNAVCENT) / *United States Fifth Fleet* (COMFIFTHFLT), and about 1500 United States and coalition military personnel.[127]

Education

Main article: Education in Bahrain

See also: List of universities in Bahrain

At the beginning of the 20th century, Qur'anic schools (*Kuttab*) were the only form of education in Bahrain. They were traditional schools aimed at teaching children and youth the reading of the Qur'an. After World War I,

Bahrain became open to western influences, and a demand for modern educational institutions appeared. 1919 marked the beginning of modern public school system in Bahrain when the Al-Hidaya Al-Khalifia School for boys opened in Muharraq. In 1926, the Education Committee opened the second public school for boys in Manama, and in 1928 the first public school for girls was opened in Muharraq.

Students at the University of Bahrain, wearing the traditional garb

In 2004 King Hamad ibn Isa Al Khalifa introduced the "King Hamad Schools of Future *project that uses Information Communication Technology to support K–12 education in Bahrain. The project's objective is to connect all schools within the kingdom with the Internet. In addition to British intermediate schools, the island is served by the Bahrain School (BS). The BS is a United States Department of Defense school that provides a K-12 curriculum including International Baccalaureate offerings. There are also private schools that offer either the IB Diploma Programme or United Kingdom A-Levels.*

In 2007, St. Christopher's School Bahrain became the first school in Bahrain to offer a choice of International Baccalaureate or A-Levels for students. Numerous international educational institutions and schools have established links to Bahrain. A few prominent institutions are DePaul University, Bentley University, the Ernst & Young Training Institute, NYIT and the Birla Institute of Technology International Centre Schooling is paid for by the government. Primary and secondary school attendance is high[*citation needed*] even though it is not compulsory.

Bahrain also encourages institutions of higher learning, drawing on expatriate talent and the increasing pool of Bahrain Nationals returning from abroad with advanced degrees. The University of Bahrain was established for standard undergraduate and graduate study, and the King Abdulaziz University College of Health Sciences, operating under the direction of the Ministry of Health, trains physicians, nurses, pharmacists, and paramedics. The 2001 National Action Charter paved the way for the formation of private universities such as the Ahlia University in Manama and University College of Bahrain in Saar. The Royal University for Women (RUW), established in 2005, was the first private, purpose-built, international University in Bahrain dedicated solely to educating women. The University of London External has appointed MCG as the regional representative office in Bahrain for distance learning programs. MCG is one of the oldest private institutes in the country. Institutes have also opened which educate Asian students, such as the Pakistan Urdu School, Bahrain and the Indian School, Bahrain.

Tourism

Main article: Tourism in Bahrain

A 123 m (404 ft) high fountain off the coast

As a tourist destination, Bahrain receives over eight million visitors per annum[*citation needed*]. Most of these are from the surrounding Arab states although an increasing number hail from outside the region due to growing awareness of the kingdom's heritage and its higher profile as a result of the Bahrain International F1 Circuit. The Lonely Planet Guide describes Bahrain as "*an excellent introduction to the Persian Gulf*",[128] because of its authentic Arab heritage and reputation as a liberal and modern country. The kingdom is also home to the popular tourist attraction, the Bahrain City Center.

of Manama. The mechanism is contained in a barge, anchored to the seabed.

The kingdom combines modern Arab culture and the archaeological legacy of five thousand years of civilisation. The island is home to castles including Qalat Al Bahrain which has been listed by UNESCO as a World Heritage Site. The Bahrain National Museum has artefacts from the country's history dating back to the island's first human inhabitants some 9000 years ago.

History of Bahrain

From Wikipedia, the free encyclopedia

Bahrain is a island country in the Persian Gulf. Although Bahrain became an independent country in 1971, the history of these islands starts from ancient times. Bahrain's strategic location in the Persian Gulf has brought rule and influence from the Sumerians, Assyrians, Babylonians, Persians, Portuguese, the Arabs, and the British.

Ancient history

Bahrain has been proposed as the possible site of Dilmun, a land mentioned by Mesopotamians as a trade partner, source of raw material, copper, and entrepot of the Mesopotamia and the Indus Valley Civilization trade route. However, the exact location of Dilmun is unclear, it might be associated with the islands of Bahrain, Eastern Province, Qatar and nearby Iranian coast in the Persian Gulf.[1] One of the early settlements discovered in Bahrain suggests that Sennacherib, king of Assyria (707-681 BC) attacked northeast Arabia and captured the Bahrain islands.[2]

From the 6th century BC to the 3rd century BC Bahrain was

Timeline of Bahrain history

included in the Persian Empire by the Achaemenids, an Iranian dynasty.[2] Bahrain was referred to by the Greeks as "Tylos", the centre of pearl trading, when Nearchus discovered it while serving under Alexander the Great.[3] From the 3rd century BC to the arrival of Islam in the 7th century AD, Bahrain was controlled by two other Iranian dynasties, the Parthians and the Sassanids. By about 130 BC, the Parthian dynasty brought the Persian Gulf under their control and extended their influence as far as Oman. Because they needed to control the Persian Gulf trade route, the Parthians established garrisons along the southern coast of the Persian Gulf.[4]

Bahrain Portal

Asia in 600 CE, showing the Sassanid Empire before the Arab conquest.

In the 3rd century AD, the Sassanids succeeded the Parthians and held the area until the arrival of Islam four centuries later.[4] Ardashir, the first ruler of the Iranian Sassanid dynasty marched to Oman and Bahrain and defeated Sanatruq[5] (or Satiran[2]), probably the Parthian governor of Bahrain.[6] He appointed his son Shapur I as governor of Bahrain. Shapur constructed a new city there and named it Batan Ardashir after his father.[2] At this time, Bahrain incorporated the southern Sassanid province covering the Persian Gulf's southern shore plus the archipelago of Bahrain.[6] The southern province of the Sassanids was subdivided into three districts; Haggar (now al-Hafuf province, Saudi Arabia), Batan Ardashir (now al-Qatif province, Saudi Arabia), and Mishmahig (now Bahrain Island)[2] (In Middle-Persian/Pahlavi it means "ewe-fish").[7]

Islam

From the time when Islam emerged in the 7th century until the early 16th century, the name *Bahrain* referred to the wider historical region of Bahrain stretching from Basrah to the Strait of Hormuz along the Persian Gulf coast. This was *Iqlīm al-Baḥrayn*, i.e. the Province of Bahrain, and the Arab inhabitants of the province were descendants of the Arab tribe Bani Abd al-Qais.

Bahrainis were amongst the first to embrace Islam. The Prophet Mohammed ruled Bahrain through one of his representatives, Al-Ala'a Al-Hadhrami. Bahrain embraced Islam in 629 (the seventh year of hijra). During the time of Umar I the famous companion of the Prophet(Peace and Blessings upon Him), Abu Hurayrah ,was the governor of Bahrain. Umar I also appointed Uthman bin Abi Al Aas as governor of the area. Al Khamis Mosque, founded in 692, was one of the earliest mosques built in Bahrain, in the era of Umayyad caliph Umar II.

The expansion of Islam did not affect Bahrain's reliance on trade, and its prosperity continued to be dependent on markets in Mesopotamia. After Baghdad emerged as the seat of the caliph in 750 and the main centre of Islamic civilization, Bahrain greatly benefited from the city's increased demand for foreign goods especially from China and South Asia.

Bahrain became a principal centre of knowledge for hundreds of years stretching from the early days of Islam in the 6th century to the 18th century. Philosophers of Bahrain were highly esteemed, such as the 13th century mystic, Sheikh Maitham Al Bahrani (died in 1299). (The mosque of Sheikh Maitham and his tomb can be visited in the outskirts of the capital, Manama, near the district of Mahooz.).

The Qarmatian Republic

Main article: Qarmatians

In the end of the 3rd Hijri century, Abu Sa'id al-Hasan al-Janaby led the Revolution of al-Qaramita, a rebellion by a messianic Ismaili sect originating in Kufa in present day Iraq. Al-Janaby took over the city of Hajr, Bahrain's capital at

that time, and al-Hasa, which he made the capital of his republic. Once in control of the state he sought to create a utopian society.

The Qarmatians' goal was to build a society based on reason and equality. The state was governed by a council of six with a chief who was a first among equals.[8] All property within the community was distributed evenly among all initiates. The Qarmatians were organized as an esoteric society but not as a secret one; their activities were public and openly propagated, but new members had to undergo an initiation ceremony involving seven stages. The Qarmatian world view was one where every phenomenon repeated itself in cycles, where every incident was replayed over and over again.

Even before taking over Bahrain, the Qarmatians had instigated what some scholars have termed a ‘century of terrorism’ in Kufa.[9] From Bahrain they launched raids along the pilgrim routes crossing Arabia: in 906 they ambushed the pilgrim caravan returning from Mecca and massacred 20,000 pilgrims.[10] Under Abu Tahir Al-Jannabi they came close to capturing Baghdad in 923 and sacked Mecca in 930. In the assault on Islam's holiest sites, the Qarmatians desecrated the Well of Zamzam with corpses of Hajj pilgrims, and took the Black Stone from Mecca to Bahrain.[11] The sack of Mecca followed millenarian excitement among the Qarmatians (and in Persia) over the conjunction of Saturn and Jupiter in 928. Bahrain became the seat of the Qarmatian Mahdi-Caliph from Isfahan who abolished Sharīa law. The new Mahdi also changed the qibla of prayer from Mecca to that of fire, a specifically Zoroastrian practice. Some scholars take the view that "they may not have been Isamailis at all at the outset, and their conduct and customs gave plausibility to the belief that they were not merely heretics but bitter enemies of Islam."[12]

For much of the 10th century the Qarmatians were the most powerful force in the Persian Gulf and Middle East, controlling the coast of Oman, and collecting tribute from the Abbasid caliph in Baghdad and from the rival Ismaili Fatimid caliph in Cairo, whom they did not recognize. The land they ruled over was extremely wealthy with a huge slave-based economy according to academic Yitzhak Nakash:

> “The Qarmatian state had vast fruit and grain estates both on the islands and in Hasa and Qatif. Nasiri Khusru, who visited Hasa in 1051, recounted that these estates were cultivated by some thirty thousand Ethiopian slaves. He mentions that the people of Hasa were exempt from taxes. Those impoverished or in debt could obtain a loan until they put their affairs in order. No interest was taken on loans, and token lead money was used for all local transactions. The Qarmathian state had a powerful and long-lasting legacy. This is evidenced by a coin known as Tawila, minted around 920 by one of the Qarmathian rulers, and which was still in circulation in Hasa early in the twentieth century[13] ”

The Qarmatians were defeated in battle in 976 by the Abbasids, which encouraged them to look inward to build their utilitarian society. Around 1058, a revolt on the island of Bahrain led by two Shi'a members of the Abd al-Qays tribe, Abul-Bahlul al-‘Awwam and Abu’l-Walid Muslim,[14] precipitated the waning of Qarmatian power and eventually the ascendancy to power of the Uyunids, an Arab dynasty belonging to the Abdul Qays tribe.[15]

Uyunid, Usfurid, and Jabrid dynasties

The Uyunids ruled from 1076 to 1235, when the islands were briefly occupied by the Turkic Salgharid Atabeg of Fars. Supported by the Seljuk rulers of Iraq, the Uyunids relied on the power of the Banu 'Amir tribes such as the Banu Uqayl.

In 1253, the Bahrani dynasty of the Usfurids of Banu Uqayl — named after its founder, Usfur ibn Rashid — gained control over eastern Arabia, including the islands of Bahrain. The late Middle Ages were a time of chronic instability with local disputes allowing various Persian-based Arab Kingdoms based in Qais, Qishm and Hormuz to involve themselves in Bahrain's affairs.[16] In 1330, the islands became tributary to the rulers of Hormuz.[17]

According to historian Juan Cole it was under Sunni rule that Twelver Shiaism became established in Bahrain, as Shia Bahrainis gradually moved away from the radical, egalitarian Ismaili Qarmatian sect to the more quietist Twelver or Imami branch, a process which the Sunni rulers encouraged.[18] But even in the 14th century, the North African traveller Ibn Battuta visiting Qatif around 1331, found it inhabited by Arabs whom he described as "extremist Shi`is" (rafidiyya ghulat), which Cole presumes is how a 14th century Sunni would describe Ismailis. Ibn Battuta also noted the great wealth of the area thanks to the pearling industry.[19]

The historical region of Bahrain on a 1745 Bellin map

Until the late Middle Ages, "Bahrain" referred to the larger historical region of Bahrain. Ibn Battuta's 14th century account contains an early use of the term "Bahrain" to refer solely to the Awal islands. However, the exact date at which the term "Bahrain" began to refer solely to the Awal archipelago is unknown.[20]

In the mid-15th century, another branch of the Banu Uqayl, led by Zamil ibn Jabir, wrested control of Bahrain, founding the dynasty of the Bedouin Jabrids. Based in al-Ahsa, the Jarbids ruled most of eastern Arabia and followed the Sunni Maliki rite, which they actively promoted within their domain.[20][21]

Portuguese rule

Portuguese expansion into the Indian Ocean in the early 16th century followed Vasco da Gama's voyages of exploration in which the Portuguese battled the Ottomans up the coast of the Persian Gulf. Reputedly, the first Portuguese traveller to visit Bahrain was Duarte Barbosa in 1485.

The Arab navigator, Ahmad Bin Majid, visited Bahrain in 1489 and gave a contemporary account of the country that the first Portuguese would have seen: "In Awal (Bahrain) there are 360 villages and fresh water can be found in a number of places. A most wonderful al-Qasasir, where a man can dive into the salt sea with a skin and can fill it with fresh water while he is submerged in the salt water. Around Bahrain are pearl fisheries and a number of islands all of which have pearl fisheries and connected with this trade are 1,000 ships".

In 1521, a Portuguese force led by commander António Correia invaded Bahrain to take control of the wealth created by its pearl industry. The defeated King Muqrin was beheaded after Correia defeated his forces near present day Karbabad and took control of the fort "Qala'at Al-Bahrain". The bleeding head of King Muqrin was later depicted on the Coat of Arms of António Correia.

The Portuguese ruled through force against the inhabitants for eighty years, until they were driven out of the island in 1602, when an uprising was sparked by the governor's order of the execution of the island's richest traders. The uprising coincided with regional disputes between the Portuguese and rival European powers. The power vacuum that resulted was almost immediately filled by the Persian ruler, Shah Abbas I, who invaded the island and subsumed it within the Safavid Empire.

Safavid hegemony and the Beglarbegi of Kuhgilu

Under Persian Safavid rule (1602–1717), Bahrain fell under the administrative jurisdiction of the Beglarbegi of Kuhgilu centered at Behbahan in southern Iran. In fact, the Safavids ruled Bahrain from a distance, seeking to control the islands not by force, but through ideology and the manipulation of local rivalries. Safavid rule was a period of intellectual flowering among the Shia theological elite, with Bahrain's seminaries producing such theorists as Sheikh Yusuf Al Bahrani. The Safavid's used the clergy to buttress their rule, hoping that by firmly implanting Imami Shiaism they could secure the islands of Bahrain, with their centrality to trade routes and pearl wealth.[22]

However, the Safavids' strategy was in many ways too successful: the power and influence of the religious class meant that they had a great deal of autonomy, and it was the subsequent tension between Safavid state and the clergy that drove Bahrain's theological vitality. Part of this flourishing was borne of the Bahraini clerics' adherence to conservative Akhbari Shiaism, while the Safavids encouraged the more state-centric, Usulism. Attempts by the Persians to reign in the Bahraini ulema were often counterproductive, and ended up strengthening the clerics against their local land-owning Bahraini rivals who challenged the clerics' control over the lucrative pearl trade. Cleric-landowner conflict was usually contained within very limited parameters given that the senior ulema were usually the sons of the land-owning class.[23]

Omani invasion and subsequent instability

An Afghan invasion of Iran at the beginning of the 18th century resulted in the near collapse of the Safavid state. In the resultant power vacuum, Oman invade Bahrain in 1717, ending over a hundred years of Persian hegemony. The Omani invasion began a period of political instability and a quick succession of outside rulers took power with consequent destruction. According to a contemporary account by theologian, Sheikh Yusuf Al Bahrani, in an unsuccessful attempt by the Persians and their Bedouin allies to take back Bahrain from the Kharijite Omanis, much of the country was burnt to the ground.[24] Bahrain was eventually sold back to the Persians by the Omanis, but the weakness of the Safavid empire saw Huwala tribes seize control.[25]

In 1730, the new Shah of Persia, Nadir Shah, sought to re-assert Persian sovereignty in Bahrain, bring the island back under central rule and to challenge Oman in the Persian Gulf. He sought help from the British and Dutch, and he eventually recaptured Bahrain in 1736.[26] In 1753, Bahrain was occupied by the Arabs of Abu Shahr of the Bushire-based Al Madhkur family[27], who ruled Bahrain in the name of Persia and paid allegiance to Karim Khan Zand.

The years of almost constant warfare and instability in the period led to a demographic collapse - German geographer Carsten Niebuhr found in 1763 that Bahrain's 360 towns and villages had, through warfare and economic distress, been reduced to only 60.[28] The influence of Iran was further undermined at the end of the 18th century when the ideological power struggle between the Akhbari-Usuli strands culminated in victory for the Akhbaris in Bahrain.[29]

Al Khalifa and British Protectorate

In 1782, war broke out between the Zubarah-based Bani Utbah tribe and the army of Nasr Al-Madhkur, Ruler of Bahrain and Bushire.[30] The prosperity of Zubarah, which is in modern Qatar, had brought it to the attention of the two main powers at the time, Persia and Oman,[31] which were presumably sympathetic to Sheikh Nasr's ambitions. At the same time, Bahrain offered great potential wealth because of the extensive pearls found in its waters.

See also: 1783 Bani Utbah invasion of Bahrain

In 1783, after defeat in the battle of Zubarah, Nasr Al-Madhkur lost the islands of Bahrain to the Bani Utbah tribe. Fourteen years later in 1797 the Al Khalifa family, a clan of the tribe, moved from Zubarah to Bahrain, where they initially settled in Jaw and later moved to Riffa. The first ruler of the Al Khalifa was Shaikh Ahmed Al-Fateh.

In the early 19th century, Bahrain was invaded by the Omanis and by the Al Sauds. In 1802 it was governed by a twelve-year-old child, when the Omani ruler Sayyid Sultan installed his son, Salim, as Governor in the Arad Fort.[32]

Treaties with Britain

A view of Arad Fort

In 1820 Al Khalifa power in Bahrain was buttressed when it entered into a treaty relationship with Britain, which was by then the dominant military power in the Persian Gulf. This treaty granted the Al Khalifa the title of Rulers of Bahrain. It was the first of several treaties including the 1861 Perpetual Truce of Peace and Friendship, which was further revised in 1892 and 1951.

Riffa Fort at night

In the 19th century, the Al-Khalifas controlled the main archipelago of Bahrain, the Hawar Islands and the section of the Qatar peninsula around Zubarah called the Zubarah Bloc. Between 1869 and 1872 Midhat Pasha brought the islands nominally under the authority of the Ottoman Empire in coordination with the British. Ottoman ships starting appearing in the area as well.

Inside Riffa Fort

This treaty was similar to those entered into by the British Government with the other Persian Gulf principalities. It specified that the ruler could not dispose of any of his territory except to the United Kingdom and could not enter into relationships with any foreign government without British consent. In return the British promised to protect Bahrain from all aggression by sea and to lend support in case of land attack. More importantly, the British promised to support the rule of the Al Khalifa in Bahrain, securing its unstable position as rulers of the country. According to School of Oriental and African Studies academic, Nelida Fuccaro, this treaty relationship with Britain was one aspect of an evolving polity:

> From this perspective state building under the Al Khalifa shayks should not be considered exclusively as the result of Britain's informal empire in the Persian Gulf. In fact, it was a long process of strategic negotiation with different sections of the local population in order to establish a pre-eminence of their particularly artistic Sunni/Bedouin tradition of family rule.[33]

Economic and social development

Peace and trade brought a new prosperity. Bahrain was no longer dependent upon pearling, and by the mid-19th century, it became the pre-eminent trading centre in the Persian Gulf, overtaking rivals Basra, Kuwait, and finally in the 1870s, Muscat.[34] At the same time, Bahrain's socio-economic development began to diverge from the rest of the Persian Gulf: it transformed itself from a tribal trading centre in to a modern state.[35] This process was spurred by the attraction of large numbers of Persian, Huwala, and Indian merchant families who set up businesses on the island, making it the nexus of a vast web of trade routes across the Persian Gulf, Persia and the Indian sub-continent. A contemporary account of Manama in 1862 found:

> Mixed with the indigenous population [of Manamah] are numerous strangers and settlers, some of whom have been established here for many generations back, attracted from other lands by the profits of either commerce or the pearl fishery, and still retaining more or less the physiognomy and garb of their native countries. Thus the gay-coloured dress of the southern Persian, the saffron-stained vest of Oman, the white robe of Nejed, and the striped gown of Bagdad, are often to be seen mingling with the light garments of Bahreyn, its blue and red turban, its white silk-fringed cloth worn Banian fashion round the waist, and its frock-like overall; while a small but unmistakable colony of Indians, merchants by profession, and mainly from Guzerat, Cutch, and their vicinity, keep up here all their peculiarities of costume and manner, and live among the motley crowd, ‘among them, but not of them’.
>
> WG Palgrave, *Narrative of a Year's Journey through Central and Eastern Arabia (1862-3)*[36]

Palgrave's description of Manama's coffee houses in the mid-19th century portrays them as cosmopolitan venues in contrast to what he describes as the ‘closely knit and bigoted universe of central Arabia’.[37] Palgrave describes a people with an open – even urbane – outlook: "Of religious controversy I have never heard one word. In short, instead of Zelators and fanatics, camel-drivers and Bedouins, we have at Bahrain [Manama] something like ‘men of the world, who know the world like men’ a great relief to the mind; certainly it was so to mine."[38]

The great trading families that emerged during this period have been compared to the Borgias and Medicis[39] and their great wealth - long before the oil wealth for which the region would later be renowned - gave them extensive power, and among the most prominent were the Persian Al Safar family, who held the position of Native Agents of Britain in 19th Century.[40] The Al Safar enjoyed an 'exceptionally close'[41] relationship with the Al Khalifa clan from 1869, although the al-Khalifa never intermarried with them - it has been speculated that this could be related to political reasons (to limit the Safars’ influence with the ruling family) and possibly for religious reasons (because the Safars were Shia).

As a result of Bahrain's trade with India, the cultural influence of the subcontinent grew dramatically, with styles of dress, cuisine, and education showing a marked Indian influence. According to Exeter University's James Onley "In these and countless other ways, eastern Arabia's ports and people were as much a part of the Indian Ocean world as they were a part of the Arab world."[42]

Bahrain underwent a period of major social reform between 1926 and 1957, under the *de facto* rule of Charles Belgrave, the British advisor to Shaikh Hamad ibn Isa Al-Khalifa (1872-1942). The country's first modern school was established in 1919, with the opening of the Al-Hiddaya Boys School, while the Persian Gulf's first girls school opened in 1928. The American Mission Hospital, established by the Dutch Reform Church, began work in 1903. Other reforms include the abolition of slavery, while the pearl diving industry developed at a rapid pace.

These reforms were often opposed vigorously by powerful groups within Bahrain including sections within the ruling family, tribal forces, the religious authorities and merchants. In order to counter conservatives, the British removed the Emir, Isa bin Ali Al Khalifa, replacing him with his son in 1923. Some Sunni tribes such as the al Dosari left Bahrain to mainland Arabia, while clerical opponents of social reforms were exiled to Saudi and Iran, and the heads of some merchant and notable families were likewise exiled. Britain's interest in pushing Bahrain's development was motivated by concerns about Saudi-Wahabbi and Iranian ambitions.

Discovery of oil

The discovery of oil in 1932 made Bahrain the first location in the Persian Gulf to have oil wells sunk. Oil production required thousands of workers, attracting peasants and enfranchised slaves who had become free men thanks to the end of slavery and debt bondage. As the first oil wells were being drilled, the pearl diving industry, hitherto the main source of income for the country, collapsed because of competition from cultured pearls produced in Japan. This provided a further pool of labour needed by the new oil industry. It was the bringing together of all these disparate groups that prompted the emergence of an indigenous working class and the Leftist politics they adopted was to have important repercussions for the development of Bahraini society over the next fifty years.

During the Second World War, Bahrain fought on the side of the Allies, declaring war on Germany on September 10, 1939. It was a key base for the Allies to safeguard oil supplies in the Persian Gulf and was the subject of Italian air raids on its oil refineries on October 20, 1940 from bases in East Africa. The Bahraini provided two divisions to join the war in North Africa just before the Second Battle of El Alamein: the First Cavalry, led by General Benjamin Segal, and the Second Infantry, led by General Aaron Landberg. Both divisions were mentioned in dispatches in late 1942.

The leftist movement

Main article: National Union Committee

The National Union Committee (NUC), a leftist nationalist movement associated with the labour unions, was formed in 1954 calling for the end of British interference and political reforms. Work sites were plagued with frequent strikes and occasional riots (including several fatalities) during this period. Following riots in support of Egypt defending itself against the tripartite invasion during 1956 Suez Crisis, the British decided to put an end to the NUC challenge to their presence in Bahrain. The NUC and its offshoots were declared illegal. Its leaders were arrested, tried and imprisoned. Some fled the country while others were forcibly deported.[43][44]

The National Union Committee members in 1954

Strikes and riots continued during the 1960s, now under the leadership of underground cells of the NUC, namely the communist National Liberation Front and the Popular Front for the Liberation of Bahrain, the Bahraini section of the Arab Nationalist Movement.

In March 1965, an uprising broke out, called the March Intifada, against the British presence in Bahrain. The spark of the riots was the laying off of hundreds of Bahraini workers at the Bahrain Petroleum Company. Several people died in the sometimes violent clashes between protesters and police.

Independent Bahrain

After World War II, Bahrain became the centre for British administration of the lower Persian Gulf. In 1968, when the British Government announced its decision to end the treaty relationships with the Persian Gulf sheikdoms, Bahrain joined with Qatar and the seven Trucial States (which now form the United Arab Emirates) under British protection in an effort to form a union of Arab emirates. By mid-1971, however, the nine sheikhdoms still had not agreed on the terms of union. Accordingly, Bahrain sought independence as a separate entity declaring independence on August 15, 1971, and becoming formally independent as the State of Bahrain on December 16, 1971.[45]

At independence, the permanent Royal Navy presence in Bahrain ended and the United States Navy moved onto the 10 acres (40,000 m^2) previously occupied by British operations. The installation later grew into Naval Support Activity Bahrain, headquarters for the United States Fifth Fleet.

The emirate emerged just as the price of oil sky rocketed after the 1973 Arab-Israeli war; while Bahrain's own reserves were being depleted the high oil price meant there was massive capitalisation in the Kingdom's neighbours. The Kingdom was able to exploit the situation thanks to another war in the Levant in 1975: the Lebanese Civil War. Beirut had long been the financial centre of the Arab world, but the outbreak of hostilities in the country had an immediate impact on the banking industry. Bahrain offered a new location at the centre of the booming Persian Gulf with a large educated indigenous workforce and sound fiscal regulations. Realizing the opportunity to become a financial centre resulted in growth in other industry in the country.

This bolstered the development of the middle class and gives Bahrain a very different class structure from its tribal dominated neighbours. Although there had long been a large Indian presence in Bahrain, it was at this time that mass migration to the Kingdom began to take off with subsequent consequences for the Kingdom's demographics, as large numbers of third world immigrants from countries such as the Philippines, Pakistan, Egypt and Iran were attracted by better salaries than at home.

The constitutional experiment

Main article: Politics of Bahrain

Based on its new constitution, Bahraini men elected its first National Assembly in 1973 (although Article 43 of the 1973 Constitution states that the Assembly is to be elected by "universal suffrage", the conditional clause "in accordance with the provisions of the electoral law" allowed the regime to prevent women from participating). Although the Assembly and the then emir Isa ibn Salman al-Khalifa quarreled over a number of issues: foreign policy; the U.S. naval presence, and the budget, the biggest clash came over the State Security Law (SSL). The Assembly refused to ratify the government-sponsored law, which allowed, among other things, the arrest and detention of people for up to three years, (renewable) without a trial. The legislative stalemate over this act created a public crisis, and on August 25, 1975, the emir dissolved the Assembly. The emir then ratified the State Security Law by decree, and suspended those articles in the constitution dealing with the legislative powers of the Assembly. In that same year, the emir established the State Security Court, whose judgments were not subject to appeal.

Iranian Revolution and social and political change

The tide of political Islam that swept the Middle East in the 1970s culminating in the Iranian Revolution in 1979 was to have profound implications for Bahrain's social and political development.

There were a number of factors that had caused Bahrain to be more liberal than its neighbours, but these were challenged by the zeitgeist of religious fundamentalism. Bahrain's pluralist traditions were to a large extent a result of the complex confessional and demographic make up of the state, which required Shias, Sunnis, Southern Persians (i.e. Huwala and Ajams) and a plethora of minority faiths to live and work together; this tolerance had been buttressed by the prominence of Arab nationalism and Marxism as the main modes of dissent, both of which were socially progressive and downplayed religious affiliations; while the country's traditional dependence on trade further encouraged openness.

Even before Iran's revolution in 1979, there was a noticeable conservative trend growing, with the traditional abaya being donned by women in preference to the then popular mini-skirt. But it was the political earthquake represented by the Shah's fall that changed the dynamics of Bahrain's politics. The prelude and aftermath of the Iranian Revolution in 1979 encouraged Shia Islamist dissent across the Middle East. Ayatollah Khomeini's Iran immediately saw their co-religionists in Bahrain, who had grown more conscious of their own religious identity during this period, as prime agents to export the revolution. The failure of the Left to offer a political or philosophical challenge to the Islamists allowed them quickly to dominate the avenues of dissent.

In 1981, an Iranian front organisation, the Islamic Front for the Liberation of Bahrain attempted a coup d'état through a plan involving the assassination of Bahrain's leadership and an Islamist uprising. The aim was to install a clerical leadership with Iraqi cleric Hādī al-Mudarrisī as supreme leader, but the coup was detected after a tip off from a friendly intelligence source.

The failed coup and the outbreak of the Iran–Iraq War led to the formation of the Gulf Cooperation Council which Bahrain joined with Kuwait, Oman, Qatar, Saudi Arabia and the United Arab Emirates. The sense of regional uncertainty was further heightened when Saddam Hussein's Iraq invaded Kuwait followed by the 1991 Persian Gulf War.

1990s

Main article: 1990s Uprising in Bahrain

Years of political stasis, the collapse of the price of oil, and growing frustration at the lack of democracy exploded into an uprising in 1994. While previous advocacy of reforms had been secular in character, the uprising was specifically Islamist, beginning with the stoning of female competitors in a marathon race for wearing 'inappropriate' clothing. There was also a strong sense of grievance due to perceived discrimination against the majority Shia population of Bahrain by the Al Khalifa rulers.

In the 1990s, a group consisting mainly of clerics and businessmen led by Islamist leader Abdul Amir Al Jamri, drew up two petitions that were then signed by Shia, Sunni and secular nationalist individuals. They asked for reforms such as restoration of the National Assembly and the constitution of 1975, and participation by the population in decision making. To pre-empt the delivery of the petition to the emir, the regime arrested several of the leading Shia clerics who were organising the petition, including Ali Salman.

The political impasse continued over the next few years during which time the regime dealt with its opponents using severe repression. Bomb attacks and police brutality marked this period in which over forty people were killed in violence between the two sides. Although the violence was never entirely stopped by the security measures, it was contained and continued as low-level intermittent disturbances.[46]

In 1999 Shaykh Hamad bin Isa Al Khalifa became Emir after the death of his father, Shaykh Isa bin Salman Al Khalifa, and carried out some social and political reforms.

2000s

Main article: 2000s in Bahrain

King Hamad tried to end the political repression that had defined the 1990s by scrapping security laws, releasing all political prisoners, instituting elections, giving women the vote and promising a return to constitutional rule. The move brought an end to political violence, but did not initially bring about a reconciliation between the government and most of the opposition groups, because the changes are seen as largely superficial and do not address the true issues facing Bahrainis today.[*citation needed*]

The country participated in military action against the Taliban in 2001 with its ships patrolling the Arabian Sea searching for vessels, but opposed the invasion of Iraq. Relations improved with neighbouring Qatar after the border dispute over the Hawar Islands was resolved by the International Court of Justice in The Hague in 2001. Following the political liberalization Bahrain negotiated a free trade agreement with the United States in 2004.[*citation needed*]

Qatar and Bahrain have made plans to build the Qatar-Bahrain Friendship Bridge to link the countries across the Persian Gulf, which would be the longest fixed-link bridge in the world if completed.[*citation needed*]

2011–2012 Bahraini uprising

Main article: 2011–2012 Bahraini uprising

Protesters raising their hands towards Pearl Roundabout

The protests in Bahrain were initially aimed at achieving greater political freedom and respect for human rights, and were not intended to threaten the monarchy nor were they as large as those in other countries.[47] Lingering frustration among the Shiite majority with being ruled by the Sunni government was a major root cause, but the protests in Tunisia and Egypt are cited as the inspiration for the demonstrations.[48] The protests began in Bahrain on 14 February[47] and were largely peaceful, until a raid by police on the night of 17 February against protestors sleeping at the Pearl Roundabout in Manama, in which police killed four protestors.[49][50] Following the deadly raid, some of the protestors' begins to expand their aims to a call for the end of the monarchy, who has ruled Bahrain since the late 18th century.[51] On 18 February, government forces opened fire on protesters, mourners, and news journalists,[52] prompting protesters to begin calling for the overthrow of the Bahraini monarchy and government.[53] On 19 February, protesters occupied Pearl Roundabout after the government ordered troops and police to withdraw.[54][55][56] On 22 February, an estimated one hundred thousand people, one fifth of all Bahrainis, marched. On 14 March, at the request of the Crown Prince, GCC

Saudi Arabian troops entered the country,[57] and opened fire on the protesters, several of whom were killed.[58][59] Later thousands of Shia protesters arose in Iraq and Qatif in opposition to the Saudi-led intervention in Bahrain.[60][61][62]

One of the huge marches that swept across Bahrain in February 2011

King Hamad bin Isa Al Khalifa declared a three-month state of emergency on 15 March and asked the military to reassert its control as clashes spread across the country.[63] It was later lifted on 1 June 2011.[64] On 16 March 2011, the protesters' camp in the Pearl Roundabout was evacuated, bulldozed, and set on fire by the Bahraini Defense Force and riot police.[65] Later on 18 March, the Pearl Roundabout monument was torn down as part of the crackdown on protesters.[66] Human rights organizations reported that since the in the 8 months following the outbreak of protests on 14 February, more than 1,600 peaceful political protesters, medical professionals, journalists, human rights defenders and innocent bystanders were arrested and more than 100 people convicted by a special military court established by the government.[67]

Panoramic image for the march of 9 March 2012

Since the lifting of emergency law on 1 June, several large rallies have been staged by the Shi'ite community demanding the release of detained protesters, greater political representation, and an end to sectarian discrimination. In July 2011, medical personnel were tried by special military courts for treating injured protesters and sentenced to multi-year prison sentences.[68] Several human rights groups and news organizations have alleged they have been deliberately targeted by the Bahraini government.[69]

On 23 November 2011, the Bahrain Independent Commission of Inquiry released its report on human rights violations during the February and March 2011 protests, finding that the government "systematically" tortured prisoners, summarily fired Shi'ite employees and university students, and committed other gross human rights violations.[70] One of the report's recommendations was to allow human rights groups into the country to monitor the situation. Between 23 November and the end of January, however, the Bahraini government refused entry to several international human rights groups including Freedom House,[71][72] Human Rights First [73] and Physicians for Human Rights.[74]

On 9 March 2012, hundreds of thousands protested in one of the biggest anti-govemrent rallies to date. According to CNN, the march "filled a four-lane highway between Duraz and Muksha".[75] The government said 100,000 participated in the march while opposition activists estimated the number to be more than 200,000. The march was called for by Sheikh Isa Qassim, Bahrain's top Shia cleric. Protesters called for downfall of King and the release of imprisoned political leaders. The protest ended peacefully, however hundreds of youth tried to march back to the site of the now demolished symbolic Pearl roundabout, and were dispersed by security forces with tear gas.[76] Nabeel Rajab, president of BCHR called the march "the biggest in our history".[77]

King of Bahrain

From Wikipedia, the free encyclopedia

The **King of Bahrain** (Arabic: ملك البحرين) is the monarch and head of state of Bahrain. Between 1783 and 1971, the Bahraini monarch held the title of Hakim, and, from 1971 until 2002, the title of Emir. On 14 February 2002, the then-Emir of Bahrain, Hamad ibn Isa Al Khalifa, declared Bahrain a kingdom and proclaimed himself the first king.

Early life and education

Hamad ibn Isa Al Khalifa was born on 28 January 1950 in Riffa, Bahrain. His parents were Isa bin Salman Al Khalifa who in 1950 was the Crown Prince and Hessa bint Salman Al Khalifa. After attending Manama Secondary School in Bahrain, Hamad was sent to England to complete the remainder of his education. He attended Applegarth College in Godalming, Surrey before taking a place at The Leys School in Cambridge. Hamad then underwent military training, first with the British Army at Mons Officer Cadet School at Aldershot in Hampshire, graduating in September 1968.[1] Four years later in June 1972 Hamad attended the United States Army Command and General Staff College at Fort Leavenworth in Kansas, graduating the following June with a degree in leadership.[3][4]

Crown prince

King Hamad was designated as heir apparent by his father on 27 June 1964. In 1968 King Hamad was appointed as the

Religion	Sunni Islam

In October 1977, King Hamad started learning to fly helicopters, successfully completing the training in January 1978. He then worked to establish the Bahrain Amiri Air Force[3] which came into being in 1987 when the Defence Force air wing was reconstituted as an air force.

Reign

King Hamad with Donald H. Rumsfeld

On the death of his father Isa bin Salman Al Khalifa, Hamad became Emir of Bahrain on 6 March 1999.[2] As Emir, Hamad brought several political reforms to Bahrain. These included the release of all political prisoners, the dissolution of the State Security Court and the abolition of the 1974 Decree on State Security Measures. Additionally, many Bahraini citizens were permitted to return after several years in exile overseas.[5] In 2002 he declared himself king.

Political turmoil

After HM King Hamad took power in 1999, he focused on attaining stability in a nation riddled with profound tensions because of the 1990s uprising in Bahrain. The King succeeded in improving the living standards and in making Bahrain a financial hub. During the period 2003-2010 majority Shi'ite community and Secular Sunni accused his government of corruption, discrimination in housing and jobs, recruiting foreigners in military service and bringing Sunni tribes from Asia to change the demographic composition of the nation. This led to some minor disturbances by the Shia'a community against His Majesty's Government.

During HM King Hamad current years of reign, Shi'ite majority community took some positions in the government, But they called for improving the entire political system and equitable distribution of positions and jobs. Al Khalifa family led a large number of ministerial and Governmental posts including Ministry of Interior, Ministry of Justice, Ministry of Finance, Ministry of Culture, Ministry of foreign affairs, general organization for youth and sport, Bahrain Economic development board and Supreme council for women. Also, Positions of power in Bahrain Defence Force in the country were filled with Sunnis , a minority that made around 30% of the population. Information affairs authority had been separated from the Ministry of information and led by a member of Al Khalifa family too. Opposition claimed that this is a Nepotism which marginalizing the people. HM King Hamad stated that he is giving an equal chance to all Bahrain people regardless their sect.

In October 2010, HM's Government accused 24 Bahraini citizens mostly Shi'ite Muslim in forming terrorist cell linked to Iran and Trained in Syria for overthrowing the regime and planning for terrorist attacks. Opposition Parties denounced the accusations and described it as propaganda. After just few weeks, tension raised again

after controversial Bahraini parliamentary election, 2010 when The main Opposition bloc Al Wefaq National Islamic Society with Secularist National Democratic Action Society (Waad) accused the government for unfair election system that aims to reduce the number of Shiite's and Secularists chairs in the parliament, although the party won nearly 40% of the available seats, and the United States regarded the elections as *free and fair*[6].

Bahrain uprising

Main article: 2011–2012 Bahraini uprising

On 14 February 2011, the tenth anniversary of a referendum in favour of the National Action Charter, Bahrain was rocked by protests inspired by the Arab spring and coordinated by a Facebook page named "Day of Rage in Bahrain", a page that was liked by more than 90,000 people just one week after its creation. The Bahrain government responded with what has been described as a "brutal" crackdown[7][8][9] on the protest, including violations of human rights that caused anger. Later on, demonstrators demanded Hamad to step down.[10] As a result of this "massive" crackdown, The Foreign Policy classified him as rank 3 out of 8 of "America's Unsavory Allies" calling him "one of the bad guys the U.S. still supports".[11]

During the peak of the 2011–2012 Bahraini uprising on the mid of March 2011 HM King Hamad declared three months State of emergency just after he called Peninsula Shield Force troops to enter Bahrain. Saudi Arabia deployed about 1,000 troops with armored support, and the United Arab Emirates deployed about 500 police officers. Opposition parties reacted strongly, calling it an "occupation". But HM King Hamad stated that he deployed the troops to protect infrastructure and to secure key installations. After this step taken by HM King Hamad, Bahrain economy suffered losses estimated at billions. Also, security situation deteriorated in areas that people were demonstrating against him. While Number of deaths were announced including five whom died in custody.

On 1 June 2011, protests erupted across Shia-dominated areas of Bahrain to demand HM King Hamad to step down and to end martial law as HM King Hamad announced that state of emergency was officially lifted.

In June 2011 King Hamad commissioned the Bahrain Independent Commission of Inquiry headed by respected human rights lawyer M. Cherif Bassiouni to look into the events surrounding the unrest. The establishment of the BICI was praised by Barack Obama and the international community[12][13] as a step towards establishing responsibility and accountability for the events of the 2011-2012 Bahraini uprising. The BICI reported its findings in November 2011 and US Secretary of State Hillary Clinton "commend[ed] King Hamad bin Isa al-Khalifa's initiative in commissioning it".[14]

Prince William wedding decline

King Hamad was invited to the royal wedding of Prince William of Wales and Kate Middleton. He declined amidst protests by human rights activists who had pledged to disrupt his stay in Britain because of his violent response to demonstrators.[15] Earlier in 2005, he was the only sovereign head of state to attend the wedding of Charles, Prince of Wales, and Camilla Parker Bowles.

Family

King Hamad has four wives and in total twelve children, seven sons and five daughters:

- He married his first wife, Queen Sabika bint Ibrahim Al Khalifa, at Rifa'a on 9 October 1968. Together they have three sons and one daughter:

    - HRH Prince Salman bin Hamad Al Khalifa, Crown Prince of Bahrain (born 21 October 1969)
    - HH Sheikh Abdullah bin Hamad Al Khalifa (born 30 June 1975)
    - HH Sheikh Khalifa bin Hamad Al Khalifa (born 4 June 1977)
    - HH Sheikha Najla bint Hamad Al Khalifa (born 20 May 1981)
- His second wife, Sheikha Sheia bint Hassan Al-Khrayyesh Al-Ajmi, is a lady from Kuwait. Together they have two sons:
    - HH Sheikh Nasser bin Hamad Al Khalifa (born 8 May 1987)
    - HH Sheikh Khalid bin Hamad Al Khalifa (born 23 September 1989)

- He also has a third wife, a lady from Qatar, with whom he has two sons and four daughters:
    - HH Sheikh Faisal bin Hamad Al Khalifa (12 February 1992 – 12 January 2006), died in a fatal car accident
    - HH Sheikh Sultan bin Hamad Al Khalifa
    - HH Sheikha Hessa bint Hamad Al Khalifa
    - HH Sheikha Nura bint Hamad Al Khalifa
    - HH Sheikha Munira bint Hamad Al Khalifa
    - HH Sheikha Reema bint Hamad Al Khalifa
- He does not have any children with his fourth wife, a lady from Qatar.

Al Khalifa family

From Wikipedia, the free encyclopedia

The **Al Khalifa family** (Arabic: آل خليفة / ALA-LC: Āl Khalīfah / English: The house of Khalifa) is the ruling royal family of Bahrain. The Al Khalifa profess Sunni Islam and belong to the Anizah tribe that migrated from Najd to Kuwait in the early 18th century. They are also from the Utub tribe. The current head of the family is Hamad bin Isa Al Khalifa, who became the Emir of Bahrain in 1999 and proclaimed himself King of Bahrain in 2002.

As of 2010, roughly half of the serving cabinet ministers of Bahrain have been selected from the Al Khalifa royal family,[3] while the country's only Prime Minister, Khalifah bin Salman al-Khalifah, (serving since independence in 1971) is also from the Al Khalifa family and is the uncle of the current King.

Al Khalifa

List of monarchs of Bahrain of the Al Khalifa family

Name	Years as ruler	Title
Ahmed bin Muhammad bin Khalifa	1783–1796	Hakim
Abdullah bin Ahmad Al-Khalifa, ruling jointly with Salman bin Ahmad Al-Khalifa Khalifah bin Sulman Al-Khalifa	1796–1843 1796–1825 1825–1834	Hakim Hakim Hakim
Muhammad bin Khalifah Al-Khalifa	1834–1842 1849–1868 1869-1869	Hakim
Ali bin Khalifah Al-Khalifa	1868–1869	Hakim

Muhammad bin Abdullah Al-Khalifa	1869-1869	Hakim
Isa bin Ali Al-Khalifa	1869–1932	Hakim
Hamad bin Isa Al-Khalifa	1932–1942	Hakim
Salman bin Hamad Al-Khalifa	1942–1961	Hakim
Isa bin Salman Al-Khalifa	1961–1971 1971–1999	Hakim Amir
Hamad bin Isa Al Khalifa	1999–2002 2002 -	Amir King

Ruling Family Council

Decisions pertaining to the Al Khalifa family, as well as disputes between family members are arbitrated by the Ruling Family Council (Arabic: مجلس العائلة الحاكمة).[4][5][6] The council attends to internal family disputes particularly those related to appropriation of land, sale of real estate and other properties. Members of the ruling family are not allowed to refer these or other disputes to ordinary law courts.[4]

Relations between the political leadership and the rest of the "rank and file" members of the Al Khalifa ruling family have been formally managed by the council since 1932. However, on the eve of the 1973 parliamentary elections, the then Amir Isa bin Salman Al Khalifa issued a decree restructuring the Ruling Family Council to become a formal organ of the state, and giving the administrative head of the council the rank of minister.[4]

The Ruling Family Council is currently chaired by King Hamad,[7] its Deputy Chairman is Mohammed bin Khalifa bin Hamad Al Khalifa,[8] and the Director General is Ibrahim bin Khalid bin Mohammed Al Khalifa.[9]

The King appoints the members of the board of the Ruling Family Council as recognised representatives of various kinship lines and factional alliances within the Al Khalifa family.[4]

Members of the Ruling Family Council since 1974

Name	Year appointed
Hamad bin Isa Al Khalifa	1974[10]
Khalifa bin Mohammed bin Abdullah Al Khalifa	1974[10]
Abdullah bin Khalid Al Khalifa	1974[10]
Khalid bin Mohammed bin Abdullah Al Khalifa	1974[10]
Mohammed bin Mubarak bin Hamad Al Khalifa	1974[10]
Mohammed bin Khalifa bin Hamad Al Khalifa	1974[10]
Abdul Rahman bin Ibrahim bin Hamad Al Khalifa	1974[10]
Duaij bin Khalifa bin Mohammed Al Khalifa	1974[10]
Khalid Bin Abdullah Bin Khalid Al Khalifa	1981[11]
Isa bin Ibrahim bin Mohammed bin Isa Al Khalifa	1993[12]

Abdullah bin Khalifa bin Salman Al Khalifa	1997[13]
Khalifa bin Ahmed bin Salman Al Khalifa	2006[14]
Khalifa bin Rashid bin Abdulla Al Khalifa	2006[14]
Fawaz bin Mohammed bin Khalifa Al Khalifa	2006[14]
Ahmed bin Mohammed bin Hamad Al Khalifa	2006[14]
Rashid bin Abdullah bin Ahmed Al Khalifa	2008[15]
Rashid bin Sabah bin Hamoud bin Sabah Al Khalifa	2010[16]

Other notable members

- Salman bin Hamad bin Isa Al Khalifa, crown prince and chief of the Bahrain Defence Force.
- Khalifa bin Salman Al Khalifa, prime minister of Bahrain (16 December 1971 -), son of Salman bin Hamad Al Khalifa (Emir, 1941–1961) and brother of Isa bin Salman Al Khalifa (Hakim, 1961–1971; Emir, 1971–1999). The current King, Hamad bin Isa Al Khalifa, is his nephew.
- Shaikh Rashid bin Khalifa Al Khalifa, prominent Bahraini artist and patron of the arts.
- Mohammed bin Salman Al Khalifa, brother of Isa bin Salman Al Khalifa (Hakim, 1961–1971; Emir, 1971–1999) and Khalifa bin Salman Al Khalifa (prime minister since 1971).
- Mai Al Khalifa, culture minister.
- Meriam Al-Khalifa, a relative of the King, Hamad bin Isa Al Khalifa; married Jason Johnson, a United States Marine and a Mormon, against her family's wishes and moved to the United States. They subsequently filed for a divorce on 11-17-2004, one day after their fifth wedding anniversary.

  Note: contrary to the standard transcription of the name *Al Khalifa*, Meriam Al-Khalifa's surname constitutes a primary transcription and should be rendered *Al-Khalifa*.

Transcription

Al Khalifa is commonly mistranscribed *al-Khalifa*. The *Al* (آل) particle here (written with the long (*madda*) alif and unconnected to the following word) means *house*, in the sense of *family* or *dynasty*, and is not the definite article particle *al-*.

Bhutan

Coordinates: 27°25′01″N 90°26′06″E

From Wikipedia, the free encyclopedia

Bhutan (Dzongkha: འབྲུག་ཡུལ་, tr *'brug-yul*, "Druk Yul"; Nepali: भूटान, *Bhūṭān*), officially the **Kingdom of Bhutan**, is a landlocked state in South Asia, located at the eastern end of the Himalayas and bordered to the south, east and west by the Republic of India and to the north by the People's Republic of China. Bhutan is separated from the nearby country of Nepal to the west by the Indian state of Sikkim, and from Bangladesh to the south by the Indian states of Assam and West Bengal.

Bhutan existed as a patchwork of minor warring fiefdoms until the early 17th century, when the area was unified by Shabdrung Ngawang Namgyal, who fled religious persecution in Tibet and cultivated a separate Bhutanese identity. In the early 20th century, Bhutan came into contact with the British Empire, after which Bhutan continued strong bilateral relations with India upon its independence. In 2006, *Business Week* magazine rated Bhutan the happiest country in Asia and the eighth-happiest in the world, based on a global survey.[9]

Bhutan's landscape ranges from subtropical plains in the south to the sub-alpine Himalayan heights in the north, with some peaks exceeding 7,000 metres (23,000 ft). The state religion is Vajrayana Buddhism, and the population of 691,141 is predominantly Buddhist, with Hinduism the second-largest religion.[10] The capital and largest city is Thimphu. In 2007, Bhutan made the transition from absolute monarchy to constitutional monarchy, holding its first general election. Bhutan is a member of the United Nations and the South Asian Association for Regional Cooperation (SAARC); it hosted the sixteenth SAARC summit in April 2010. The total area of the country has been reported as 38,394 square kilometres (14,824 sq mi) since 2002.[1][2] The area had previously been reported as approximately 46,500 km^2 (18,000 sq mi) in 1997.[11]

Etymology

Names similar to Bhutan — including *Bottanthis*, *Bottan*, *Bottanter* — began to appear in Europe around the 1580s. Jean-Baptiste Tavernier's 1676 *Six Voyages* is the first to record the name *Boutan*. However, in every case, these seem to have been describing not modern Bhutan but the Kingdom of Tibet. The modern distinction between the two did not begin until well into Bogle's 1774 expedition — realizing the differences between the two regions, cultures, and states, his final report to the East India Company formally proposed labeling the Druk Desi's kingdom as "Boutan" and the Panchen Lama's as "Tibet". The EIC's surveyor general James Rennell first anglicized the French name as Bootan and then popularized the distinction between it and greater Tibet.[12]

1 The population of Bhutan had been estimated based on the reported figure of about 1 million in the 1970s when the country had joined the United Nations and precise statistics were lacking.[7] Thus using the annual increase rate of 2–3%, the most population estimates were around 2 million in the year 2000. A national census was carried out in 2005 and it turned out that the population was 672,425. Consequently, United Nations Population Division had down-estimated the country's population in the 2006 revision[8] for the whole period from 1950 to 2050.

2 The Indian rupee is also legal tender.

1777

1786

Two of Rennell's EIC maps, showing the division of "Thibet or Bootan" into separate regions.

The precise etymology of Bhutan is unknown, although it quite probably derives from the Tibetan endonym Bod, used for Greater Tibet. It is traditionally taken to be a transcription of the Sanskrit *Bhoṭa-anta* (भोट-अन्त, "end of Tibet"), in reference to Bhutan's position as the southern extremity of the Tibetan plateau and culture.[13][14]

Locally, Bhutan has been known by many names. The earliest western records of Bhutan, the 1627 *Relacao* of the Portuguese Jesuits Estêvão Cacella and João Cabral, records its name variously as *Cambirasi* (among the Koch Biharis[15]), *Potente*, and *Mon* (an endonym for southern Tibet).[12] The first time a separate Kingdom of Bhutan did appear on a western map, it did so under its local name as "Broukpa".[12] Others including *Lho Mon* ("Dark Southland"), *Lho Tsendenjong* ("Southland of the Cypress"), *Lhomen Khazhi* ("Southland of the Four Approaches") and *Lho Men Jong* ("Southland of the Herbs).[16][17]

History

Main articles: History of Bhutan and Timeline of Bhutanese history

Stone tools, weapons, elephants, and remnants of large stone structures provide evidence that Bhutan was inhabited as early as 2000 BC, although there are no existing records from that time. Historians have theorized that the state of *Lhomon* (literally, "southern darkness"), or *Monyul* ("Dark Land", a reference to the Monpa, the aboriginal peoples of Bhutan) may have existed between 500 BC and AD 600. The names *Lhomon Tsendenjong* (Sandalwood Country), and *Lhomon Khashi*, or Southern Mon (country of four approaches), have been found in ancient Bhutanese and Tibetan chronicles.[18][19]

Buddhism was first introduced to Bhutan in the 7th century AD. Tibetan king Songtsän Gampo[20] (reigned 627–49), a convert to Buddhism, ordered the construction of two Buddhist temples, at Bumthang in central Bhutan and at Kyichu (near Paro) in the Paro Valley.[21] Buddhism was propagated in earnest[20] in 746[22] under King Sindhu Rāja (*also* Künjom;[23] Sendha Gyab; Chakhar Gyalpo), an exiled Indian king who had established a government in Bumthang at Chakhar Gutho Palace.[24]:35 [25]:13

Buddhist saint Padma Sambhava (also known as Guru Rinpoche) came to Bhutan in in 747.[26] Much of early Bhutanese history is unclear because most of the records were destroyed when fire ravaged the ancient capital, Punakha, in 1827. By the 10th century, Bhutan's political development was heavily influenced by its religious history. Various sub-sects of Buddhism emerged which were patronized by the various Mongol warlords. After

the decline of the Yuan Dynasty in the 14th century, these sub-sects vied with each other for supremacy in the political and religious landscape, eventually leading to the ascendancy of the Drukpa sub-sect by the 16th century.[21][27]

Until the early 17th century, Bhutan existed as a patchwork of minor warring fiefdoms, when the area was unified by the Tibetan lama and military leader Shabdrung Ngawang Namgyal who had fled religious persecution in Tibet. To defend the country against intermittent Tibetan forays, Namgyal built a network of impregnable *dzong* (fortresses), and promulgated the Tsa Yig, a code of law that helped to bring local lords under centralized control. Many such *dzong* still exist and are active centers of religion and district administration. Portuguese Jesuits Estêvão Cacella and João Cabral were the first recorded Europeans to visit Bhutan, on their way to Tibet. They met Ngawang Namgyal, presented him with firearms, gunpowder and a telescope, and offered him their services in the war against Tibet, but the Shabdrung declined the offer. After a stay of nearly eight months Cacella wrote a long letter from the Chagri Monastery reporting on his travels. This is a rare extant report of the Shabdrung.[28][29] After Ngawang Namgyal's death in 1651, his passing was kept secret for 54 years; after a period of consolidation, Bhutan lapsed into internal conflict. In the year 1711 Bhutan went to war against the Mughal Empire and its Subedars, who restored Koch Bihar in the south. During the chaos that followed, the Tibetans unsuccessfully attacked Bhutan in 1714.[30]

In the 18th century, the Bhutanese invaded and occupied the kingdom of Cooch Behar to the south. In 1772, Cooch Behar appealed to the British East India Company which assisted them in ousting the Bhutanese and later in attacking Bhutan itself in 1774. A peace treaty was signed in which Bhutan agreed to retreat to its pre-1730 borders. However, the peace was tenuous, and border skirmishes with the British were to continue for the next hundred years. The skirmishes eventually led to the Duar War (1864–65), a confrontation for control of the Bengal Duars. After Bhutan lost the war, the Treaty of Sinchula was signed between British India and Bhutan. As part of the war reparations, the Duars were ceded to the United Kingdom in exchange for a rent of Rs. 50,000. The treaty ended all hostilities between British India and Bhutan.

Map of Bhutan showing border with China as of 2010

During the 1870s, power struggles between the rival valleys of Paro and Tongsa led to civil war in Bhutan, eventually leading to the ascendancy of Ugyen Wangchuck, the *ponlop* (governor) of Tongsa. From his power base in central Bhutan, Ugyen Wangchuck defeated his political enemies and united the country following several civil wars and rebellions during 1882–85.[31]

In 1907, an epochal year for the country, Ugyen Wangchuck was unanimously chosen as the hereditary king of the country by an assembly of leading Buddhist monks, government officials, and heads of important families. The British government promptly recognized the new monarchy, and in 1910 Bhutan signed the Treaty of Punakha, a subsidiary alliance which gave the British control of Bhutan's foreign affairs and meant that Bhutan was treated as an Indian princely state. This had little real effect, given Bhutan's historical reticence, and also did not appear to affect Bhutan's traditional relations with Tibet. After the new Union of India gained independence from the United Kingdom on 15 August 1947, Bhutan became one of the first countries to recognize India's independence. On 8 August 1949, a treaty similar to that of 1910, in which Britain had gained power over Bhutan's foreign relations, was signed with the newly independent India.[18]

In 1953, King Jigme Dorji Wangchuck established the country's legislature – a 130-member National Assembly – to promote a more democratic form of governance. In 1965, he set up a Royal Advisory Council, and in 1968 he formed a Cabinet. In 1971, Bhutan was admitted to the United Nations, having held observer status for three years. In July 1972, Jigme Singye Wangchuck ascended to the throne at the age of sixteen after the death of his father, Dorji Wangchuck.

A *thrikheb* (throne cover) from the 19th century. Throne covers were placed atop the temple cushions used by high lamas. The central circular swirling quadrune is the Gankyil in its mode as the "Four Joys".

In the late 1980s and early 1990s, the country expelled or forced to leave nearly one fifth of its population in the name of preserving its Tibetan Mahayana Buddhist culture and identity.[32] The Lhotshampas, the ethnic group persecuted by the Bhutanese government, were subject to "harassment, arrests and the burning of ethnic Nepali homes."[33] The government enacted discriminatory citizenship laws against the Lhotshampas, stripping about one-fifth of its population of citizenship. A harassment campaign escalating in the early 1990s ensued, and afterwards Bhutanese security forces began expelling people after making them renounce claims to their homes and homeland. A refugee recounted, “The army took all the people from their houses. As we left Bhutan, we were forced to sign the document. They snapped our photos. The man told me to smile, to show my teeth. He wanted to show that I was leaving my country willingly, happily, that I was not forced to leave.”[34] Due to the violence, Bhutanese of Nepali origin, mainly Hindu, fled their homeland. According to the UNHCR, more than 107,000 Bhutanese refugees living in seven camps in eastern Nepal have been documented as of 2008.[35] After many years in refugee camps, many are now moving to host nations such as Norway, the United Kingdom, Australia, and the United States as refugees. The United States has admitted 30,870 refugees from fiscal years 2008 through 2010.[36] Still, in July 2010, the Bhutanese prime minister, Jigme Y Thinley, called the Bhutanese refugees illegal immigrants.[37]

Political reform and modernization

Further information: Law of Bhutan and Constitution of Bhutan

King Jigme Singye Wangchuck introduced significant political reforms, transferring most of his administrative powers to the Council of Cabinet Ministers and allowing for impeachment of the King by a two-thirds majority of the National Assembly.[38]

In 1999, the government lifted a ban on television and the Internet, making Bhutan one of the last countries to introduce television. In his speech, the King said that television was a critical step to the modernisation of Bhutan as well as a major contributor to the country's Gross National Happiness (Bhutan is the only country to measure happiness),[39] but warned that the "misuse" of television could erode traditional Bhutanese values.[40]

A new constitution was presented in early 2005. In December 2005, Jigme Singye Wangchuck announced that he would abdicate the throne in his son's favor in 2008. On 14 December 2006, he announced that he would be abdicating immediately. This was followed by the first national parliamentary elections in December 2007 and March 2008.

On November 6, 2008, 28-year old Jigme Khesar Namgyel Wangchuck, eldest son of King Jigme Singye Wangchuck, was crowned King.[41]

Government and politics

Main article: Politics of Bhutan

View of Tashichoedzong, Thimphu, seat of the Bhutanese government since 1952.

Bhutan's political system has developed from an absolute monarchy into a constitutional monarchy. In 1999, the fourth king of Bhutan created a body called the Lhengye Zhungtshog (Council of Ministers). The *Druk Gyalpo* (King of Druk Yul) is head of state. Executive power is exercised by the Lhengye Zhungtshog, the council of ministers. Legislative power was vested in both the government and the former Grand National Assembly.

On the 17th of December 2005, the 4th King, Jigme Singye Wangchuck, announced to a stunned nation that the first general elections would be held in 2008, and that he would abdicate the throne in favor of his eldest son, the crown prince.[42] King Jigme Khesar Namgyal Wangchuck took the throne on December 14, 2006 upon his father's abdication. Jigme Khesar Namgyel Wangchuck was adorned with Bhutan's Raven Crown at an ornate coronation ceremony in Thimphu on Thursday, November 6, 2008, becoming the world's youngest reigning monarch and head of the newest democracy.[43]

The new political system comprises an upper and lower house, the latter based on political party affiliations. Elections for the upper house (National Council) were held on December 31, 2007, while elections for the lower house, the 47-seat National Assembly, were held on March 24, 2008. Two political parties, the People's Democratic Party (PDP) headed by Sangay Ngedup, and the Druk Phuensum Tshogpa (DPT) headed by Jigmi Thinley, competed in the National Assembly election. The Druk Phuensum Tshogpa won the elections taking 45 out of 47 seats in the parliament.[44]

Judicial power is vested in the courts of Bhutan. The Chief Justice is the administrative head of the Judiciary.

Military and foreign affairs

Main articles: Military of Bhutan and Foreign relations of Bhutan

The Royal Bhutan Army is Bhutan's military service. It includes the Royal Bodyguard and the Royal Bhutan Police. Membership is voluntary, and the minimum age for recruitment is 18. The standing army numbers about 16,000 and is trained by the Indian Army.[45] It has an annual budget of about $13.7 million — 1.8 percent of the GDP. Being a landlocked country, Bhutan has no navy. It also has no air force or army aviation corps. The Army relies on Eastern Air Command of the Indian Air Force for air assistance.

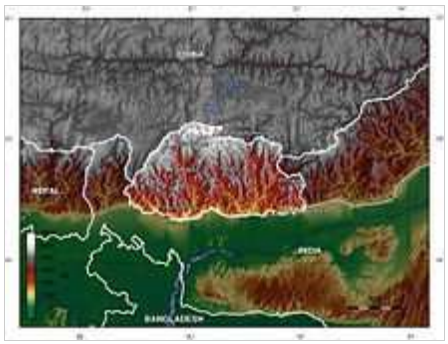
In 2007, Bhutan and India signed a new treaty that clarified that Bhutan was master of its own foreign relations, superseding the treaty signed in 1949. The superseded treaty is still sometimes misinterpreted to mean that India controls Bhutan's foreign affairs, but the government of Bhutan handles all of its own foreign affairs, including the sensitive (to India) border demarcation issue with China. Bhutan has diplomatic relations with 21 countries, and with the European Union, with missions in India, Bangladesh, Thailand, and Kuwait. It has two UN missions, one in New York and one in Geneva. Only India and Bangladesh have residential embassies in Bhutan, while Thailand has a consulate office in Bhutan.

By a long standing treaty, Indian and Bhutanese citizens may travel to each other's countries without a passport or visa using their national identity cards instead. Bhutanese citizens may also work in India without legal restriction. Bhutan does not have formal diplomatic ties with its northern neighbour, the People's Republic of China, although exchanges of visits at various levels between the two have significantly increased in recent times. The first bilateral agreement between China (PRC) and Bhutan was signed in 1998, and Bhutan has also set up honorary consulates in Macau and Hong Kong. Bhutan's border with China is largely not demarcated and thus disputed in some places. Approximately 269 square kilometers remain under discussion between China and Bhutan.[46]

On 13 November 2005, Chinese soldiers crossed into the disputed territories between China and Bhutan, and began building roads and bridges.[47] Bhutanese Foreign Minister Khandu Wangchuk took up the matter with Chinese authorities after the issue was raised in the Bhutanese parliament. In response, Foreign Ministry spokesman Qin Gang of the People's Republic of China has said that the border remains in dispute and that the two sides are continuing to work for a peaceful and cordial resolution of the dispute.[48] An Indian intelligence officer has said that a Chinese delegation in Bhutan told the Bhutanese that they were "overreacting." The Bhutanese newspaper *Kuensel* has said that China might use the roads to further Chinese claims along the border.[47]

On 8 February 2007, the Indo-Bhutan Friendship Treaty was substantially revised. The Treaty of 1949, Article 2 states: "The Government of India undertakes to exercise no interference in the internal administration of Bhutan. On its part the Government of Bhutan agrees to be guided by the advice of the Government of India in regard to its external relations." In the revised treaty it now reads as "In keeping with the abiding ties of close friendship and cooperation between Bhutan and India, the Government of the Kingdom of Bhutan and the Government of the Republic of India shall cooperate closely with each other on issues relating to their national interests. Neither government shall allow the use of its territory for activities harmful to the national security and interest of the other." The revised treaty also includes this preamble: "Reaffirming their respect for each other's independence, sovereignty and territorial integrity", an element that was absent in the earlier version. The Indo-Bhutan Friendship Treaty of 2007 clarifies Bhutan's status as an independent and sovereign nation.

Bhutan maintains formal diplomatic relations with several Asian and European nations, Canada, and Brazil. Other countries, such as the United States and the United Kingdom, have no formal diplomatic relations with Bhutan, but maintain informal contact through their respective embassies in New Delhi and Bhutanese honorary consulates in London and Washington, D.C.[49][50][51]



Geography

Main article: Geography of Bhutan

Haa Valley

Bhutan is located on the southern slopes of the eastern Himalayas, landlocked between the Tibet Autonomous Region to the north and the Indian states of Sikkim, West Bengal, Assam and Arunachal Pradesh to the west and south. It lies between latitudes 26° and 29°N, and longitudes 88° and 93°E. The land consists mostly of steep and high

Topographic map of Bhutan

mountains crisscrossed by a network of swift rivers, which form deep valleys before draining into the Indian plains. Elevation rises from 200 m (660 ft) in the southern foothills to more than 7,000 m (23,000 ft). This great geographical diversity combined with equally diverse climate conditions contributes to Bhutan's outstanding range of biodiversity and ecosystems.[2]

Gangkhar Puensum from Ura La, Bhutan

The northern region of the country consists of an arc of Eastern Himalayan alpine shrub and meadows reaching up to glaciated mountain peaks with an extremely cold climate at the highest elevations. Most peaks in the north are over 7,000 m (23,000 ft) above sea level; the highest point in Bhutan is Gangkhar Puensum at 7,570 metres (24,840 ft), which has the distinction of being the highest unclimbed mountain in the world.[3] The lowest point, at 98 m (322 ft), is in the valley of Drangme Chhu, where the river crosses the border with India.[3] Watered by snow-fed rivers, alpine valleys in this region provide pasture for livestock, tended by a sparse population of migratory shepherds.

The Black Mountains in the central region of Bhutan form a watershed between two major river systems: the Mo Chhu and the Drangme Chhu. Peaks in the Black Mountains range between 1,500 and 2,700 m (4,900 and 8,900 ft) above sea level, and fast-flowing rivers have carved out deep gorges in the lower mountain areas. The forests of the central Bhutan mountains consist of Eastern Himalayan subalpine conifer forests in higher elevations and Eastern Himalayan broadleaf forests in lower elevations. Woodlands of the central region provide most of Bhutan's forest production. The Torsa, Raidak, Sankosh, and Manas are the main rivers of Bhutan, flowing through this region. Most of the population lives in the central highlands.

In the south, the Shiwalik Hills are covered with dense Himalayan subtropical broadleaf forests, alluvial lowland river valleys, and mountains up to around 1,500 m (4,900 ft) above sea level. The foothills descend into the subtropical Duars Plain. Most of the Duars is located in India, although a 10 to 15 km (6.2 to 9.3 mi) wide strip extends into Bhutan. The Bhutan Duars is divided into two parts: the northern and the southern Duars. The northern Duars, which abuts the Himalayan foothills, has rugged, sloping terrain and dry, porous soil with dense vegetation and abundant wildlife. The southern Duars has moderately fertile soil, heavy savannah grass, dense, mixed jungle, and freshwater springs. Mountain rivers, fed by either the melting snow or the monsoon rains, empty into the Brahmaputra River in India. Data released by the Ministry of Agriculture showed that the country had a forest cover of 64% as of October 2005.

Climate

The climate in Bhutan varies with elevation, from subtropical in the south to temperate in the highlands and polar-type climate, with year-round snow in the north. Bhutan experiences five distinct seasons: summer, monsoon, autumn, winter and spring. Western Bhutan has the heavier monsoon rains; southern Bhutan has hot humid summers and cool winters; central and eastern Bhutan is temperate and drier than the west with warm summers and cool winters.

Jacaranda trees in Bhutan

Wildlife

See also: List of mammals of Bhutan

More than 770 species of bird and 5,400 species of plants are known to occur throughout the kingdom. Bhutan has a rich primate life with rare species such as the golden langur.[52][53] Recently, a variant Assamese macaque, which is also regarded by some authorities as a new species, *Macaca munzala* has also been recorded.[54]

The Takin is Bhutan's national animal.

The Bengal tiger, Greater One-horned Rhinoceros, clouded leopard, hispid hare and the sloth bear live in the lush tropical lowland and hardwood forests in the south. In the temperate zone, grey langur, tiger, Indian leopard, goral and serow are found in mixed conifer, broadleaf and pine forests. Fruit bearing trees and bamboo provide habitat for the Himalayan black bear, red panda, squirrel, sambar, wild pig and barking deer. The alpine habitats of the great Himalayan range in the north are home to the snow leopard, blue sheep, marmot, Tibetan wolf, antelope, Himalayan musk deer and the takin, Bhutan's national animal. The endangered Wild Water Buffalo occurs in southern Bhutan although in small numbers.[55]

Among birds, the globally endangered White-winged Wood Duck has been added recently to the list of Bhutan's avifauna.[56]

Conservation significance

Main article: List of protected areas of Bhutan

The Eastern Himalayas have been identified as a global biodiversity hotspot and counted among the 234 globally outstanding ecoregions of the world in a comprehensive analysis of global biodiversity undertaken by WWF between 1995 and 1997.

Protected areas of Bhutan in lavender, biological corridors in green.

Bhutan is seen as a model for proactive conservation initiatives. The Kingdom has received international acclaim for its commitment to the maintenance of its biodiversity. This is reflected in the decision to maintain at least sixty percent of the land area under forest cover, to designate more than 40%[57][58] of its territory as national parks, reserves and other protected areas, and most recently to identify a further nine percent of land area as biodiversity corridors linking the protected areas. Environmental conservation has been placed at the core of the nation's development strategy, the middle path. It is not treated as a sector but rather as a set of concerns that must be mainstreamed in Bhutan's overall approach to development planning and to be buttressed by the force of law.

Conservation issues

Further information: Environmental issues in Bhutan

Although Bhutan's natural heritage is still largely intact, the Government has said that it cannot be taken for granted and that conservation of the natural environment must be considered one of the challenges that will need to be addressed in the years ahead.

Pressures on the natural environment are already evident and will be fuelled by a complex array of forces. They

include population pressures, agricultural modernisation, poaching, hydro-power development, mineral extraction, industrialisation, urbanisation, sewage and waste disposal, tourism, competition for available land road construction and the provision of other physical infrastructure associated with social and economic development.

The most endangered Asia top predator of 2010, the dhole is on the edge of extinction. Fewer than 2500 members of the species remain in the world.

Policy implementation needs to be continually improved. Sustainable rural livelihoods that do not rely solely upon natural resource use need to be developed and supported, and there needs to be far wider understanding of the environmental threats that come hand in hand with development, to ensure the future of Bhutan's rich and diverse environment.

In practice, the overlap of these extensive protected lands with populated areas has led to mutual habitat encroachment. Protected wildlife has entered agricultural areas, trampling crops and killing livestock. In response, Bhutan has implemented an insurance scheme, begun constructing solar powered alarm fences, watch towers, and search lights, and has provided fodder and salt licks outside human settlement areas to encourage animals to stay away.[59]

Economy

Main article: Economy of Bhutan

The ngultrum is the currency of Bhutan and its value is fixed to the Indian rupee. The rupee is also accepted as legal tender in the country.

The ngultrum is the currency of Bhutan

Though Bhutan's economy is one of the world's smallest, it has grown rapidly in recent years, by eight percent in 2005 and 14 percent in 2006. In 2007, Bhutan had the second fastest growing economy in the world, with an annual economic growth rate of 22.4 percent. This was mainly due to the commissioning of the gigantic Tala Hydroelectricity project. As of March 2006, Bhutan's per capita income was US$1,321.

Bhutan's economy is based on agriculture, forestry, tourism and the sale of hydroelectric power to India. Agriculture provides the main livelihood for more than 80 percent of the population. Agrarian practices consist largely of subsistence farming and animal husbandry. Handicrafts, particularly weaving and the manufacture of religious art for home altars, are a small cottage industry. A landscape that varies from hilly to ruggedly mountainous has made the building of roads and other infrastructure difficult and expensive. This, and a lack of access to the sea, has meant that Bhutan has not been able to benefit from significant trading of its produce. Bhutan does not have any railways, though Indian Railways plans to link southern Bhutan to its vast network under an agreement signed in January 2005.[60] Bhutan and India signed a 'free trade' accord in 2008, which additionally allowed Bhutanese imports and exports from third markets to transit India without tariffs.[61] Bhutan had trade relations with the Tibet region until 1960, when it closed its border with China after an influx of refugees.[62]

The industrial sector is in a nascent stage, and though most production comes from cottage industry, larger industries are being encouraged and some industries such as cement, steel, and ferroalloy have been set up. Most development projects, such as road construction, rely on Indian contract labour. Agricultural produce includes rice, chilies, dairy (some yak, mostly cow) products, buckwheat, barley, root crops, apples, and citrus and maize at lower elevations. Industries include cement, wood products, processed fruits, alcoholic beverages and calcium

carbide.

Incomes of over Nu 100,000 per annum are taxed, but very few wage and salary earners qualify. Bhutan's inflation rate was estimated at about three percent in 2003. Bhutan has a Gross Domestic Product of around USD 2.913 billion (adjusted to Purchasing Power Parity), making it the 162nd largest economy in the world. Per capita income is around $1,400,[3] ranked 124th. Government revenues total $272 million, though expenditures amount to $350 million. 60 percent of the budget expenditure, however, is financed by India's Ministry of External Affairs.[note 1][63] Bhutan's exports, principally electricity, cardamom, gypsum, timber, handicrafts, cement, fruit, precious stones and spices, total €128 million (2000 est.). Imports, however, amount to €164 million, leading to a trade deficit. Main items imported include fuel and lubricants, grain, machinery, vehicles, fabrics and rice. Bhutan's main export partner is India, accounting for 58.6 percent of its export goods. Hong Kong (30.1 percent) and Bangladesh (7.3 percent) are the other two top export partners.[3] As its border with Tibet is closed, trade between Bhutan and China is now almost non-existent. Bhutan's import partners include India (74.5 percent), Japan (7.4 percent) and Sweden (3.2 percent).

Administrative divisions

Main articles: Districts of Bhutan, Blocks of Bhutan, and Local Government Act of Bhutan 2009

Bhutan is divided into twenty *dzongkhags* (districts), administered by a body called the Dzongkhag Tshogdu. In certain *thromdes* (urban municipalities), a further municipal administration is directly subordinate to the Dzongkhag administration. In the vast majority of constituencies, rural *gewogs* (village blocks) are administered by bodies called the Gewog Tshogde.[64]

Thromdes (municipalities) elect Thrompons to lead administration, who in turn represent the Thromde in the Dzongkhag Tshogdu. Likewise, gewogs elect headmen called *gups*, vice-headmen called *mangmis*, who also sit on the Dzongkhag Thshogdu, as well as other members of the Gewog Tshogde. The basis of electoral constituencies in Bhutan is the *chiwog*, a subdivision of gewogs delineated by the Election Commission.[64]

- Trashigang, administrative headquarters of Trashigang District the most populous district in the country.
- Trongsa, in central Bhutan which has the largest and the most magnificent of all the dzongs in Bhutan.

Demographics

Main article: Demographics of Bhutan

Bhutanese people primarily consist of the Ngalops and Sharchops, called the Western Bhutanese and Eastern Bhutanese respectively. The Lhotshampa, meaning "southerners," are a heterogeneous group of mostly Nepalese descent. The Ngalops primarily consist of Bhutanese living in the western part of the country. Their culture is closely related to that of Tibet. Much the same could be said of the Sharchops, the dominant group, who traditionally follow the Nyingmapa rather than the official Drukpa Kagyu form of Tibetan Buddhism. In modern times, with improved transportation infrastructure, there has been much intermarriage between these groups. In the early 1970s, intermarriage between the Lhotshampas and mainstream Bhutanese society was encouraged by the government, but after the late 1980s, the Bhutanese government forced about 108,000 Lhotshampas from their homes, seized their land, and expelled them to refugee camps.[33]

The literacy rate in Bhutan is 59.5 percent.[66] The country has a median age of 22.3 years.[67] Bhutan has a life expectancy of 62.2 years (61 for males and 64.5 for females) according to the latest data from the World Bank. There are 1,070 males to every 1,000 females in the country.

Religion

Main article: Religion in Bhutan

Religions of Bhutan

religion	percent
Buddhism	76%
Hinduism	23%
Others	1%

It is estimated that between two thirds and three quarters of the Bhutanese population follow Vajrayana Buddhism, which is also the state religion. About one quarter to one third are followers of Hinduism. Other religions account for less than 1% of the population.[68] The current legal framework, in principle guarantees freedom of religion; proselytism, however, is forbidden by a royal government decision[68] and by judicial interpretation of the Constitution.[69]

Taktshang Goemba or "Tiger's nest" of Buddhism in Bhutan. Located on a

Buddhism was introduced to Bhutan in the 7th century AD. Tibetan king Songtsän Gampo (reigned 627–49), a convert to Buddhism, ordered the construction of two Buddhist temples, at Bumthang in central Bhutan and at Kyichu (near Paro) in the Paro Valley.[21]

Languages

Main article: Languages of Bhutan

The national language is Bhutanese, or Dzongkha, one of 53 languages in

Languages of Bhutan

cliff 900 meters high, Parowan city -maps.google (http://maps.google.com/maps?ll=27.491884,89.363544&spn=0.011706,0.026157&t=h&z=16&vpsrc=6&lci=com.panoramio.all)

the Tibetan language family. The script, here called *Chhokey* ("Dharma Language"), is identical to classical Tibetan. In the schools English is the medium of instruction and Dzongkha is taught as the national language. Ethnologue lists 24 languages currently spoken in Bhutan, all of them in the Tibeto-Burman family, except Nepali, an Indo-Aryan language. Until the 1980s, the government sponsored the teaching of Nepali in schools in Southern Bhutan. However, after the armed uprising in the south, Nepali was dropped from the curriculum. The languages of Bhutan are still not well-characterized, and several have yet to be recorded in an in-depth academic grammar. Before the 1980s, the Lhotshampa (Nepali-speaking community), mainly based in southern Bhutan, constituted approximately 30% of the population.[70] However, during the 1980s, after the Bhutanese government instituted a policy of one language and one culture, these Lhotshampas were forced to wear the national costume of Bhutan, which is not well-suited to the high temperatures of the southern region.[70] This cultural discrimination led to protests which eventually resulted in the eviction of more than 100,000 Lhotshampas throughout the 1990s.[35] These Lhotshampas took refuge in Nepal via India. Because the bilateral talks between Nepal and Bhutan to repatriate Bhutanese refugees (Lhotshampas) have been proven futile, the UNHCR is now helping the refugees to settle in various developed countries such as Norway, USA, Canada and many others.[32][35]

Dzongkha is partially intelligible with Sikkimese and spoken natively by 25% of the population. Tshangla, the language of the Sharchop and the principal pre-Tibetan language of Bhutan, is spoken by a greater number of people. It is not easily classified and may constitute an independent branch of Tibeto-Burman. Nepali speakers constituted some 40% of the population as of 2006. The larger minority languages are Dzala (11%), Limbu (10%, immigrant), and Kheng (8%). There are no reliable sources for the ethnic or linguistic composition of Bhutan, so these numbers do not add up to 100%.

Culture

Main article: Culture of Bhutan

Bhutan has a rich and unique cultural heritage that has largely remained intact because of its isolation from the rest of the world until the early 1960s. One of the main attractions for tourists is the country's culture and traditions. Bhutanese tradition is deeply steeped in its Buddhist heritage.[71][72]Hinduism is the second dominant religion in Bhutan, being most prevalent in the southern regions.[73] The government is increasingly making efforts to preserve and sustain the current culture and traditions of the country. Because of its largely unspoiled natural environment and cultural heritage, Bhutan has been referred to as *The Last Shangri-la*.[74]

While Bhutanese citizens are free to travel abroad, Bhutan is viewed as inaccessible by many foreigners. Another reason for it being an unpopular destination is the cost, which is high for tourists on tighter budgets. Entry is free for citizens of India and Bangladesh, but all other foreigners are required to sign up with a Bhutanese tour operator and pay around US$200 per day that they stay in the country.[75]

The national dress for Bhutanese men is the *gho*, a knee-length robe tied at the waist by a cloth belt known as the *kera*. Women wear an ankle-length dress, the *kira*, which is clipped at one shoulder and tied at the waist. An

accompaniment to the kira is a long-sleeved blouse, the *toego*, which is worn underneath the outer layer. Social status and class determine the texture, colours, and decorations that embellish the garments. Differently coloured scarves and shawls are important indicators of social standing, as Bhutan has traditionally been a feudal society. Jewellery is mostly worn by women, especially during religious festivals (tsechus) and public gatherings. To strengthen Bhutan's identity as an independent country, Bhutanese law requires all Bhutanese citizens to wear the national dress in public areas and as formal wear.

Bhutanese thanka of Mt. Meru and the Buddhist Universe, 19th century, Tongsa Dzong, Tongsa, Bhutan.

Rice, buckwheat, and increasingly maize, are the staples of Bhutanese cuisine. The local diet also includes pork, beef, yak meat, chicken, and mutton. Soups and stews of meat and dried vegetables spiced with chillies and cheese are prepared. *Ema datshi*, made very spicy with cheese and chilies, might be called the national dish for its ubiquity and the pride that Bhutanese have for it. Dairy foods, particularly butter and cheese from yaks and cows, are also popular, and indeed almost all milk is turned to butter and cheese. Popular beverages include butter tea, tea, locally brewed *ara* (rice wine) and beer. Bhutan is the first country in the world to have banned the sale of tobacco under its Tobacco Act of 2010.[28]

Bhutanese architecture remains distinctively traditional, employing rammed earth and wattle and daub construction methods, stone masonry, and intricate woodwork around windows and roofs. Traditional architecture uses no nails or iron bars in construction.[28][76][77] Characteristic of the region is a type of castle fortress known as the dzong. Since ancient times, the dzongs have served as the religious and secular administration centres for their respective districts.[78] The University of Texas at El Paso in the United States has adopted Bhutanese architecture for its buildings on campus, as have the nearby Hilton Garden Inn and other buildings in the city of El Paso.[79]

Chaam, sacred masked dances, are annually performed during religious festivals.

Bhutan has numerous public holidays, most of which centre around traditional seasonal, secular and religious festivals. They include the winter solstice (around January 1, depending on the lunar calendar), the lunar New Year (February or March), the King's birthday and the anniversary of his coronation, the official start of monsoon season (September 22), National Day (December 17), and various Buddhist and Hindu celebrations.

Masked dances and dance dramas are common traditional features at festivals, usually accompanied by traditional music. Energetic dancers, wearing colourful wooden or composition face masks and stylized costumes, depict heroes, demons, dæmons, death heads, animals, gods, and caricatures of common people. The dancers enjoy royal patronage, and preserve ancient folk and religious customs and perpetuate the ancient lore and art of mask-making.

The music of Bhutan can generally be divided into traditional and modern varieties; traditional music comprises religious and folk genres, the latter including *zhungdra* and *boedra*.[80] The modern *rigsar* is played on a mix of traditional instruments and electronic keyboards, and dates back to the early 1990s; it shows the influence of Indian popular music, a hybrid form of traditional and Western popular influences.[81][82]

In Bhutanese families, inheritance generally passes through the female rather than the male line. Daughters will inherit their parents' house. A man is expected to make his own way in the world and often moves to his wife's home. Love marriages are common in urban areas, but the tradition of arranged marriages is still common in the villages. Although uncommon, polygamy is accepted, often being a device to keep property in a contained family unit rather than dispersing it.[83] The previous king, Jigme Singye Wangchuck, who abdicated in 2006, had four queens, all of whom are sisters. The current king, Jigme Khesar Namgyel Wangchuck, wed Jetsun Pema, 21, a commoner and daughter of a pilot, on 13 October 2011.

Sports

Bhutan's national sport is archery, and competitions are held regularly in most villages. It differs from Olympic standards in technical details such as the placement of the targets and atmosphere. There are two targets placed over 100 meters apart and teams shoot from one end of the field to the other. Each member of the team shoots two arrows per round. Traditional Bhutanese archery is a social event and competitions are organized between villages, towns, and amateur teams. There are usually plenty of food and drink complete with singing and dancing. Attempts to distract an opponent include standing around the target and making fun of the shooter's ability. Darts (*khuru*) is an equally popular outdoor team sport, in which heavy wooden darts pointed with a 10 cm nail are thrown at a paperback-sized target 10 to 20 meters away.

Changlimithang Stadium, during a parade.

Another traditional sport is the *Digor*, which resembles the shot put and horseshoe throwing. Cricket has gained popularity in Bhutan, particularly since the introduction of television channels from India. The Bhutan national cricket team is one of the more successful affiliate nations in the region. Football is also an increasingly popular sport. In 2002, Bhutan's national football team played Montserrat, in what was billed as The Other Final; the match took place on the same day Brazil played Germany in the World Cup final, but at the time Bhutan and Montserrat were the world's two lowest ranked teams. The match was held in Thimphu's Changlimithang National Stadium, and Bhutan won 4–0. A documentary of the match was made by the Dutch filmmaker Johan Kramer.

Traffic and transport

Main article: Transport in Bhutan

Paro Airport is the only international airport in Bhutan. Yongphulla Airport in Trashigang is a small domestic airport that underwent upgrades through 2010.[84] Yongphulla Airport was scheduled for completion in January 2010, but as of August 2011 work is still ongoing.[85] There are plans for further domestic airports to be built at Bathpalathang in Bumthang District and at Gelephu in Sarpang District, which were due to start operations in June 2011.[86]

The Lateral Road is Bhutan's primary east-west corridor, connecting Phuentsholing in the southwest to Trashigang in the east. In between, the Lateral Road runs directly through Wangdue Phodrang, Trongsa, and other population centers. The Lateral Road also has spurs connecting to the capital Thimphu and other major population centers such as Paro and Punakha. As with other roads in Bhutan, the Lateral Road presents serious safety concerns due to pavement conditions, sheer drops, hairpin turns, weather, and landslides.[87][88][89]

History of Bhutan

From Wikipedia, the free encyclopedia

Bhutan's early history is steeped in mythology and remains obscure. It may have been inhabited as early as 2000 BC, but not much was known until the introduction of Tibetan Buddhism in the 9th century, when turmoil in Tibet forced many monks to flee to Bhutan. In the 12th century, the Drukpa Kagyupa school was established and remains the dominant form of Buddhism in Bhutan today. The country's political history is intimately tied to its religious history and the relations among the various monastic schools and monasteries.[1]

View of Tashichoedzong, Thimphu. The 17th century fortress-monastery on the northern edge of the city, has been the seat of Bhutan's government since 1952.

Bhutan is one of the only countries which has been independent throughout its history, never conquered, occupied, or governed by an outside power. Although there has been speculation that it was under the Kamarupa Kingdom or the Tibetan Empire in the 7th to 9th centuries, firm evidence is lacking. From the time historical records are clear, Bhutan has continuously and successfully defended its sovereignty.[2]

The consolidation of Bhutan occurred in 1616 when Ngawanag Namgyal, a lama from western Tibet known as the Shabdrung Rinpoche, defeated three Tibetan invasions, subjugated rival religious schools, codified the **Tsa Yig**, an intricate and comprehensive system of law, and established himself as ruler over a system of ecclesiastical and civil administrators. After his death, infighting and civil war eroded the power of the shabdrung for the next 200 years when in 1885, Ugyen Wangchuck was able to consolidate power and cultivated closer ties with the British in India.[1]

In 1907, Ugyen Wangchuck was elected as the hereditary ruler of Bhutan, crowned on December 17, 1907, and installed as the head of state Druk Gyalpo (Dragon King). In 1910, King Ugyen and the British signed the Treaty of Punakha which provided that British India would not interfere in the internal affairs of Bhutan if the country accepted external advice in its external relations. When Ugyen Wangchuck died in 1926, his son Jigme Wangchuck became the next ruler, and when India gained independence in 1947, the new Indian Government recognized Bhutan as an independent country. In 1949, India and Bhutan signed the Treaty of Peace and Friendship, which provided that India would not interfere in Bhutan's internal affairs but would be guided by India in its foreign policy. Succeeded in 1952 by his son Jigme Dorji Wangchuck, Bhutan began to slowly emerge from its isolation and began a program of planned development. Bhutan became a member of the United Nations in 1971, and the National Assembly was established and a new code of law, as well as the Royal Bhutanese Army and the High Court.[1]

In 1972, Jigme Singye Wangchuck ascended the throne at age 20. He emphasized modern education, decentralization of governance, the development of hydroelectricity and tourism and improvements in rural developments. He was perhaps best known internationally for his overarching development philosophy of "gross national happiness." It recognizes that there are many dimensions to development and that economic goals alone are not sufficient. Satisfied with Bhutan's transitioning democratization process, he abdicated in December 2006 rather than wait until the promulgation of the new constitution in 2008. His son, Jigme Khesar Namgyel Wangchuck, became King upon his abdication.[1]

Origins and early settlement, AD 600–1600

Although knowledge of prehistoric Bhutan has yet to emerge through archaeological study, stone tools and weapons, remnants of large stone structures, and megaliths that may have been used for boundary markers or rituals provide evidence of civilization as early as 2000 BC. The absence of neolithic mythological legends argues against earlier inhabitation. A more certain prehistoric period has been theorized by historians as that of the state of Lhomon (literally, southern darkness) or Monyul (dark land, a reference to the Monpa aboriginal peoples of Bhutan), possibly a part of Tibet that was then beyond the pale of Buddhist teachings. Monyul is thought to have existed between 500 BC. and AD 600. The names Lhomon Tsendenjong (southern Mon sandalwood country) and Lhomon Khashi (southern Mon country of four approaches), found in ancient Bhutanese and Tibetan chronicles, may also have credence and have been used by some Bhutanese scholars when referring to their homeland. Variations of the Sanskrit words Bhota-ant (end of Bhot) or Bhu-uttan (meaning highlands) have been suggested by historians as origins of the name Bhutan, which came into common foreign use in the late nineteenth century and is used in Bhutan only in English-language official correspondence. The traditional name of the country since the seventeenth century has been Drukyul—country of the Drukpa, the Dragon people, or the Land of the Thunder Dragon, a reference to the country's dominant Buddhist sect.[3]

Some scholars believe that during the early historical period the inhabitants were fierce mountain aborigines, the Monpa, who were of neither the Tibetan or Mongol stock that later overran northern Bhutan. The people of Monyul practiced the shamanistic Bön religion, which emphasized worship of nature and

Improve this page

and evil spirits. During the latter part of this period, historical legends relate that the mighty king of Monyul invaded a southern region known as the Duars, subduing the regions of modern Assam, West Bengal, and Bihar in India.[3]

Arrival of Buddhism

Buddhism was first introduced to Bhutan in the 7th century AD. Tibetan king Songtsän Gampo[4] (reigned 627–49), a convert to Buddhism, ordered the construction of two Buddhist temples, at Bumthang in central Bhutan and at Kyichu (near Paro) in the Paro Valley.[5] Buddhism was propagated in earnest[4] in 746[6] under King Sindhu Rāja (*also* Künjom;[7] Sendha Gyab; Chakhar Gyalpo), an exiled Indian king who had established a government in Bumthang at Chakhar Gutho Palace. [8]:35 [9]:13

Buddhism replaced but did not eliminate the Bon religious practices that had also been prevalent in Tibet until the late sixth century. Instead, Buddhism absorbed Bon and its believers. As the country developed in its many fertile valleys, Buddhism matured and became a unifying element. It was Buddhist literature and chronicles that began the recorded history of Bhutan.[10]

In 747, a Buddhist saint, Padmasambhava (known in Bhutan as Guru Rimpoche and sometimes referred to as the Second Buddha), came to Bhutan from India at the invitation of one of the numerous local kings. After reportedly subduing eight classes of demons and converting the king, Guru Rimpoche moved on to Tibet. Upon his return from Tibet, he oversaw the construction of new monasteries in the Paro Valley and set up his headquarters in Bumthang. According to tradition, he founded the Nyingmapa sect—also known as the "old sect" or Red Hat sect—of Mahayana Buddhism, which became for a time the dominant religion of Bhutan. Guru Rimpoche plays a great historical and religious role as the national patron saint who revealed the tantras —manuals describing forms of devotion to natural energy—to Bhutan. Following the guru's sojourn, Indian influence played a temporary role until increasing Tibetan migrations brought new cultural and religious contributions.[10]

There was no central government during this period. Instead, small independent monarchies began to develop by the early ninth century. Each was ruled by a deb (king), some of whom claimed divine origins. The kingdom of Bumthang was the most prominent among these small entities. At the same time, Tibetan Buddhist monks (lam in Dzongkha, Bhutan's official national language) had firmly rooted their religion and culture in Bhutan, and members of joint Tibetan-Mongol military expeditions settled in fertile valleys. By the eleventh century, all of Bhutan was occupied by Tibetan-Mongol military forces.[10]

Rivalry among sects

By the tenth century, Bhutan's political development was heavily influenced by its religious history. Following a period in which Buddhism was in decline in Tibet in the eleventh century, contention among a number of subsects emerged. The Mongol overlords of Tibet and Bhutan patronized a sequence of subsects until their own political decline in the fourteenth century. By that time, the Gelugpa or Yellow Hat school had, after a period of anarchy in Tibet, become a powerful force resulting in the flight to Bhutan of numerous monks of various minor opposing sects. Among these monks was the founder of the Lhapa subsect of the Kargyupa school, to whom is attributed the introduction of strategically built dzong. Although the Lhapa subsect had been successfully challenged in the twelfth century by another Kargyupa subsect—the Drukpa—led by Tibetan monk Phajo Drugom Shigpo, it continued to proselytize until the seventeenth century. The Drukpa spread throughout Bhutan and eventually became a dominant form of religious practice. Between the twelfth century and the seventeenth century, the two Kargyupa subsects vied with one another from their respective dzong as the older form of Nyingmapa Buddhism was eclipsed.[11]

Theocratic government, 1616–1907

Consolidation and defeat of Tibetan invasions, 1616–51

A 17th-century Italian map showing a large "Kingdom of Barantola or Boutan" bordering on Nepal and Tibet, as well as, surprisingly, Yunnan, Sichuan, and the Kingdom of Tanguts

In the seventeenth century, a theocratic government independent of Tibetan political influence was established, and premodern Bhutan emerged. The theocratic government was founded by an expatriate Drukpa monk, Ngawang Namgyal, who arrived in Bhutan in 1616 seeking freedom from the domination of the Gelugpa subsect led by the Dalai Lama (Ocean Lama) in Lhasa. After a series of victories over rival subsect leaders and Tibetan invaders, Ngawang Namgyal took the title shabdrung (At Whose Feet One Submits, or, in many Western sources, Dharma Raja), becoming the temporal and spiritual leader of Bhutan. Considered the first great historical figure of Bhutan, he united the leaders of powerful Bhutanese families in a land called Drukyul. He promulgated a code of law and built a network of impregnable dzong, a system that helped bring local lords under centralized control and strengthened the country against Tibetan invasions. Many dzong were extant in the late twentieth century.[12]

Circa 1627, during the first war with Tibet, Portuguese Jesuits Estêvão Cacella and João Cabral were the first recorded Europeans to visit Bhutan on their way to Tibet. They met with Ngawang Namgyal, presented him with firearms, gunpowder and a telescope, and offered him their services in the war against Tibet, but the shabdrung declined the offer.[12] After a stay of nearly eight months Cacella wrote a long letter from the Chagri Monastery reporting the travel. This is a rare report of the Shabdrung remaining.[13]

Tibetan armies invaded Bhutan around 1629, in 1631, and again in 1639, hoping to throttle Ngawang Namgyal's popularity before it spread too far. In 1634 Ngawang Namgyal defeated Karma Tenkyong's army in the Battle of Five Lamas. The invasions were thwarted, and the Drukpa subsect developed a strong presence in western and central Bhutan, leaving Ngawang Namgyal supreme. In recognition of the power he accrued, goodwill missions were sent to Bhutan from Cooch Behar in the Duars (present-day northeastern West Bengal), Nepal to the west, and Ladakh in western Tibet. The ruler of Ladakh even gave a number of villages in his kingdom to Ngawang Namgyal.

Bhutan's troubles were not over, however. In 1643, a joint Mongol-Tibetan force sought to destroy Nyingmapa refugees who had fled to Bhutan, Sikkim, and Nepal. The Mongols had seized control of religious and civil power in Tibet in the 1630s and established Gelugpa as the state religion. Bhutanese rivals of Ngawang Namgyal encouraged the Mongol intrusion, but the Mongol force was easily defeated in the humid lowlands of southern Bhutan. Another Tibetan invasion in 1647 also failed.[12]

During Ngawang Namgyal's rule, administration comprised a state monastic body with an elected head, the Je Khenpo (lord abbot), and a theocratic civil government headed by the Druk Desi (regent of Bhutan, also known as Deb Raja in Western sources). The Druk Desi was either a monk or a member of the laity—by the nineteenth century, usually the latter; he was elected for a three-year term, initially by a monastic council and later by the State Council (Lhengye Tshokdu). The State Council was a central administrative organ that included regional rulers, the shabdrung's chamberlains, and the Druk Desi. In time, the Druk Desi came under the political control of the State Council's most powerful faction of regional administrators. The Shabdrung was the head of state and the ultimate authority in religious and civil matters. The seat of government was at Thimphu, the site of a thirteenth-century dzong, in the spring, summer, and fall. The winter capital was at Punak

Improve this page

established northeast of Thimphu in 1527. The kingdom was divided into three regions (east, central, and west), each with an appointed ponlop, or governor, holding a seat in a major dzong. Districts were headed by dzongpon, or district officers, who had their headquarters in lesser dzong. The ponlop were combination tax collectors, judges, military commanders, and procurement agents for the central government. Their major revenues came from the trade between Tibet and India and from land taxes.[12]

Ngawang Namgyal's regime was bound by a legal code called the Tsa Yig, which described the spiritual and civil regime and provided laws for government administration and for social and moral conduct. The duties and virtues inherent in the Buddhist dharma (religious law) played a large role in the new legal code, which remained in force until the 1960s.[12]

Administrative integration and conflict with Tibet, 1651–1728

To keep Bhutan from disintegrating, Ngawang Namgyal's death in 1651 apparently was kept a carefully guarded secret for fifty-four years. Initially, Ngawang Namgyal was said to have entered into a religious retreat, a situation not unprecedented in Bhutan, Sikkim, or Tibet during that time. During the period of Ngawang Namgyal's supposed retreat, appointments of officials were issued in his name, and food was left in front of his locked door.[14]

Ngawang Namgyal's son and stepbrother, in 1651 and 1680, respectively, succeeded him. They started their reigns as minors under the control of religious and civil regents and rarely exercised authority in their own names. For further continuity, the concept of multiple reincarnation of the first shabdrung—in the form of either his body, his speech, or his mind—was invoked by the Je Khenpo and the Druk Desi, both of whom wanted to retain the power they had accrued through the dual system of government. The last person recognized as the bodily reincarnation of Ngawang Namgyal died in the mid-eighteenth century, but speech and mind reincarnations, embodied by individuals who acceded to the position of Shabdrung, were recognized into the early twentieth century. The power of the state religion also increased with a new monastic code that remained in effect in the early 1990s. The compulsory admission to monastic life of at least one son from any family having three or more sons was instituted in the late seventeenth century. In time, however, the State Council became increasingly secular as did the successive Druk Desi, ponlop, and dzongpon, and intense rivalries developed among the ponlop of Tongsa and Paro and the dzongpon of Punakha, Thimphu, and Wangdue Phodrang.[14]

During the first period of succession and further internal consolidation under the Druk Desi government, there was conflict with Tibet and Sikkim. Internal opposition to the central government resulted in overtures by the opponents of the Druk Desi to Tibet and Sikkim. In the 1680s, Bhutan invaded Sikkim in pursuit of a rebellious local lord. In 1700, Bhutan again invaded Sikkim, and in 1714 Tibetan forces, aided by Mongolia, invaded Bhutan but were unable to gain control.[14]

Western outposts

During the 17th century Bhutan maintained close relations with Ladakh, and assisted Ladakh in its 1684 war with Tibet. Ladakh had earlier granted Bhutan several enclaves near Mount Kailash in western Tibet; these were monasteries of the Drukpa sect and so fell under the authority of the Bhutanese Je Khenpo and the Shabdrung. These enclaves persisted under Bhutanese control even after the rest of western Tibet came under the control of the Dalai Lama and his Gelugpa sect. Not until 1959 were the Bhutanese enclaves seized by the Chinese.[15] In addition to these outposts in Tibet, Bhutan for a time held monastic fiefs in Ladakh, Zanskar, and Lahul (now part of India), as well as in Lo Manthang and Dolpo (now part of Nepal).[16][17]

Civil conflict, 1728–72

Improve this page

Though the invaders were unable to take control, the political system remained unstable. Regional rivalries contributed to the gradual disintegration of Bhutan at the time the first British agents arrived.[18]

In the early eighteenth century, Bhutan had successfully developed control over the principality of Cooch Behar. The raja of Cooch Behar had sought assistance from Bhutan against the Indian Mughals in 1730, and Bhutanese political influence was not long in following. By the mid-1760s, Thimphu considered Cooch Behar its dependency, stationing a garrison force there and directing its civil administration. When the Druk Desi invaded Sikkim in 1770, Cooch Behari forces joined their Bhutanese counterparts in the offensive. In a succession dispute in Cooch Behar two years later, however, the Druk Desi's nominee for the throne was opposed by a rival who invited British troops, and, in effect, Cooch Behar became a dependency of the British East India Company.[18]

British intrusion, 1772–1907

Under the Cooch Behari agreement with the British, a British expeditionary force drove the Bhutanese garrison out of Cooch Behar and invaded Bhutan in 1772–73. The Druk Desi petitioned Lhasa for assistance from the Panchen Lama, who was serving as regent for the youthful Dalai Lama. In correspondence with the British governor general of India, however, the Panchen Lama instead punished the Druk Desi and invoked Tibet's claim of suzerainty over Bhutan.[19]

Failing to receive help from Tibet, the Druk Desi signed a Treaty of Peace with the British East India Company on April 25, 1774. Bhutan agreed to return to its pre-1730 boundaries, paid a symbolic tribute of five horses to Britain, and, among other concessions, allowed the British to harvest timber in Bhutan. Subsequent missions to Bhutan were made by the British in 1776, 1777, and 1783, and commerce was opened between British India and Bhutan and, for a short time, Tibet. In 1784, the British turned over to Bhutanese control Bengal Duars territory, where boundaries were poorly defined. As in its other foreign territories, Bhutan left administration of the Bengal Duars territory to local officials and collected its revenues. Although major trade and political relations failed to develop between Bhutan and Britain, the British had replaced the Tibetans as the major external threat.[19]

Boundary disputes plagued Bhutanese–British relations. To reconcile their differences, Bhutan sent an emissary to Calcutta in 1787, and the British sent missions to Thimphu in 1815 and 1838. The 1815 mission was inconclusive. The 1838 mission offered a treaty providing for extradition of Bhutanese officials responsible for incursions into Assam, free and unrestricted commerce between India and Bhutan, and settlement of Bhutan's debt to the British. In an attempt to protect its independence, Bhutan rejected the British offer. Despite increasing internal disorder, Bhutan had maintained its control over a portion of the Assam Duars more or less since its reduction of Cooch Behar to a dependency in the 1760s. After the British gained control of Lower Assam in 1826, tension between the countries began to rise as Britain exerted its strength. Bhutanese payments of annual tribute to the British for the Assam Duars gradually fell into arrears, however. The resulting British demands for payment and military incursions into Bhutan in 1834 and 1835 brought about defeat for Bhutan's forces and a temporary loss of territory.[19]

The British proceeded in 1841 to annex the formerly Bhutanese controlled Assam Duars, paying a compensation of 10,000 rupees a year to Bhutan. In 1842, Bhutan gave up control to the British of some of the troublesome Bengal Duars territory it had administered since 1784.[19]

Charges and countercharges of border incursions and protection of fugitives led to an unsuccessful Bhutanese mission to Calcutta in 1852. Among other demands, the mission sought increased compensation for its former Duars territories, but instead the British deducted nearly 3,000 rupees from the annual compensation and

Improve this page

demanded an apology for alleged plundering of British-protected lands by members of the mission. Following more incidents and the prospect of an anti-Bhutan rebellion in the Bengal Duars, British troops deployed to the frontier in the mid-1850s. The Sepoy Rebellion in India in 1857-58 and the demise of the British East India Company's rule prevented immediate British action. Bhutanese armed forces raided Sikkim and Cooch Behar in 1862, seizing people, property, and money. The British responded by withholding all compensation payments and demanding release of all captives and return of stolen property. Demands to the Druk Desi went unheeded, as he was alleged to be unaware of his frontier officials' actions against Sikkim and Cooch Behar.[19]

Britain sent a peace mission to Bhutan in early 1864, in the wake of the recent conclusion of a civil war there. The dzongpon of Punakha—who had emerged victorious—had broken with the central government and set up a rival Druk Desi while the legitimate Druk Desi sought the protection of the ponlop of Paro and was later deposed. The British mission dealt alternately with the rival ponlop of Paro and the ponlop of Tongsa (the latter acted on behalf of the Druk Desi), but Bhutan rejected the peace and friendship treaty it offered. Britain declared war in November 1864. Bhutan had no regular army, and what forces existed were composed of dzong guards armed with matchlocks, bows and arrows, swords, knives, and catapults. Some of these dzong guards, carrying shields and wearing chainmail armor, engaged the well-equipped British forces.[19]

The Duar War (1864–65) lasted only five months and, despite some battlefield victories by Bhutanese forces, resulted in Bhutan's defeat, loss of part of its sovereign territory, and forced cession of formerly occupied territories. Under the terms of the Treaty of Sinchula, signed on November 11, 1865, Bhutan ceded territories in the Assam Duars and Bengal Duars, as well as the eighty-three-square-kilometer territory of Dewangiri in southeastern Bhutan, in return for an annual subsidy of 50,000 rupees.[19] The land that was to become Bhutan House was ceded from Bhutan to British India in 1865 at the conclusion the Duar War and as a condition of the Treaty of Sinchula.[20][21]

In the 1870s and 1880s, renewed competition among regional rivals—primarily the pro-British ponlop of Tongsa and the anti-British, pro-Tibetan ponlop of Paro—resulted in the ascendancy of Ugyen Wangchuck, the Ponlop of Tongsa. From his power base in central Bhutan, Ugyen Wangchuck had defeated his political enemies and united the country following several civil wars and rebellions in 1882-85. His victory came at a time of crisis for the central government, however. British power was becoming more extensive to the south, and in the west Tibet had violated its border with Sikkim, incurring British disfavor. After 1,000 years of close ties with Tibet, Bhutan faced the threat of British military power and was forced to make serious geopolitical decisions. The British, seeking to offset potential Russian advances in Lhasa, wanted to open trade relations with Tibet. Ugyen Wangchuck, on the advice of his closest adviser Ugyen Dorji, saw the opportunity to assist the British and in 1903-4 volunteered to accompany a British mission to Lhasa as a mediator. For his services in securing the Anglo-Tibetan Convention of 1904, Ugyen Wangchuck was knighted and thereafter continued to accrue greater power in Bhutan.[19] Ugyen Dorji, as well as his descendants, went on to maintain British favor on behalf of the government from Bhutan House in Kalimpong, India.

Establishment of the hereditary monarchy, 1907

Further information: House of Wangchuck

Ugyen Wangchuck's emergence as the national leader coincided with the realization that the dual political system was obsolete and ineffective. He had removed his chief rival, the ponlop of Paro, and installed a supporter and relative, a member of the pro-British Dorji family, in his place. When the last shabdrung died in 1903 and a reincarnation had not appeared by 1906, civil administration came under the control of Ugyen Wangchuck. Finally, in 1907, the fifty-fourth and last Druk Desi was forced to retire, and despite recognitions of subsequent reincarnations of Ngawang Namgyal, the shabdrung system came to an end.[22]

Improve this page

In November 1907, an assembly of leading Buddhist monks, government officials, and heads of important families was held to end the moribund 300-year-old dual system of government and to establish a new absolute monarchy. Ugyen Wangchuck was elected its first hereditary Druk Gyalpo (Dragon King, reigned 1907–26). The Dorji family became hereditary holders of the position of gongzim (chief chamberlain), the top government post. The British, wanting political stability on their northern frontier, approved of the entire development.[22]

Britain's earlier entreaties in Lhasa had unexpected repercussions at this time. The Chinese, concerned that Britain would seize Tibet, invaded Tibet in 1910 and asserted political authority. In the face of the Chinese military occupation, the Dalai Lama fled to India. China laid claim not only to Tibet but also to Bhutan, Nepal, and Sikkim. With these events, Bhutanese and British interests coalesced.[22]

On January 8, 1910, Sikkim Political Officer and Tibetologist Sir Charles Alfred Bell engaged Bhutan and signed the Treaty of Punakha. The Treaty of Punakha amended two articles of the 1865 treaty: the British agreed to double their annual stipend to 100,000 rupees and "to exercise no interference in the internal administration of Bhutan." In turn, Bhutan agreed "to be guided by the advice of the British Government in regard to its external relations." The Treaty of Punakha guaranteed Bhutan's defense against China; China, in no position to contest British power, conceded the end of the millennium-long Tibetan-Chinese influence.[22] It also assigned land in Motithang (Thimphu) and a hill station between Chukha and Thimphu to the British, assigning a portion of Kalimpong (Bhutan House) to Bhutan.[23]

Much of Bhutan's modern development has been attributed by Bhutanese historians to the first Druk Gyalpo. Internal reforms included introducing Western-style schools, improving internal communications, encouraging trade and commerce with India, and revitalizing the Buddhist monastic system. Toward the end of his life, Ugyen Wangchuck was concerned about the continuity of the family dynasty, and in 1924 he sought British assurance that the Wangchuck family would retain its preeminent position in Bhutan. His request led to an investigation of the legal status of Bhutan vis-à-vis the suzerainty held over Bhutan by Britain and the ambiguity of Bhutan's relationship to India. Both the suzerainty and the ambiguity were maintained.[22]

Development of centralized government, 1926–52

Ugyen Wangchuck died in 1926 and was succeeded by his son, Jigme Wangchuck (reigned 1926–52). The second Druk Gyalpo continued his father's centralization and modernization efforts and built more schools, dispensaries, and roads. During Jigme Wangchuck's reign, monasteries and district governments were increasingly brought under royal control. However, Bhutan generally remained isolated from international affairs.[24]

The issue of Bhutan's status vis-à-vis the government of India was reexamined by London in 1932 as part of the issue of the status of India itself. It was decided to leave the decision to join an Indian federation up to Bhutan when the time came. When British rule over India ended in 1947, so too did Britain's association with Bhutan. India succeeded Britain as the de facto protector of the Himalayan kingdom, and Bhutan retained control over its internal government. It was two years, however, before a formal agreement recognized Bhutan's independence.[24]

Following the precedent set by the Treaty of Punakha, on August 8, 1949, Thimphu signed the Treaty of Friendship Between the Government of India and the Government of Bhutan, according to which external affairs, formerly guided by Britain, were to be guided by India. Like Britain, India agreed not to interfere in Bhutan's internal affairs. India also agreed to increase the annual subsidy to 500,000 rupees per year. Important to Bhutan's national pride was the return of Dewangiri. Some historians believe that if India had been at odds with China at this time, as it was to be a decade later, it might not have acceded so easily t

independent status.[24]

Modernization under Jigme Dorji, 1952–72

The third Druk Gyalpo, Jigme Dorji Wangchuck, was enthroned in 1952. Earlier he had married the European-educated cousin of the chogyal (king) of Sikkim and with her support made continual efforts to modernize his nation throughout his twenty-year reign. Among his first reforms was the establishment of the National Assembly — the Tshogdu — in 1953. Although the Druk Gyalpo could issue royal decrees and exercise veto power over resolutions passed by the National Assembly, its establishment was a major move toward a constitutional monarchy.[25]

When the Chinese communists took over Tibet in 1951, Bhutan closed its frontier with Tibet and sided with its powerful neighbor to the south. To offset the chance of Chinese encroachment, Bhutan began a modernization program. Land reform was accompanied by the abolition of slavery and serfdom and the separation of the judiciary from the executive branch of government. Mostly funded by India after China's invasion of Tibet in 1959, the modernization program also included the construction of roads linking the Indian plains with central Bhutan. An all-weather road was completed in 1962 between Thimphu and Phuntsholing, the overland gateway town on the southwest border with India. Dzongkha was made the national language during Jigme Dorji's reign. Additionally, development projects included establishing such institutions as a national museum in Paro and a national library, national archives, and national stadium, as well as buildings to house the National Assembly, the High Court (Thrimkhang Gongma), and other government entities in Thimphu. The position of gongzim, held since 1907 by the Dorji family, was upgraded in 1958 to lonchen (prime minister) and was still in the hands of the Dorji. Jigme Dorji Wangchuck's reforms, however, although lessening the authority of the absolute monarchy, also curbed the traditional decentralization of political authority among regional leaders and strengthened the role of the central government in economic and social programs.[25]

Modernization efforts moved forward in the 1960s under the direction of the lonchen, Jigme Palden Dorji, the Druk Gyalpo's brother-in-law. In 1962, however, Dorji incurred disfavor with the Royal Bhutan Army over the use of military vehicles and the forced retirement of some fifty officers. Religious elements also were antagonized by Dorji's efforts to reduce the power of the state-supported religious institutions. In April 1964, while the Druk Gyalpo was in Switzerland for medical care, Dorji was assassinated in Phuntsholing by an army corporal. The majority of those arrested and accused of the crime were military personnel and included the army chief of operations, Namgyal Bahadur, the Druk Gyalpo's uncle, who was executed for his part in the plot.[25]

The unstable situation continued under Dorji's successor as acting lonchen, his brother Lhendup Dorji, and for a time under the Druk Gyalpo's brother, Namgyal Wangchuck, as head of the army. According to some sources, a power struggle ensued between pro-Wangchuck loyalists and "modernist" Dorji supporters. The main issue was not an end to or lessening of the power of the monarchy but "full freedom from Indian interference." Other observers believe the 1964 crisis was not so much a policy struggle as competition for influence on the palace between the Dorji family and the Druk Gyalpo's Tibetan consort, Yanki, and her father. Lhendup Dorji had earlier threatened to kill Yanki—his sister's rival—and ordered her arrest when, fearing for her life and that of her 2-year-old son by the Druk Gyalpo, she sought refuge in India during the political crisis.[26] Lhendup also incurred the disapproval of the Druk Gyalpo by seeking to become sole regent of the kingdom after his brother's death, eliminating the Queen and the king's brother.[26] Before returning to Bhutan from Switzerland, Jigme Dorji met with the Indian Secretary General and Foreign Secretary in Calcutta who offered Indian support, including paratroopers if necessary, to help the Druk Gyalpo restore order in the kingdom.[26] Unable to regain the Druk Gyalpo's trust, Lhendup fled to London, while other supporters in the military and government fled to Nepal and Calcutta.[26] Afterwards, in concurrence of the National Assembly, Lhendup D[illegible]

members were exiled in 1965. However, the exiles continued their attacks on the Druk Gyalpo and India, worsening relations between India and China.[26] The tense political situation continued and in July 1965 there was an assassination attempt on the Druk Gyalpo. The Dorjis were not implicated in the attempt—which was described as a "private matter"—and the would-be assassins were pardoned by the Druk Gyalpo.[25]

In 1966, to increase the efficiency of government administration, Jigme Dorji Wangchuck made Thimphu the year-round capital. In May 1968, the comprehensive Rules and Regulations of the National Assembly revised the legal basis of the power granted to the National Assembly. The Druk Gyalpo decreed that henceforth sovereign power, including the power to remove government ministers and the Druk Gyalpo himself, would reside with the National Assembly. The following November, the Druk Gyalpo renounced his veto power over National Assembly bills and said he would step down if two-thirds of the legislature passed a no-confidence vote. Although he did nothing to undermine the retention of the Wangchuck dynasty, the Druk Gyalpo in 1969 called for a triennial vote of confidence by the National Assembly (later abolished by his successor) to renew the Druk Gyalpo's mandate to rule.[25]

Diplomatic overtures also were made during Jigme Dorji Wangchuck's reign. Although always seeking to be formally neutral and nonaligned in relations with China and India, Bhutan also sought more direct links internationally than had occurred previously under the foreign-policy guidance of India. Consequently, in 1962 Bhutan joined the Colombo Plan for Cooperative, Economic, and Social Development in Asia and the Pacific known as the Colombo Plan, and in 1966 notified India of its desire to become a member of the United Nations (UN). In 1971, after holding observer status for three years, Bhutan was admitted to the UN. In an effort to maintain Bhutan as a stable buffer state, India continued to provide substantial amounts of development aid.[25]

Jigme Dorji Wangchuck ruled until his death in July 1972 and was succeeded by his seventeen-year-old son, Jigme Singye Wangchuck. The close ties of the Wangchuck and Dorji families were reemphasized in the person of the new king, whose mother, Ashi Kesang Dorji (ashi means princess), was the sister of the lonchen, Jigme Palden Dorji. Jigme Singye Wangchuck, who had been educated in India and Britain, had been appointed ponlop of Tongsa in May 1972 and by July that year had become the Druk Gyalpo. With his mother and two elder sisters as advisers, the new Druk Gyalpo was thrust into the affairs of state. He was often seen among the people, in the countryside, at festivals, and, as his reign progressed, meeting with foreign dignitaries in Bhutan and abroad. His formal coronation took place in June 1974, and soon thereafter the strains between the Wangchucks and Dorjis were relieved with the return that year of the exiled members of the latter family. The reconciliation, however, was preceded by reports of a plot to assassinate the new Druk Gyalpo before his coronation could take place and to set fire to the Tashichho Dzong (Fortress of the Glorious Religion, the seat of government in Thimphu). Yanki (who had four children with the Druk Gyalpo, including two sons, between 1962–1972) was the alleged force behind the plot, which was uncovered three months before the coronation; thirty persons were arrested, including high government and police officials. However, Lawrence Sittling, secretary to Jigme Dorji Wangchuck, later reported that the assassination plot was a fabrication by a Chinese diplomat designed to alienate Bhutan from India. But the truth was not any more politically acceptable—those arrested were Tibetan Khampas rebels, trained in India, who were traveling through Bhutan on a mission to Tibet. (Encyclopaedia of Saarc Nations, Syed) Under pressure from China, the Bhutanese government demanded that the four thousand Tibetan refugees living in Bhutan either become Bhutanese citizens or go into exile. Most chose exile. (Syed)

International relations, 1972–present

Main article: Foreign relations of Bhutan

When civil war broke out in Pakistan in 1971, Bhutan was among the first nations to recognize the new government of Bangladesh, and formal diplomatic relations were established in 1973. An

have served as a major impetus to Bhutan to speed up reform and modernization. In that year, neighboring Sikkim's monarchy, which had endured for more than 300 years, was ousted following a plebiscite in which the Nepalese majority outvoted the Sikkimese minority. Sikkim, long a protectorate of India, became India's twenty-second state.[27]

To further ensure its independence and international position, Bhutan gradually established diplomatic relations with other nations and joined greater numbers of regional and international organizations. Many of the countries with which Bhutan established relations provided development aid. Moderization of daily life brought new problems to Bhutan in the late 1980s.[27] Television broadcast was official introduced in Bhutan in 1999.[28]

Assamese separatists

Several guerrilla groups seeking to establish an independent Assamese state in northeast India have set up guerrilla bases in the forests of southern Bhutan, from which they launch cross-border attacks on targets in Assam. The largest guerrilla group is the ULFA (United Liberation Front of Asom). Negotiations aimed at removing them peacefully from these bases failed in the spring of 2003. Bhutan is faced with the prospect of having to strengthen its token army force to evict the guerrillas.

Military action against Assamese separatists December 2003

On 15 December 2003 the Royal Bhutan Army began military operations against guerrilla camps in southern Bhutan, in coordination with Indian armed forces who lined the border to the south to prevent the guerrillas from dispersing back into Assam. News sources indicated that of the 30 camps that were target, 13 were controlled by ULFA, 12 camps by the National Democratic Front of Bodoland (NDFB), and 5 camps controlled by the Kamatapur Liberation Organisation (KLO). By January, government news reports indicated the guerillas had been routed from their bases.

Refugee community

Main articles: Bhutanese refugees and Lhotshampa

In 1988, Bhutan was reported to have evicted some number of Nepali-speaking residents (Bhutanese reports say about 5,000 and Refugee reports says over 100,000) from districts in southern Bhutan, creating a large refugee community that is now being detained in seven temporary United Nations refugee camps in Nepal and Sikkim. The actual numbers are difficult to establish, as many of those in the camps are reported to be holding forged identity papers, and impoverished Nepalese citizens and started to migrate to the Nepalese community leaving their refugee camps. The reason for leaving refugee camps is to find a job or to avoid the poor living condition of the camp. However, after the UNHCR provided free shelter, food, and services to those living in camps, few of them returned back to the Refugee camps. As a result, the number of people living in the camps decreased exponentially. Although Bhutanese Government claims that only about 5000 initially left the country, the number of actual migration is more than that.[29]

After years of negotiations between Nepal and Bhutan, in 2000 Bhutan agreed in principle to allow certain classes of the refugees to return to Bhutan. However the situation is at a standstill, after violence was committed on Bhutanese officials by the angered people in the camps. Significant unrest is now reported to be fermenting in the camps, especially as the United Nations terminates a number of educational and welfare programmes in an effort to force Bhutan and Nepal to come to terms. As the Bhutanese government was unwilling to take them into their country many developed nations offered the Refugees to allow them to settle in their own countries which include USA and Australia. As many as 20,000 Bhutanese refugees have been resettled in these countries

Improve this page

With less than 700,000 people living in Bhutan, if all the Bhutanese refugees in Nepal would return it would severely disturb the country's demography.

Shabdrung

Main article: Shabdrung

In early 2007, reports alleged that the current Shabdrung, Pema Namgyel, who is a small child, has been held under house arrest in Bhutan along with his parents since 2005.[30]

Formalized democracy

Constitution

Main article: Constitution of Bhutan

On March 26, 2005, "an auspicious day when the stars and elements converge favourably to create an environment of harmony and success"[1], the king and government distributed a draft of the country's first constitution, requesting that every citizen review it. A new house of parliament, the National Council, is chartered consisting of 20 elected representatives from each of the dzonghags, persons selected by the King. The National Council would be paired with the other already existing house, the National Assembly.

Per the Constitution, the monarchy is given a leadership role in setting the direction for the government as long as the King shall demonstrate his commitment and ability to safeguard the interests of the kingdom and its people.

Jigme Khesar Namgyel Wangchuck

On December 15, 2006, the fourth Druk Gyalpo, His Majesty Jigme Singye Wangchuck, abdicated all of his powers as King to his son, Prince Jigme Khesar Namgyel Wangchuck, with a specific intention to prepare the young King for the country's transformation to a full-fledged, democratic form of government due to occur in 2008.

The previous King's abdication in favour of his son was originally set to occur in 2008 as well, but there was an apparent concern that the new King should have hands-on experience as the nation's leader before presiding over a transformation in the country's form of government. According to the national newspaper, the Kuensel, the previous King stated to his cabinet that "as long as he himself continued to be King, the Crown Prince would not gain the actual experience of dealing with issues and carrying out the responsibilities of a head of state. With parliamentary democracy to be established in 2008, there was much to be done; so it was necessary that he gained this valuable experience."

The fourth Druk Gyalpo further stated that "Bhutan could not hope for a better time for such an important transition. Today, the country enjoys peace and stability, and its security and sovereignty is ensured. After phenomenal development and progress, the country is closer than ever to the goal of economic self reliance. Bhutan’s relations with its closest neighbour and friend, India, has reached new heights. International organisations and bilateral development partners are ready to support Bhutan’s development efforts and political transformation."

Druk Gyalpo

From Wikipedia, the free encyclopedia

The **Druk Gyalpo** (Dzongkha: ; Wylie: *'brug rgyal-po*; "**Dragon King**") is the head of state of Bhutan.[1] He is also known in English as the **King of Bhutan**. Bhutan, in the local Dzongkha language, is known as *Dryukyul* which translates as "The Land of Dragons." Thus, while Kings of Bhutan are known as *Druk Gyalpo* ("Dragon King"), the Bhutanese people call themselves the *Drukpa*, meaning "Dragon people."

The current ruler of Bhutan is the 5th Hereditary King His Majesty Jigme Khesar Namgyel Wangchuck, who is the 5th *Druk Gyalpo*.[2] He wears the Raven Crown which is the official Crown worn by the Monarchs of Bhutan. He is correctly styled "*Mi'wang 'Ngada Rimboche*" ("His Majesty") and addressed "'*Ngada Rimboche*" ("Your Majesty").[3][4]

The current Druk Gyalpo Jigme Khesar Namgyel Wangchuck is the youngest reigning monarch in the world.[5] He ascended to the throne in November 2008 after his father, Jigme Singye Wangchuck, abdicated the throne in his favor.[2]

List of rulers of Bhutan

From Wikipedia, the free encyclopedia

Bhutan was founded and unified as a country by Shabdrung Ngawang Namgyal in the mid–17th century. After his death in 1651, Bhutan nominally followed his recommended "dual system of government." Under the dual system, government control was split between a civil administrative leader, the Druk Desi (Dzongkha: འབྲུག་སྡེ་སྲིད; Wylie: *'brug sde-srid*; also called "Deb Raja");[nb 1] and a religious leader, the Je Khenpo (Dzongkha: རྗེ་མཁན་པོ; Wylie: *rje mkhan-po*). Both the Druk Desi and Je Khenpo were under the nominal authority of the Shabdrung (Dzongkha: ཞབས་དྲུང; Wylie: *zhabs-drung*), a reincarnation of Ngawang Namgyal. In practice however, the Shabdrung was often a child under the control of the Druk Desi, and regional *penlops* (governors) often administered their districts in defiance of the power of the Druk Desis until the rise of the unified Wangchuck monarchy in 1907.[1]

Notes:

1. ^ Druk Desi Sonam Lhundub was the first Bhutanese ruler to confront British power, losing in a power bid in Cooch Behar, a traditional Bhutanese dependency.

Kings of Bhutan (1907–present)

Main articles: Druk Gyalpo and House of Wangchuck

The Bhutanese monarchy was established in 1907, unifying the country under the control of the Wangchuk family, hereditary *penlops* (governors) of Trongsa district. The king of Bhutan, formally known as the Druk Gyalpo ("Dragon King"), also occupies the office of Druk Desi under the dual system of government. Since the enactment of the Constitution of 2008, the Druk Gyalpo has remained head of state, while the Prime Minister of Bhutan acts as executive and head of government in a parliamentary democracy.[4]

Family

Khesar (pronounced Gesar) is the eldest son of the fourth and previous Dragon King of Bhutan, Jigme Singye Wangchuck, and his father's third wife, Queen (Ashi) Tshering Yangdon. He has a younger sister, Princess Dechen Yangzom, and brother, Prince Jigme Dorji, as well as four half-sisters and three half-brothers.[3]

Engagement and marriage

Main article: Wedding of Jigme Khesar Namgyel Wangchuck and Jetsun Pema

As he opened the session of parliament on Friday, 20 May 2011, the King announced his engagement to Jetsun Pema, 21, born in Thimphu on 4 June 1990. They were married on 13 October 2011 in Punakha Dzong. The royal wedding was Bhutan's largest media event in history. The royal wedding ceremony was held first in Punakha followed by formal

visits to different parts of the country. During the ceremony the King also received the Crown of the Druk Gyal-tsuen from the sacred Machhen and bestowed it on Jetsun Pema, thereby formally proclaiming her as the Queen of the Kingdom of Bhutan. The wedding was held in traditional style with the "blessings of the guardian deities".[4][5][6]

Education

After completing his higher secondary studies at Yangchenphu Higher Secondary School, Bhutan, Khesar studied abroad at Phillips Academy in Andover, Massachusetts, Cushing Academy and Wheaton College in Massachusetts, United States, before graduating from Magdalen College, University of Oxford, where he completed the Foreign Service Programme and International Relations.[7]

As Crown Prince, he travelled abroad, officially representing Bhutan on several occasions and has an active role in numerous cultural, educational and economic organisations. He is an active basketball player and has represented Bhutan in many international events.

Ascension to the throne

In December 2005, King Jigme Singye Wangchuck announced his intention to abdicate in his son's favour in 2008, and that he would begin handing over responsibility to him immediately.[8] On 14 December 2006, the King abdicated and transferred the throne to Jigme Khesar Namgyel Wangchuck[9] who was officially crowned on 6 November 2008,[10][11] in the month of the male earth rat, in Punakha. Religious ceremonies and public celebrations were also held at Tashichhoedzong and Changlingmithang in Thimphu. The coronation ceremony comprised an ancient and colourful ritual, attended by thousands of foreign dignitaries, including the President of India, Pratibha Patil, and the External Affairs Minister S.M.Krishna.[12][13]

CNN reported that, in order to welcome Khesar as King of Bhutan, people painted the street signs, hung festive banners and decorated traffic circles with fresh flowers to celebrate the occasion.[14]

The young king began his reign overseeing the democratization of his country by presiding over the last sessions of the parliament where electoral laws, land reform and other important issues were deliberated.[15] He stated that the responsibility of this generation for Bhutanese was to ensure the success of democracy. He also travelled extensively around the country to encourage participation in the upcoming democratic exercises, speaking mainly to the youth of Bhutan on the need for Bhutanese to strive for greater standards in education, business, civil service and the need for people of a small country to work harder than those of others.[16][17]

He signed a new treaty of friendship with India in February 2007, replacing the treaty of 1949.[18] Many government initiatives were undertaken by the new King with a view to strengthening the system in preparation for the democratic changes in 2008. The Constitution of the Kingdom of Bhutan was adopted on 18 July 2008, by the first elected parliament. On 1 November 2008, he was formally crowned in Punakha as the Fifth King of the Wangchuck Dynasty.

Since the formal coronation, King Jigme Khesar's first landmark project was the launching of the National Cadastral Resurvey in March 2009. The programme is aimed at resolving long-standing land issues of excess land that affects every Bhutanese household.[*citation needed*]

The King has also been giving away land to landless farmers around the country. The on-going project takes the King to remote villages and communities. He personally supervised the rebuilding efforts following major earthquakes and floods in 2009.[*citation needed*]

In November 2011, the King with Queen Jetsun made a state visit to Japan; they were the first state guests to Japan since the 2011 earthquake.

On 24 November 2011 The King was called to the Bar of England and Wales at the Honourable Society of the Inner Temple and was also made an Honorary Master of the Bench.

Popularity abroad

As Crown Prince of Bhutan, Khesar attended Thai King Bhumibol Adulyadej's 60th Anniversary Celebrations on 12–13 June 2006 in Bangkok along with royals from 25 countries. Known in the Thai press as Prince Jigme, the prince, at 26 the youngest of the visiting royals, caused a sensation, giving rise to a legion of female fans in Thailand. The Thai press dubbed him "Prince Charming", publishing his photograph and running stories about him as well as tourism in Bhutan for several weeks after he had left Thailand.

When he became king, he was the youngest reigning monarch in the world, and because of his handsome appearance, he has been called, "The world's most handsome king." [19]

House of Wangchuck

From Wikipedia, the free encyclopedia

The House of Wangchuck (Tibetan: , Wylie: *Dbang-phyug Rgyal-brgyud*) has ruled Bhutan since it was reunified in 1907. Prior to reunification, the Wangchuck family had governed the district of Trongsa as descendants of Dungkar Choji. They eventually overpowered other regional lords and earned the favour of the British Empire. After consolidating power, Penlop of Trongsa Sir Ugyen Wangchuck was elected hereditary King of Bhutan, or Druk Gyalpo ("Dragon King"), thus founding the royal house.

The Wangchuck dynasty centralized government power in Bhutan and established relations with the British Empire and India under its first two monarchs. The third, fourth, and fifth (current) monarchs have put the kingdom on its path toward democratization, decentralization, and development.

History

There have been five Wangchuck kings of Bhutan, namely:

1. Ugyen Wangchuck (*b.*1861-*d.*1926) "First King"; reigned 17 December 1907 – 21 August 1926.
2. Jigme Wangchuck (*b.*1902/1906-*d.*1952) "Second King"; *r.* 21 August 1926 – 24 March 1952.
3. Jigme Dorji Wangchuck (*b.*1929-*d.*1972) "Third King"; *r.* 24 March 1952 – 24 July 1972.
4. Jigme Singye Wangchuck (*b.*1955) "Fourth King"; *r.* 24 July 1972 – 15 December 2006.
5. Jigme Khesar Namgyel Wangchuck (*b.*1980) "Fifth King"; *r.* 14 December 2006 – present.

The ascendency of the House of Wangchuck is deepy rooted in the historical

politics of Bhutan. Between 1616 and 1907, varying administrative, religious, and regional powers vied for control within Bhutan. During this period, factions were influenced and supported by Tibet and the British Empire. Ultimately, the hereditary Penlop of Trongsa, Ugyen Wangchuck, was elected the first Druk Gyalpo by an assembly of his subjects in 1907, marking the ascendency of the House of Wangchuck.

Origins

Further information: History of Bhutan and Dual system of government

Under Bhutan's early theocratic dual system of government, decreasingly effective central government control resulted in the *de facto* disintegration of the office of Shabdrung after the death of Shabdrung Ngawang Namgyal in 1651. Under this system, the Shabdrung reigned over the temporal Druk Desi and religious Je Khenpo. Two successor Shabdrungs – the son (1651) and stepbrother (1680) of Ngawang Namgyal – were effectively controlled by the Druk Desi and Je Khenpo until power was further splintered through the innovation of multiple Shabdrung incarnations, reflecting speech, mind, and body. Increasingly secular regional lords (penlops and dzongpons) competed for power amid a backdrop of civil war over the Shabdrung and invasions from Tibet, and the Mongol Empire.[1] The penlops of Trongsa and Paro, and the dzongpons of Punakha, Thimphu, and Wangdue Phodrang were particularly notable figures in the competition for regional dominance.[1][2]

Chogyal Minjur Tenpa (1613–1680; *r.* 1667–1680) was the first Penlop of Trongsa (Tongsab), appointed by Shabdrung Ngawang Namgyal. He was born Damchho Lhundrub in Min-Chhud, Tibet, and led a monastic life from childhood. Before his appointment as Tongsab, he held the appointed post of Umzey (Chant Master). A trusted follower of the Shabdrung, Minjur Tenpa was sent to subdue kings of Bumthang, Lhuntse, Trashigang, Zhemgang, and other lords from Trongsa Dzong. After doing so, the Tongsab divided his control in the east among eight regions (Shachho Khorlo Tsegay), overseen by Dungpas and Kutshabs (civil servants). He went on to build Jakar, Lhuentse, Trashigang, and Zhemgang Dzongs.[3]:106

Within this political landscape, the Wangchuck family originated in the Bumthang region of central Bhutan.[4] The family belongs to the Nyö clan, and is descended from Pema Lingpa, a Bhutanese Nyingmapa saint. The Nyö clan emerged as a local aristocracy, supplanting many older aristocratic families of Tibetan origin that sided with Tibet during invasions of Bhutan. In doing so, the clan came to occupy the hereditary position of Penlop of Trongsa, as well as significant national and local government positions.[5]

The Penlop of Trongsa controlled central Bhutan; the rival Penlop of Paro controlled western Bhutan; and dzongpons controlled areas surrounding their respective dzongs. The Penlop of Paro, unlike Trongsa, was an office appointed by the Druk Desi's central government. Because western regions controlled by the Penlop of Paro contained lucrative trade routes, it became the object of competition among aristocratic families.[5]

Although Bhutan generally enjoyed favorable relations with both Tibet and British India through the 19th century, extension of British power at Bhutan's borders as well as Tibetan incursions in British Sikkim defined politically opposed pro-Tibet and pro-Britain forces.[6] This period of intense rivalry between and within western and central Bhutan, coupled with external forces from Tibet and especially the British Empire, provided the conditions for the ascendancy of the Penlop of Trongsa.[5]

After the Duar War with Britain (1864–65) as well as substantial territorial losses (Cooch Behar 1835; Assam Duars 1841), armed conflict turned inward. In 1870, amid the continuing civil wars, Penlop Jigme Namgyal of Trongsa

ascended to the office of Druk Desi. In 1879, he appointed his 17-year-old son Ugyen Wangchuck as Penlop of Paro. Jigme Namgyal reigned through his death 1881, punctuated by periods of retirement during which he retained effective control of the country.[7]

The pro-Britain Penlop Ugyen Wangchuck ultimately prevailed against the pro-Tibet and anti-Britain Penlop of Paro after a series of civil wars and rebellions between 1882 and 1885. After his father's death in 1881, Ugyen Wangchuck entered a feud over the post of Penlop of Trongsa. In 1882, at the age of 20, he marched on Bumthang and Trongsa, winning the post of Penlop of Trongsa in addition to Paro. In 1885, Ugyen Wangchuck intervened in a conflict between the Dzongpens of Punakha and Thimphu, sacking both sides and seizing Simtokha Dzong. From this time forward, the office of Desi became purely ceremonial.[7]

Nationhood under the Wangchucks

King Ugyen Wangchuk, receiving the order of the Knight Commander of the Order of the British Empire at Punakha Dzong

Further information: Ugyen Wangchuck, Jigme Wangchuck, and Jigme Dorji Wangchuck

Trongsa Penlop Ugyen Wangchuck, firmly in power and advised by Kazi Ugyen Dorji, accompanied the British expedition to Tibet as an invaluable intermediary, earning his first British knighthood. Penlop Ugyen Wangchuck further garnered knighthood in the KCIE in 1904. Meanwhile, the last officially recognized Shabdrung and Druk Desi had died in 1903 and 1904, respectively. As a result, a power vacuum formed within the already dysfunctional dual system of government. Civil administration had fallen to the hands of Penlop Ugyen Wangchuck, and in November 1907 he was unanimously elected hereditary monarch by an assembly of the leading members of the clergy, officials, and aristocratic families. His ascendency to the throne ended the traditional dual system of government in place for nearly 300 years.[6][8] The title Penlop of Trongsa – or Penlop of Chötse, another name for Trongsa – continued to be held by crown princes.[9]

As King of Bhutan, Ugyen Wangchuck secured the Treaty of Punakha (1910), under which Britain guaranteed Bhutan's independence, granted Bhutanese Royal Government a stipend, and took control of Bhutanese foreign relations. After becoming the first King of Bhutan, Ugyen Wangchuck further merited the British Delhi Durbar Gold Medal in 1911; the Knight Commander of the Order of the Star of India (KCSI) in 1911; and the Knight Grand Commander of the Order of the Indian Empire (GCIE) in 1921. The first Druk Gyalpo Ugyen Wangchuck died in 1926.

The reign of the Second King Jigme Wangchuck (1926–1952) was characterized by an increasingly powerful central government and the beginnings of infrastructure development. Bhutan also established its first diplomatic relations with India under the bilateral Treaty of Friendship, largely patterned after the prior Treaty of Punakha.[10]

The Third King Jigme Dorji Wangchuck (*r.* 1952–1972) ascended the throne at the age of 16, having been educated in England and India. During the reign of the Third King, Bhutan began further political and legal reforms and started to open to the outside world.[7] Notably, the Third King was responsible for establishing a unicameral National Assembly in 1953 and establishing relations with Indian Prime Minister Jawaharlal Nehru in 1958. Under Jigme Dorji Wangchuck, Bhutan also modernized its legal codes.[11]

Relations with the Dorji family

Further information: Dorji family

The powerful Dorji family, unlike the Wangchucks, do not have independent roots in legendary monks or historical

figures. In fact, the Dorji family was not among the elite families, but became prominent through their ties to the Wangchuck family and to the British.[12] Kazi Dorji had advised the future First King to mediate between the British and Tibet,[13]:35 and it was Kazi Dorji who was later responsible for the large-scale induction of Nepalis into Bhutan.[12] During the early years of the Dorji family's prominence, members of the family served as *gongzim* (chief chamberlain, the top government post),[10] and their official residence was at the palatial Bhutan House at Kalimpong. From Bhutan house, Raja Sonam Topgay Dorji ("Topgay Raja") held the post of Trade Agent to the Government of Bhtan, however he functioned to a large extent as prime minister, foreign minister, and ambassador to India. Through this position as a trade intermediary, the Dorji family amassed wealth reputedly greater than that of the royal family.[14] Topgay Raja himself married a Sikkimese princess.[14][15]

Padmasambhava with Nyingmapa masters Longchenpa and Jigme Lingpa; Jigme is an early Wangchuck forefather.

After two generations of growing influence, the sister of Prime Minister Jigme Dorji – the daughter of Topgay Raja – married the Third King, creating a new bond so prominent as to cause discontent among other Bhutanese families.[14][16] The public was divided between pro-modernist and pro-monarchist camps.[10]

Assassination of Jigme Dorji

In the early 1960s, the Third King fell ill and went to Switzerland for treatment. As the king was unavailable, Prime Minister Jigme Dorji sought to fill a leadership role, however this led to tensions with the military and monarchist factions.[13]:85 Namely, Dorji conflicted with the Royal Bhutan Army over the use of military vehicles, forced the retirement of some 50 military officers, and sought to limit the power of state-supported religious institutions such as the Dratshang Lhentshog and Je Khenpo.[10] On April 5, 1964, reformist Prime Minister Jigme Dorji was assassinated in Phuentsholing by monarchist cadres as the king lay ill in Switzerland. The Dorji family was subsequently put under close watch.[17]

Third Druk Gyalpo Jigme Dorji Wangchuck

The King's Tibetan mistress Yangki and her father, who had been implicated in the assassination, suspected that Jigme Dorji's son Lhendup would use the king's absence to exact revenge.[13]:36 They attempted to flee into India, but were detained at Gelephu. They eventually fled the country.[16] The King's own uncle and head of the Royal Bhutan Army, Namgyal Bahadur, was among those executed for their role in the attempted coup.[18]

The post of Prime Minister (Lonchen) was vacant, and the King identified Jigme Dorji's son Lhendup as the successor. Lhendup's mother, then head of the Dorji family, advised the King against giving any title to Lhendup because it would have made the situation more explosive. In 1964, however, the King announced his intention to appoint Lhendup as Lonchen. Lhendup fled to Nepal in 1965 due to political pressure, and was effectively exiled by the National Assembly.[13]:118 Today, remaining members of the Dorji family remain prominent in Bhutanese politics.[12]

Democratization under the Wangchucks

Main articles: Jigme Singye Wangchuck and Jigme Khesar Namgyel Wangchuck

The Third King died in 1972, and the Raven Crown passed to the 16-year-old Jigme Singye Wangchuck. The Fourth King was, like his father, educated in England and India, and had also attended Ugyen Wangchuck Academy in Paro. Reigning until 2008, the Fourth King was responsible for the development of the tourism industry, Gross National Happiness as a concept, and strides in democratization including the draft Constitution of Bhutan. The later years of his reign, however, also marked the departure of Bhutanese refugees in the 1990s amid the government's driglam namzha policy and citizenship laws that were overzealously enforced by some district officials. To the astonishment of the Bhutanese public, the Fourth King announced his abdication in 2005 and retired in 2008, handing the crown to his son Jigme Khesar Namgyel Wangchuck.[7]

Jigme Khesar Namgyel Wangchuck assumed the throne as the Fifth King in 2008 as the kingdom adopted its first democratic Constitution.

Genealogy

Cambodia

From Wikipedia, the free encyclopedia

Cambodia (/kæm'boʊdiːʌ/;[5] Khmer: កម្ពុជា, Kampuchea, IPA: [kam'puciə]), officially known as the **Kingdom of Cambodia**, is a country located in the southern portion of the Indochina Peninsula in Southeast Asia. With a total landmass of 181,035 square kilometres (69,898 sq mi), it is bordered by Thailand to the northwest, Laos to the northeast, Vietnam to the east, and the Gulf of Thailand to the southwest.

With a population of over 14.8 million, Cambodia is the 69th most populous country in the world. The official religion is Theravada Buddhism which is practiced by around 95% of the Cambodian population. The country minority groups include Vietnamese, Chinese, Chams and 30 various hill tribes.[6] The capital and largest city is Phnom Penh; the political, economic, and cultural center of Cambodia.

The kingdom is a constitutional monarchy with Norodom Sihamoni, a monarch chosen by the Royal Throne Council, as head of state. The head of government is Hun Sen, who is currently the longest serving leader in South East Asia and has ruled Cambodia for over 25 years.

In 802 AD Jayavarman II declared himself king which marked the beginning of the Khmer Empire. Successive kings flourished which marked the Khmer empire's immense power and wealth who dominate much of South East Asia for over 600 years. Cambodia was ruled as a vassal between its neighbors, until it was colonized by the French in mid-19th century. Cambodia gained independence in 1953. The Vietnam War extended into Cambodia, giving rise to the Khmer Rouge, which took Phnom Penh in 1975. Cambodia reemerged several years later within a socialistic sphere of influence as the People's Republic of Kampuchea until 1993. After years of isolation, the war-ravaged nation was reunited under the monarchy in 1993.

Rebuilding from decades of civil war, Cambodia has seen rapid progress in the economic and human resource areas. The country has had one of the best economic records in Asia, with economic growth growing an average 6.0% for the last 10 years. Strong textiles, agriculture, construction, garments, and tourism sectors led to foreign investments and international trade.[7] In 2005, oil and natural gas deposits were found beneath Cambodia's territorial waters, and once commercial extraction begins in 2013, the oil revenues could

profoundly affect Cambodia's economy.[8] However the majority of Cambodians are not beneficiaries of economic growth because wealth is spread very unevenly, as a result of the prevalence of massive government corruption. According to Transparency International Cambodia is the third most corrupt nation in Asia, ahead of only North Korea and Myanmar, and ranked 164 out of 182 in the world.[9]

1 The US Dollar is often used

The official name of the country is the Kingdom of Cambodia, which is pronounced in Khmer as Preăh Réachéanachâk Kâmpŭchéa. Etymologically, its components are: *-Preah-* ("sacred") ; *-Reachea-* (from Sanskrit *raja*, meaning "king, royal, realm") ; *-ana-* (from Pāli *āṇā*, "authority, command, power", itself from Sanskrit *ājñā*, same meaning) *-chak* (from Sanskrit *chakra* meaning "wheel", a symbol of power and rule).

In the Khmer language, the country is named Kampuchea (Khmer: កម្ពុជា). Kampuchea is a derivation of the Sanskrit term *Kambojadeśa* (Sanskrit: कम्बोजदेश). The Khmer people will often refer to their country using the polite form *Prâteh Kampuchea* (Khmer: ប្រទេសកម្ពុជា) which literally means "the Country of Cambodia". Cambodians also most commonly use the more colloquial word "Srok Khmer" (Khmer: ស្រុកខ្មែរ) which translates to "the Land of Khmers".

The English name, "Cambodia" is derived from the French "Cambodge", a contraction of the Sanskrit name.

History

Main article: History of Cambodia

Pre-history

Main article: Early history of Cambodia

A gold-lotus bowl dating back to 1200AD.

There is some sparse evidence for a Pleistocene human occupation of present day Cambodia, which includes quartz and quartzite pebble tools found in terraces along the Mekong River, in Stung Treng and Kratié provinces, and in Kampot Province, although their dating is unreliable.[10]

Some slight archaeological evidence shows communities of hunter-gatherers inhabited Cambodia during Holocene: the most ancient Cambodian archeological site is considered to be the cave of *L'aang Spean*, in Battambang Province, which belongs to the so-called Hoabinhian period. Excavations in its lower layers produced a series of radiocarbon dates as of 6000 BC.[10][11]

Khmer army going to war against the Cham, from a relief on the Bayon

Upper layers in the same site gave evidence of transition to Neolithic, containing the earliest dated earthenware ceramics in Cambodia[12]

Archeological records for the period between Holocene and Iron Age remain equally limited. Other prehistoric sites of somewhat uncertain date are *Samrong Sen* (not far from the ancient capital of Udong), where the first investigations began in 1877,[13] and *Phum Snay*, in the northern province of Banteay Meanchey.[14] Prehistoric artifacts are often found during mining activities in Ratanakiri.[10]

The most outstanding prehistoric evidence in Cambodia however are probably various "circular earthworks", discovered in the red soils near Memot and in the adjacent region of Vietnam as of the end of the 1950s. Their function and age are still debated, but some of them possibly date from 2nd millennium BC at least.[15][16]

A pivotal event in Cambodian prehistory was the slow penetration of the first rice farmers from the north, which began in the late 3rd millennium BC.[17]

Iron was worked by about 500 BC, with supporting evidence coming from the Khorat Plateau, in modern day Thailand. In Cambodia, some Iron Age settlements were found beneath Angkorian temples, like Baksei Chamkrong. Others were circular earthworks, like *Lovea*, a few kilometers north-west of Angkor. Burials, much richer, testify to improvement of food availability and trade (even on long distances: in the 4th century BC trade relations with India were already opened) and the existence of a social structure and labor organization.[17]

Pre-Angkorian era and Angkorian era

Main article: Khmer Empire

Angkor Wat

Prasat Bayon

During the 3rd, 4th, and 5th centuries, the Indianised states of Funan and Chenla coalesced in present-day Cambodia and southwestern Vietnam. For more than 2,000 years, Cambodia absorbed influences from India, passing them on to other Southeast Asian civilizations that are now Thailand and Laos.[18] The Khmer Empire flourished in the area from the 9th to the 13th centuries.[19] Around the 13th century, Theravada Buddhism was introduced to the area through monks from Sri Lanka.[20] From then on, Theravada Buddhism grew and eventually became the popular religion.

The Khmer Empire was Southeast Asia's largest empire during the 12th century and it remained very powerful. The empire declined yet remained powerful in the region until the 15th century. The empire's centre of power was Angkor, where a series of capitals was constructed during the empire's zenith. In 2007 an international team of researchers using satellite photographs and other modern techniques concluded that Angkor had been the largest pre-industrial city in the world with an urban sprawl of 1,150 square miles.[21] The city could have supported a population of up to one million people[22] and Angkor Wat, the most famous and best-preserved religious temple at the site, are reminders of Cambodia's past as a major regional power. The design of the Angkor Wat was inspired by the beauty of the ancient princess of Cambodia, Mo Hy. Her visage is still engrained on the interior of the building next to her brother Mony.[23]

Dark ages of Cambodia

Main article: Dark ages of Cambodia

After a long series of wars with neighboring kingdoms, Angkor was sacked by the Ayutthaya Kingdom and abandoned in 1432 because of ecological failure and infrastructure breakdown.[24][25] This led to a period of economic, social, and cultural stagnation when the kingdom's internal affairs came increasingly under the control of its neighbors. By this time, the Khmer penchant for monument building had ceased. Older faiths such as Mahayana Buddhism and the Hindu cult of the god-king had been supplanted by Theravada Buddhism for good.

The ancient city of Longvek

The court moved the capital to Longvek where the kingdom sought to regain its glory through maritime trade. Portuguese and Spanish travelers described the city as a place of flourishing wealth and foreign trade. The attempt was short-lived however, as continued wars with the Ayutthaya and the Vietnamese resulted in the loss of more territory and Longvek being conquered in 1594. Not long after the conquer of Siamese, the wall of Longvek broke within three days after the order of King Naresuan the Great of Ayutthaya Kingdom. Shortly after, with the capturing of Longvek by the Siamese, the nation never fully recovered and was under colonization of Siam for long periods of time. During the next three centuries, the Khmer kingdom alternated as a vassal state of the Ayutthaya Kingdom and Vietnamese kings, as well as short-lived periods of relative independence.

A new Khmer capital was established at Udong south of Longvek, but its monarchs could survive only by entering into what amounted to vassal relationships with the Siamese and Vietnamese. A renewed struggle between Siam and Vietnam for control of Cambodia in the nineteenth century resulted in a period when Vietnamese officials attempted to force the Khmers to adopt Vietnamese customs. This led to several rebellions against the Vietnamese. The Siamese–Vietnamese War (1841–1845) ended with an agreement to place the country under joint suzerainty. This later led to the signing of a treaty for French Protection of Cambodia by King Norodom I.

French colonization

Map of French Indochina

In 1863 King Norodom, who had been installed by Thailand,[26] sought the protection of France from the Thai and Vietnamese after tensions grew between them. In 1867 the Thai king signed a treaty with France, renouncing suzerainty over Cambodia in exchange for the control of Battambang and Siem Reap provinces which officially became part of Thailand. The provinces were ceded back to Cambodia by a border treaty between France and Thailand in 1906.

King Norodom is credited for saving Cambodia from disappearing altogether

Cambodia continued as a protectorate of France from 1863 to 1953, administered as part of the colony of French Indochina, though occupied by the Japanese empire from 1941 to 1945.[27] Between 1874 and 1962, the total population increased from about 946,000 to 5.7 million.[28] After King Norodom's death in 1904, France manipulated the choice of king, and Sisowath, Norodom's brother, was placed on the throne. The throne became vacant in 1941 with the death of Monivong, Sisowath's son, and France passed over Monivong's son, Monireth, feeling he was too independently minded. Instead, Norodom Sihanouk, a maternal grand-son of king Sisowath was enthroned. The French thought young Sihanouk would be easy to control.[27] They were wrong, however, and under the reign of King Norodom Sihanouk, Cambodia gained independence from France on November 9, 1953.[27]

Independence and Vietnam War

Cambodia became a constitutional monarchy under King Norodom Sihanouk. When French Indochina was given independence, Cambodia lost official control over the Mekong Delta as it was awarded to Vietnam. [*citation needed*] The area had been controlled by the Vietnamese since 1698 with King Chey Chettha II granting Vietnamese permission to settle in the area decades before.[29]

In 1955, Sihanouk abdicated in favour of his father in order to participate in politics and was elected prime minister. Upon his father's death in 1960, Sihanouk again became head of state, taking the title of prince. As the Vietnam War progressed, Sihanouk adopted an official policy of neutrality in the Cold War, although he was widely considered to be sympathetic to the communist cause. Sihanouk allowed the Vietnamese communists to use Cambodia as a sanctuary and a supply route for their arms and other aid to their armed forces fighting in South Vietnam. This policy was perceived as humiliating by many Cambodians. In December 1967 Washington Post journalist Stanley Karnow was told by Sihanouk that if the US wanted to bomb the Vietnamese communist sanctuaries, he would not object, unless Cambodians were killed.[30] The same message was conveyed to US President Johnson's emissary Chester Bowles in January 1968.[31] So the US had no real motivation to overthrow Sihanouk. However members of the government and army, who resented Sihanouk's ruling style as well as his tilt away from the United States, did have such a motivation. While visiting Beijing in 1970 Sihanouk was ousted by a military coup led by Prime Minister General Lon Nol and Prince Sisowath Sirik Matak. There is no evidence of any US role in the coup. However once the coup was completed the new regime, which immediately demanded that the Vietnamese communists leave Cambodia, gained the political support of the United States. The North Vietnamese and Viet Cong forces, desperate to retain their sanctuaries and supply lines from North Vietnam, immediately launched armed attacks on the new government. The king urged his followers to help in overthrowing this government, hastening the onset of civil war,[32] Soon the Khmer Rouge rebels began using him to gain support. However from 1970 until early 1972 the Cambodian conflict was largely one between the government and army of Cambodia, and the armed forces of North Vietnam. As they gained control of Cambodian territory the Vietnamese communists imposed a new political infrastructure, which was eventually dominated by the Cambodian communists we now refer to as the Khmer Rouge.[33] So the Vietnamese communists played a vital role in the rise of the Khmer Rouge.

Norodom Sihanouk and Mao Tse-Tung in 1956

Between 1969 and 1973, Republic of Vietnam forces and U.S. forces bombed and briefly invaded Cambodia in an effort to disrupt the Viet Cong and Khmer Rouge.[34] Some two million Cambodians were made refugees by the war and by the terrorist policies of the Khmer Rouge, and fled to Phnom Penh. Estimates of the number of Cambodians killed during the bombing campaigns vary widely, as do views of the effects of the bombing. The U.S. Seventh Air Force argued that the bombing prevented the fall of Phnom Penh in 1973 by killing 16,000 of 25,500 Khmer Rouge fighters besieging the city.[35] However, journalist William Shawcross and Cambodia specialists Milton Osborne, David P. Chandler and Ben Kiernan argued that the bombing drove peasants to join the Khmer Rouge.[36] Cambodia specialist Craig Etcheson argued that the Khmer Rouge "would have won anyway", even without U.S. intervention driving recruitment.[37]

While president, Bill Clinton released extensive Air Force data on all American bombings of Indochina between 1964 and 1975. Regarding Cambodia in particular, it emerged that

> [F]rom October 4, 1965, to August 15, 1973, the United States dropped far more ordnance on

> Cambodia than was previously believed: 2,756,941 tons' worth, dropped in 230,516 sorties on 113,716 sites. Just over 10 percent of this bombing was indiscriminate, with 3,580 of the sites listed as having "unknown" targets and another 8,238 sites having no target listed at all. . . . [T]he total payload dropped during these years to be nearly five times greater than the generally accepted figure. To put the revised total of 2,756,941 tons into perspective, the Allies dropped just over 2 million tons of bombs during all of World War II, including the bombs that struck Hiroshima and Nagasaki: 15,000 and 20,000 tons, respectively. Cambodia may well be the most heavily bombed country in history. . . . [T]he bombing forced the Vietnamese Communists deeper and deeper into Cambodia, bringing them into greater contact with Khmer Rouge insurgents . . . [and] drove ordinary Cambodians into the arms of the Khmer Rouge, a group that seemed initially to have slim prospects of revolutionary success.[38]

Nixon had commanded that, "They [the USAF] have got to go in there and I mean really go in . . . I want everything that can fly to go in there and crack the hell out of them. There is no limitation on mileage and there is no limitation on budget. Is that clear?"[38] Taylor Owen (http://taylorowen.com/?page_id=5) and Yale's Ben Kiernan claim that, "Previously, it was estimated that between 50,000 and 150,000 Cambodian civilians were killed by the bombing. Given the fivefold increase in tonnage revealed by the database, the number of casualties is surely higher."[38]

Khmer Rouge regime

Main articles: Democratic Kampuchea and Khmer Rouge

As the Vietnam War ended, a draft USAID report observed that the country faced famine in 1975, with 75% of its draft animals destroyed, and that rice planting for the next harvest would have to be done "by the hard labour of seriously malnourished people". The report predicted that

> *"Without large-scale external food and equipment assistance there will be widespread starvation between now and next February ... Slave labour and starvation rations for half the nation's people (probably heaviest among those who supported the republic) will be a cruel necessity for this year, and general deprivation and suffering will stretch over the next two or three years before Cambodia can get back to rice self-sufficiency".*[39]

Flag of the Khmer Rouge and Democratic Kampuchea

The Khmer Rouge reached Phnom Penh and took power in 1975. The regime, led by Pol Pot, changed the official name of the country to Democratic Kampuchea. The regime modelled itself on Maoist China during the Great Leap Forward. The regime immediately evacuated the cities and sent the entire population on forced marches to rural work projects. They attempted to rebuild the country's agriculture on the model of the 11th century, discarded Western medicine, and destroyed temples, libraries, and anything considered Western. At least a million Cambodians, out of a total population of 8 million, died from executions, overwork, starvation and disease.[40]

Estimates as to how many people were killed by the Khmer Rouge regime range from approximately one to three million; the most commonly cited figure is two million (about one-third of the population).[41][42] This era gave rise to the term Killing Fields, and the prison Tuol Sleng became notorious for its history of mass killing. Hundreds of thousands fled across the border into neighbouring Thailand. The regime disproportionately targeted ethnic minority groups. The Cham Muslims suffered serious purges with as much as half of their population exterminated.[43]

In the late 1960s, an estimated 425,000 ethnic Chinese lived in Cambodia, but by 1984, due to Khmer Rouge killings and to emigration, only about 61,400 Chinese remained in the country.[44] Forced repatriation in 1970 and deaths during the Khmer Rouge era reduced the Vietnamese population in Cambodia from between 250,000 and 300,000 in 1969 to a reported 56,000 in 1984.[28] However most of the victims of the Khmer Rouge regime were not ethnic minorities but ethnic Khmer. Professionals, such as doctors, lawyers and teachers, were also targeted. According to Robert D. Kaplan, "eyeglasses were as deadly as the yellow star" as they were seen as a sign of intellectualism.[40]

End of Khmer Rouge and transition

Main article: Modern Cambodia

In November 1978, Vietnamese troops invaded Cambodia in response to border raids by the Khmer Rouge.[45] The People's Republic of Kampuchea (PRK), a Pro-Soviet state led by the Kampuchean People's Revolutionary Party, a party created by the Vietnamese in 1951, and led by a group of Khmer Rouge who had fled Cambodia to avoid being purged by Pol Pot and Ta Mok, was established.[46] It was fully beholden to the occupying Vietnamese army and under direction of the Vietnamese ambassador to Phnom Penh. Its arms came from Vietnam and the Soviet Union. In opposition to the newly-created state, a government-in-exile referred to as the Coalition Government of Democratic Kampuchea (CGDK) was formed in 1981 from three factions. This consisted of the Khmer Rouge, a royalist faction led by Sihanouk, and the Khmer People's National Liberation Front. Its credentials were recognized by the United Nations. The Khmer Rouge representative to the UN, Thiounn Prasith, was retained, but he had to work in consultation with representatives of the noncommunist Cambodian parties.[47][48]

Stupa which houses the skulls of those killed by the Khmer Rouge at Choeung Ek

Throughout the 1980s the CGDK, supplied by China, Thailand, the United States[49] and the United Kingdom[50][51] controlled parts of the country and attacked some of the territory not under their dominance. The refusal of Vietnam to withdraw from Cambodia led to economic sanctions[52] by the U.S. and its allies, made reconstruction virtually impossible and left the country deeply impoverished.

Peace efforts began in Paris in 1989 under the State of Cambodia, culminating two years later in October 1991 in a comprehensive peace settlement. The UN was given a mandate to enforce a ceasefire and deal with refugees and disarmament known as the United Nations Transitional Authority in Cambodia (UNTAC).[53]

In 1993, Norodom Sihanouk was restored as King of Cambodia, but all power was in the hands of the government established after the UNTAC sponsored elections. The stability established following the conflict was shaken in 1997 by a coup d'état led by the co-Prime Minister Hun Sen against the noncommunist parties in the government.[54]. Many of the noncommunist politicians were murdered by Hun Sen's forces. In recent years, reconstruction efforts have progressed and led to some political stability through political repression of a multiparty democracy under a constitutional monarchy.[55] In July 2010 Kang Kek Iew was the first Khmer Rouge member found guilty of war crimes and crimes against humanity in his role as the former commandant of the S21 extermination camp. He was sentenced to life in prison.[56][57]. However Hun Sen has opposed any extensive trials of former Khmer Rouge mass murderers.[58] He says that this is because he wishes to avoid political instability. However it is more likely because of the prevalence of former Khmer Rouge at the highest levels of Cambodia's national and local government structures.[*citation needed*]

Politics

Main articles: Politics of Cambodia and List of political parties in Cambodia

Government

Independence Monument: built to commemorate Cambodia's independence from France on November 9, 1953.

National politics in Cambodia take place within the framework of the nation's constitution of 1993. The government is a constitutional monarchy operated as a parliamentary representative democracy. The Prime Minister of Cambodia, an office held by Hun Sen since 1985, is the head of government, while the King of Cambodia (currently Norodom Sihamoni) is the head of state. The prime minister is appointed by the king, on the advice and with the approval of the National Assembly

King Norodom Sihamoni during the 2008 Royal Ploughing Ceremony

The prime minister and the ministerial appointees exercise executive power while legislative powers are shared by the executive and the bicameral Parliament of Cambodia, which consists of a lower house, the National Assembly or *Radhsphea* and an upper house, the Senate or *Sénat*. Members of the 123-seat Assembly are elected through a system of proportional representation and serve for a maximum term of five years. The Senate has 61 seats, two of which are appointed by the king and two others by the National Assembly. Senators serve five year terms.

On October 14, 2004, King Norodom Sihamoni was selected by a special nine-member throne council, part of a selection process that was quickly put in place after the abdication of King Norodom Sihanouk a week prior. Sihamoni's selection was endorsed by Prime Minister Hun Sen and National Assembly Speaker Prince Norodom Ranariddh (the king's half brother and current chief advisor), both members of the throne council. He was enthroned in Phnom Penh on October 29, 2004.

The Cambodian People's Party (CPP) is the major ruling party in Cambodia. The CPP controls the lower and upper chambers of parliament, with 73 seats in the National Assembly and 43 seats in the Senate. The opposition Sam Rainsy Party is the second largest party in Cambodia with 26 seats in the National Assembly and 2 in the Senate.

Military

Main article: Royal Cambodian Armed Forces

The Royal Cambodian Army, Royal Cambodian Navy, Royal Cambodian Air Force and Royal Gendarmerie collectively form the Royal Cambodian Armed Forces, under the command of the Ministry of National Defense, presided over by the Prime Minister of Cambodia. His Majesty King Norodom Sihamoni is the Supreme Commander of the Royal Cambodian Armed Forces (RCAF), and the country's Prime Minister Hun Sen effectively holds the position of commander-in-chief.

Royal Cambodian Navy officers observe flight quarters during the Cambodia-US Maritime Exercise 2011.

The introduction of a revised command structure early in 2000 was a key prelude to the reorganisation of the Cambodian military. This saw the defence ministry form three subordinate general departments responsible for logistics and finance, materials and technical services, and defence services under the High Command Headquarters (HCHQ).

The minister of National Defence is General Tea Banh. Banh has served as defence minister since 1979. The Secretaries of State for Defence are Chay Saing Yun and Por Bun Sreu. The new Commander-in-Chief of the RCAF and was replaced by his deputy General Pol Saroeun, who is a long time loyalist of Prime Minister Hun Sen. The Army Commander is General Meas Sophea and the Army Chief of Staff is Chea Saran.

In 2010, the Royal Cambodian Armed Forces comprised about 210,000 personnel. Total Cambodian military spending stands at 3% of national GDP. The Royal Gendarmerie of Cambodia total more than 7,000 personnel. Its civil duties include providing security and public peace, to investigate and prevent organized crime, terrorism and other violent groups; to protect state and private property; to help and assist civilians and other emergency forces in a case of emergency, natural disaster, civil unrest and armed conflicts.

Foreign relations

Main article: Foreign relations of Cambodia

The foreign relations of Cambodia are handled by the Ministry of Foreign Affairs under H.E. Hor Namhong.

Ambassador Thay Vanna presents his credentials to Russian President Dmitry Medvedev on October 18, 2010.

Cambodia is a member of the United Nations, the World Bank and the International Monetary Fund. It is a member of the Asian Development Bank (ADB), ASEAN, and joined the WTO on October 13, 2004. In 2005 Cambodia attended the inaugural East Asia Summit in Malaysia. On November 23, 2009, Cambodia reinstated the membership to the International Atomic Energy Agency (IAEA) (http://www.iaea.org/) . Cambodia first became a member of IAEA on February 6, 1958 but withdrew its membership on March 26, 2003.[59]

Cambodia has established diplomatic relations with numerous countries; the government reports twenty embassies in the country[60] including many of its Asian neighbours and those of important players during the Paris peace negotiations, including the US, Australia, Canada, China, the European Union (EU), Japan, and Russia.[61] As a result of its international relations, various charitable organizations have assisted with social, economical, and civil infrastructure needs.

Prime Minister Hun Sen with Nguyen Tan Dung of Vietnam

U.S. Secretary of State Hillary Clinton meets with Foreign Minister Hor Namhong in New York City on September 28, 2009

In recent years, bilateral relations between the United States and Cambodia have strengthened. The U.S. supports efforts in Cambodia to combat terrorism, build democratic institutions, promote human rights, foster economic development, eliminate corruption, achieve the fullest possible accounting for Americans missing from the Vietnam War-era, and to bring to justice those most responsible for serious violations of international humanitarian law committed under the Khmer Rouge regime. China's geopolitical interest in Cambodia changed significantly with the end of the Cold War. It retains considerable influence, including close links with former King Norodom Sihanouk, senior members of Cambodian Government, and the ethnic Chinese community in Cambodia. There are regular high level exchanges between the two countries. Japan has been a vital contributor to Cambodia's rehabilitation and reconstruction since the high-profile UN Transitional Authority (UNTAC) mission and elections in 1993. Japan provided some US$1.2 billion in total overseas development assistance (ODA) during the period since 1992 and remains Cambodia's top donor country.

While the violent ruptures of the 1970s and 80s have passed, several border disputes between Cambodia and its neighbours persist. There are disagreements over some offshore islands and sections of the boundary with Vietnam and undefined maritime boundaries and border areas with Thailand. Both Cambodian and Thai troops have clashed over land immediately adjacent to the Preah Vihear temple, leading to a deterioration in relations. The International Court of Justice in 1962 awarded the temple to Cambodia but was unclear regarding some of the surrounding land. Both countries blamed the other for firing first and denied entering the other's territory.

Geography

Main article: Geography of Cambodia

Dângrêk Mountains in Northern Cambodia

Cambodia has an area of 181,035 square kilometers (69,898 sq mi) and lies entirely within the tropics, between latitudes 10° and 15°N, and longitudes 102° and 108°E. It borders Thailand to the north and west, Laos to the northeast, and Vietnam to the east and southeast. It has a 443-kilometer (275 mi) coastline along the Gulf of Thailand.

Cambodia's landscape is characterized by a low-lying central plain that is surrounded by uplands and low mountains and includes the Tonle Sap (Great Lake) and the upper reaches of the Mekong River delta. Extending outward from this central region are transitional plains, thinly forested and rising to elevations of about 650 feet (200 metres) above sea level. To the north the Cambodian plain abuts a sandstone escarpment, which forms a southward-facing cliff stretching more than 200 miles (320 km) from west to east and rising abruptly above the plain to heights of 600 to 1,800 feet (180 to 550 metres). This escarpment marks the southern limit of the Dângrêk Mountains.

Flowing south through the country's eastern regions is the Mekong River. East of the Mekong the transitional plains gradually merge with the eastern highlands, a region of forested mountains and high plateaus that extend into Laos and Vietnam. In southwestern Cambodia two distinct upland blocks, the Krâvanh Mountains and the Dâmrei Mountains, form another highland region that covers much of the land area between the Tonle Sap and the Gulf of Thailand. In this remote and largely uninhabited area, Phnom Aural, Cambodia's highest peak, rises to an elevation of 5,949 feet (1,813 metres). The southern coastal region adjoining the Gulf of Thailand is a narrow lowland strip, heavily wooded and sparsely populated, which is isolated from the central plain by the southwestern highlands.

The most distinctive geographical feature is the inundations of the Tonle Sap (Great Lake), measuring about

2,590 square kilometers (1,000 sq mi) during the dry season and expanding to about 24,605 square kilometers (9,500 sq mi) during the rainy season. This densely populated plain, which is devoted to wet rice cultivation, is the heartland of Cambodia. Much of this area has been designated as a biosphere reserve.

Climate

Main article: Climate of Cambodia

Sun Bear

Cambodia's climate, like that of the rest of Southeast Asia, is dominated by monsoons, which are known as tropical wet and dry because of the distinctly marked seasonal differences.

Cambodia has a temperature range from 21 to 35 °C (69.8 to 95 °F) and experiences tropical monsoons. Southwest monsoons blow inland bringing moisture-laden winds from the Gulf of Thailand and Indian Ocean from May to October. The northeast monsoon ushers in the dry season, which lasts from November to March. The country experiences the heaviest precipitation from September to October with the driest period occurring from January to February.

Cambodia has two distinct seasons. The rainy season, which runs from May to October, can see temperatures drop to 22 °C (71.6 °F) and is generally accompanied with high humidity. The dry season lasts from November to April when temperatures can rise up to 40 °C (104 °F) around April. Disastrous flooding occurred in 2001 and again in 2002, with some degree of flooding almost every year.

Wildlife

Main article: Wildlife of Cambodia

Sarus Crane

Cambodia has a wide variety of plants and animals. There are 212 mammal species, 536 bird species, 240 reptile species, 850 freshwater fish species (Tonle Sap Lake area), and 435 marine fish species. Much of this biodiversity is contained around the Tonle Sap Lake and the surrounding biosphere.[62] The Tonle Sap Biosphere Reserve is a unique ecological phenomenon surrounding the Tonle Sap. It encompasses the lake and nine provinces: Kampong Thom, Siem Reap, Battambang, Pursat, Kampong Chhnang, Banteay Meanchey, Pailin, Oddar Meanchey and Preah Vihear. In 1997, it was successfully nominated as a UNESCO Biosphere Reserve.[63] Other key habitats include the dry forest of Mondolkiri and Ratanakiri provinces and the Cardamom Mountains ecosystem, including Bokor National Park, Botum-Sakor National Park, and the Phnom Aural and Phnom Samkos wildlife sanctuaries.

The rate of deforestation in Cambodia is one of the highest in the world. Cambodia's primary rainforest cover fell from over 70% in 1969 to just 3.1% in 2007. In total, Cambodia lost 25,000 square kilometres (9,700 sq mi) of forest between 1990 and 2005—3,340 km^2 (1,290 sq mi) of which was primary forest. Since 2007, less than 3,220 km^2 (1,243 sq mi) of primary forest remain with the result that the future sustainability of the forest reserves of Cambodia is under severe threat, with illegal loggers looking to generate revenue.[64]

Administrative divisions

Main article: Administrative divisions of Cambodia

The capital (*reach thani*) and provinces (*khaet*) of Cambodia are first-level administrative divisions. Cambodia is divided into 24 provinces including the capital.

Municipalities and districts are the second-level administrative divisions of Cambodia. The provinces are subdivided into 159 districts and 26 municipalities. The districts and municipalities in turn are further divided into communes (*khum*) and quarters (*sangkat*).

Number	Province	Capital	Area (km²)	Population
1	Banteay Meanchey	Sisophon	6,679	678,033

Economy

Main articles: Economy of Cambodia and Cambodia Securities Exchange

In 2010 Cambodia's per capita income in PPP is $2,470 and $1,040 in nominal per capita. Cambodia's per capita income is rapidly increasing but is low compared to other countries in the region. Most rural households depend on agriculture and its related sub-sectors. Rice, fish, timber, garments and rubber are Cambodia's major exports. The International Rice Research Institute (IRRI) reintroduced more than 750 traditional rice varieties to Cambodia from its rice seed bank in the Philippines.[65] These varieties had been collected in the 1960s.

OCIC Tower, the first skyscraper in Cambodia

Based on the Economist, IMF: Annual average GDP growth for the period 2001–2010 was 7.7% making it one of the world's top ten countries with the highest annual average GDP growth. Tourism was Cambodia's fastest growing industry, with arrivals increasing from 219,000 in 1997 to 2 million in 2007. In 2004, inflation was at 1.7% and exports at $1.6 billion US$.

China is Cambodia's biggest source of foreign direct investment in the kingdom. China plans to spend $8 billion in 360 projects in the first seven months of 2011. It is also the largest source of foreign aid, providing about $600 million in 2007 and $260 million in 2008.

Rice cropping plays an important

The older population often lacks education, particularly in the countryside, which suffers from a lack of basic infrastructure. Fear of renewed political instability and corruption within the government discourage foreign investment and delay foreign aid, although there has been significant aid from bilateral and multilateral donors. Donors pledged $504 million to the country in 2004,[66] while the Asian Development Bank alone has provided

$850 million in loans, grants, and technical assistance.[67]

role in the economy

Tourism

The tourism industry is the country's second-greatest source of hard currency after the textile industry.[53] Between January and December 2007, visitor arrivals were 2.0 million, an increase of 18.5% over the same period in 2006. Most visitors (51%) arrived through Siem Reap with the remainder (49%) through Phnom Penh and other destinations.[68] Other tourist destinations include Sihanoukville in the south east which has several popular beach resorts and the area around Kampot and Kep including the Bokor Hill Station. Tourism has increased steadily each year in the relatively stable period since the 1993 UNTAC elections; in 1993 there were 118,183 international tourists, and in 2009 there were 2,161,577 international tourists.[69]

Most of the tourists were Japanese, Chinese, Americans, South Koreans and French people, said the report, adding that the industry earned some 1,400 million U.S. dollars in 2007, accounting for almost ten percent of the kingdom's gross national products.[70] Chinese-language newspaper Jianhua Daily quoted industry official as saying that Cambodia will have three million foreign tourist arrival in 2010 and five million in 2015. Tourism has been one of Cambodia's triple pillar industries. The Angkor Wat historical park in Siem Reap province, the beaches in Sihanoukville and the capital city Phnom Penh are the main attractions for foreign tourists.[71]

View of Angkor Wat in Siem Reap. Today Angkor Wat is Cambodia's main tourist attraction and is visited by many tourists from around the world.

Demographics

Chinese in Cambodia

Linguistic Group	percent
Teochew	60%
Cantonese	20%
Hokkien	7%
Hainanese	4%

Main articles: Demographics of Cambodia, Ethnic groups in Cambodia, and Religion in Cambodia

As of 2010, Cambodia has an estimated population of 14,805,358 people. Ninety percent of Cambodia's population is of Khmer origin and speak the Khmer

Hakka		4%
Other groups		5%

language, the country's official language. Cambodia's population is relatively homogeneous. Its minority groups include Vietnamese (2,200,000), Chinese (1,180,000), Cham (317,000), and Khmer Loeu (550,000).[72] The country's birth rate is 25.4 per 1,000. Its population growth rate is 1.70%, significantly higher than those of Thailand, South Korea, and India.[73]

Buddhism is the major religion in Cambodia

The Khmer language is a member of the Mon–Khmer subfamily of the Austroasiatic language group. French, once the language of government in Indochina, is still spoken by many older Cambodians. French is also the language of instruction in some schools and universities that are funded by the government of France. Cambodian French, a remnant of the country's colonial past, is a dialect found in Cambodia and is sometimes used in government, particularly in court.[74]

In recent decades, many younger Cambodians and those in the business-class have favoured learning English. In the major cities and tourist centers, English is widely spoken and taught at a large number of schools because of the overwhelming number of tourists from English-speaking countries. Even in the most rural outposts, most young people speak at least some English, as it is often taught by monks at the local pagodas where many children are educated.

The civil war and its aftermath have markedly affected the Cambodian population; 50% of the population is younger than 22 years old. At a 1.04 female to male ratio, Cambodia has the most female-biased sex ratio in the Greater Mekong Subregion.[75] In the Cambodian population over 65, the female to male ratio is 1.6:1.[66]

Urbanization

Religion

Theravada Buddhism is the official religion of Cambodia, which is practiced by more than 95 percent of the population. The Theravada Buddhist tradition is widespread and strong in all provinces, with an estimated 4,392 monastery temples throughout the country.[76] The vast majority of ethnic Khmers are Buddhist, and there are close associations between Buddhism, cultural traditions, and daily life. Adherence to Buddhism generally is considered intrinsic to the country's ethnic and cultural identity. Religion in Cambodia, including Buddhism, was suppressed by the Khmer Rouge during the late 1970s but has since experienced a revival.

Islam is the religion of the majority of the Chams and Malay minorities in Cambodia. The majority of Muslims are Sunnis of the Shafi'i school and are highly populated in Kampong Cham Province. Currently there are more than 300,000 Muslims in the country.

One percent of Cambodians are identified as being Christian; of this, Catholics make up the largest group followed by Protestants. There are currently 20,000 Catholics in Cambodia which represents only 0.15% of the total population. Other Christian denominations include Baptists, The Christian and Missionary Alliance, Methodists, Jehovah's Witnesses, and The Church of Jesus Christ of Latter-day Saints.[77]

Mahayana Buddhism is the religion of the majority of Chinese and Vietnamese in Cambodia. Elements of other religious practices, such as the veneration of folk heroes and ancestors, Confucianism, and Taoism mix with Chinese Buddhism are also practiced.

Buddhist Trinity in the Bayon style from the 13th century.

Education

Main article: Education in Cambodia

Religion in Cambodia

Religion	percent
Buddhism	96.4%
Islam	2.1%
Christianity	1.3%
Others	0.3%

The Ministry of Education, Youth and Sports is responsible for establishing national policies and guidelines for education in Cambodia. The Cambodian education system is heavily decentralised, with three levels of government, central, provincial and district – responsible for its management. The constitution of Cambodia promulgates free compulsory education for nine years, guaranteeing the universal right to basic quality education.

In 2004 it was estimated that 73.6% of the population was literate (84.7% of males and 64.1% of females).[78] Male youth age (15–24 years) have a literacy rate of 89% compared to 86% for females.[79]

The education system in Cambodia continues to face many challenges, but during the past years there have been significant improvements, especially in terms of primary net enrollment gains, the introduction of program based-budgeting, and the development of a policy framework which helps disadvantaged children to gain access to education.[80] Many of Cambodia's most acclaimed universities are based in Phnom Penh.

Stupa of King Ang Duong (1796–1860) in Udong.

Traditionally, education in Cambodia was offered by the wats (Buddhist temples), thus providing education exclusively for the male population[81] During the Khmer Rouge regime, education suffered significant setbacks.

Health

Main article: Health in Cambodia

The quality of health in Cambodia is rising. As of 2010, the life expectancy is 60 years for males and 65 years for females, a major improvement since 1999 when the average life expectancy was 49.8 and 46.8 respectively.[82] The Royal Cambodian Government plans to increase the quality of healthcare in the country by raising awareness of HIV/AIDS, malaria, and other diseases. Government spending on health care corresponded to 5.8% of Cambodia's gross domestic product (GDP).

Cambodia's infant mortality rate has decreased from 115 per 1,000 live births in 1993 to 54 in 2009. In the same period, the under-five mortality rate decreased from 181 to 115 per 1,000 live births.[83] In the province with worst health indicators, Ratanakiri, 22.9% of children die before age five.[84]

UNICEF has designated Cambodia the third most landmined country in the world,[85] attributing over 60,000 civilian deaths and thousands more maimed or injured since 1970 because of the unexploded land mines left behind in rural areas.[86] The majority of the victims are children herding animals or playing in the fields.[85] Adults that survive landmines often require amputation of one or more limbs and have to resort to begging for

survival.[86] However, the number of landmine casualties has sharply decreased, from 800 in 2005 to less than 400 in 2006 and 208 in 2007 (38 killed and 170 injured).[87]

Culture

Main articles: Culture of Cambodia and Sport in Cambodia

The Royal Ballet of Cambodia in Paris, France 2010

Chhim Sothy's painting "Please let there be peace"

Various factors contribute to the Cambodian culture including Theravada Buddhism, Hinduism, French colonialism, Angkorian culture, and modern globalization. The Cambodian Ministry of Culture and Fine Arts is responsible for promoting and developing Cambodian culture. Cambodian culture not only includes the culture of the lowland ethnic majority, but also some 20 culturally distinct hill tribes colloquially known as the Khmer Loeu, a term coined by Norodom Sihanouk to encourage unity between the highlanders and lowlanders. Rural Cambodians wear a krama scarf which is a unique aspect of Cambodian clothing. The sampeah is a traditional Cambodian greeting or a way of showing respect to others. Khmer culture, as developed and spread by the Khmer empire, has distinctive styles of dance, architecture and sculpture, which have been exchanged with neighbouring Laos and Thailand through the history. Angkor Wat (*Angkor* means "city" and *Wat* "temple") is the best preserved example of Khmer architecture from the Angkorian era along with hundreds of other temples that have been discovered in and around the region.

Traditionally, the Khmer people have a unique method of recording information on Tra leaves. Tra leaf books record legends of the Khmer people, the Ramayana, the origin of Buddhism and other prayer book series. They are greatly taken care of and wrapped in cloth to protect from moisture and the climate.[88]

Bon Om Teuk (Festival of Boat Racing), the annual boat rowing contest, is the most attended Cambodian national festival. Held at the end of the rainy season when the Mekong river begins to sink back to its normal levels allowing the Tonle Sap River to reverse flow, approximately 10% of Cambodia's population attends this event each year to play games, give thanks to the moon, watch fireworks, dine, and attend the boat race in a carnival-type atmosphere.[89] Popular games include cockfighting, soccer, and kicking a *sey*, which is similar to a footbag. Based on the classical Indian solar calendar and Theravada Buddhism, the Cambodian New Year is a major holiday that takes place in April. Recent artistic figures include singers Sinn Sisamouth and Ros Sereysothea (and later Meng Keo Pichenda), who introduced new musical styles to the country.

Cuisine

Rice is the staple grain, as in other Southeast Asian countries. Fish from the Mekong and Tonle Sap rivers is also an important part of the diet. The supply of fish and fish products for food and trade in 2000 was 20 kilograms per person or 2 ounces per day per person.[90] Some of the fish can be made into prahok for longer storage. The cuisine of Cambodia contains tropical fruits, soups and noodles. Key ingredients are kaffir lime, lemon grass,

garlic, fish sauce, soy sauce, curry, tamarind, ginger, oyster sauce, coconut milk and black pepper. Some delicacies are(□□□□□□□□) (Num Bunhjok), (□□□□□□□□) (Amok), (□□□□□□) (Ah Ping).

Amok, a popular Khmer dish

French influence on Cambodian cuisine includes the Cambodian red curry with toasted baguette bread. The toasted baguette pieces are dipped in the curry and eaten. Cambodian red curry is also eaten with rice and rice vermicelli noodles. Probably the most popular dine out dish, ka tieu, is a *pork broth* rice noodle soup with fried garlic, scallions, green onions that may also contain various toppings such as beef balls, shrimp, pork liver or lettuce. The cuisine is relatively unknown to the world compared to that of its neighbours Thailand and Vietnam.

Sports

Football is one of the more popular sports, although professional organized sports are not as prevalent in Cambodia as in western countries because of the economic conditions. Football was brought to Cambodia by the French and became popular with the locals.[91] The Cambodia national football team managed fourth in the 1972 Asian Cup, but development has slowed since the civil war. Western sports such as volleyball, bodybuilding, field hockey, rugby union, golf, and baseball are gaining popularity. Native sports include traditional boat racing, buffalo racing, Pradal Serey, Khmer traditional wrestling and Bokator. Cambodia first participated in the Olympics during the 1956 Summer Olympic Games sending equestrian riders. Cambodia also hosted the GANEFO Games, the alternative to the Olympics, in the 1960s.

The 19th century illustration tale of Vorvong & Sorvong.

Sinn Sisamouth

Dance

Main article: Dance in Cambodia

Cambodian dance can be divided into three main categories: Khmer classical dance, folk dance, and social dances.

Music

Main article: Music of Cambodia

Traditional Cambodian music dates back as far as the Khmer Empire. Royal dances like the Apsara Dance are icons of the Cambodian culture. Popular types of dances are Romvong, commonly danced at festivals. The Classic Music Era of Cambodia was during the 1960s to the 1970s featuring notable singers Sinn Sisamouth and Ros Sereysothea. However, during the Khmer Rouge Revolution many classic and popular singers of the 60s and 70s died of execution, starvation, or overwork[*citation needed*].

Internet

As Cambodia continues to grow, so does its connection to the world. There are numerous places where internet is available for public use, such as coffee shops, bars, restaurants and petrol stations. Through the use of USB

modems and internet capabilities on cell phones, many Cambodians are connecting with the outside world.

The Internet connection in both metropolitan and rural areas of Cambodia is still quite expensive when compared to developed countries such as the US or Australia. A basic connection of 512 kbit/s can cost upwards of $100 per month with line and modem rental.[92] These connections are considered as "premium" in Cambodia but would be considered as out of date in more technologically advanced countries.

The increased connection to the internet has created the desire for more websites focused on Cambodia. Because of the literacy rate in Cambodia, the issue arises of whether Cambodia-focused sites need to be in English or Khmer. English is the predominant language of the internet, and the majority of internet users in Cambodia are able to understand English, but with the use of Khmer Unicode more sites have the capability to provide Khmer language versions.

Transport

Main article: Transport in Cambodia

National Highway 4

The civil war and neglect severely damaged Cambodia's transport system, but with assistance and equipment from other countries Cambodia has been upgrading the main highways to international standards and most are vastly improved from 2006. Most main roads are now paved.

Siem Reap International Airport

Cambodia has two rail lines, totalling about 612 kilometers (380 mi) of single, one meter gauge track.[93] The lines run from the capital to Sihanoukville on the southern coast, and from Phnom Penh to Sisophon (although trains often run only as far as Battambang). Currently only one passenger train per week operates between Phnom Penh and Battambang.

Besides the main interprovincial traffic artery connecting Phnom Penh with Sihanoukville, resurfacing a former dirt road with concrete / asphalt and implementation of 5 major river crossings by means of bridges have now permanently connected Phnom Penh with Koh Kong, and hence there is now uninterrupted road access to neighboring Thailand and their vast road system.

Cambodia's road traffic accident rate is high by world standards. In 2004, the number of road fatalities per 10,000 vehicles was ten times higher in Cambodia than in the developed world, and the number of road deaths had doubled in the preceding three years.[94]

The nation's extensive inland waterways were important historically in international trade. The Mekong and the Tonle Sap River, their numerous tributaries, and the Tonle Sap provided avenues of considerable length, including 3,700 kilometers (2,300 mi) navigable all year by craft drawing 0.6 meters (2 ft) and another 282 kilometers (175 mi) navigable to craft drawing 1.8 meters (6 ft).[93] Cambodia has two major ports, Phnom Penh and Sihanoukville, and five minor ones. Phnom Penh, located at the junction of the Bassac, the Mekong, and the Tonle Sap rivers, is the only river port capable of receiving 8,000-ton ships during the wet season and 5,000-ton

A Cambodia Angkor Air ATR-72

ships during the dry season. With increasing economic activity has come an increase in automobile and motorcycle use, though bicycles still predominate.[95] "Cyclo" (as hand-me-down French) or Cycle rickshaws are an additional option often used by visitors. These kind of rickshaws are unique to Cambodia in that the cyclist is situated behind the passenger(s) seat,[96] as opposed to Cycle rickshaws in neighbouring countries where the cyclist is at the front and "pulls" the carriage.

The country has four commercial airports. Phnom Penh International Airport (Pochentong) in Phnom Penh is the second largest in Cambodia. Siem Reap-Angkor International Airport is the largest and serves the most international flights in and out of Cambodia. The other airports are in Sihanoukville and Battambang.

Prehistory and early history

Main article: Early history of Cambodia

Ancient Khmer script

Carbon 14 dating of a cave at Laang Spean in northwest Cambodia reveals people who made pots were living in Cambodia as early as 4200 BCE (Before the Common Era).[1] Further archaeological evidence indicates that other parts of the region now called Cambodia were inhabited from around 1000-2000 BCE by a Neolithic culture. Skulls and human bones found at Samrong Sen date from 1500 BCE.[1] These people may have migrated from South Eastern China to the Indochinese Peninsula. Scholars trace the first cultivation of rice and the first bronze making in Southeast Asia to these people.[1] By the 1st century CE, the inhabitants had developed relatively stable, organized societies and spoke languages very much related to the Cambodian or Khmer of the present day.[1] The culture and technical skills of these people of the 1st century in the CE far surpassed the primitive stage. The most advanced groups lived along the coast and in the lower Mekong River valley and delta regions in houses constructed on stilts where they cultivated rice, fished and kept domesticated animals. Recent research has unlocked the discovery of artificial circular earthworks dating to Cambodia's Neolithic era.1 (http://muse.jhu.edu /demo/asian_perspectives/v039/39.1albrecht.pdf)

The Khmer people were among the first inhabitants of South East Asia. They were also among the first in South East Asia to adopt religious ideas and political institutions from India and to establish centralized kingdoms surrounding large territories. The earliest known kingdom in the area, Funan, flourished from around the first to the 6th century. This was succeeded by Chenla, which controlled large parts of modern Cambodia, Vietnam, Laos, and Thailand.

Funan Kingdom

Main article: Kingdom of Funan

Map of Funan at around 3rd century

The Funanese Empire rose to eminence from its affluent and powerful home city of Oc Eo (in nowadays Vietnam), known in the Roman Empire as Kattigara, meaning the Renowned City. Contacts with the distant Roman Empire are evidenced by the fact that Roman coins have been found at archeological sites dating from the 2nd and 3rd centuries.[2] However, most of the foreign trade of the Funan Empire was carried on much closer to home with India, especially the Bengal area of India. Trade with India commenced well before 500 BCE (before the widespread use of Sanskrit as a language in India).[3] With the Indian trade came the Indianization of the culture of Funan and the religion of Hinduism. Funan and its succeeding societies which occupied this section of Southeast Asia would remain Hindu in religion for about 900 years. Some cultural features and customs of Hinduism continue to exist within the current society.

The empire reached its greatest extent under the rule of Fan Shih-man in the early 3rd century, extending as far south as Malaysia and as far west as Burma. The Funanese established a strong system of mercantilism and commercial monopolies that would become a pattern for empires in the region. Exports from the Funan Empire were largely forest products and precious metals—including gold elephants, ivory, rhinoceros horn, kingfisher feathers, wild spices like cardamom, lacquer hides and aromatic wood.[2] Fan Shih-man expanded the fleet and improved the Funanese bureaucracy, creating a quasi-feudal pattern that left local customs and identities largely intact, particularly in the empire's farther reaches.

Chenla Kingdom

Main article: Chenla

The Khmers, vassals of Funan, had reached the Mekong River from the northern Menam River via the Mun River Valley. Chenla, their first independent state developed out of Funanese influence.

Ancient Chinese records mention two kings, Shrutavarman and Shreshthavarman who ruled at the capital Shreshthapura located in modern day southern Laos. The immense influence on the identity of Cambodia to come was wrought by the Khmer Kingdom of Bhavapura, in the modern day Cambodian city of Kompong Thom. Its legacy was its most important sovereign, Ishanavarman who completely conquered the kingdom of Funan during 612-628. He chose his new capital at the Sambor Prei Kuk, naming it Ishanapura.

After the death of Jayavarman I in 681, turmoil came upon the kingdom and at the start of the 8th century, the kingdom broke up into many principalities. Pushkaraksha, the ruler of Shambhupura announced himself as king of the entire Kambuja. Chinese chronicles proclaim that in the 8th century, Chenla was split into land Chenla and water Chenla. During this time, Shambhuvarman son of Pushkaraksha controlled most of water Chenla until the 8th century which the Malayans and Javanese dominated over many Khmer principalities.

Khmer Empire

Main article: Khmer Empire

Angkor Wat

The golden age of Khmer civilization, however, was the period from the 9th to the 13th centuries, when Khmer Empire, which gave Kampuchea, or Cambodia, its name, ruled large territories from its capital in the region of Angkor in western Cambodia.

Legend has it that in 802 CE, Jayavarman II, king of the Khmers, first came to the Kuhlen hills, the future site of Angkor Wat.[4] Later, under Jayavarman VII (1181–ca. 1218), Khmer reached its zenith of political power and cultural creativity. Jayavarman VII gained power and territory in a series of successful wars. Khmer conquests were almost unstoppable as they raided home cities of powerful seafaring Chams. However, territorial expansion stopped after a defeat by Dai Viet. The battle also witnessed Suryavarman II's death. Following Jayavarman VII's death, Khmer experienced a gradual decline. Important factors were the aggressiveness of neighboring peoples (especially the Thai, or Siamese), chronic interdynastic strife, and the gradual deterioration of the complex irrigation system that had ensured rice surpluses. The Angkorian monarchy survived until 1431, when the Thai captured Angkor Thom and the Cambodian king fled to the southern part of the country

Map of South-east Asia circa 900 CE, showing the Khmer Empire in red, Champa in yellow and Haripunjaya in light Green plus additional surrounding states.

Dark Ages of Cambodia

Main article: Dark ages of Cambodia

The 15th to the 19th centuries were a period of continued decline and territorial loss. Cambodia enjoyed a brief period of prosperity during the 16th century because its kings, who built their capitals in the region southeast of the Tonle Sap along the Mekong River, promoted trade with other parts of Asia. This was the period when Spanish and Portuguese adventurers and missionaries first visited the country. However, the Thai conquest of the new capital at Lovek in 1594 marked a downturn in the country's fortunes and Cambodia. Becoming a pawn in power struggles between its two increasingly powerful neighbors, Siam and Vietnam. Cambodia remained a protectorate of Siam. Vietnam's settlement of the Mekong Delta led to its annexation of that area at the end of the 17th century. Vietnam employed a strategy similar to those of North American pilgrims and pioneers: settle and claim. Such foreign encroachments continued through the first half of the 19th century. A successful invasion by Vietnam further limited Thai protectorship in Cambodia and established the kingdom under full Vietnamese suzerainty.

French colonial period

Main articles: French protectorate of Cambodia and French Indochina

In 1863, King Norodom signed an agreement with the French to establish a protectorate over his kingdom. The

state gradually came under French colonial domination.

Norodom of Cambodia

During World War II, the 1940 - 1941 Franco–Thai War left the French Indochinese colonial authorities in a position of weakness. The Vichy government signed an agreement with Japan to allow the Japanese military transit through French Indochina.[5]

Meanwhile the Thai government, under the pro-Japanese leadership of Field Marshal Plaek Phibunsongkhram, took advantage of its position and invaded Cambodia's western provinces.[6]

French Indochina in 1913.

Cambodia's situation at the end of the war was chaotic. The Free French, under General Charles de Gaulle, were determined to recover Indochina, though they offered Cambodia and the other Inchochinese protectorates a carefully circumscribed measure of self-government. Convinced that they had a "civilizing mission", they envisioned Indochina's participation in a French Union of former colonies that shared the common experience of French culture.

Administration of Sihanouk

Main articles: Japanese occupation of Cambodia and Kingdom of Cambodia (1953–1970)

On 9 March 1945, during the Japanese occupation of Cambodia, young king Norodom Sihanouk proclaimed an independent Kingdom of Kampuchea, following a formal request by the Japanese. Shortly thereafter the Japanese government nominally ratified the independence of Cambodia and established a consulate in Phnom Penh.[7] The new government did away with the romanization of the Khmer language that the French colonial administration was beginning to enforce and officially reinstated the Khmer script. This measure taken by the short-lived governmental authority would be popular and long-lasting, for since then no government in Cambodia has tried to romanize the Khmer language again.[8] After Allied military units entered Cambodia, the Japanese military forces present in the country were disarmed and repatriated. The French were able to reimpose the colonial administration in Phnom Penh in October the same year.[9]

Sihanouk's "royal crusade for independence" resulted in grudging French acquiescence to his demands for a transfer of sovereignty. A partial agreement was struck in October 1953. Sihanouk then declared that independence had been achieved and returned in triumph to Phnom Penh. As a result of the Geneva Conference on Indochina, Cambodia was able to bring about the withdrawal of the Viet Minh troops from its territory and to withstand any residual impingement upon its sovereignty by external powers.

Neutrality was the central element of Cambodian foreign policy during the 1950s and 1960s. By the mid-1960s, parts of Cambodia's eastern provinces were serving as bases for North Vietnamese Army and Viet Cong (NVA/VC) forces operating against South Vietnam, and the port of Sihanoukville was being used to supply them. As NVA/VC activity grew, the United States and South Vietnam became concerned, and in 1969, the United

States began a 14 month long series of bombing raids targeted at NVA/VC elements, contributing to destabilization. Prince Sihanouk, fearing that the conflict between communist North Vietnam and South Vietnam might spill over to Cambodia, steadfastly opposed the bombing campaign by the United States along the Vietnam-Cambodia border and inside Cambodian territory. Prince Sihanouk wanted Cambodia to stay out of the North Vietnam-South Vietnam conflict and was very critical of the United States government and its allies (the South Vietnamese government). The United States claims that the bombing campaign took place no further than ten, and later twenty miles (32 km) inside the Cambodian border, areas where the Cambodian population had been evicted by the NVA.[10] Prince Sihanouk, facing internal struggles of his own, due to the rise of the Khmer Rouge, did not want Cambodia to be involved in the conflict. Sihanouk wanted the United States and its allies (South Vietnam) to keep the war away from the Cambodian border. Not only did Sihanouk try to keep the communist North Vietnamese soldiers from entering Cambodia territory, but he also did not allow the United States to use Cambodian air space and airports for military purposes. This upset the United States greatly. The United States saw Prince Sihanouk as a North Vietnamese sympathizer and a thorn on the United States, and using the CIA, it began plans to get rid of Sihanouk.[11]

Throughout the 1960s, domestic Cambodian politics became polarized. Opposition to the government grew within the middle class and leftists including Paris-educated leaders like Son Sen, Ieng Sary, and Saloth Sar (later known as Pol Pot), who led an insurgency under the clandestine Communist Party of Kampuchea (CPK). Sihanouk called these insurgents the Khmer Rouge, literally the "Red Khmer." But the 1966 national assembly elections showed a significant swing to the right, and General Lon Nol formed a new government, which lasted until 1967. During 1968 and 1969, the insurgency worsened. In August 1969, Lon Nol formed a new government. Prince Sihanouk went abroad for medical reasons in January 1970.

Khmer Republic and the War

Main article: Civil War in Cambodia

Map of Asia in 1890

In March 1970, while Prince Sihanouk was absent, General Lon Nol deposed Prince Sihanouk in a coup d'état in the early hours of March 18, 1970.[12] It has been alleged that this coup was not planned by the United States Central Intelligence Agency.[13][*citation needed*] Still while abroad, Prince Sihanouk had been warned by both the leaders in Soviet Union and in Peking, that he should return home, immediately without delay.[13] As early as March 12, 1970, the C.I.A. Station Chief told Washington that based on communications from Sirik Matak, Lon Nol's cousin, that "the (Cambodian) army was ready for a coup."[14] Nonetheless, Lon Nol assumed the power after the military coup and immediately allied Cambodia with the United States. Immediately, Son Ngoc Thanh, an opponent of Pol Pot, announced his support for the new government. On October 9, the Cambodian monarchy was abolished, and the country was renamed the Khmer Republic.

Hanoi rejected the new republic's request for the withdrawal of NVA troops. 2,000–4,000 Cambodians who had gone to North Vietnam in 1954 reentered Cambodia, backed by North Vietnamese soldiers. In response, the United States moved to provide material assistance to the new government's armed forces, which were engaged against both CPK insurgents and NVA forces.

On April 1970, US President Nixon announced to the American public that US and South Vietnamese ground forces had entered Cambodia in a campaign aimed at destroying NVA base areas in Cambodia (see Cambodian Incursion).[15] The US had already been bombing Cambodia for well over a year by that point.

While president, Bill Clinton released extensive Air Force data on all American bombings of Indochina between 1964 and 1975. Regarding Cambodia in particular, it emerged that

> [F]rom October 4, 1965, to August 15, 1973, the United States dropped far more ordnance on Cambodia than was previously believed: 2,756,941 tons' worth, dropped in 230,516 sorties on 113,716 sites. Just over 10 percent of this bombing was indiscriminate, with 3,580 of the sites listed as having "unknown" targets and another 8,238 sites having no target listed at all. . . . [T]he total payload dropped during these years to be nearly five times greater than the generally accepted figure. To put the revised total of 2,756,941 tons into perspective, the Allies dropped just over 2 million tons of bombs during all of World War II, including the bombs that struck Hiroshima and Nagasaki: 15,000 and 20,000 tons, respectively. Cambodia may well be the most heavily bombed country in history. . . . [T]he bombing forced the Vietnamese Communists deeper and deeper into Cambodia, bringing them into greater contact with Khmer Rouge insurgents . . . [and] drove ordinary Cambodians into the arms of the Khmer Rouge, a group that seemed initially to have slim prospects of revolutionary success.[16]

Nixon had commanded that, "They [the USAF] have got to go in there and I mean really go in . . . I want everything that can fly to go in there and crack the hell out of them. There is no limitation on mileage and there is no limitation on budget. Is that clear?"[16] Taylor Owen (http://taylorowen.com/?page_id=5) and Yale's Ben Kiernan note that, "Previously, it was estimated that between 50,000 and 150,000 Cambodian civilians were killed by the bombing. Given the fivefold increase in tonnage revealed by the database, the number of casualties is surely higher."[16]

Although a considerable quantity of equipment was seized or destroyed by US and South Vietnamese forces, containment of North Vietnamese forces proved elusive. The North Vietnamese moved deeper into Cambodia to avoid US and South Vietnamese raids. NVA units overran many Cambodian army positions while the CPK expanded their small-scale attacks on lines of communication.

The Khmer Republic's leadership was plagued by disunity among its three principal figures: Lon Nol, Sihanouk's cousin Sirik Matak, and National Assembly leader In Tam. Lon Nol remained in power in part because none of the others were prepared to take his place. In 1972, a constitution was adopted, a parliament elected, and Lon Nol became president. But disunity, the problems of transforming a 30,000-man army into a national combat force of more than 200,000 men, and spreading corruption weakened the civilian administration and army.

The Communist insurgency inside Cambodia continued to grow, aided by supplies and military support from North Vietnam. Pol Pot and Ieng Sary asserted their dominance over the Vietnamese-trained communists, many of whom were purged. At the same time, the Communist Party of Kampuchea forces became stronger and more independent of their Vietnamese patrons. By 1973, the CPK were fighting battles against government forces with little or no North Vietnamese troop support, and they controlled nearly 60% of Cambodia's territory and 25% of its population.

The government made three unsuccessful attempts to enter into negotiations with the insurgents, but by 1974, the CPK were operating openly as divisions, and some of the NVA combat forces had moved into South Vietnam. Lon Nol's control was reduced to small enclaves around the cities and main transportation routes. More than 2 million refugees from the war lived in Phnom Penh and other cities.

On New Year's Day 1975, Communist troops launched an offensive which, in 117 days of the hardest fighting of

the war, collapsed the Khmer Republic. Simultaneous attacks around the perimeter of Phnom Penh pinned down Republican forces, while other CPK units overran fire bases controlling the vital lower Mekong resupply route. A US-funded airlift of ammunition and rice ended when Congress refused additional aid for Cambodia. The Lon Nol government in Phnom Penh surrendered on April 17, 1975, just five (5) days after the US mission evacuated Cambodia.[17]

Democratic Kampuchea (Khmer Rouge Era)

Main articles: Democratic Kampuchea and Khmer Rouge rule of Cambodia

Flag of Democratic Kampuchea

Flag of the Communist Party of Kampuchea

Immediately after its victory, the CPK ordered the evacuation of all cities and towns, sending the entire urban population into the countryside to work as farmers, as the CPK was trying to reshape society into a model that Pol Pot had conceived.

Thousands starved or died of disease during the evacuation and its aftermath. Many of those forced to evacuate the cities were resettled in newly created villages, which lacked food, agricultural implements, and medical care. Many who lived in cities had lost the skills necessary for survival in an agrarian environment. Thousands starved before the first harvest. Hunger and malnutrition—bordering on starvation—were constant during those years. Most military and civilian leaders of the former regime who failed to disguise their pasts were executed.

Within the CPK, the Paris-educated leadership—Pol Pot, Ieng Sary, Nuon Chea, and Son Sen—were in control. A new constitution in January 1976 established Democratic Kampuchea as a Communist People's Republic, and a 250-member Assembly of the Representatives of the People of Kampuchea (PRA) was selected in March to choose the collective leadership of a State Presidium, the chairman of which became the head of state.

Prince Sihanouk resigned as head of state on April 4. On April 14, after its first session, the PRA announced that Khieu Samphan would chair the State Presidium for a 5-year term. It also picked a 15-member cabinet headed by Pol Pot as prime minister. Prince Sihanouk was put under virtual house arrest.

The new government sought to completely restructure Cambodian society. Remnants of the old society were abolished and religion, particularly Buddhism and Catholicism, was suppressed. Agriculture was collectivized, and the surviving part of the industrial base was abandoned or placed under state control. Cambodia had neither a currency nor a banking system.

Life in 'Democratic Kampuchea' was strict and brutal. In many areas of the country people were rounded up and executed for speaking a foreign language, wearing glasses, scavenging for food, and even crying for dead loved ones. Former businessmen and bureaucrats were hunted down and killed along with their entire families; the Khmer Rouge feared that they held beliefs that could lead them to oppose their regime. A few Khmer Rouge loyalists were even killed for failing to find enough 'counter-revolutionaries' to execute.

Solid estimates of the numbers who died between 1975 and 1979 are not available, but it is likely that hundreds of thousands were executed by the regime. Hundreds of thousands died of starvation and disease (both under the CPK and during the Vietnamese invasion in 1978). Some estimates of the dead range from 1 to 3 million, out of a

1975 population estimated at 7.3 million. The CIA estimated 50,000–100,000 were executed in a single purge by the state and that 1.5 million (from a range of 1.2 to 1.8 million) were killed by the Khmer Rouge from 1975 to 1979.[18]

Democratic Kampuchea's relations with Vietnam and Thailand worsened rapidly as a result of border clashes and ideological differences. While communist, the CPK was fiercely nationalistic, and most of its members who had lived in Vietnam were purged. Democratic Kampuchea established close ties with the People's Republic of China, and the Cambodian-Vietnamese conflict became part of the Sino-Soviet rivalry, with Moscow backing Vietnam. Border clashes worsened when the Democratic Kampuchea military attacked villages in Vietnam. The regime broke off relations with Hanoi in December 1977, protesting Vietnam's alleged attempt to create an Indochina Federation. In mid-1978, Vietnamese forces invaded Cambodia, advancing about 30 miles (48 km) before the arrival of the rainy season.

The reasons for Chinese support of the CPK was to prevent a pan-Indochina movement, and maintain Chinese military superiority in the region. The Soviet Union supported a strong Vietnam to maintain a second front against China in case of hostilities and to prevent further Chinese expansion. Since Stalin's death, relations between Mao-controlled China and the Soviet Union had been lukewarm at best. In February to March 1979, China and Vietnam would fight the brief Sino-Vietnamese War over the issue.

In December 1978, Vietnam announced formation of the Kampuchean United Front for National Salvation (KUFNS) under Heng Samrin, a former DK division commander. It was composed of Khmer Communists who had remained in Vietnam after 1975 and officials from the eastern sector—like Heng Samrin and Hun Sen—who had fled to Vietnam from Cambodia in 1978. In late December 1978, Vietnamese forces launched a full invasion of Cambodia, capturing Phnom Penh on January 7, 1979 and driving the remnants of Democratic Kampuchea's army westward toward Thailand.

People's Republic of Kampuchea

Main article: Cambodia under Vietnamese occupation (1979–1989)

On January 10, 1979, after the Vietnamese army and the KUFNS invaded Cambodia, the new People's Republic of Kampuchea (PRK) was established with Heng Samrin as head of state. Pol Pot's Khmer Rouge forces retreated rapidly to the Thai border. The Khmer Rouge and the PRK began a costly struggle that played into the hands of the larger powers China, the United States and the Soviet Union. A civil war was imposed on impoverished Cambodia that displaced 600,000 Cambodians to refugee camps along the border between Thailand and Cambodia.[19]

Peace efforts began in Paris in 1989 under the State of Cambodia, culminating two years later in October 1991 in a comprehensive peace settlement. The United Nations was given a mandate to enforce a ceasefire, and deal with refugees and disarmament known as the United Nations Transitional Authority in Cambodia (UNTAC).[20]

Modern Cambodia: 1993-present

Main article: Modern Cambodia (1990–present)

On October 23, 1991, the Paris Conference reconvened to sign a comprehensive settlement giving the UN full authority to supervise a cease-fire, repatriate the displaced Khmer along the border with Thailand, disarm and demobilize the factional armies, and prepare the country for free and fair elections. Prince Sihanouk, President of the Supreme National Council of Cambodia (SNC), and other members of the SNC returned to Phnom Penh

in November 1991, to begin the resettlement process in Cambodia. The UN Advance Mission for Cambodia (UNAMIC) was deployed at the same time to maintain liaison among the factions and begin demining operations to expedite the repatriation of approximately 370,000 Cambodians from Thailand.

On March 16, 1992, the UN Transitional Authority in Cambodia (UNTAC) arrived in Cambodia to begin implementation of the UN Settlement Plan. The UN High Commissioner for Refugees began fullscale repatriation in March 1992. UNTAC grew into a 22,000-strong civilian and military peacekeeping force to conduct free and fair elections for a constituent assembly.

Over 4 million Cambodians (about 90% of eligible voters) participated in the May 1993 elections, although the Khmer Rouge or Party of Democratic Kampuchea (PDK), whose forces were never actually disarmed or demobilized, barred some people from participating. Prince Ranariddh's royalist FUNCINPEC Party was the top vote recipient with 45.5% of the vote, followed by Hun Sen's Cambodian People's Party and the Buddhist Liberal Democratic Party, respectively. FUNCINPEC then entered into a coalition with the other parties that had participated in the election. The parties represented in the 120-member assembly proceeded to draft and approve a new constitution, which was promulgated September 24, 1993. It established a multiparty liberal democracy in the framework of a constitutional monarchy, with the former Prince Sihanouk elevated to King. Prince Ranariddh and Hun Sen became First and Second Prime Ministers, respectively, in the Royal Cambodian Government (RGC). The constitution provides for a wide range of internationally recognized human rights.

On October 4, 2004, the Cambodian National Assembly ratified an agreement with the United Nations on the establishment of a tribunal to try senior leaders responsible for the atrocities committed by the Khmer Rouge. Donor countries have pledged the $43 million international share of the three-year tribunal budget, while the Cambodian government’s share of the budget is $13.3 million. The tribunal started trials of senior Khmer Rouge leaders in 2008. Cambodia is also recovering from the land mines which were used heavily by the Khmer Rouge and Vietnamese; it will take approximately a decade to remove most of the land mines from Cambodia.

List of kings of Cambodia

From Wikipedia, the free encyclopedia

The **King of Cambodia** is the head of state of the Kingdom of Cambodia. The King's power is limited to that of a symbolic figurehead to whom people are to give love and respect. The monarch also represents peace, stability, and prosperity to the Khmer people. The King of Cambodia is an elected monarch, making Cambodia one of the few elected monarchies of the world.

Norodom Sihamoni

From Wikipedia, the free encyclopedia

Norodom Sihamoni (Khmer: [illegible], born 14 May 1953) is the current reigning King of Cambodia. He is the eldest son of Norodom Sihanouk and Norodom Monineath Sihanouk. Previously Cambodia's ambassador to UNESCO, he was named by a nine-member throne council to become the next king after his father Norodom Sihanouk abdicated in 2004. Before ascending the throne, Sihamoni was best known for his work as a cultural ambassador in Europe and as a classical dance instructor.

Norodom Sihamoni

[illegible]

King of Cambodia

Reign	14 October 2004 – present
Coronation	29 October 2004

Life

Sihamoni was born in 1953. At the time of his birth and that of his younger brother, his mother, a Cambodian citizen of Italian and Khmer ancestry, had been one of King Norodom Sihanouk's consorts after being a constant companion since the day they met in 1951, when the young Monique Izzi won first prize in a national beauty contest.[1] She was granted the title of Neak Moneang and the name of Monineath at the time of her marriage to King Norodom Sihanouk in 1952.

Furthermore, Queen Monineath is a step-granddaughter of the late Prince Norodom Duongchak of Cambodia, and the daughter of Pomme Peang and of her second husband, Jean-François Izzi, a French-Italian banker. [2] The Royal Ark website entry about the genealogy of the Cambodian royal family states that Sihanouk and Monineath were married twice, once on 12 April 1952, when she was 15, and again ("more formally", according to the website) on 5 March 1955. She is described as Sihanouk's seventh wife.

King Norodom Sihamoni has 14 half-brothers and half-sisters by his father's various relationships; his only full sibling, a younger brother, HRH Samdech Norodom Narindrapong (born 1954) died in 2003.

Norodom Sihamoni in Phnom Penh in May 2008

He has spent most of his life outside Cambodia. As a child, Sihamoni was sent to Prague, Czechoslovakia, by his father in 1962, where he, while attending elementary school, high school and Academy of Music Arts, studied classical dance and music until 1975. He is fluent in French and Czech, as well as being a good speaker of English and Russian. During the 1970 coup d'état by Lon Nol, Sihamoni remained in Czechoslovakia. In 1975, he left Prague and began to study filmmaking in North Korea, and in 1977 returned to his native Cambodia. Immediately, the ruling Khmer Rouge government turned against the monarchy, and Sihamoni was put under house arrest by the Khmer Rouge with the rest of the royal family until the 1979 Vietnamese invasion. In 1981, he moved to France to teach ballet and was later president of the Khmer Dance Association. He lived in France for nearly 20 years, but even then he regularly visited Prague, where he spent his childhood and youth. He is the only ruling monarch who speaks Czech.

In 1993, the prince was appointed Cambodia's delegate to UNESCO, the UN cultural body based in Paris, where he became known for his hard work and his devotion to Cambodian culture. He previously refused an appointment as Cambodia's ambassador to France.[3]

Royal Standard of the King of Cambodia

On 14 October 2004, he was selected by a special nine-member council, part of a selection process that was quickly put in place after the surprise abdication of King Norodom Sihanouk a week before. Sihamoni's selection was endorsed by Prime Minister Hun Sen and National Assembly Speaker Prince Norodom Ranariddh (the new king's brother), both members of the privy council. He was inaugurated and formally anointed as King on Friday, 29 October 2004.[4] King Sihamoni and his parents, King Father Norodom Sihanouk and Queen Mother Norodom Monineath specifically requested that the ceremonies be kept low-key because they did not wish for the impoverished country to spend too much money on the event.

The original gold and diamond encrusted crown, a sacred symbol of Mount Meru, used in official coronation ceremonies in Cambodia for centuries dating back to the ancient Angkorian Empire, disappeared along with many other items of Royal Regalia during the Lon Nol regime in the early 1970s. As stated by Julio A. Jeldres, King Father Norodom Sihanouk's official biographer, "The King did not want a crown remade because of Cambodia's poverty."[5]

Sihamoni remains a bachelor. His father Norodom Sihanouk has stated that Sihamoni "loves women as his sisters"[6]. Sihamoni has no children, but this does not pose a problem because the King in Cambodia is selected by the throne council even when such a successor exists.

Title

Before he was crowned king, his royal title was: *Sdech Krom Khun* (□□□□□□□□□□□□□□□□□□□□), equating him to the rank of 'great prince.' As king, his title is: **Preah Karuna Preah Bat Sâmdach Preah Bâromneath Norodom Sihamoni Nai**

Styles of

The King of Cambodia

Preah Reacheanachak Kampuchea (in romanized Khmer); roughly translating to: *His Majesty, King Norodom Sihamoni of the Kingdom of Cambodia*. His given name, Sihamoni, comprises two morphemes from his parent's given names, Sihanouk and Monineath.

Reference style	His Majesty
Spoken style	Your Majesty
Alternative style	*Sire*

Advisory court

On 12 December 2008, Sihamoni selected twenty-six members of the Cambodian royal family to his advisory court, among them his half-brother Prince Norodom Ranariddh as chief advisor. Other choices included Prince Sisowath Sirirath, Princess Norodom Marie (estranged wife of Prince Ranariddh) and Prince Sisowath Thomico.[7]

Awards

- Grand Cross of the Royal Order of Cambodia
- Grand Cross of the Royal Order of Monisaraphon
- Grand Cross of the Legion of Honor (2010; Grand Officer 2004)
- Silver Medal of the City of Paris
- Grand Cordon of the Order of the Chrysanthemum (2010)

Japan

From Wikipedia, the free encyclopedia

Japan /dʒəˈpæn/ (Japanese: 日本 ***Nihon*** or ***Nippon***; formally 日本国 ***Nippon-koku*** or ***Nihon-koku***, literally the *State of Japan*) is an island nation in East Asia. Located in the Pacific Ocean, it lies to the east of the Sea of Japan, China, North Korea, South Korea and Russia, stretching from the Sea of Okhotsk in the north to the East China Sea and Taiwan in the south. The characters that make up Japan's name mean "sun-origin", which is why Japan is sometimes referred to as the "Land of the Rising Sun".

Japan is an archipelago of 6,852 islands. The four largest islands are Honshū, Hokkaidō, Kyūshū and Shikoku, together accounting for ninety-seven percent of Japan's land area. Japan has the world's tenth-largest population, with over 127 million people. The Greater Tokyo Area, which includes the *de facto* capital city of Tokyo and several surrounding prefectures, is the largest metropolitan area in the world, with over 30 million residents.

Archaeological research indicates that people lived in Japan as early as the Upper Paleolithic period. The first written mention of Japan is in Chinese history texts from the 1st century AD. Influence from other nations followed by long periods of isolation has characterized Japan's history. In the late 19th and early 20th centuries victory in the First Sino-Japanese War, the Russo-Japanese War, and World War I allowed Japan to expand its empire during a period of increasing militarism. The Second Sino-Japanese War of 1937 expanded into part of World War II, which came to an end in 1945 following the atomic bombings of Hiroshima and Nagasaki. Since adopting its revised constitution in 1947, Japan has maintained a unitary constitutional monarchy with an emperor and an elected parliament called the Diet.

A major economic power,[2] Japan has the world's third-largest economy by nominal GDP and fourth-largest economy by purchasing power parity. It is also the world's fourth-largest exporter and fourth-largest importer. Although Japan has officially renounced its right to declare war, it maintains a modern military force in self-defense and peacekeeping roles. After Singapore, Japan has the lowest homicide rate (including attempted homicide) in the world.[10] According to both UN and WHO estimates, Japan has the longest life expectancy of any country in the world. According to the UN, it has the third lowest infant mortality rate.[11][12]

Etymology

Main article: Names of Japan

The English word *Japan* is an exonym. The Japanese names for Japan are *Nippon* (日本) listen and *Nihon* (日本) listen ; both names are written using the kanji 日本. The Japanese name *Nippon* is used for most official purposes, including on Japanese yen, postage stamps, and for many international sporting events. *Nihon* is a more casual term and is used in contemporary speech. Japanese people refer to themselves as *Nihonjin* (日本人) and to their language as *Nihongo* (日本語). Both *Nippon* and *Nihon* mean "sun-origin" and are often translated as *Land of the Rising Sun*. This nomenclature comes from Japanese missions to Imperial China and refers to Japan's eastward position relative to China. Before *Nihon* came into official use, Japan was known as *Wa* (倭) or *Wakoku* (倭国).[13]

The English word for Japan came to the West via early trade routes. The early Mandarin or possibly Wu Chinese (日本) word for Japan was recorded by Marco Polo as *Cipangu*. In modern Shanghainese, a Wu dialect, the pronunciation of characters 日本 'Japan' is *Zeppen* [zəʔpən]. The old Malay word for Japan, *Jepang*, was borrowed from a Chinese language — Jih'pen'kuo [14]—, and this Malay word was encountered by Portuguese traders in Malacca in the 16th century. Portuguese traders were the first to bring the word to Europe.[15] It was first recorded in English in a 1565 letter, spelled *Giapan*.[16]

History

Main article: History of Japan

Prehistory and ancient history

A Paleolithic culture around 30,000 BC constitutes the first known habitation of Japan. This was followed from around 14,000 BC (the start of the Jōmon period) by a Mesolithic to Neolithic semi-sedentary hunter-gatherer culture, who include ancestors of both the contemporary Ainu people and Yamato

Calling code	81

The Golden Hall and five-storey pagoda of Hōryū-ji, among the oldest wooden buildings in the world, National Treasures, and a UNESCO World Heritage Site

people,[17][18] characterized by pit dwelling and rudimentary agriculture.[19] Decorated clay vessels from this period are some of the oldest surviving examples of pottery in the world. Around 300 BC, the Yayoi people began to enter the Japanese islands, intermingling with the Jōmon.[20] The Yayoi period, starting around 500 BC, saw the introduction of practices like wet-rice farming,[21] a new style of pottery,[22] and metallurgy, introduced from China and Korea.[23]

The Japanese first appear in written history in the Chinese *Book of Han*. According to the *Records of Three Kingdoms*, the most powerful kingdom on the archipelago during the 3rd century was called Yamataikoku. Buddhism was first introduced to Japan from Baekje, but the subsequent development of Japanese Buddhism was primarily influenced by China.[24] Despite early resistance, Buddhism was promoted by the ruling class and gained widespread acceptance beginning in the Asuka period (592–710).[25]

The Nara period (710–784) of the 8th century marked the emergence of a strong Japanese state, centered on an imperial court in Heijō-kyō (modern Nara). The Nara period is characterized by the appearance of a nascent literature as well as the development of Buddhist-inspired art and architecture.[26] The smallpox epidemic of 735–737 is believed to have killed as much as one-third of Japan's population.[27] In 784, Emperor Kammu moved the capital from Nara to Nagaoka-kyō before relocating it to Heian-kyō (modern Kyoto) in 794.

This marked the beginning of the Heian period (794–1185), during which a distinctly indigenous Japanese culture emerged, noted for its art, poetry and prose. Lady Murasaki's *The Tale of Genji* and the lyrics of Japan's national anthem *Kimigayo* were written during this time.[28]

Byōdō-in (1053) is a temple of Pure Land Buddhism. It was registered to the UNESCO World Heritage Site.

Buddhism began to spread during the Heian era chiefly through two major sects, Tendai by Saichō, and Shingon by Kūkai. Pure Land Buddhism greatly becomes popular in the latter half of the 11th century.

Feudal era

Japan's feudal era was characterized by the emergence and dominance of a ruling class of warriors, the samurai. In 1185, following the defeat of the Taira clan, sung in the epic Tale of Heike, samurai Minamoto no Yoritomo was appointed shogun and established a base of power in Kamakura. After his death, the Hōjō clan came to power as regents for the shoguns. The Zen school of Buddhism was introduced from China in the Kamakura period (1185–1333) and became popular among the samurai class.[29] The Kamakura shogunate repelled Mongol invasions in 1274 and 1281, but was eventually overthrown by Emperor Go-Daigo. Go-Daigo was himself defeated by Ashikaga Takauji in 1336.

Ashikaga Takauji establishes the shogunate in Muromachi, Kyoto. It is a start of Muromachi Period (1336–1573). The Ashikaga shogunate receives glory in the age of Ashikaga Yoshimitsu, and the culture based on Zen Buddhism (art of *Miyabi*) has prospered. It evolves to Higashiyama Culture, and has prospered until the 16th century. On the other hand, the succeeding Ashikaga shogunate failed to control the feudal warlords (*daimyo*), and a civil war (the Ōnin War) began in 1467, opening the century-long Sengoku period ("Warring States").[30]

During the 16th century, traders and Jesuit missionaries from Portugal reached Japan for the first time, initiating direct commercial and cultural exchange between Japan and the West. Oda Nobunaga conquered many other daimyo using European technology and firearms; after he was assassinated in 1582, his successor Toyotomi Hideyoshi unified the nation in 1590. Hideyoshi invaded Korea twice, but following defeats by Korean and Ming Chinese forces and Hideyoshi's death, Japanese troops were withdrawn in 1598.[31] This age is called Azuchi-Momoyama Period (1573–1603).

Tokugawa Ieyasu served as regent for Hideyoshi's son and used his position to gain political and military support. When open war broke out, he defeated rival clans in the Battle of Sekigahara in 1600. Ieyasu was appointed shogun in 1603 and established the Tokugawa shogunate at Edo (modern Tokyo).[32] The Tokugawa shogunate enacted measures including *buke shohatto*, as a

Ginkaku-ji in Kyoto (Higashiyama period in Muromachi Period, c. 1489). It was registered as part of the UNESCO World Heritage Site "Historic Monuments of Ancient Kyoto".

code of conduct to control the autonomous daimyo;[33] and in 1639, the isolationist *sakoku* ("closed country") policy that spanned the two and a half centuries of tenuous political unity known as the Edo period (1603–1868).[34] The study of Western sciences, known as *rangaku*, continued through contact with the Dutch enclave at Dejima in Nagasaki. The Edo period also gave rise to *kokugaku* ("national studies"), the study of Japan by the Japanese.[35]

Modern era

On March 31, 1854, Commodore Matthew Perry and the "Black Ships" of the United States Navy forced the opening of Japan to the outside world with the Convention of Kanagawa. Subsequent similar treaties with Western countries in the Bakumatsu period brought economic and political crises. The resignation of the shogun led to the Boshin War and the establishment of a centralized state nominally unified under the Emperor (the Meiji Restoration).[36] Adopting Western political, judicial and military institutions, the Cabinet organized the Privy Council, introduced the Meiji Constitution, and assembled the Imperial Diet. The Meiji Restoration transformed the Empire of Japan into an industrialized world power that pursued military conflict to expand its sphere of influence. After victories in the First Sino-Japanese War (1894–1895) and the Russo-Japanese War (1904–1905), Japan gained control of Taiwan, Korea, and the southern half of Sakhalin.[37] Japan's population grew from 35 million in 1873 to 70 million in 1935.[38]

The early 20th century saw a brief period of "Taishō democracy" overshadowed by increasing expansionism and militarization. World War I enabled Japan, on the side of the victorious Allies, to widen its influence and territorial holdings. It continued its expansionist policy by occupying Manchuria in 1931; as a result of international condemnation of this occupation, Japan resigned from the League of Nations two years later. In 1936, Japan signed the Anti-Comintern Pact with Nazi Germany, and the 1940 Tripartite Pact made it one of the Axis Powers.[39] In 1941, Japan negotiated the Soviet–Japanese Neutrality Pact.[40]

The Meiji Emperor (1868–1912), in whose name imperial rule was restored at the end of the Tokugawa shogunate

The Empire of Japan invaded other parts of China in 1937, precipitating the Second Sino-Japanese War (1937–1945). In 1940, the Empire then invaded French Indochina, after which the United States placed an oil embargo on Japan.[41] On December 7, 1941, Japan attacked the US naval base at Pearl Harbor and declared war, bringing the US into World War II.[42][43] After the Soviet invasion of Manchuria and the atomic bombings of Hiroshima and Nagasaki in 1945, Japan agreed to an unconditional surrender on August 15.[44] The war cost Japan and the rest of the Greater East Asia Co-Prosperity Sphere millions of lives and left much of the nation's industry and infrastructure destroyed. The Allies (led by the US) repatriated millions of ethnic Japanese from colonies and military camps throughout Asia, largely eliminating the Japanese empire and restoring the independence of its conquered territories.[45] The Allies also convened the International Military Tribunal for the Far East on May 3, 1946 to prosecute some Japanese leaders for war crimes. However, the bacteriological research units and members of the imperial family involved in the war were exonerated from criminal prosecutions by the Supreme Allied Commander despite calls for trials for both groups.[46]

In 1947, Japan adopted a new constitution emphasizing liberal democratic practices. The Allied occupation ended with the Treaty of San Francisco in 1952[47] and Japan was granted membership in the United Nations in 1956. Japan later achieved rapid growth to become the second-largest economy in the world, until surpassed by China in 2010. This ended in the mid-1990s when Japan suffered a major recession. In the beginning of the 21st century, positive growth has signaled a gradual economic recovery.[48] On March 11, 2011, Japan suffered the strongest earthquake in its recorded history; this triggered the Fukushima I nuclear accidents, one of the worst disasters in the history of nuclear power.[49]

Politics

Main articles: Politics of Japan and Government of Japan

Japan is a constitutional monarchy where the power of the Emperor is very limited. As a ceremonial figurehead, he is defined by the constitution as "the symbol of the state and of the unity of the people". Power is held chiefly by the Prime Minister of Japan and other elected members of the Diet, while sovereignty is vested in the Japanese people.[50] Akihito is the current Emperor of Japan; Naruhito, Crown Prince of Japan, stands as next in line to the throne.

Emperor Akihito and Empress Michiko

Japan's legislative organ is the National Diet, a bicameral parliament. The Diet consists of a House of Representatives with 480 seats, elected by popular vote every four years or when dissolved, and a House of Councillors of 242 seats, whose popularly-elected members serve six-year terms. There is universal suffrage for adults over 20 years of age,[2] with a secret ballot for all elected offices.[50] In 2009, the social liberal Democratic Party of Japan took power after 54 years of the liberal conservative Liberal Democratic Party's rule.[51] The Prime Minister of Japan is the head of government and is appointed by the Emperor after being designated by the Diet from among its members. The Prime Minister is the head of the Cabinet and appoints and dismisses the Ministers of State. Naoto Kan was designated by the Diet to replace Yukio Hatoyama as the Prime Minister of Japan on June 2, 2010.[52] Although the Prime Minister is formally appointed by the Emperor, the Constitution of Japan explicitly requires the Emperor to appoint whoever is designated by the Diet. Emperor Akihito formally appointed Kan as the country's 94th Prime Minister on June 8.[53]

Historically influenced by Chinese law, the Japanese legal system developed independently during the Edo period through texts such as *Kujikata Osadamegaki*.[54] However, since the late 19th century the judicial system has been largely based on the civil law of Europe, notably Germany. For example, in 1896, the Japanese government established a civil code based on a draft of the German Bürgerliches Gesetzbuch; with post–World War II modifications, the code remains in effect.[55] Statutory law originates in Japan's legislature and has the rubber stamp of the Emperor. The Constitution requires that the Emperor promulgate legislation passed by the Diet, without specifically giving him the power to oppose legislation.[50] Japan's court system is divided into four basic tiers: the Supreme Court and three levels of lower courts.[56] The main body of Japanese statutory law is called the Six Codes.[57]

Foreign relations and military

Main articles: Foreign relations of Japan and Japan Self-Defense Forces

Japan is a member of the G8, APEC, and "ASEAN Plus Three", and is a participant in the East Asia Summit. Japan signed a security pact with Australia in March 2007[58] and with India in October 2008.[59] It is the world's third largest donor of official development assistance after the United States and France, donating US$9.48 billion in 2009.[60]

JDS *Kongō* (DDG-173) guided missile destroyer launching a Standard Missile 3 anti-ballistic missile.

Japan has close economic and military relations with the United States; the US-Japan security alliance acts as the cornerstone of the nation's foreign policy.[61] A member state of the United Nations since 1956, Japan has served as a non-permanent Security Council member for a total of 19 years, most recently for 2009 and 2010. It is one of the G4 nations seeking permanent membership in the Security Council.[62]

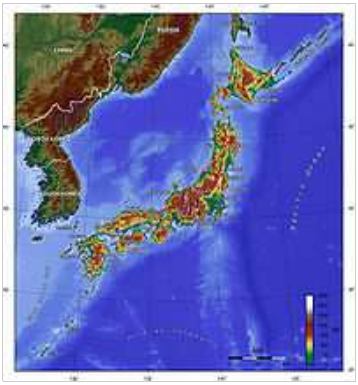
Japan is engaged in several territorial disputes with its neighbors: with Russia over the South Kuril Islands, with South Korea over the Liancourt Rocks, with China and Taiwan over the Senkaku Islands, and with China over the EEZ around Okinotorishima.[63] Japan also faces an ongoing dispute with North Korea over the latter's abduction of Japanese citizens and its nuclear weapons and missile program (see also Six-party talks).[64]

Japan maintains one of the largest military budgets of any country in the world.[65] Japan contributed non-combatant troops to the Iraq War but subsequently withdrew its forces.[66] The Japan Maritime Self-Defense Force is a regular participant in RIMPAC maritime exercises.[67]

Japan's military is restricted by Article 9 of the Japanese Constitution, which renounces Japan's right to declare war or use military force in international disputes. Japan's military is governed by the Ministry of Defense, and primarily consists of the Japan Ground Self-Defense Force (JGSDF), the Japan Maritime Self-Defense Force (JMSDF) and the Japan Air Self-Defense Force (JASDF). The forces have been recently used in peacekeeping operations; the deployment of troops to Iraq marked the first overseas use of Japan's military since World War II.[66] Nippon Keidanren has called on the government to lift the ban on arms exports so that Japan can join multinational projects such as the Joint Strike Fighter.[68]

Administrative divisions

Main articles: Prefectures of Japan, Regions of Japan, Cities of Japan, Towns of Japan, and Villages of Japan



Japan consists of forty-seven prefectures, each overseen by an elected governor, legislature and administrative bureaucracy. Each prefecture is further divided into cities, towns and villages.[69] The nation is currently undergoing administrative reorganization by merging many of the cities, towns and villages with each other. This process will reduce the number of sub-prefecture administrative regions and is expected to cut administrative costs.[70]

Geography

Main articles: Geography of Japan and Geology of Japan

Japan has a total of 6,852 islands extending along the Pacific coast of East Asia.[71][72] The country, including all of the islands it controls, lies between latitudes 24° and 46°N, and longitudes 122° and 146°E. The main islands, from north to south, are Hokkaidō, Honshū, Shikoku and Kyūshū. The Ryūkyū Islands, including Okinawa, are a chain to the south of Kyūshū. Together they are often known as the Japanese Archipelago.[73] About 73 percent of Japan is forested, mountainous, and unsuitable for agricultural, industrial, or residential use.[2][74] As a result, the habitable zones, mainly located in coastal areas, have extremely high population densities. Japan is one of the most densely populated countries in the world.[75]

Topographic map of the Japanese Archipelago

The islands of Japan are located in a volcanic zone on the Pacific Ring of Fire. They are primarily the result of large oceanic movements occurring over hundreds of millions of years from the mid-Silurian to the Pleistocene as a result of the subduction of the Philippine Sea Plate beneath the continental Amurian Plate and Okinawa Plate to the south, and subduction of the Pacific Plate under the Okhotsk Plate to the north. Japan was originally attached to the eastern coast of the Eurasian continent. The subducting plates pulled Japan eastward, opening the Sea of Japan around 15 million years ago.[76] Japan has 108 active volcanoes. Destructive earthquakes, often resulting in tsunami, occur several times each century.[77] The 1923 Tokyo earthquake killed over 140,000 people.[78] More recent major quakes are the 1995 Great Hanshin earthquake and the 2011 Tōhoku earthquake, a 9.0-magnitude[79] quake which hit Japan on March 11, 2011, and triggered a large tsunami.[49]

Climate

Main article: Climate of Japan

Autumn leaves (momiji) at Kongōbu-ji on Mount Kōya, a UNESCO World Heritage Site

The climate of Japan is predominantly temperate, but varies greatly from north to south. Japan's geographical features divide it into six principal climatic zones: Hokkaidō, Sea of Japan, Central Highland, Seto Inland Sea, Pacific Ocean, and Ryūkyū Islands. The northernmost zone, Hokkaido, has a temperate climate with long, cold winters and cool summers. Precipitation is not heavy, but the islands usually develop deep snowbanks in the winter. In the Sea of Japan zone on Honshū's west coast, northwest winter winds bring heavy snowfall. In the summer, the region is cooler than the Pacific area, though it sometimes experiences extremely hot temperatures because of the foehn wind. The Central Highland has a typical inland climate, with large temperature differences between summer and winter, and between day and night; precipitation is light. The mountains of the Chūgoku and Shikoku regions shelter the Seto Inland Sea from seasonal winds, bringing mild weather year-round. The Pacific coast experiences cold winters with little snowfall and hot, humid summers because of the southeast seasonal wind. The Ryukyu Islands have a subtropical climate, with warm winters and hot summers. Precipitation is very heavy, especially during the rainy season.[80]

The average winter temperature in Japan is 5.1 °C (41.2 °F) and the average summer temperature is 25.2 °C (77.4 °F).[81] The highest temperature ever measured in Japan—40.9 °C (105.6 °F)—was recorded on August 16, 2007.[82] The main rainy season begins in early May in Okinawa, and the rain front gradually moves north until reaching Hokkaidō in late July. In most of Honshū, the rainy season begins before the middle of June and lasts about six weeks. In late summer and early autumn, typhoons often bring heavy rain.[83]

Biodiversity

Japan has nine forest ecoregions which reflect the climate and geography of the islands. They range from subtropical moist broadleaf forests in the Ryūkyū and Bonin Islands, to temperate broadleaf and mixed forests in the mild climate regions of the main islands, to temperate coniferous forests in the cold, winter portions of the northern islands.[84] Japan has over 90,000 species of wildlife, including the brown bear, the Japanese macaque, the Japanese raccoon dog, and the Japanese giant

salamander.[85] A large network of national parks has been established to protect important areas of flora and fauna as well as thirty-seven Ramsar wetland sites.[86][87]

Environment

Main article: Environmental issues in Japan

In the period of rapid economic growth after World War II, environmental policies were downplayed by the government and industrial corporations; as a result, environmental pollution was widespread in the 1950s and 1960s. Responding to rising concern about the problem, the government introduced several environmental protection laws in 1970.[88] The oil crisis in 1973 also encouraged the efficient use of energy due to Japan's lack of natural resources.[89] Current environmental issues include urban air pollution (NOx, suspended particulate matter, and toxics), waste management, water eutrophication, nature conservation, climate change, chemical management and international co-operation for conservation.[90]

Japan is one of the world's leaders in the development of new environment-friendly technologies, and is ranked 20th best in the world in the 2010 Environmental Performance Index.[91] As a signatory of the Kyoto Protocol, and host of the 1997 conference which created it, Japan is under treaty obligation to reduce its carbon dioxide emissions and to take other steps to curb climate change.[92]

Economy

Main article: Economy of Japan

The Tokyo Stock Exchange, the largest stock exchange in Asia.[93]

Some of the structural features for Japan's economic growth developed in the Edo period, such as the network of transport routes, by road and water, and the futures contracts, banking and insurance of the Osaka rice brokers.[94] During the Meiji period from 1868, Japan expanded economically with the embrace of the market economy.[95] Many of today's enterprises were founded at the time, and Japan emerged as the most developed nation in Asia.[96] The period of overall real economic growth from the 1960s to the 1980s has been called the Japanese post-war economic miracle: it averaged 7.5 percent in the 1960s and 1970s, and 3.2 percent in the 1980s and early 1990s.[97] Growth slowed markedly in the 1990s during what the Japanese call the Lost Decade, largely because of the after-effects of the Japanese asset price bubble and domestic policies intended to wring speculative excesses from the stock and real estate markets. Government efforts to revive economic growth met with little success and were further hampered by the global slowdown in 2000.[2] The economy showed strong signs of recovery after 2005; GDP growth for that year was 2.8 percent, surpassing the growth rates of the US and European Union during the same period.[98]

As of 2011, Japan is the third largest national economy in the world, after the United States and China, in terms of nominal GDP,[99] and the fourth largest national economy in the world, after the United States, China and India in terms of purchasing power parity.[7] As of January 2011, Japan's public debt was more than 200 percent of its annual gross domestic product, the largest of any nation in the world. In August 2011, Moody's rating has cut Japan's long-term sovereign debt rating one notch from Aa3 to Aa2 inline with the size of the country's deficit and borrowing level. The large budget deficits and government debt since the 2009 global recession and followed by earthquake and tsunami in March 2011 made the rating downgrade.[100] The service sector accounts for three quarters of the gross domestic product.[101] Japan has a large industrial capacity, and is home to some of the largest and most technologically advanced producers of motor vehicles, electronics, machine tools, steel and nonferrous metals, ships, chemical substances, textiles, and processed foods. Agricultural businesses in Japan cultivate 13 percent of Japan's land, and Japan accounts for nearly 15 percent of the global fish catch, second only to China.[2] As of 2010, Japan's labor force consisted of some 65.9 million workers.[102] Japan has a low unemployment rate of around four percent. Almost one in six Japanese, or 20 million people, lived in poverty in 2007.[103] Housing in Japan is characterized by limited land supply in urban areas.[104]

Japan's exports amounted to US$4,210 per capita in 2005. Japan's main export markets are China (18.88 percent), the United States (16.42 percent), South Korea (8.13 percent), Taiwan (6.27 percent) and Hong Kong (5.49 percent) as of 2009. Its main

exports are transportation equipment, motor vehicles, electronics, electrical machinery and chemicals.[2] Japan's main import markets as of 2009 are China (22.2 percent), the US (10.96 percent), Australia (6.29 percent), Saudi Arabia (5.29 percent), United Arab Emirates (4.12 percent), South Korea (3.98 percent) and Indonesia (3.95 percent). Its main imports are machinery and equipment, fossil fuels, foodstuffs (in particular beef), chemicals, textiles and raw materials for its industries.[106] By market share measures, domestic markets are the least open of any OECD country.[107] Junichiro Koizumi's administration began some pro-competition reforms, and foreign investment in Japan has soared.[108]

A plug-in hybrid car manufactured by Toyota, one of the world's largest carmakers. Japan is the second-largest producer of automobiles in the world.[105]

Japan ranks 12th of 178 countries in the 2008 Ease of Doing Business Index and has one of the smallest tax revenues of the developed world. The Japanese variant of capitalism has many distinct features: keiretsu enterprises are influential, and lifetime employment and seniority-based career advancement are relatively common in the Japanese work environment.[107][109] Japanese companies are known for management methods like "The Toyota Way", and shareholder activism is rare.[110] Some of the largest enterprises in Japan include Toyota, Nintendo, NTT DoCoMo, Canon, Honda, Takeda Pharmaceutical, Sony, Panasonic, Toshiba, Sharp, Nippon Steel, Nippon Oil, and Seven & I Holdings Co.[111] It has some of the world's largest banks, and the Tokyo Stock Exchange (known for its Nikkei 225 and Topix indices) stands as the second largest in the world by market capitalization.[112] Japan is home to 326 companies from the Forbes Global 2000 or 16.3 percent (as of 2006).[113]

Science and technology

Main article: Science and technology in Japan

Japan is a leading nation in scientific research, particularly technology, machinery and biomedical research. Nearly 700,000 researchers share a US$130 billion research and development budget, the third largest in the world.[114] Japan is a world leader in fundamental scientific research, having produced fifteen Nobel laureates in either physics, chemistry or medicine,[115] three Fields medalists,[116] and one Gauss Prize laureate.[117] Some of Japan's more prominent technological contributions are in the fields of electronics, automobiles, machinery, earthquake engineering, industrial robotics, optics, chemicals, semiconductors and metals. Japan leads the world in robotics production and use, possessing more than half (402,200 of 742,500) of the world's industrial robots.[118]

H-II Transfer Vehicle

The Japan Aerospace Exploration Agency (JAXA) is Japan's space agency; it conducts space, planetary, and aviation research, and leads development of rockets and satellites. It is a participant in the International Space Station: the Japanese Experiment Module (Kibo) was added to the station during Space Shuttle assembly flights in 2008.[119] Japan's plans in space exploration include: launching a space probe to Venus, *Akatsuki*;[120][121] developing the *Mercury Magnetospheric Orbiter* to be launched in 2013;[122][123] and building a moon base by 2030.[124] On September 14, 2007, it launched lunar explorer "*SELENE*" (**Sel**enological and **En**gineering **E**xplorer) on an H-IIA (Model H2A2022) carrier rocket from Tanegashima Space Center. *SELENE* is also known as *Kaguya*, after the lunar princess of *The Tale of the Bamboo Cutter*.[125] *Kaguya* is the largest lunar mission since the Apollo program. Its purpose is to gather data on the moon's origin and evolution. It entered a lunar orbit on October 4,[126][127] flying at an altitude of about 100 km (62 mi).[128] The probe's mission was ended when it was deliberately crashed by JAXA into the Moon on 11 June 2009.[129]

Infrastructure

Main articles: Energy in Japan and Transport in Japan

As of 2008, 46.4 percent of energy in Japan is produced from petroleum, 21.4 percent from coal, 16.7 percent from natural gas, 9.7 percent from nuclear power, and 2.9 percent from hydro power. Nuclear power produced 25.1 percent of Japan's electricity, as of 2009.[131] However, in the wake of the Tohoku earthquake and the Fukushima Daiichi nuclear disaster, some nuclear reactors have been taken off-line and reliance on fossil fuels is higher.[132] Given its heavy dependence on imported

Nozomi Shinkansen or 'Bullet train' at Tokyo Station[130]

energy,[133] Japan has aimed to diversify its sources and maintain high levels of energy efficiency.[134]

Japan's road spending has been extensive.[135] Its 1.2 million kilometers of paved road are the main means of transportation.[136] A single network of high-speed, divided, limited-access toll roads connects major cities and is operated by toll-collecting enterprises. New and used cars are inexpensive; car ownership fees and fuel levies are used to promote energy efficiency. However, at just 50 percent of all distance traveled, car usage is the lowest of all G8 countries.[137]

Dozens of Japanese railway companies compete in regional and local passenger transportation markets; major companies include seven JR enterprises, Kintetsu Corporation, Seibu Railway and Keio Corporation. Some 250 high-speed Shinkansen trains connect major cities and Japanese trains are known for their safety and punctuality.[138][139] Proposals for a new Maglev route between Tokyo and Osaka are at an advanced stage.[140] There are 173 airports in Japan; the largest domestic airport, Haneda Airport, is Asia's second-busiest airport.[141] The largest international gateways are Narita International Airport, Kansai International Airport and Chūbu Centrair International Airport.[142] Nagoya Port is the country's largest and busiest port, accounting for 10 percent of Japan's trade value.[143]

Demographics

Main articles: Demographics of Japan, Japanese people, and Racial issues in Japan

Japan's population is estimated at around 127.3 million.[2] Japanese society is linguistically and culturally homogeneous,[144] composed of 98.5% ethnic Japanese,[145] with small populations of foreign workers.[144] Zainichi Koreans,[146] Zainichi Chinese, Filipinos, Brazilians mostly of Japanese descent,[147] and Peruvians mostly of Japanese descent are among the small minority groups in Japan.[148] In 2003, there were about 134,700 non-Latin American Western and 345,500 Latin American expatriates, 274,700 of whom were Brazilians (said to be primarily Japanese descendants, or *nikkeijin*, along with their spouses),[147] the largest community of Westerners.[149]

The most dominant native ethnic group is the Yamato people; primary minority groups include the indigenous Ainu[150] and Ryukyuan peoples, as well as social minority groups like the *burakumin*.[151] There are persons of mixed ancestry incorporated among the 'ethnic Japanese' or Yamato, such as those from Ogasawara Archipelago where roughly one-tenth of the Japanese population can have European, American, Micronesian and/or Polynesian backgrounds, with some families going back up to seven generations.[152] In spite of the widespread belief that Japan is ethnically homogeneous (in 2009, foreign-born non-naturalized workers made up only 1.7% of the total population),[153] also due to the absence of ethnicity and/or race statistics for Japanese nationals, at least one analysis describes Japan as a multiethnic society, for example, John Lie.[154] Internal to Japan, individuals may be described as Jomon or Yayoi although the distinction is largely facetious (i.e., almost all modern Japanese DNA is Yayoi).

Japan has the longest overall life expectancy at birth of any country in the world: 83.5 years for persons born in the period 2010–2015.[11][12] The Japanese population is rapidly aging as a result of a post–World War II baby boom followed by a decrease in birth rates. In 2009, about 22.7 percent of the population was over 65, by 2050 almost 40 percent of the population will be aged 65 and over, as projected in December 2006.[155] The changes in demographic structure have created a number of social issues, particularly a potential decline in workforce population and increase in the cost of social security benefits like the public pension plan. A growing number of younger Japanese are preferring not to marry or have families.[156] In 2011, Japan's population dropped for a fifth year, falling by 204,000 people to 126.24 million people. This is the greatest decline since at least 1947, the first year for which government data is available. The 1.26 million deaths included 15,844 people killed and 3,451 left missing by the tsunami.[157]

Japan's population is expected to drop to 95 million by 2050,[155][158] demographers and government planners are currently in a heated debate over how to cope with this problem.[156] Immigration and birth incentives are sometimes suggested as a solution

to provide younger workers to support the nation's aging population.[159][160] Japan accepts a steady flow of 15,000 *new Japanese citizens* by *naturalization* (帰化) per year.[161] According to the UNHCR, in 2007 Japan accepted just 41 refugees for resettlement, while the US took in 50,000.[162]

Japan suffers from a high suicide rate.[163][164] In 2009, the number of suicides exceeded 30,000 for the twelfth straight year.[165] Suicide is the leading cause of death for people under 30.[166]

Religion

Main article: Religion in Japan

Upper estimates suggest that 84–96 percent of the Japanese population subscribe to Buddhism or Shinto, including a large number of followers of a syncretism of both religions.[2][168] However, these estimates are based on people affiliated with a temple, rather than the number of true believers. Other studies have suggested that only 30 percent of the population identify themselves as belonging to a religion.[169] Nevertheless the level of participation remains high, especially during festivals and occasions such as the first shrine visit of the New Year. Taoism and Confucianism from China have also influenced Japanese beliefs and customs.[170] Fewer than one percent of Japanese are Christian.[171] In addition, since the mid-19th century numerous new religious movements have emerged in Japan.[172]

Torii of Itsukushima Shrine near Hiroshima, one of the Three Views of Japan and a UNESCO World Heritage Site

Languages

Main article: Japanese language

More than 99 percent of the population speaks Japanese as their first language.[2] It is an agglutinative language distinguished by a system of honorifics reflecting the hierarchical nature of Japanese society, with verb forms and particular vocabulary indicating the relative status of speaker and listener. Japanese writing uses kanji (Chinese characters) and two sets of kana (syllabaries based on simplified Chinese characters), as well as the Latin alphabet and Arabic numerals.[173]

Besides Japanese, the Ryukyuan languages, also part of the Japonic language family, are spoken in Okinawa; however, few children learn these languages.[174] The Ainu language, which is unrelated to Japanese or any other known language, is moribund, with only a few elderly native speakers remaining in Hokkaido.[175] Most public and private schools require students

to take courses in both Japanese and English.[176]

Education

Main article: Education in Japan

Announcement of the results of the entrance examinations to the University of Tokyo

Primary schools, secondary schools and universities were introduced in 1872 as a result of the Meiji Restoration.[177] Since 1947, compulsory education in Japan comprises elementary and middle school, which together last for nine years (from age 6 to age 15). Almost all children continue their education at a three-year senior high school, and, according to the MEXT, as of 2005 about 75.9 percent of high school graduates attend a university, junior college, trade school, or other higher education institution.[178] The two top-ranking universities in Japan are the University of Tokyo and Kyoto University.[179][180] The Programme for International Student Assessment coordinated by the OECD currently ranks the overall knowledge and skills of Japanese 15-year-olds as sixth best in the world.[181]

Health

Main article: Health care in Japan

In Japan, health care is provided by national and local governments. Payment for personal medical services is offered through a universal health insurance system that provides relative equality of access, with fees set by a government committee. People without insurance through employers can participate in a national health insurance program administered by local governments. Since 1973, all elderly persons have been covered by government-sponsored insurance.[182] Patients are free to select the physicians or facilities of their choice.[183]

Culture

Main articles: Culture of Japan, Japanese popular culture, and Japanese folklore

Kinkaku-ji or 'The Temple of the Golden Pavilion' in Kyoto, Special Historic Site, Special Place of Scenic Beauty, and UNESCO World Heritage Site; its torching by a monk in 1950 is the subject of a novel by Mishima

Japanese culture has evolved greatly from its origins. Contemporary culture combines influences from Asia, Europe and North America. Traditional Japanese arts include crafts such as ceramics, textiles, lacquerware, swords and dolls; performances of bunraku, kabuki, noh, dance, and rakugo; and other practices, the tea ceremony, ikebana, martial arts, calligraphy, origami, onsen, Geisha and games. Japan has a developed system for the protection and promotion of both tangible and intangible Cultural Properties and National Treasures.[184] Sixteen sites have been inscribed on the UNESCO World Heritage List.[185]

Art

Main articles: Japanese art, Japanese architecture, Japanese gardens, and Japanese aesthetics

The Great Wave off Kanagawa,

The Shrines of Ise have been celebrated as the prototype of Japanese architecture.[186] Largely of wood, traditional housing and many temple buildings see the use of tatami mats and sliding doors that break down the distinction between rooms and indoor and outdoor space.[187] Japanese sculpture, largely of wood, and Japanese painting are among the oldest of the Japanese arts, with early figurative paintings dating back to at least 300 BC. The history of Japanese painting exhibits synthesis and competition between native Japanese aesthetics and adaptation of imported ideas. The interaction between Japanese and European art has been significant: for example ukiyo-e prints, which began to be exported in the 19th century in the movement known as Japonism, had a significant influence on the development of modern art in the West, most notably on post-Impressionism.[188] Famous ukiyo-e artists include Hokusai and Hiroshige. The fusion of traditional woodblock printing

and Western art led to the creation of manga, a comic book format that is now popular within and outside Japan.[189] Manga-influenced animation for television and film is called anime. Japanese-made video game consoles have been popular since the 1980s.[190]

Music

Main article: Music of Japan

Japanese music is eclectic and diverse. Many instruments, such as the koto, were introduced in the 9th and 10th centuries. The accompanied recitative of the Noh drama dates from the 14th century and the popular folk music, with the guitar-like shamisen, from the sixteenth.[191] Western classical music, introduced in the late 19th century, now forms an integral part of Japanese culture. The imperial court ensemble Gagaku has influenced the work of some modern Western composers.[192] Notable classical composers from Japan include Toru Takemitsu and Rentarō Taki. Popular music in post-war Japan has been heavily influenced by American and European trends, which has led to the evolution of J-pop, or Japanese popular music.[193] Karaoke is the most widely practiced cultural activity in Japan. A 1993 survey by the Cultural Affairs Agency found that more Japanese had sung karaoke that year than had participated in traditional pursuits such as flower arranging (ikebana) or tea ceremonies.[194]

Literature

Main articles: Japanese literature and Japanese poetry

The earliest works of Japanese literature include the *Kojiki* and *Nihon Shoki* chronicles and the *Man'yōshū* poetry anthology, all from the 8th century and written in Chinese characters.[195][196] In the early Heian period, the system of phonograms known as *kana* (Hiragana and Katakana) was developed. *The Tale of the Bamboo Cutter* is considered the oldest Japanese narrative.[197] An account of Heian court life is given in *The Pillow Book* by Sei Shōnagon, while *The Tale of Genji* by Murasaki Shikibu is often described as the world's first novel.[198][199]

12th-century illustrated handscroll of *The Tale of Genji*, a National Treasure

During the Edo period, the chōnin ("townspeople") overtook the samurai aristocracy as producers and consumers of literature. The popularity of the works of Saikaku, for example, reveals this change in readership and authorship, while Bashō revivified the poetic tradition of the Kokinshū with his haikai (haiku) and wrote the poetic travelogue *Oku no Hosomichi*.[200] The Meiji era saw the decline of traditional literary forms as Japanese literature integrated Western influences. Natsume Sōseki and Mori Ōgai were the first "modern" novelists of Japan, followed by Ryūnosuke Akutagawa, Jun'ichirō Tanizaki, Yasunari Kawabata, Yukio Mishima and, more recently, Haruki Murakami. Japan has two Nobel Prize-winning authors—Yasunari Kawabata (1968) and Kenzaburō Ōe (1994).[197]

Cuisine

Main article: Japanese cuisine

The primary staple is Japanese rice. In the early modern era ingredients such as red meats that had previously not been widely used in Japan were introduced. Japanese cuisine is known for its emphasis on seasonality of food,[201] quality of ingredients and presentation. Japanese cuisine offers a vast array of regional specialties that use traditional recipes and local ingredients. The Michelin Guide has awarded Japanese cities more Michelin stars than the rest of the world combined.[202]

Breakfast at a ryokan or inn

Sports

Main article: Sport in Japan

Traditionally, sumo is considered Japan's national sport.[203] Japanese martial arts such as judo, karate and kendo are also widely practiced and enjoyed by spectators in the country. After the Meiji Restoration, many Western sports were introduced in

Japan and began to spread through the education system.[204] Japan hosted the Summer Olympics in Tokyo in 1964. Japan has hosted the Winter Olympics twice: Nagano in 1998 and Sapporo in 1972.[205]

Sumo wrestlers form around the referee during the ring-entering ceremony

The Japanese professional baseball league was established in 1936.[206] Today baseball is the most popular spectator sport in the country. Since the establishment of the Japan Professional Football League in 1992, association football has also gained a wide following.[207] Japan was a venue of the Intercontinental Cup from 1981 to 2004 and co-hosted the 2002 FIFA World Cup with South Korea.[208] Japan has one of the most successful football teams in Asia, winning the Asian Cup four times.[209] Also, Japan recently won the FIFA Women's World Cup in 2011.[210] Golf is also popular in Japan,[211] as are forms of auto racing like the Super GT series and Formula Nippon.[212]

Yuta Tabuse gained considerable international attention as he was Japan's first basketball player to play in the NBA.[213]

History of Japan

From Wikipedia, the free encyclopedia

The **history of Japan** encompasses the history of the islands of Japan and the Japanese people, spanning the ancient history of the region to the modern history of Japan as a nation state. Following the last ice age, around 12,000 BC, the rich ecosystem of the Japanese Archipelago fostered human development. The earliest-known pottery belongs to the Jōmon period. The first known written reference to Japan is in the brief information given in *Twenty-Four Histories* in the 1st century AD. The main cultural and religious influences came from China.

The first permanent capital was founded at Nara in 710 AD, which became a center of Buddhist art, religion and culture. The current imperial family emerged about 700 AD, but until 1868 (with few exceptions) had high prestige but little power. By 1550 or so political power was subdivided into several hundred local units, or "domains" controlled by local "daimyō" (lords), each with his own force of samurai warriors. Tokugawa Ieyasu came to power in 1600, gave land to his supporters, set up his "bakufu" (military government) at Edo (modern Tokyo). The "Tokugawa period" was prosperous and peaceful, but Japan deliberately terminated the Christian missions and cut off almost all contact with the outside world. In the 1860s the Meiji Period began, and the new national leadership systematically ended feudalism and transformed an isolated, underdeveloped island country into a world power that closely followed Western models. Democracy was problematic, because Japan's powerful military was semi-independent and overruled—or assassinated—civilians in the 1920s and 1930s. The military moved into China starting in 1931 but was defeated in the Pacific War by the United States and Britain.

Occupied by the U.S. after the war and stripped of its conquests, Japan was transformed into a peaceful and democratic nation. After 1950 it enjoyed very high economic growth rates, and became a world economic powerhouse, especially in automobiles and electronics. Since the 1990s economic stagnation has been a major issue, with an earthquake and tsunami in 2011 causing massive economic dislocations.

Japanese prehistory

Paleolithic Age

Main article: Japanese Paleolithic

Polished stone axes, excavated at Hinatabayashi B site, Shinano city, Nagano. Pre-Jōmon period, 30,000 BC. Tokyo National Museum

The Japanese Paleolithic age covers a lengthy period starting as early as 50,000 BC and ending sometime around 12,000 BC, at the end of the last ice age. Artifacts claimed to be older than ca. 38,000 BC are not generally accepted, and most historians therefore believe that the Japanese Paleolithic started after 38,000 BC.[1]

The Japanese archipelago would become disconnected from the mainland continent after the last ice age, around 11,000 BC. After a hoax by an amateur researcher, Shinichi Fujimura, had been exposed,[2] the Lower and Middle Paleolithic evidence reported by Fujimura and his associates has been rejected after thorough reinvestigation.

As a result of the fallout over the hoax, now only some Upper Paleolithic evidence (not associated with Fujimura) can possibly be considered as having been well established.

Ancient Japan

Jōmon period

A Middle Jōmon vessel (3000–2000 BCE)

Main article: Jōmon period

The Jōmon period lasted from about 14,000 until 300 BC. The first signs of civilization and stable living patterns appeared around 14,000 BC with the Jōmon culture, characterized by a Mesolithic to Neolithic semi-sedentary hunter-gatherer lifestyle of wood stilt house and pit dwellings and a rudimentary form of agriculture.

Weaving was still unknown at the time and clothes were often made of furs. The Jōmon people started to make clay vessels, decorated with patterns made by impressing the wet clay with braided or unbraided cord and sticks. Based on radio-carbon dating, some of the oldest surviving examples of pottery in the world can be found in Japan along with daggers, jade, combs made of shells, and various other household items dated to the 11th millennium BC.[3]

Alternatively, the Metropolitan Museum of Art's Timeline of Art History notes "Carbon-14 testing of the earliest known shards has yielded a production date of about 10,500 BC, but because this date falls outside the known chronology of pottery development elsewhere in the world, such an early date is not generally accepted.[4]

Calibrated radiocarbon measures of carbonized material from pottery artifacts: Fukui Cave 12500 ± 350 BP and 12500 ± 500 BP (Kamaki & Serizawa 1967), Kamikuroiwa rock shelter 12, 165 ± 350 years BP in Shikoku.[5] although the specific dating is disputed.

Clay figures known as dogū were also excavated. The household items suggest trade routes existed with places as far away as Okinawa.[*citation needed*] DNA analysis suggests that the Ainu, an indigenous people that live in Hokkaidō and the northern part of Honshū, are descended from the Jōmon and thus represent descendants of the first inhabitants of Japan.[*citation needed*]

Yayoi period

Main article: Yayoi period

A Yayoi period Dōtaku, 3rd century AD

The Yayoi period lasted from about 400 or 300 BC until 250 AD. This period followed the Jōmon period and completely supplanted it. This period is named after Yayoi town, the subsection of Bunkyō, Tokyo, where archaeological investigations uncovered its first recognized traces.

The start of the Yayoi period marked the influx of new practices such as weaving, rice farming, shamanism,[*citation needed*] and iron and bronze making. Bronze and iron appear to have been simultaneously introduced into Yayoi Japan. Iron was mainly used for agricultural and other tools, whereas, bronze was used for ritual and ceremonial artifacts. Some casting of bronze and iron began in Japan by about 100 BC, but the raw materials for both metals were introduced from the Asian continent.

Japan first appeared in written records in 57 AD with the following mention in China's Book of the Later Han:[6] "Across the ocean from Lelang are the people of Wa. Formed from more than one hundred tribes, they come and pay tribute frequently." The book also recorded that Suishō, the king of Wa, presented slaves to the Emperor An of Han in 107. The *Sanguo Zhi*, written in the 3rd century, noted that the country was the unification of some 30 small tribes or states and ruled by a shaman queen named Himiko of Yamataikoku.

During the Han and Wei dynasties, Chinese travelers to Kyūshū recorded its inhabitants and claimed that they were the descendants of the Grand Count (Tàibó) of the Wu. The inhabitants also show traits of the pre-sinicized Wu people with tattooing, teeth-pulling, and baby-carrying. The *Sanguo Zhi* records the physical descriptions which are similar to ones on *haniwa* statues, such as men wearing braided hair and tattoos and women wearing large, single-pieced clothing.

The Yoshinogari site in Kyūshū is the most famous archaeological site of the Yayoi period and reveals a large settlement continuously inhabited for several hundred years. Archaeological excavation has shown the most ancient parts to be from around 400 BC. It appears that the inhabitants had frequent communication and trade relations with the mainland. Today, some reconstructed buildings stand in the park on the archaeological site.[*citation needed*]

Kofun period

Main article: Kofun period

The Kofun period began around 250 AD, is named after the large tumulus burial mounds (*kofun*) that started appearing around that time.

The Kofun period (the *"Kofun-Jidai"*) saw the establishment of strong military states, each of them concentrated around powerful clans (or *zoku*). The establishment of the dominant Yamato polity was centered in the provinces of Yamato and Kawachi from the 3rd century AD till the 7th century, establishing the origin of the Japanese imperial lineage. And so the polity, by suppressing the clans and acquiring agricultural lands, maintained a strong influence in the western part of Japan.

Daisenryō Kofun, Osaka, 5th century.

Japan started to send tributes to Imperial China in the 5th century. In the Chinese history records, the polity was called Wa, and its five kings were recorded. Based upon the Chinese model, they developed a central administration and an imperial court system, with its society being organized into various occupation groups. Close relationships between the Three Kingdoms of Korea and Japan began during the middle of this period, around the end of the 4th century.

Classical Japan

Asuka period

Main article: Asuka period

Mural painting on the wall of the Takamatsuzuka Tomb, Asuka, Nara, 8th century

During the Asuka period (538 to 710), the proto-Japanese Yamato polity gradually became a clearly centralized state, defining and applying a code of governing laws, such as the Taika Reforms and Taihō Code.[7] Also during the same period, the Japanese developed strong economic ties with the Paikche or Baekje people, who lived on the southwestern coast of the Korean Peninsula. Good relations with the Baekje had begun in 391 when a Japanese expedition saved the King of Baekje and the Baekje people from their traditional enemies—the Koguryo people—who lived in the northern part of the Korean Peninsula.[8]

Indeed, Buddhism was introduced to Japan in 538 by Baekje people, to whom Japan continued to provide military support.[9] In Japan, however, Buddhism was promoted largely by the ruling class for their own purposes. Accordingly, in the early stages, Buddhism was not a popular religion with the common people of Japan.[10] However, the introduction of Buddhism led to a discontinuing of the practice of burying deceased people in large kofuns.

Prince Shōtoku came to power in Japan as Regent to Empress Suiko in 594. Empress Suiko had come to the throne as the niece of the previous Emperor—Sujun (588–593)--who had been assassinated in 593. Empress Suiko had also been married to a prior Emperor—Bidatsu (572–585), but she was the first female ruler of Japan since the legendary matriarchal times.[11]

As Regent to Empress Suiko, Prince Shotoku devoted his efforts to the spread of Buddhism and Chinese culture in Japan.[11] He is also credited with bringing relative peace to Japan through the proclamation of the Seventeen-article constitution, a Confucian style document that focused on the kinds of morals and virtues that were to be expected of government officials and the emperor's subjects. Buddhism would become a permanent part of Japanese culture.

A letter brought to the Emperor of China by an emissary from Japan in 607 stated that the "Emperor of the Land where the Sun rises (Japan) sends a letter to the Emperor of the land where Sun sets (China)",[12] thereby implying an equal footing with China which angered the Chinese emperor.[13]

Nara period

Main article: Nara period

The Great Buddha at Nara, 752 AD.

The Nara period of the 8th century marked the emergence of a strong Japanese state and is often portrayed as a golden age. In 710, the capital city of Japan was moved from Asuka to Nara.[14] Hall (1966) concludes that "Japan had been transformed from a loose federation of uji in the fifth century to an empire on the order of Imperial China in the eighth century. A new theory of state and a new structure of government supported the Japanese sovereign in the style and with the powers of an absolute monarch."[15] Traditional, political, and economic practices were now organized through a rationally structured government apparatus that legally defined functions and precedents. Lands were surveyed and registered with the state. A powerful new aristocracy emerged. This aristocracy controlled the state and was supported by taxes that were efficiently collected. The government built great public works, including government offices, temples, roads, and irrigation systems. A new system of land tenure and taxation, which was designed to widely spread land ownership throughout the rural population, was introduced. Such allotments tended to be about one acre. However, they could be as small as one-tenth of an acre. However, lots for slaves were about two-thirds the size of the allotments to free men. Allotments were reviewed every five years when the census was conducted.[16]

There was a cultural flowering during this period.[14] Soon, dramatic new cultural manifestations characterized the Nara period, which lasted four centuries.[17]

Following an imperial rescript by Empress Gemmei, the capital was moved to Heijō-kyō, present-day Nara, in 710. The city was modeled on Chang'an (now Xi'an), the capital of the Chinese Tang Dynasty.

During the Nara Period, political development was marked by a struggle between the imperial family and the Buddhist clergy,[16] as well as between the imperial family and the regents—the Fujiwara clan. Japan did enjoy peaceful relations with their traditional foes—the Silla people—who occupied the southeast coast of the Korean Peninsula. Japan also established formal relationships with the Tang dynasty of China.[18]

In 784, the capital was again moved to Nagaoka-kyō to escape the Buddhist priests; in 794, it was moved to Heian-kyō, present-day Kyōto. The capital was to remain in Kyoto until 1868.[19] In the religious town of Kyoto, Buddhism and Shinto began to form a syncretic system.[20]

Historical writing in Japan culminated in the early 8th century with the massive chronicles, the *Kojiki* (*The Record of Ancient Matters*, 712) and the *Nihon Shoki* (*Chronicles of Japan*, 720). These chronicles give a legendary account of Japan's beginnings, today known as the Japanese mythology. According to the myths contained in these chronicles, Japan was founded in 660 BC by the ancestral Emperor Jimmu, a direct descendant of the Shintō deity, Amaterasu (Sun Goddess). The myths recorded that Jimmu started a line of emperors that remains to this day. Historians assume that the myths partly describe historical facts, but the first emperor who actually existed was Emperor Ōjin, though the date of his reign is uncertain. Since the Nara period, actual political power has not been in the hands of the emperor but has, instead, been exercised at different times by the court nobility, warlords, the military, and, more recently, the Prime Minister of Japan.

Heian period

Main article: Heian period

Miniature model of Heian-kyō

The Heian period, lasting from 794 to 1185, is the final period of classical Japanese history. It is considered the peak of the Japanese imperial court and noted for its art, especially its poetry and literature. In the early 11th century, Lady Shikibu Murasaki wrote Japan's (and one of the world's) oldest surviving novels, *The Tale of Genji*.[21] The Man'yōshū[22] and Kokin Wakashū,[23] the oldest existing collections of Japanese poetry, were compiled during this period.

Strong differences from mainland Asian cultures emerged (such as an indigenous writing system, the kana). Due to the decline of the Tang Dynasty,[24] Chinese influence had reached its peak, and then effectively ended, with the last imperially sanctioned mission to Tang China in 838, although trade expeditions and Buddhist pilgrimages to China continued.[25]

A handscroll painting dated circa 1130, illustrating a scene from the "Bamboo River" chapter of the *Tale of Genji*

Political power in the imperial court was in the hands of powerful aristocratic families (*kuge*), especially the Fujiwara clan, who ruled under the titles Sesshō and Kampaku (imperial regents). The Fujiwara clan obtained almost complete control over the imperial family. However, the Fugiwara Regents who advised the Imperial Court were content to derive their authority from imperial line. This meant that the Fujiwara authority could always be challenged by a vigorous emperor. Fujiwara domination of the Court during the time from 858 until about 1160 led to this period being called "the Fujiwara Period."[26] The Fujiwara clan gained this ascendancy because of their matrimonial links with the imperial family.[27] Indeed, because of the number of emperors that were born to Fujiwara mothers, the Fujiwara Regents became so closely identified with the imperial family, that people saw no difference between the "direct rule" by the imperial family and the rule of the Fujiwara Regents.[28] Accordingly, when dissatisfaction with the government arose resulting in the Hogen Rebellion (1156–1158), the Heiji Rebellion (1160) and the Gempei War (1180–1185), the target of the dissatisfaction was the Fujiwara Regents, as well as the Imperial family. The Gempei War ended in 1185 with the naval battle of Dan-no-ura in which the Minamoto clan defeated the Taira clan. (The battle of Den-no-ura and the Gempei War is mentioned in a story told by the late Carl Sagan in the second episode of the 1980 TV miniseries *Cosmos*.) In 1192, the Court appointed Yoritomo of the Minamoto clan to a number of high positions in government. These positions were consolidated and Yoritomo became the first person to be designated the *Seii-tai-shogun* or "Shogun."[29] Yoritomo then defeated the Fujiwara clan in a military campaign in the north of Japan. This spelled the end of the Fujiwara Period and the end of Fujiwara influence over the government.

The end of the period saw the rise of various military clans. The four most powerful clans were the Minamoto clan, the Taira clan, the Fujiwara clan, and the Tachibana clan. Towards the end of the 12th century, conflicts between these clans turned into civil war, such as the Hōgen (1156–1158). The Hogen Rebellion was of cardinal importance to Japan, since it was the turning point that led to the first stages of the development of feudalism in Japan.[30] The Heiji Rebellion of 1160 also occurred during this period[31] and the uprising was followed by the Genpei War, from which emerged a society led by samurai clans under the political rule of the shōgun--the beginnings of feudalism in Japan.

Buddhism began to spread during the Heian Period. However, Buddhism was split between two sects—the Tendai sect which had been brought to Japan from China by Saichō (767–822) and the Shingon sect which had been introduced from China by Kūkai (774–835). Whereas, the Tendai sect tended to be a monastic form of Buddhism which established isolated monasteries or temples on the tops of mountains,[32] the Shingon variation

of Buddhism was a less philosophical and more practical and more popular version of the religion.[33] Pure Land Buddhism was a form of Buddhism which was much simpler than either the Tendai or Shingon versions of Buddhism. Pure Land Buddhism became very popular in Japan during a time of degeneration and trouble in the latter half of the 11th century.[34]

Byōdō-in (1053) is a temple of Pure Land Buddhism. It was registered to the UNESCO World Heritage Site.

Feudal Japan (1185–1868)

The "feudal" period of Japanese history, dominated by the powerful regional families (daimyō) and the military rule of warlords (shōgun), stretched from 1185 to 1868. The emperor remained but was mostly kept to a *de jure* figurehead ruling position, and the power of merchants was weak. This time is usually divided into periods following the reigning family of the shōgun.

Kamakura period

Main article: Kamakura period

The Kamakura period, 1185 to 1333, is a period that marks the governance of the Kamakura shogunate and the transition to the Japanese "medieval" era, a nearly 700-year period in which the emperor, the court, and the traditional central government were left intact but largely relegated to ceremonial functions. Civil, military, and judicial matters were controlled by the *bushi* (samurai) class, the most powerful of whom was the *de facto* national ruler, the shōgun. This period in Japan differed from the old *shōen* system in its pervasive military emphasis.

In 1185, Minamoto no Yoritomo and his younger brother, Yoshitsune defeated the rival Taira clan at the naval battle of Dan-no-ura.[35] The outcome of the Battle of Dan-no-ura meant the rise of the warrior or samurai class. Under the feudal structure that was arising in Japan, the samurai owed military service and loyalty to the emperor. The Samurai, in turn required loyalty and work from the peasants who rented land from them and served them. On occasion the samurai would conduct warfare against each other, which caused disruption to the society. In 1192, Yoritomo was appointed *Seii Tai-Shōgun* by the emperor.[29] The shogun was expected to run the day-to-day affairs of the government on behalf of the emperor and to keep the samurai in line. During this time the Imperial Court remained in their capital of Kyoto. Society at Kyoto was regarded as more refined and cultured than the rest of the country.[36] However, Yoritomo established his base of power called the Bakufu in the seaside town of Kamakura.[29] Yoritomo became the first in a line of shōguns who ruled from Kamakura. Thus, the period of time from 1185 until 1334 became known as the period of the Kamakura Shogunate. Society in the military or samurai capital of Kamakura was regarded as rough and ignorant by comparison with the refined society at Kyoto.[36] However, Yoritomo wished to free his government from the pernicious influence of the bureaucracy in Kyoto and, thus remained in Kamakura. The Kamakura Shogunate based itself on the interests of this rising class rather than on the bureaucracy at Kyoto. Accordingly, the preference of Kamakura as the capital of the shogunate fit this new warrior class.

Yoritomo was married to Hōjō Masako of the Hōjō clan, herself a Sensei (master) in kyudō (the art of the bow) and kendō (the art of the sword), and she contributed much to his ascent and organizing the Bafuku. However, after Yoritomo's death, another warrior clan, the Hōjō, came to rule as *shikken* (regents) for the shōgun.

A traumatic event of the period was the Mongol invasions of Japan in 1274 and in 1281. Massive Mongol forces with superior naval technology and weaponry attempted a full-scale invasion of the Japanese islands in both

Japanese samurai boarding Mongol ships in 1281

1274 and in 1281. However, a famous typhoon referred to as *kamikaze* (translating as *divine wind* in Japanese) is credited with devastating both Mongol invasion forces and saving Japan.[37] Although the Japanese were successful in stopping the Mongols, the invasion attempt had devastating domestic repercussions, leading to the extinction of the Kamakura shogunate. For two decades after the second failed Mongol invasion of Japan, the Japanese remained fearful of a third Mongol attempt. (Indeed, Japan could not rest assured of peace until the death of Kublai Khan in 1294.) Consequently, the shogun required the various samurai spend money lavishly on armed forces in order to remain in a high state of readiness for the expected third attack by the Mongols. This vast expenditure of money had a ruinous effect on the economy of Japan. The Kamakura Shogunate could perhaps have survived the strain of the continual military readiness and the resultant bad economy if that had been the only problem. However, upon the death of Emperor Go-Saga in 1272, there arose a bitter dispute over succession to the throne within the imperial family.

Kemmu Restoration

Main article: Kemmu Restoration

In 1333, the Kamakura shogunate was overthrown in a coup d'état known as the Kemmu Restoration, led by Emperor Go-Daigo and his followers (Ashikaga Takauji, Nitta Yoshisada, and Kusunoki Masashige). Emperor Go-Daigo had come to the throne in 1318. From the beginning, Go-Daigo had made it clear that he was going not going to abdicate and become a "cloistered emperor" and he was intending to rule Japan from his palace in Kyoto independent from the Kamakura Shogunate.[38] War was conducted against the Kamakura Shogunate by Go-Daigo and his supporters. The Imperial House was restored to political influence. The government was now a civilian government rather than the military-run government of the Kamakura Shogunate. However, this did not last. The warrior class throughout Japan was in tumult.[39] Furthermore, Go-Daigo was not a natural leader. Indeed, his personality tended to alienate people.[39] One of those that was alienated by Go-Daigo, was his former supporter, Ashikaga Takauji. Ashikaga Takauji found that he had support from other regional warlords in Japan. In early 1335, Ashikaga left Kyoto and moved to Kamakura.[40] Ashikaga, then began assuming powers that had not been given him by the Emperor. This brought Ashikaga Takauji in direct conflict with the governmental officials in Kyoto, including his old allies, Nitta Yoshisada and Kusunoki Masashige. However, by assuming shogun-like powers, Ashikaga appeared to be standing up for the warrior class against the civilian authority that seemed intent on destroying the power of the warriors. Accordingly, Ashikaga Takauji was joined in Kamakura by a number of other regional warlords. On November 17, 1335, Ashikaga Tadayoshi, brother of Takauji, issued a call (in the name of his brother Takauji) asking the warriors throughout the country to "assemble your clansmen and hasten to join me."[41] Dissatisfaction with Go-Daigo was so strong that a majority of the warriors in Japan answered this call.[42]

After initial defeats on the main island of Honshu, Ashikaga and his troops retreated to the southern island of Kyushu, where he immediately won over most of the regional warlords to his side and defeated the few who remained loyal to Go-Daigo. With all of the island of Kyushu in his hands, Ashikaga Takauji invaded the main island of Honshu again and, in 1336, at the decisive Battle of Minatogawa, or the Battle of Minato River, defeated the armed forces of Nitta Yoshisada and Kusunoki Masanori and the other loyalist forces of Go-Daigo. The victorious warrior-class forces gathered around the town of Kamakura became known as the "Northern Court." The Loyalist forces may have been defeated but they survived to fight on. They formed the "Southern Court" and upon the death of Go-Daigo in the late summer of 1339, they rallied around the person of Prince

Kazuhito who was enthroned as Emperor Kōgon. Prince Kazuhito was from a younger line of descendents in the Imperial family and, thus, his supporters were supporters of the "junior line." On September 20, 1336, the Ashikaga coalition of samurai opposed to Go-Daigo enthroned Prince Yutahito as Emperor Kōmyo.[43] Prince Yutahito was from the "senior line" of descendents in the Imperial family. Accordingly, the civil war between the warriors led by the Ashikaga clan—the Northern Court on the one hand and the "Loyalist" Southern Court on the other hand, became a civil war of imperial succession between followers of the "senior" and "junior" lines of succession in the Imperial family. The warriors and the Ashikaga clan captured Kyoto and proceeded to move their forces from Kamakura to Kyoto. Meanwhile, the Southern Court deposed from their capital in Kyoto, now established themselves in Yoshino.

The Ashikaga Shogunate was never able to control and centralize the government over the entire country. Rather they ruled because of a narrow and shifting majority of warlords who supported them. There were always some warlords that acted independently of either the Northern Court or the Southern Court. Later, during the war of succession, these independent warlords enthroned a third emperor—Emperor Suko. So the civil war of succession became a three-cornered affair. The prestige of the throne declined as the civil war continued. This had the effect of bolstering the idea that the Imperial family should be removed from politics and strengthened the need for a shogun to be appointed to run the government on a day-to-day basis.

In 1338, Ashikaga Takauji was officially appointed as Shogun by the new Emperor. He was the first of a line of Ashikaga shoguns. The attempted restoration of independent power of the throne—the Kemmu Restoration—was at an end and the period of the Ashikaga Shogunate had begun.

The civil war of succession to the throne was finally settled. As part of the settlement, all three "emperors" abdicated on April 6, 1352.[44] Ashikaga died in 1358 and Ashikaga Yoshiakira succeeded him as Shogun.[45] By 1368, however, the ascendancy of the Ashikaga Shogunate was so complete that Ashikaga Yoshimitsu was able to rule Japan without reference to the emperor.[46] In 1392, the Southern Court and the Northern Court were finally merged under an agreement that placed Emperor Kogon, of the Southern Court and the junior line, on the throne and pledged that the throne would, henceforth, alternate between candidates of the Northern Court and the Southern Court. This agreement was, however, never implemented.

Muromachi period

Main articles: Muromachi period and Nanboku-chō period

See also: Kitayama period and Higashiyama period

Kinkaku-ji, Kyoto. 1397, in Kitayama period

During the Muromachi period, the Ashikaga shogunate ruled for 237 years from 1336 to 1573. It was established by Ashikaga Takauji who seized political power from Emperor Go-Daigo. A majority of the warrior class supported the Ashikaga clan in the succession war. After taking Kyoto from Emperor Go-Daigo, the Ashikaga clan made Kyoto, the capital of the Ashikaga Shogunate in late 1336.[47] This became the new capital of the Northern Court. Go-Daigo, then, moved to the town of Yoshino and established the new capital of the Southern Court there. This ended the attempted restoration of the powers of the throne—the Kemmu restoration. The early years (1336 to 1392) of the Muromachi period are known as the Nanboku-chō (Northern and Southern court) period because the imperial court was split in two. In 1392, the Northern court and the southern Court were finally merged and Emperor Kogon was placed on the throne. There was an agreement that, heretofore, succession to the throne would alternate between candidates of the Northern court and candidates of the Southern Court. However, this agreement was never acted upon.

Rule of the Ashikaga Bakufu looked a lot like the rule of the Kamakura Bakufu, as the Ashikaga clan made few changes in the offices and councils of the prior government.[48] However, the Ashikaga Shogunate dominated the Imperial throne more than the Kamakura Shogunate ever did. Nonetheless, the Ashikaga Shogunate was never able to centralized its power over the regional warlords as much as the prior Kamakura government. The Ashikaga Shogunate was based on a coalition of a loose majority of the various regional warlords across the country. As a consequence, the Ashikaga Shogunate was unable to do anything about the problem of the pirates who were operating off their own shores, despite repeated requests to do so by both Korea[49] and Ming dynasty China.[50] Warlord clans, like the Kotsuna clan and the Kiyomori branch of the Taira clan, that lived along the coast of the Inland Sea, made money from the pirates and supported them.[51]

In 1368, the Ming Dynasty replaced the Yuan Dynasty of the Mongols in China. Japanese trade with China had been frozen since the second and final attempt by Mongol China to invade Japan in 1281. Now a new trade relationship began with the new Ming rulers in China. Part of the new trade with China was the coming to Japan of Zen Buddhist monks. During the Ashikaga Shogunate Zen Buddhism came to have a great influence with the ruling class in Japan.[52]

The Muromachi period ended in 1573 when the 15th and last shōgun, Ashikaga Yoshiaki, was driven out of the capital in Kyoto by Oda Nobunaga.

In the viewpoint of a cultural history, Kitayama period (14th end-15th first half[53]) and Higashiyama period (15th second half-16th first half[53]) exist in Muromachi period.

Sengoku period

Main article: Sengoku period

Osaka Castle

The later years of the Muromachi period, 1467 to 1573, are also known as the Sengoku period (Period of Warring Kingdoms), a time of intense internal warfare, and correspond with the period of the first contacts with the West—the arrival of Portuguese "Nanban" traders.

In 1543, a Portuguese ship, blown off its course to China, landed on Tanegashima Island. Firearms introduced by the Portuguese would bring the major innovation of the Sengoku period, culminating in the Battle of Nagashino where reportedly 3,000 arquebuses (the actual number is believed to be around 2,000) cut down charging ranks of samurai. During the following years, traders from Portugal, the Netherlands, England, and Spain arrived, as did Jesuit, Dominican, and Franciscan missionaries.

Hasekura Tsunenaga and San Juan Bautista

Azuchi-Momoyama period

Main article: Azuchi-Momoyama period

The Azuchi-Momoyama period runs from approximately 1568 to 1603. The period, regarded as the late Warring Kingdoms period, marks the military reunification and stabilization of the country under a single political ruler, first by the campaigns of Oda Nobunaga (1534–1582) who almost united Japan. Nobunaga decided to reduce the power of the Buddhist priests, and gave protection to Christianity. He slaughtered many Buddhist priests and captured their fortified

temples. He was killed in a revolt in 1582.[54]

Unification was finally achieved by one of Nobunaga's generals, Toyotomi Hideyoshi.

After having united Japan, Hideyoshi invaded Korea in an attempt to conquer Korea and points beyond. However, after two unsuccessful campaigns towards the allied forces of Korea and China and his death, his forces returned to Japan in 1598. Following his death, Japan experienced a short period of succession conflict. Tokugawa Ieyasu, one of the regents for Hideyoshi's young heir, emerged victorious at the Battle of Sekigahara and seized political power.

Christian missions

Main article: History of Roman Catholicism in Japan

Catholic Jesuit missionaries led by Francis Xavier (1506–1552) arrived in 1549 and were welcomed in Kyoto.[55] Their proselytizing was most successful in Kyushu, with about 100,000 to 200,000 converts, including many daimyo.[56] In 1587, Hideyoshi reversed course and decided the Christian presence was divisive and might present the Europeans with an opportunity to disrupt Japan. The Christians missionaries were seen as a threat; the Portuguese merchants were allowed to continue their operations. The edict was not immediately enforced but restrictions grew tighter in the next three decades until a full-scale government persecution destroyed the Christian community by the 1620s. The Jesuits were expelled, churches and schools were torn down, and the daimyo were forbidden to become Christians. Converts who did not reject Christianity were killed. Many Christians went underground, becoming hidden Christians (□□□□□□ *kakure kirishitan*), but their communities died out. Not until the 1870s was Christianity re-established in Japan.[57][58]

Edo ("Tokugawa") period (1603–1868)

Main article: Edo period

The Edo or Tokugawa era saw power centralized in the hands of a hereditary shogunate that took control of religion, regulated the entire economy, subordinated the nobility, and set up uniform systems of taxation, government spending and bureaucracies. It avoided international involvement and wars, established a national judiciary and suppressed protest and criticism. The Tokugawa era brought peace, and that brought prosperity to a nation of 31 million.

Map of Japan appears in the Cihannuma

Economy

About 80% of the people were rice farmers.[59] Rice production increased steadily, but population remained stable, so prosperity increased. Rice paddies grew from 1.6 million chō in 1600 to 3 million by 1720.[60] Improved technology helped farmers control the all-important flow of irrigation to their paddies. The daimyos operated several hundred castle towns, which became loci of domestic trade. Large-scale rice markets developed, centered on Edo and Osaka.[61] In the cities and towns, guilds of merchants and artisans met the growing demand for goods and services. The merchants, while low in status, prospered, especially those with official patronage. Merchants invented credit instruments to transfer money, currency came into common use, and the strengthening credit market encouraged entrepreneurship.[62]

The samurai, forbidden to engage in farming or business but allowed to borrow money, borrowed too much. One scholar observed that the entire military class was living "as in an inn, that is, consuming now and paying later". The bakufu and daimyos raised taxes on farmers, but did not tax business, so they too fell into debt. By 1750 rising taxes incited peasant unrest and even revolt. The nation had to deal somehow with samurai impoverishment and treasury deficits. The financial troubles of the samurai undermined their loyalties to the system, and the empty treasury threatened the whole system of government. One solution was reactionary—with prohibitions on spending for luxuries. Other solutions were modernizing, with the goal of increasing agrarian productivity. The eighth Tokugawa shogun, Tokugawa Yoshimune (in office 1716–1745) had considerable success, though much of his work had to be done again between 1787 and 1793 by the shogun's chief councilor Matsudaira Sadanobu (1759–1829). Others shoguns debased the coinage to pay debts, which caused inflation.[63]

Tokugawa Ieyasu, first shogun of the Tokugawa shogunate

By 1800 the commercialization of the economy grew rapidly, bringing more and more remote villages into the national economy. Rich farmers appeared who switched from rice to high-profit commercial crops and engaged in local money-lending, trade, and small-scale manufacturing. Some wealthy merchants sought higher social status by using money to marry into the samurai class.

A few domains, notably Chōshū and Satsuma, used innovative methods to restore their finances, but most sunk further into debt. The financial crisis provoked a reactionary solution near the end of the "Tenpō Reforms" (1830–1843) promulgated by the chief counselor Mizuno Tadakuni. He raised taxes, denounced luxuries and tried to impede the growth of business; he failed and it appeared to many that the continued existence of the entire Tokugawa system was in jeopardy.[64]

Social structure

Japanese society had an elaborate social structure, in which everyone knew their place and level of prestige. At the top were the emperor and the court nobility, invincible in prestige but weak in power. Next came the "bushi" of shogun, daimyo and layers of feudal lords whose rank was indicated by their closeness to the Tokugawa. They had power. The "daimyo" comprised about 250 local lords of local "han" with annual outputs of 50,000 or more bushels of rice. The upper strata was much given to elaborate and expensive rituals, including elegant architecture, landscaped gardens, nō drama, patronage of the arts, and the tea ceremony.[65]

Samurai

Next in the social structure were the 400,000 warriors, called "samurai", whose ranks ranged in numerous grades and degrees. A few upper samurai were eligible for high office; most were foot soldiers (ashigaru) with minor duties. The samurai were affiliated with senior lords in a well-established chain of command. The shogun had 17,000 samurai retainers; the daimyo each had hundreds. Most lived in modest homes near their lord's headquarters, and lived off hereditary rights to collect rents and stipends. Together these high status groups comprised Japan's ruling class making up about 6% of the total population.[66]

Lower orders

The lower social orders were divided into two main segments—the peasants—80% of the population—whose

high prestige as producers was undercut by their burden as the chief source of taxes. They were illiterate and lived in villages controlled by appointed officials who kept the peace and collected taxes. Peasants and villagers frequently engaged in unlawful and disruptive protests, especially after 1780.[67]

Merchants and artisans

Near the bottom of the prestige scale—but much higher up in terms of income and life style—were the merchants and artisans of the towns and cities. They had no political power, and even rich merchants found it difficult to rise in the world in a society in which place and standing were fixed at birth.[68] Finally came the entertainers, prostitutes, day laborers and servants, and the thieves, beggars and hereditary outcasts. They were tightly controlled by local officials and were not allowed to mingle with higher status people.[69]

Literacy

Literacy was highly prized, albeit made difficult by the writing system. Wood block printing had been standard for centuries; after 1500 Japanese printers experimented with movable type, but reverted to the wood blocks. By the 1780s Japan was publishing 3000 books a year (compared with 400 in Russia). By the 1850s the major new trend was the translation of western scientific and geographical books, which reached a wide audience. By 1860 about 40% of the men and 10% of the women were literate in rural areas, with much higher rates in the cities, such as 80% in Edo (Tokyo).[70] Universal compulsory education only began in 1871.[71]

Government

During the Edo period, also called the **Tokugawa period,** the administration of the country was shared by over two hundred daimyō in a federation governed by the Tokugawa shogunate. The Tokugawa clan, leader of the victorious eastern army in the Battle of Sekigahara, was the most powerful of them and for fifteen generations monopolized the title of *Sei-i Taishōgun* (often shortened to *shōgun*). With their headquarters at Edo (present-day Tokyo), the Tokugawa commanded the allegiance of the other daimyō, who in turn ruled their domains with a rather high degree of autonomy.

Tokugawa Yoshimune the Shogun
1716–1745

The Tokugawa shogunate carried out a number of significant policies. They placed the samurai class above the commoners: the agriculturists, artisans, and merchants. They enacted sumptuary laws limiting hairstyle, dress, and accessories. They organized commoners into groups of five and held all responsible for the acts of each individual. To prevent daimyō from rebelling, the shōguns required them to maintain lavish residences in Edo and live at these residences on a rotating schedule; carry out expensive processions to and from their domains; contribute to the upkeep of shrines, temples, and roads; and seek permission before repairing their castles.

This 265-year span was called "A peaceful state". Cultural achievement was high during this period, and many artistic developments took place. Most significant among them were the *ukiyo-e* form of wood-block print and the *kabuki* and *bunraku* theaters. Also, many of the most famous works for the *koto* and *shakuhachi* date from this time period.

Sakoku—seclusion from the outside world

Main article: Sakoku

Japan's first treatise on Western anatomy, published in 1774, an example of Rangaku.

During the early part of the 17th century, the shogunate suspected that foreign traders and missionaries were actually forerunners of a military conquest by European powers. Christianity had spread in Japan, especially among peasants, and the shogunate suspected the loyalty of Christian peasants towards their daimyō, severely persecuting them. This led to a revolt by persecuted peasants and Christians in 1637 known as the Shimabara Rebellion which saw 30,000 Christians, rōnin, and peasants facing a massive samurai army of more than 100,000 sent from Edo. The rebellion was crushed at a high cost to the shōgun's army.

After the eradication of the rebels at Shimabara, the shogunate placed foreigners under progressively tighter restrictions. It monopolized foreign policy and expelled traders, missionaries, and foreigners with the exception of the Dutch and Chinese merchants who were restricted to the man-made island of Dejima in Nagasaki Bay and several small trading outposts outside the country. However, during this period of isolation (*Sakoku*) that began in 1635, Japan was much less cut off from the rest of the world than is commonly assumed, and some acquisition of western knowledge occurred under the Rangaku system. Russian encroachments from the north led the shogunate to extend direct rule to Hokkaidō, Sakhalin and the Kuriles in 1807, but the policy of exclusion continued.

End of seclusion

Main article: Bakumatsu

Landing of Commodore Perry, officers & men of the squadron, to meet the Imperial commissioners at Yokohama July 14, 1853. Lithograph by Sarony & Co., 1855, after W. Heine

The policy of isolation lasted for more than 200 years. In 1844, William II of the Netherlands sent a message urging Japan to open its doors which was rejected by the Japanese.[72] On July 8, 1853, Commodore Matthew Perry of the United States Navy with four warships—the *Mississippi*, *Plymouth*, *Saratoga*, and *Susquehanna*—steamed into the bay in Yokohama and displayed the threatening power of his ships' cannons during a Christian burial which the Japanese observed. He requested that Japan open to trade with the West. These ships became known as the *kurofune*, the Black Ships.

The following year at the Convention of Kanagawa on March 31, 1854, Perry returned with seven ships and demanded that the shōgun sign the Treaty of Peace and Amity, establishing formal diplomatic relations between Japan and the United States. Within five years, Japan had signed similar treaties with other Western countries. The Harris Treaty was signed with the United States on July 29, 1858. These treaties were unequal, having been forced on Japan through gunboat diplomacy, and were interpreted by the Japanese as a sign of Western imperialism taking hold of the rest of the Asian continent. Among other measures, they gave the Western nations unequivocal control of tariffs on imports and the right of extraterritoriality to all of their visiting nationals. They would remain a sticking point in Japan's relations with the West up to the turn of the century.

Empire of Japan (1868–1945)

Main article: Empire of Japan

Beginning in 1868, Japan undertook political, economic, and cultural transformations emerging as a unified and centralized state, the Empire of Japan (also Imperial Japan or Prewar Japan). This 77-year period, which lasted

until 1945, was a time of rapid economic growth. Japan became an imperial power, colonizing Korea and Taiwan. Starting in 1931 it began the takeover of Manchuria and China, in defiance of the League of Nations and the United States. Escalating tension with the U.S.--and western control of Japan's vital oil supplies—led to World War II. Japan launched multiple successful attacks on the U.S. as well as British and Dutch territories in 1941–42. But after a series of great naval battles it was defeated by a much larger industrial power, as its cities were systematically demolished by strategic bombing. Japan surrendered in 1945, and was occupied and transformed by the U.S.

Meiji Restoration

Main articles: Meiji Restoration and Meiji period

Samurai of the Satsuma clan, during the Boshin War period. Colored photograph by Felice Beato.

Renewed contact with the West precipitated a profound alteration of Japanese society. Importantly, within the context of Japan's subsequent aggressive militarism, the signing of the treaties was viewed as profoundly humiliating and a source of national shame. The Tokugawa shōgun was forced to resign, and soon after the Boshin War of 1868, the emperor was restored to power, beginning a period of fierce nationalism and intense socio-economic restructuring known as the Meiji Restoration. The Tokugawa system was abolished, the military was modernized, and numerous Western institutions were adopted–including a Western legal system and quasi-parliamentary constitutional government as outlined in the Meiji Constitution. This constitution was modeled on the constitution of the German Empire. While many aspects of the Meiji Restoration were adopted directly from Western institutions, others, such as the dissolution of the feudal system and removal of the shogunate, were processes that had begun long before the arrival of Perry. Nonetheless, Perry's intervention is widely viewed as a pivotal moment in Japanese history.

Emperor Meiji, the 122nd emperor of Japan.

Economic modernization

Main article: Economic history of Japan

Japan's industrial revolution began about 1870 as national leaders decided to catch up with the West. The government built railroads, improved roads, and inaugurated a land reform program to prepare the country for further development. It inaugurated a new Western-based education system for all young people, sent thousands of students to the United States and Europe, and hired more than 3,000 Westerners to teach modern science, mathematics, technology, and foreign languages in Japan (O-yatoi gaikokujin).

In 1871 a group of Japanese politicians known as the Iwakura Mission toured Europe and the USA to learn western ways. The result was a deliberate state-led industrialisation policy to enable Japan to quickly catch up. The Bank of Japan, founded in 1877, used taxes to fund model steel and textile factories. Education was expanded and Japanese students were sent to study in the West.

Modern industry first appeared in textiles, including cotton and especially silk, which was based in home workshops in rural areas.[73]

Wars with China and Russia

Main article: Foreign relations of Meiji Japan

Japanese intellectuals of the late-Meiji period espoused the concept of a "line of advantage", an idea that would help to justify Japanese foreign policy at the turn of the century. According to this principle, embodied in the slogan *fukoku kyōhei*, Japan would be vulnerable to aggressive Western imperialism unless it extended a line of advantage beyond its borders which would help to repel foreign incursions and strengthen the Japanese economy. Emphasis was especially placed on Japan's "preeminent interests" in the Korean Peninsula, once famously described as a "dagger pointed at the heart of Japan". It was tensions over Korea and Manchuria, respectively, that led Japan to become involved in the first Sino-Japanese War with China in 1894–1895 and the Russo-Japanese War with Russia in 1904–1905.

The war with China made Japan the world's first Eastern, modern imperial power, and the war with Russia proved that a Western power could be defeated by an Eastern state. The aftermath of these two wars left Japan the dominant power in the Far East with a sphere of influence extending over southern Manchuria and Korea, which was formally annexed as part of the Japanese Empire in 1910. Japan had also gained half of Sakhalin Island from Russia. The results of these wars established Japan's dominant interest in Korea, while giving it the Pescadores Islands, Formosa (now Taiwan), and the Liaodong Peninsula in Manchuria, which was eventually retroceded in the "humiliating" Triple Intervention.

Over the next decade, Japan would flaunt its growing prowess, including a very significant contribution to the Eight-Nation Alliance formed to quell China's Boxer Rebellion. Many Japanese, however, believed their new empire was still regarded as inferior by the Western powers, and they sought a means of cementing their international standing. This set the climate for growing tensions with Russia, which would continually intrude into Japan's "line of advantage" during this time.

Russian pressure from the north appeared again after Muraviev had gained Outer Manchuria at Aigun (1858) and Peking (1860). This led to heavy Russian pressure on Sakhalin which the Japanese eventually yielded in exchange for the Kuril islands (1875). The Ryukyu Islands were similarly secured in 1879, establishing the borders within which Japan would "enter the World". In 1898, the last of the unequal treaties with Western powers was removed, signaling Japan's new status among the nations of the world. In a few decades by reforming and modernizing social, educational, economic, military, political and industrial systems, the Emperor Meiji's "controlled revolution" had transformed a feudal and isolated state into a world power. Significantly, the impetus for this change was the belief that Japan had to compete with the West both industrially and militarily to achieve equality.

Anglo-Japanese Alliance

Main article: Anglo-Japanese Alliance

The Anglo-Japanese Alliance treaty was signed between the United Kingdom and Japan on January 30, 1902, and announced on February 12, 1902. It was renewed in 1905 and 1911 before its demise in 1921 and its termination in 1923. It was a military alliance between the two countries that threatened Russia and Germany. Due to this alliance, Japan entered World War I on the side of Great Britain. Japan attacked German bases in China and sent troops to the Mediterranean in 1917. Through this treaty, there was also great cultural exchange between the two countries.

World War I

Japan entered World War I on the Allied side and declared war on the Central Powers. Though Japan's role was limited largely to seizing German colonial outposts in East Asia and the Pacific, it took advantage of the opportunity to expand its influence in Asia and its territorial holdings in the Pacific. Acting virtually

independently of the civil government, the Japanese navy seized Germany's Micronesian colonies. It also attacked and occupied the German coaling port of Qingdao in the Chinese Shandong peninsula.

Early Modern Japan, Marunouchi, Tokyo 1920

Japan went to the peace conference at Versailles in 1919 as one of the great military and industrial powers of the world and received official recognition as one of the "Big Five" of the new international order. It joined the League of Nations and received a mandate over Pacific islands north of the Equator formerly held by Germany. Japan was also involved in the post-war Allied intervention in Russia, occupying Russian (Outer) Manchuria and also north Sakhalin (which held Japan's limited oil reserves). It was the last Allied power to withdraw from the interventions against Soviet Russia (doing so in 1925).

The post–World War I era brought Japan unprecedented prosperity.

Fascism in Japan

Main article: Statism in Shōwa Japan

During the 1910s and 1920s, Japan progressed towards democracy movements known as 'Taishō Democracy'. However, parliamentary government was not rooted deeply enough to withstand the economic and political pressures of the late 1920s and 1930s during the Depression period, and its state became increasingly militarized. This was due to the increasing powers of military leaders and was similar to the actions some European nations were taking leading up to World War II. These shifts in power were made possible by the ambiguity and imprecision of the Meiji Constitution, particularly its measure that the legislative body was answerable to the Emperor and not the people. The Kodoha, a militarist faction, even attempted a coup d'état known as the February 26 Incident, which was crushed after three days by Hirohito, the Emperor Shōwa.[74]

Party politics came under increasing fire because it was believed they were divisive to the nation and promoted self-interest where unity was needed. As a result, the major parties voted to dissolve themselves and were absorbed into a single party, the Imperial Rule Assistance Association (IRAA), which also absorbed many prefectural organizations such as women's clubs and neighborhood associations. However, this umbrella organization did not have a cohesive political agenda and factional in-fighting persisted throughout its existence, meaning Japan did not devolve into a totalitarian state. The IRAA has been likened to a sponge, in that it could soak everything up, but there is little one could do with it afterwards. Its creation was precipitated by a series of domestic crises, including the advent of the Great Depression in the 1930s and the actions of extremists such as the members of the Cherry Blossom Society, who enacted the May 15 Incident.[75]

Second Sino-Japanese War

Main articles: Germany–Japan relations, Second Sino-Japanese war, Pacific War, Greater East Asia Co-Prosperity Sphere, and Home front during World War II#Japan

The Imperial Japanese Navy's

Under the pretext of the Manchurian Incident, Lieutenant Colonel Kanji Ishiwara invaded Inner (Chinese) Manchuria in 1931, an action the Japanese government ratified with the creation of the puppet state of Manchukuo under the last Chinese emperor, Pu Yi. As a result of international condemnation of the incident, Japan resigned from the League of Nations in 1933. After several more similar incidents fueled by an expansionist military, the second Sino-Japanese War began in 1937 after the Marco Polo Bridge

Yamato, the heaviest battleship in history, 1941

Incident.

From 1937–45, Emperor Hirohito was supreme commander of the Imperial General Headquarters, by which the military decisions were made. This ad-hoc body consisted of the chief and vice chief of the Army, the minister of the Army, the chief and vice chief of the Navy, the minister of the Navy, the inspector general of military aviation, and the inspector general of military training.

Having joined the Anti-Comintern Pact in 1936, Japan formed the Axis Pact with Germany and Italy on September 27, 1940. Many Japanese politicians believed war with the Occident to be inevitable due to inherent cultural differences and Western imperialism. Japanese imperialism was then justified by the revival of the traditional concept of hakko ichiu, the divine right of the emperor to unite and rule the world.

Japan was defeated by Soviet Union in 1938 in large-scale but localized battles at Battle of Lake Khasan and in 1939 in the Battle of Khalkhin Gol. The Army no longer wanted to fight the Soviets, so the Soviet–Japanese Neutrality Pact was signed in 1941.[76] The treaty held until August 1945 when the Soviets again attacked Japan.

World War II

Main article: Home front during World War II#Japan

Tensions were mounting with the U.S. as a result of public outcry over Japanese aggression and reports of atrocities in China, such as the infamous Nanjing Massacre. The U.S. strongly supported China with money, airmen, supplies and threats against Japan. In retaliation to the invasion of French Indochina the U.S. began an embargo on such goods as petroleum products and scrap iron. On July 25, 1941, all Japanese assets in the US were frozen. Because Japan's military might, especially the Navy, was dependent on their dwindling oil reserves, this action had the contrary effect of increasing Japan's dependence on and hunger for new acquisitions.

Many civil leaders of Japan, including Prime Minister Konoe Fumimaro, believed a war with America would end in defeat, but felt the concessions demanded by the U.S. would almost certainly relegate Japan from the ranks of the World Powers, leaving it prey to Western collusion. Civil leaders offered political compromises in the form of the "Amau Doctrine," dubbed the "Japanese Monroe Doctrine" that would have given the Japanese free rein with regards to war with China. These offers were flatly rejected by the U.S.; the military leaders instead vied for quick military action.[77]

Most military leaders such as Osami Nagano, Kotohito Kan'in, Hajime Sugiyama and Hideki Tōjō believed that war with the Occident was inevitable. They finally convinced the Emperor to sanction on November 1941 an attack plan against U.S., Great Britain and the Netherlands. However, there were dissenters in the ranks about the wisdom of that option, most notably Admiral Yamamoto and Prince Takamatsu. They pointedly warned that at the beginning of hostilities with the US, the Empire would have the advantage for six months, after which Japan's defeat in a prolonged war with an enemy with a much larger economy would be almost certain.

The Americans were expecting an attack in the Philippines and sent bombers to deter Japan. On Yamamoto's advice, Japan made the decision to attack the main American fleet at Pearl Harbor in Hawaii. American strategists believed that Japan would never be so bold as to attack so close to its home base, and the US was taken completely by surprise.[78]

The attack on Pearl Harbor, initially appeared to be a major success that knocked out the American battle fleet—but it missed the aircraft carriers that were at sea and ignored vital shore facilities whose destruction could

Planes from the Japanese aircraft carrier Shokaku preparing the attack on Pearl Harbor

have crippled US Pacific operations. Ultimately, the attack proved a long-term strategic disaster that actually inflicted relatively little significant long-term damage while provoking the United States to seek revenge. At the same time as the Pearl Harbor attack, the Japanese army attacked British Hong Kong and occupied it for nearly four years.[79]

While Nazi Germany was in the middle of its *Blitzkrieg* through Europe, Japan was following suit in Asia. The Japanese Army invaded and captured most of the coastal Chinese cities such as Shanghai. Japan took over French Indochina (Vietnam, Laos, Cambodia), British Malaya (Brunei, Malaysia, Singapore) as well as the Dutch East Indies (Indonesia) while Thailand entered into an alliance with Japan. Japanese forces overwhelmed the British in Burma (thus cutting off supplies to China) and reached the borders of India and Australia. Its air raids devastated Darwin, Australia. Japan had soon established an empire stretching over much of the Pacific.

Atomic cloud over Hiroshima, 1945

However as Admiral Yamamoto warned, Japan's six-month window of military advantage following Pearl Harbor ended with the Japanese Navy's offensive ability being crippled at the hands of the American Navy in the Battle of Midway, which established a significant American military advantage. The war became one of mass production and logistics, the U.S. funding a far stronger navy with more numerous warplanes, and a superior communications and logistics system. The Japanese had stretched too far and were unable to supply its forward bases—many soldiers died of starvation. American submarines destroyed the Japanese tankers, causing a severe shortage of fuel oil for ships and aviation gasoline. Japan built warplanes in large quantity but the quality plunged, and the performance of poorly trained pilots spiraled downward.[80] The Navy lost a series of major battles, from Midway (1942) to the Philippine Sea (1944) and Leyte Gulf (1945), which put American long-range B-29 bombers in range. A series of massive raids burned out much of Tokyo and other major industrial cities beginning in March 1945 while Operation Starvation seriously disrupted the nation's vital internal shipping lanes. Regardless of how the war was becoming hopeless, the circle around the Emperor held fast and refused to open negotiations. Finally in August, two atomic bombs and the Soviet invasion of Manchuria demonstrated the cause was futile, and Hirohito authorized a surrender whereby he kept his throne.[81]

Total Japanese military fatalities between 1937 and 1945 were 2.1 million; most came in the last year of the war. Starvation or malnutrition-related illness accounted for roughly 80 percent of Japanese military deaths in the Philippines, and 50 percent of military fatalities in China. The aerial bombing of a total of 65 Japanese cities appears to have taken a minimum of 400,000 and possibly closer to 600,000 civilian lives (over 100,000 in Tokyo alone, over 200,000 in Hiroshima and Nagasaki combined, and 80,000–150,000 civilian deaths in the battle of Okinawa). Civilian death among settlers who died attempting to return to Japan from Manchuria in the winter of 1945 were probably around 100,000.[82]

Modernizing society

Childhood transformed

Childhood as a distinct phase of life was apparent in the early modern period, when social and economic changes brought increased attention to children, the growth of schooling and child-centered rituals. A modern concept of childhood emerged in Japan after 1850 as part of its engagement with the West. Meiji era leaders decided the

nation-state had the primary role in mobilizing individuals – and children – in service of the state. The Western-style school was introduced as the agent to reach that goal. By the 1890s, schools were generating new sensibilities regarding childhood.[83] After 1890 Japan had numerous reformers, child experts, magazine editors, and well-educated mothers who bought into the new sensibility. They taught the upper middle class a model of childhood that included children having their own space where they read children's books, played with educational toys and, especially, devoted enormous time to school homework. These ideas rapidly disseminated through all social classes [84][85]

Postwar Japan (1945–present)

Main article: Postwar Japan

After the collapse of the Empire of Japan, Japan was transformed into a democratic state with a revised democratic Constitution of Japan. During the postwar period, Japan became an economic power state. This period is characterized by the US-Japan Alliance such as the United States Forces Japan.

Occupation of Japan

Main article: Occupation of Japan

General MacArthur and Emperor Hirohito

As a result of its defeat of World War II, the Empire of Japan was dissolved, Japan lost all of its overseas possessions and retained only the home islands. Manchukuo was dissolved, and Inner Manchuria and Taiwan were returned to the Republic of China; Korea was taken under the control of the UN; southern Sakhalin and the Kuriles were occupied by the U.S.S.R.; and the United States became the sole administering authority of the Ryukyu, Bonin, and Volcano Islands. The International Military Tribunal for the Far East (Tokyo Trial), an international war crimes tribunal, was held, in which seven politicians were executed. Emperor Hirohito was not convicted, but instead was enthroned as the emperor of the new state.

The 1972 reversion of Okinawa completed the United States' return of control of these islands to Japan. Japan continues to protest for the corresponding return of the Kuril Islands from Russia.

Defeat came for a number of reasons. The most important is probably Japan's underestimation of the military capabilities of the U.S. The U.S. recovered from its initial setback at Pearl Harbor much quicker than the Japanese expected, and their sudden counterattack came as a blow to Japanese morale. U.S. output of military products was also much higher than Japanese counterparts over the course of the war. Another reason was factional in-fighting between the Army and Navy, which led to poor intelligence and cooperation. This was compounded as the Japanese forces found they had overextended themselves, leaving Japan itself vulnerable to attack. Another important factor is Japan's underestimation of resistance in China, which Japan claimed would be conquered in three months. The prolonged war was both militarily and economically disastrous for Japan.

After the war, Japan was placed under international control of the American-led Allied powers in the Asia-Pacific region through General Douglas MacArthur as Supreme Commander of the Allied Powers. This was the first time since the unification of Japan that the island nation was successfully occupied by a foreign power. Some high officers of the Shōwa regime were prosecuted and convicted by the International Military Tribunal for the Far East. However, Emperor Shōwa, all members of the imperial family implicated in the war such as prince

Asaka, prince Chichibu, prince Takeda, prince Higashikuni, prince Fushimi, as well as Shirō Ishii and all members of unit 731 were exonerated from criminal prosecutions by MacArthur.[86][87]

Entering the Cold War with the Korean War, Japan came to be seen as an important ally of the US government. Political, economic, and social reforms were introduced, such as an elected Japanese Diet (legislature) and expanded suffrage. The country's constitution took effect on May 3, 1947. The United States and 45 other Allied nations signed the Treaty of Peace with Japan in September 1951. The U.S. Senate ratified the treaty on March 20, 1952, and under the terms of the treaty, Japan regained full sovereignty on April 28, 1952.

Under the terms of the peace treaty and later agreements, the United States maintains naval bases at Sasebo, Okinawa and at Yokosuka. A portion of the U.S. Pacific Fleet, including one aircraft carrier (currently USS George Washington (CVN-73)), is based at Yokosuka. This arrangement is partially intended to provide for the defense of Japan, as the treaty and the new Japanese constitution imposed during the occupation severely restrict the size and purposes of Japanese Self-Defense Forces in the modern period.

Cold War

Main article: Post-occupation Japan

After a series of realignment of political parties, the conservative Liberal Democratic Party (LDP) and the leftist Social Democratic Party (SDP) were formed in 1955. The political map in Japan had been largely unaltered until early 1990s and LDP had been the largest political party in the national politics.[88] LDP politicians and government bureaucrats focused on economic policy. From the 1950s to the 1980s, Japan experienced its rapid development into a major economic power, through a process often referred to as the Japanese post-war economic miracle.

Japan's biggest postwar political crisis took place in 1960 over the revision of the Japan-United States Mutual Security Assistance Pact. As the new Treaty of Mutual Cooperation and Security was concluded, which renewed the United States role as military protector of Japan, massive street protests and political upheaval occurred, and the cabinet resigned a month after the Diet's ratification of the treaty. Thereafter, political turmoil subsided. Japanese views of the United States, after years of mass protests over nuclear armaments and the mutual defense pact, improved by 1972 with the reversion of United States-occupied Okinawa to Japanese sovereignty and the winding down of the Vietnam War.

Japan had reestablished relations with the Republic of China after World War II, and cordial relations were maintained with the nationalist government when it was relocated to Taiwan, a policy that won Japan the enmity of the People's Republic of China, which was established in 1949. After the general warming of relations between China and Western countries, especially the United States, which shocked Japan with its sudden rapprochement with Beijing in 1971, Tokyo established relations with Beijing in 1972. Close cooperation in the economic sphere followed. Japan's relations with the Soviet Union continued to be problematic after the war, but a Joint Declaration between Japan and the USSR ending the state of war and reestablishing diplomatic relations was signed October 19, 1956.[89] The main object of dispute was the Soviet occupation of what Japan calls its Northern Territories, the two most southerly islands in the Kurils (Etorofu and Kunashiri) and Shikotan and the Habomai Islands, which were seized by the Soviet Union in the closing days of World War II.

Economic growth

Throughout the postwar period, Japan's economy continued to boom, with results far outstripping expectations.[90] Given a massive boost by the Korean War, in which it acted as a major supplier to the UN force, Japan's economy embarked on a prolonged period of extremely rapid growth, led by the manufacturing

sectors. Japan emerged as a significant power in many economic spheres, including steel working, car manufacturing and the manufacturing of electronic goods. Japan rapidly caught up with the West in foreign trade, GNP, and general quality of life. These achievements were underscored by the 1964 Tokyo Olympic Games and the Osaka International Exposition in 1970. The high economic growth and political tranquility of the mid to late 1960s were tempered by the quadrupling of oil prices by the OPEC in 1973. Almost completely dependent on imports for petroleum, Japan experienced its first recession since World War II. Another serious problem was Japan's growing trade surplus, which reached record heights during Nakasone's first term. The United States pressured Japan to remedy the imbalance, demanding that Tokyo raise the value of the yen and open its markets further to facilitate more imports from the United States.[91]

After the Cold War

Main article: Heisei period

Japan after the Cold War is also called as the Heisei period, which starts from the year of the Revolutions of Eastern Europe. 1989 marked one of the most rapid economic growth spurts in Japanese history. With a strong yen and a favorable exchange rate with the dollar, the Bank of Japan kept interest rates low, sparking an investment boom that drove Tokyo property values up sixty percent within the year. Shortly before New Year's Day, the Nikkei 225 reached its record high of 39,000. By 1991, it had fallen to 15,000, signifying the end of Japan's famed bubble economy.[92] Unemployment ran reasonably high, but not at crisis levels. Rather than suffer large-scale unemployment and lay-offs, Japan's labor market suffered in more subtle, yet no less profound effects that were nonetheless difficult to gauge statistically. During the prosperous times, jobs were seen as long term even to the point of being life long. In contrast, Japan during the lost decade saw a marked increase in temporary and part time work which only promised employment for short periods and marginal benefits. This also created a generational gap, as those who had entered the labor market prior to the lost decade usually retained their employment and benefits, and were effectively insulated from the economic slowdown, whereas younger workers who entered the market a few years later suffered the brunt of its effects.

In a series of financial scandals of the LDP, a coalition led by Morihiro Hosokawa took power in 1993. Hosokawa succeeded to legislate a new plurality voting election law instead of the stalemated multi-member constituency election system.[93] However, the coalition collapsed the next year as parties had gathered to simply overthrow LDP and lacked a unified position on almost every social issue. The LDP returned to the government in 1996, when it helped to elect Social Democrat Tomiichi Murayama as prime minister.

The Great Hanshin earthquake hit Kobe on January 17, 1995. 6,000 people were killed and 44,000 were injured. 250,000 houses were destroyed or burned in a fire. The amount of damage totaled more than ten trillion yen.[94] In March of the same year the doomsday cult Aum Shinrikyo attacked on the Tokyo subway system with sarin gas, killing 12 and injuring hundreds more. An investigation later revealed that the cult was responsible for dozens of murders that occurred prior to the gas attacks.[95]

Junichiro Koizumi was president of the LDP and Prime Minister of Japan from April 2001 to September 2006. Koizumi enjoyed high approval ratings. He was known as an economic reformer and he privatized the national postal system. Koizumi also had an active involvement in the War on Terrorism, sending 1,000 soldiers of the Japan Self-Defense Forces to help in Iraq's reconstruction after the Iraq War, the biggest overseas troop deployment since World War II.

The ruling coalition is formed by the liberal Democratic Party of Japan (DPJ), the leftist Social Democratic Party and the conservative People's New Party. The opposition is formed by the liberal conservative Liberal Democratic Party (LDP). Other parties are the New Komeito Party, a Sōka Gakkai party and the Japanese Communist Party. On 2 June 2010 Prime Minister Yukio Hatoyama resigned from his position as leader of the

DPJ, citing the failure to fulfill his campaign promise of removing a U.S. base from the island of Okinawa as his main reason for stepping down.

On March 11, 2011, Japan suffered the strongest earthquake in its recorded history, affecting the north-east area of Honshū. The magnitude 9.0[96] quake was aggravated by a tsunami and also caused numerous fires and damaged several nuclear reactors. Damage to Fukushima Nuclear Plant led to meltdown of three reactors and release of radioactive material, in the largest nuclear accident since the 1986 Chernobyl disaster.

Periodization

One commonly accepted periodization of Japanese history:

Dates	Period	Period	Subperiod	Main government
30,000–10,000 BC	Japanese Paleolithic			unknown
10,000–300 BC	Ancient Japan	Jōmon		local clans
900 BC – 250 AD (overlaps)		Yayoi		
c. 250–538 AD		Kofun		Yamato clans
538–710 AD	Classical Japan	Asuka		
710–794		Nara		Emperor of Japan
794–1185		Heian		
1185–1333	Feudal Japan	Kamakura		Kamakura shogunate
1333–1336		Kemmu Restoration		Emperor of Japan
1336–1392		Muromachi	Nanboku-cho	Ashikaga shogunate
1392–1467				
1467–1573			Sengoku period	Ashikaga shogunate, daimyōs, Oda Nobunaga, Toyotomi Hideyoshi
1573–1603		Azuchi-Momoyama		
1603–1868	Early Modern Japan	Edo		Tokugawa shogunate
1868–1912	Modern Japan	Prewar	Meiji	Emperor of Japan
1912–1926			Taishō	
1926–1945			Prewar Shōwa	
1945–1952	Contemporary Japan	Postwar	Occupied Japan (Postwar Shōwa)	Supreme Commander of the Allied Powers
1952–1989			Post-occupation (Postwar Shōwa)	Parliamentary democracy
1989–present			Heisei	

Regnal years

Main article: Japanese era name

Regnal years (*Gengō*) in Japan

> Regnal years are commonly used in Japan as an alternative to the Gregorian calendar. For example, in censuses, birthdays are written using regnal years. Dates of newspapers and official documents are also written using regnal years.
> Regnal years are changed upon the enthronement of each new Tennō since Meiji until the Postwar Constitution was enacted (1868–1947).
> But, in 1979, the *Regnal Years Law* was enacted, regnal years are changed upon the enthronement of each new Tennō once more.
> Until Keio, regnal years were changed on a whim.

Regnal years since 1800

- Kansei (1789–1801)
- Kyōwa (1801–1804)
- Bunka (1804–1818)
- Bunsei (1818–1830)
- Tenpō (1830–1844)
- Kōka (1844–1848)
- Kaei (1848–1854)
- Ansei (1854–1860)
- Man'en (1860–1861)
- Bunkyū (1861–1864)
- Genji (1864–1865)
- Keiō (1865–1867)
- Meiji (1868–1912)
- Taishō (1912–1926)
- Shōwa (December 25, 1926 – January 7, 1989)
- Heisei (January 8, 1989–present)

For example

- 1820 was the 3rd year of Bunsei.
- 1855 was the 2nd year of Ansei.
- 1900 was the 33rd year of Meiji.
- 1945 was the 20th year of Shōwa.
- 2000 was the 12th year of Heisei.
- 1848 was the 5th year of Kōka through March 31, but on April 1, it became the 1st year(*Gan-nen*) of Kaei.
- 1989 was the 64th year of Shōwa through to January 7, but on January 8, it became the 1st year(*Gan-nen*) of Heisei.

Other eras

- During the pre–World War II period, **Jimmu era (Kōki)** is also used in common that the year of enthronement of first Tennō (*Jimmu-Tennō*) is defined as First Year. (= 660 BCE)[97][98][99] For example, 2010 is 2670 Jimmu era.

- During the post–World War II period, **postwar era (sengo)** has been used as a private era,[*citation needed*] which starts from 1946 (1945 being the 0th postwar year). It is seen in media and books. For example, 2010 is 65 postwar.

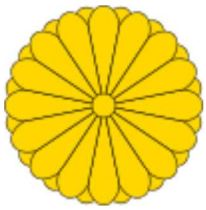
Emperor of Japan

From Wikipedia, the free encyclopedia

The **Emperor of Japan** is "the symbol of the state and of the unity of the people" according to the 1947 Constitution of Japan, which dissolved the Empire of Japan when it was adopted by the Postwar Japanese government. He is a ceremonial figurehead under a form of constitutional monarchy and is head of the Japanese Imperial Family with functions as head of state. He is also the highest authority of the Shinto religion.[1]

The Emperor is called the ***Tennō*** (天皇) in Japanese, literally meaning "heavenly sovereign".[2] He is also referred to in English as the **Mikado** (帝) of Japan. Currently the Emperor of Japan is the only remaining monarch in the world reigning under that title.



The Imperial House of Japan is the oldest continuing hereditary monarchy in the world.[3] In Nihon Shoki, a book of Japanese history finished in the eighth century, it is said that the Empire of Japan was founded in 660 BC by Emperor Jimmu. The current emperor is His Imperial Majesty the Emperor Akihito, who has been on the Chrysanthemum Throne since his father the Showa Emperor (Hirohito) died in 1989.

The role of the Emperor of Japan has historically alternated between a largely ceremonial symbolic role and that of an actual imperial ruler. Since the establishment of the first shogunate in 1192, the emperors of Japan have rarely taken on a role as supreme battlefield commander, unlike many Western monarchs. Japanese emperors have nearly always been controlled by external political forces, to varying degrees. In fact, from 1192 to 1867, the shoguns, or their *shikken* regents in Kamakura (1203–1333), were the *de facto* rulers of Japan, although they were nominally appointed by the emperor.

Incumbent:
Akihito

Style:	His Imperial Majesty
Heir apparent:	Crown Prince Naruhito
First monarch:	Emperor Jimmu
Formation:	*660 BC*

Since the mid-nineteenth century, the Imperial Palace has been called "Kyūjō" (宮城), then *Kōkyo* (皇居), and located on the former site of Edo Castle in the heart of Tokyo. Earlier emperors resided in Kyoto for nearly eleven centuries.

The Emperor's Birthday (currently celebrated on 23 December) is a national holiday.

Role

Unlike most constitutional monarchies, the Emperor is not even the *nominal* chief executive explicitly in the Constitution of Japan, but has duties "in matters of state", which are closely regulated. The constitution states that the Emperor "shall perform only such acts in matters of state as are provided for in the Constitution and he shall not have powers related to government" (article 4) and that the "advice and approval of the Cabinet shall be required for all acts of the Emperor in matters of state" (article 3). Article 4 also states that these duties can be delegated by the Emperor as provided for by law. Article 65 explicitly vests the executive power in the Cabinet, of which the Prime Minister is the leader.

In addition, while formally the Emperor's duties include appointing the Prime Minister to office, article 6 of the constitution requires him to appoint the candidate "as designated by the Diet" (in practice, the candidate designated by the House of Representatives), without any right to decline appointment. This is in marked contrast to his status under the Meiji Constitution, which recognized the emperor as the embodiment of all sovereign power of the realm.

The other detailed regulation of the Emperor's duties is laid down in article 7 of the constitution, where it is stated that the "Emperor with the advice and approval of the Cabinet, shall perform the following acts in matters of state on behalf of the people:

1. Promulgation of amendments of the constitution, laws, cabinet orders and treaties.
2. Convocation of the Diet.
3. Dissolution of the House of Representatives.
4. Proclamation of general election of members of the Diet.
5. Attestation of the appointment and dismissal of Ministers of State and other officials as provided for by law, and of full powers and credentials of Ambassadors and Ministers.
6. Attestation of general and special amnesty, commutation of punishment, reprieve, and restoration of rights.
7. Awarding of honors.
8. Attestation of instruments of ratification and other diplomatic documents as provided for by law.
9. Receiving foreign ambassadors and ministers.

10. Performance of ceremonial functions."

The Emperor is not the (ceremonial) commander-in-chief of the Japan Self-Defense Forces as in some other monarchies. The Japan Self-Defense Forces Act of 1954 explicitly vests this role as commander-in-chief with the Prime Minister. This is similar to the system in Germany, where article 65a of the Basic Law for the Federal Republic of Germany vests it with the Federal Minister of Defence.

Regular ceremonies of the Emperor with a constitutional basis are the Prime Minister investitures in the Imperial palace throne room and the Speech from the Throne ceremony in the House of Councillors in the National Diet Building. The latter ceremony opens ordinary and extra sessions of the Diet. Ordinary sessions are opened this way each January and also after new elections to the House of Representatives. Extra sessions usually convene in the autumn and are opened then.[4]

History

Although the emperor has been a symbol of continuity with the past, the degree of power exercised by the emperor of Japan has varied considerably throughout Japanese history. In the early 7th century the emperor began to be called "Son of Heaven" (天子 *tenshi*).[5]

Origin

Main article: List of Japanese monarchs

The earliest emperor recorded in Kojiki and Nihon Shoki is Emperor Jimmu. The key to knowing the origin of the Japanese imperial line may lie within the ancient imperial tombs known as kofun. However, since the Meiji period, the Imperial Household Agency has refused to open the kofun to the public or to archaeologists, citing their desire not to disturb the spirits of the past emperors as justification for their refusal. But in December 2006, the Imperial Household Agency reversed its position and decided to allow researchers to enter some of the kofun with no restrictions.

Factional control

There have been six non-imperial families who have controlled Japanese emperors: the Soga (530s–645), the Fujiwara (850s–1070), the Taira (for a relatively short period), the Minamoto (and Kamakura bakufu) (1192–1333), the Ashikaga (1336–1565) and the Tokugawa (1603–1867). However, every shogun from the Minamoto, Ashikaga and Tokugawa families had to be officially recognized by the emperors, who were still the source of sovereignty, although they could not exercise their powers independently from the Shogunate.

Disputes

The growth of the samurai class from the 10th century gradually weakened the power of the imperial family over the nation, leading to a time of instability. Emperors have been known to come into conflict with the reigning shogun from time to time; a notable example is the Hōgen Rebellion of 1156, in which former Emperor Sutoku attempted to seize power from the then current Emperor Go-Shirakawa, both of whom were supported by different clans of samurai. Other instances, such as Emperor Go-Toba's 1221 rebellion against the Kamakura shogunate and the 1336 Kemmu Restoration under Emperor Go-Daigo, show the power struggle between the Imperial House and the military governments of Japan.

Territorial matters

Up to recent centuries, Japan's territory did not include several remote regions of its modern-day territory. The name Nippon came into use only many centuries after the start of the current imperial line. Centralized government only began to appear shortly before and during the time of Prince Shōtoku. The emperor was more like a revered embodiment of divine harmony rather than the head of an actual governing administration. In Japan it has always been easy for ambitious lords to hold actual power, as such positions have not been inherently contradictory to the emperor's position. Parliamentary government today continues a similar coexistence with the emperor as have various shoguns, regents, warlords, guardians, etc.

Historically the titles of *Tennō* in Japanese have never included territorial designations as is the case with many European monarchs. The position of emperor is a territory-independent phenomenon—the emperor is the emperor, even if he has followers only in one province (as was the case sometimes with the southern and northern courts).

Shoguns

From 1192 to 1867, sovereignty of the state was exercised by the shoguns, or their *shikken* regents (1203–1333), whose authority was conferred by Imperial warrant. When Portuguese explorers first came into contact with the Japanese (see *Nanban period*), they described Japanese conditions in analogy, likening the Emperor, with great symbolic authority but little political power, to the Pope, and the Shogun to secular European rulers, e.g. the Holy Roman Emperor. In keeping with the analogy, they even used the term "Emperor" in reference to the shogun/regent, e.g. in the case of Toyotomi Hideyoshi, who missionaries called "Emperor Taicosama" (from Taiko and the honorific *sama*).

Meiji restoration

Main article: Meiji restoration

After the United States Navy Commodore Matthew C. Perry's Black Ships forcibly opened Japan to foreign trade and the shogunate proved incapable of hindering the "barbarian" interlopers, the Emperor Kōmei began to assert himself politically. By the early 1860s, the relationship between the imperial court and the Shogunate was changing radically. Disaffected domains and ronin began to rally to the call of *sonnō jōi*, or "revere the emperor, expel the barbarians." The domains of Satsuma and Chōshū, historic enemies of the Tokugawa, used this turmoil to unite their forces and won an important military victory outside of Kyoto against Tokugawa forces.

In 1868, imperial "restoration" was declared, and the Shogunate was dissolved. A new constitution described the Emperor as "the head of the Empire, combining in Himself the rights of sovereignty", whose rights included to sanction and promulgate laws, to execute them and to exercise "supreme command of the Army and the Navy". The liaison conference created in 1893 also made the Emperor the leader of the Imperial General Headquarters.

World War II

The role of the emperor as head of the Shinto religion was exploited during the war, creating an Imperial cult that led to kamikaze bombers and other fanaticism. This in turn led to the requirement in the Potsdam Declaration for the elimination "for all time [of] the authority and influence of those who have deceived and misled the people of Japan into embarking on world conquest". Following Japan's surrender, the Allies issued the Shinto Directive separating church and state within Japan, leading to the Humanity Declaration of the incumbent Emperor. Subsequently a new constitution was drafted to define the role of the emperor and the government.

Current constitution

The constitution provides for a parliamentary system of government and guarantees certain fundamental rights. Under its terms the Emperor of Japan is "the symbol of the State and of the unity of the people" and exercises a purely ceremonial role without the possession of sovereignty.

The constitution, also known as the "Constitution of the State of Japan" (日本国憲法 *Nihonkoku-Kenpō*), "Postwar Constitution" (戦後憲法 *Sengo-Kenpō*) or the "Peace Constitution" (平和憲法 *Heiwa-Kenpō*), was drawn up under the Allied occupation that followed World War II and was intended to replace Japan's previous militaristic and absolute monarchy system with a form of liberal democracy. Currently, it is a rigid document and no subsequent amendment has been made to it since its adoption.

Addressing and naming

There are two Japanese words equivalent to the English word "emperor": *tennō* (天皇, lit. "heavenly sovereign"), which is used exclusively to refer to an emperor of Japan, and *kōtei* (皇帝, the title used for Chinese emperors), which is used primarily to describe non-Japanese emperors. ***Sumeramikoto*** (lit. "the Imperial person") was also used in Old Japanese. The term *tennō* was used by the emperors up until the Middle Ages; then, following a period of disuse, it was used again from the 19th century.[6] In English, the term ***mikado*** (帝 or 御門 or 御門), literally meaning "the honorable gate" (i.e. the gate of the imperial place, which indicates the person who lives and possesses the place), was once used (as in *The Mikado*, a 19th century operetta), but this term is now obsolete.[7] (Compare Sublime Porte, an old term for the Ottoman government.)

Traditionally, the Japanese considered it disrespectful to call any person by his given name, and more so for a person of noble rank. This convention is more relaxed in modern age and now it is acceptable among friends to use the given name, but use of the family name is still common. In the case of the imperial family, it is still considered inappropriate to use the given name. Since Emperor Meiji, it has been customary to have one era per emperor and to rename each emperor after his death using the name of the era over which he presided, plus the word *Tennō*. Prior to Emperor Meiji, the names of the eras were changed more frequently, and the posthumous names of the emperors were chosen in a different manner.

The Emperor of Japan giving a New Year's address to the people in 2010.

Outside of Japan, beginning with Emperor Shōwa, the emperors are often referred to by their given names, both whilst alive and posthumously. For example, the previous emperor is usually called Hirohito in English, although he was never referred to as Hirohito in Japan, and was renamed *Shōwa Tennō* after his death, which is the only name that Japanese speakers currently use when referring to him.

The current emperor on the throne is typically referred to by the title *Tennō Heika* (天皇陛下, literally "His Majesty the heavenly sovereign") or *Kinjō Heika* (今上陛下, literally "his current majesty") or simply *Tennō* when speaking Japanese. Other terms used to refer to the emperor in Japanese include *Heika* and *Okami*, but these are much less typical than *Tennō Heika* or *Kinjō Heika* in ordinary conversation. The current Emperor will be renamed *Heisei Tennō* (平成天皇) after his death and will then be referred to exclusively by that name in Japanese. Non-Japanese speakers typically refer to him now as Akihito, or "Emperor Akihito", and will almost certainly continue to do so after his death. It is considered a major faux pas to refer to a living emperor by his posthumous name, though.

Origin of the title

The ruler of Japan was known as either □□□/□ (Yamato-ōkimi, Grand King of Yamato), □/□□ (*Wa-ō*/*Wakoku-ō*, King of Wa, used externally), or □□□□ (*ame-no-shita shiroshimesu ōkimi* or *sumera no mikoto*, Grand King who rules all under heaven, used internally) in Japanese and Chinese sources prior to the 7th century. The oldest documented use of the word "tennō" is on a wooden slat, or *mokkan*, that was unearthed in Asuka-mura, Nara Prefecture in 1998 and dated back to the reign of Emperor Temmu and Empress Jitō.

Marriage traditions

Throughout history, Japanese emperors and noblemen appointed the position of chief wife, rather than just keeping a harem or an assortment of female attendants.

The current Empress Michiko

The Japanese imperial dynasty consistently practiced official polygamy, a practice that only ended in the Taishō period (1912–1926). Besides the empress, the emperor could take, and nearly always took, several secondary consorts ("concubines") of various hierarchical degrees. Concubines were allowed also to other dynasts (shinno, o). After a decision decreed by Emperor Ichijō, some emperors even had two empresses simultaneously (*kōgō* and *chūgū* are the two separate titles for that situation). With the help of all this polygamy, the imperial clan thus was capable of producing more offspring. (Sons by secondary consorts were usually recognized as imperial princes, too, and could be recognized as heir to the throne if the empress did not give birth to an heir.)

Of the eight female tennō (reigning empress) of Japan, none married or gave birth after ascending the throne. Some of them, being widows, had produced children prior to their reigns.

The current Crown Princess Masako

In the succession, children of the empress were preferred over sons of secondary consorts. Thus it was significant which quarters had preferential opportunities in providing chief wives to imperial princes, i.e. supplying future empresses.

Apparently the oldest tradition of official marriages within the imperial dynasty were marriages between dynasty members, even half-siblings or uncle and niece. Such marriages were deemed to preserve better the imperial blood or were aimed at producing children symbolic of a reconciliation between two branches of the imperial dynasty. Daughters of others than imperials remained concubines, until Emperor Shōmu—in what was specifically reported as the first elevation of its kind—elevated his Fujiwara consort Empress Kōmyō to chief wife.

Japanese monarchs have been, as much as others elsewhere, dependent on making alliances with powerful chiefs and other monarchs. Many such alliances were sealed by marriages. The specific feature in Japan has been the fact that these marriages have been soon incorporated as elements of tradition which controlled the marriages of later generations, though the original practical alliance had lost its real meaning. A repeated pattern has been an imperial son-in-law under the influence of his powerful non-imperial father-in-law.

Beginning from the 7th and 8th centuries, emperors primarily took women of the Fujiwara clan as their highest wives—the most probable mothers of future monarchs. This was cloaked as a tradition of marriage between heirs

of two kamis, Shinto gods: descendants of Amaterasu with descendants of the family kami of the Fujiwara. (Originally, the Fujiwara were descended from relatively minor nobility, thus their kami is an unremarkable one in the Japanese myth world.) To produce imperial children, heirs of the nation, with two-side descent from the two kamis, was regarded as desirable—or at least it suited powerful Fujiwara lords, who thus received preference in the imperial marriage market. The reality behind such marriages was an alliance between an imperial prince and a Fujiwara lord, his father-in-law or grandfather, the latter with his resources supporting the prince to the throne and most often controlling the government. These arrangements created the tradition of regents (Sesshō and Kampaku), with these positions allowed to be held only by a Fujiwara sekke lord.

Earlier, the emperors had married women from families of the government-holding Soga lords, and women of the imperial clan itself, i.e. various-degree cousins and often even their own sisters (half-sisters). Several imperials of the 5th and 6th centuries such as Prince Shōtoku were children of a couple of half-siblings. These marriages often were alliance or succession devices: the Soga lord ensured the domination of a prince, to be put as puppet to the throne; or a prince ensured the combination of two imperial descents, to strengthen his own and his children's claim to the throne. Marriages were also a means to seal a reconciliation between two imperial branches.

After a couple of centuries, emperors could no longer take anyone from outside such families as primary wife, no matter what the expediency of such a marriage and power or wealth brought by such might have been. Only very rarely was a prince without a mother of descent from such families allowed to ascend the throne. The earlier necessity and expediency had mutated into a strict tradition that did not allow for current expediency or necessity, but only dictated that daughters of a restricted circle of families were eligible brides, because they had produced eligible brides for centuries. Tradition had become more forceful than law.

Fujiwara women were often Empresses, and concubines came from less exalted noble families. In the last thousand years, sons of an imperial male and a Fujiwara woman have been preferred in the succession.

The five Fujiwara families, Ichijō, Kujō, Nijō, Konoe and Takatsukasa, were the primary source of imperial brides from the 8th century to the 19th century, even more often than daughters of the imperial clan itself. Fujiwara daughters were thus the usual empresses and mothers of emperors.

The acceptable source of imperial wives, brides for the emperor and crown prince, were even legislated into the Meiji-era imperial house laws (1889), which stipulated that daughters of Sekke (the five main branches of the higher Fujiwara) and daughters of the imperial clan itself were primarily acceptable brides.

Since that law was repealed in the aftermath of World War II, the present Emperor Akihito became the first crown prince for over a thousand years to have an empress outside the previously eligible circle.

Succession

The Japanese imperial dynasty bases its position in the expression that it has "reigned since time immemorial" (□□□□ *bansei ikkei*). It is true that its origins are buried in the mists of time: there are no records of any emperor who was not said to have been a descendant of other, yet earlier emperors. There is suspicion that Emperor Keitai (c. 500 AD) may have been an unrelated outsider, though the sources state that he was a male-line descendant of Emperor Ōjin.[*citation needed*] However, his descendants, including his successors, were according to records descended from at least one and probably several imperial princesses of the older lineage. The tradition built by those legends has chosen to recognize just the putative male ancestry as valid for legitimizing his succession, not giving any weight to ties through the said princesses.[*citation needed*] Millennia ago, the Japanese imperial family developed its own peculiar system of hereditary succession. It has been non-primogenitural, more or less agnatic, based mostly on rotation. Today, Japan uses strict agnatic

primogeniture, which was adopted from Prussia, by which Japan was greatly influenced in the 1870s.

Tokyo Imperial Palace

The controlling principles and their interaction were apparently very complex and sophisticated, leading to even idiosyncratic outcomes. Some chief principles apparent in the succession have been:

- Women were allowed to succeed (but there existed no known children of theirs whose father did not also happen to be an agnate of the imperial house, thus there is neither a precedent that a child of an imperial woman with a non-imperial man could inherit, nor a precedent forbidding it for children of empresses). However, female accession was clearly much more rare than male.
- Adoption was possible and a much used way to increase the number of succession-entitled heirs (however, the adopted child had to be a child of another member agnate of the imperial house).
- Abdication was used very often, and in fact occurred more often than death on the throne. In those days, the emperor's chief task was priestly (or godly), containing so many repetitive rituals that it was deemed that after a service of around ten years, the incumbent deserved pampered retirement as an honored former emperor.
- Primogeniture was not used—rather, in the early days, the imperial house practised something resembling a system of rotation. Very often a brother (or sister) followed the elder sibling even in the case of the predecessor leaving children. The "turn" of the next generation came more often after several individuals of the senior generation. Rotation went often between two or more of the branches of the imperial house, thus more or less distant cousins succeeded each other. Emperor Go-Saga even decreed an official alternation between heirs of his two sons, which system continued for a couple of centuries (leading finally to shōgun-induced (or utilized) strife between these two branches, the "southern" and "northern" emperors). Towards the end, the alternates were very distant cousins counted in degrees of male descent (but all that time, intermarriages occurred within the imperial house, thus they were close cousins if female ties are counted). During the past five hundred years, however, probably due to Confucian influence, inheritance by sons—but not always, or even most often, the eldest son—has been the norm.

Historically, the succession to Japan's Chrysanthemum Throne has always passed to descendants in male line from the imperial lineage. Generally they have been males, though of the over one hundred monarchs there have been nine women (one pre-historical and eight historical) as Emperor on eleven occasions. See the male line (http://genealogics.org/descend.php?personID=I00524444&tree=LEO&displayoption=male&generations=6) of the Yamato dynasty.

Over a thousand years ago, a tradition started that an emperor should ascend relatively young. A dynast who had passed his toddler years was regarded suitable and old enough. Reaching the age of legal majority was not a requirement. Thus, a multitude of Japanese emperors have ascended as children, as young as 6 or 8 years old. The high-priestly duties were deemed possible for a walking child. A reign of around ten years was regarded a sufficient service. Being a child was apparently a fine property, to better endure tedious duties and to tolerate subjugation to political power-brokers, as well as sometimes to cloak the truly powerful members of the imperial dynasty. Almost all Japanese empresses and dozens of emperors abdicated, and lived the rest of their lives in pampered retirement, wielding influence behind the scenes. Several emperors abdicated to their entitled retirement while still in their teens. These traditions show in Japanese folklore, theater, literature and other forms of culture, where the emperor is usually described or depicted as an adolescent.

Before the Meiji Restoration, Japan had eleven reigns of reigning empresses, all of them daughters of the male line of the Imperial House. None ascended purely as a wife or as a widow of an emperor. Imperial daughters and granddaughters, however, usually ascended the throne as a sort of a "stop gap" measure—if a suitable male was not available or some imperial branches were in rivalry so that a compromise was needed. Over half of Japanese empresses and many emperors abdicated once a suitable male descendant was considered to be old enough to rule (just past toddlerhood, in some cases). Four empresses, Empress Suiko, Empress Kōgyoku (also Empress Saimei) and Empress Jitō, as well as the mythical Empress Jingū, were widows of deceased emperors and princesses of the blood imperial in their own right. One, Empress Gemmei, was the widow of a crown prince and a princess of the blood imperial. The other four, Empress Genshō, Empress Kōken (also Empress Shōtoku), Empress Meishō and Empress Go-Sakuramachi, were unwed daughters of previous emperors. None of these empresses married or gave birth after ascending the throne.

Article 2 of the 1889 Meiji Constitution (the Constitution of the Empire of Japan) stated, "The Imperial Throne shall be succeeded to by imperial male descendants, according to the provisions of the Imperial House Law." The 1889 Imperial Household Law fixed the succession on male descendants of the imperial line, and specifically excluded female descendants from the succession. In the event of a complete failure of the main line, the throne would pass to the nearest collateral branch, again in the male line. If the empress did not give birth to an heir, the emperor could take a concubine, and the son he had by that concubine would be recognized as heir to the throne. This law, which was promulgated on the same day as the Meiji Constitution, enjoyed co-equal status with that constitution.

Article 2 of the Constitution of Japan, promulgated in 1947 by influence of the U.S. occupation administration and still in force, provides that "The Imperial Throne shall be dynastic and succeeded to in accordance with the Imperial Household Law passed by the Diet." The Imperial Household Law of 16 January 1947, enacted by the ninety-second and last session of the Imperial Diet, retained the exclusion on female dynasts found in the 1889 law. The government of Prime Minister Yoshida Shigeru hastily cobbled together the legislation to bring the Imperial Household in compliance with the American-written Constitution of Japan that went into effect in May 1947. In an effort to control the size of the imperial family, the law stipulates that only legitimate male descendants in the male line can be dynasts; that imperial princesses lose their status as Imperial Family members if they marry outside the Imperial Family;[8] and that the Emperor and other members of the Imperial Family may not adopt children. It also prevented branches, other than the branch descending from Taishō, from being imperial princes any longer.

Current status

Succession is now regulated by laws passed by the Japanese Diet. The current law excludes women from the succession. A change to this law had been considered until Princess Kiko gave birth to a son.

Until the birth of Prince Hisahito, son of Prince Akishino, on September 6, 2006, there was a potential succession problem, since Prince Akishino was the only male child to be born into the imperial family since 1965. Following the birth of Princess Aiko, there was public debate about amending the current Imperial Household Law to allow women to succeed to the throne. In January 2005 Prime Minister Junichiro Koizumi appointed a special panel composed of judges, university professors, and civil servants to study changes to the Imperial Household Law and to make recommendations to the government.

The panel dealing with the succession issue recommended on October 25, 2005 amending the law to allow females of the male line of imperial descent to ascend the Japanese throne. On January 20, 2006, Prime Minister Junichiro Koizumi devoted part of his annual keynote speech to the controversy, pledging to submit a bill allowing women to ascend the throne to ensure that the succession continues in the future in a stable manner. Shortly after the announcement that Princess Kiko was pregnant with her third child, Koizumi suspended such

plans. Her son, Prince Hisahito, is the third in line to the throne under the current law of succession. On January 3, 2007, Prime Minister Shinzo Abe announced that he would drop the proposal to alter the Imperial Household Law.[9]

Name

In Japan, the emperor is never referred to by his given name, but rather is referred to as "His Imperial Majesty the Emperor" which may be shortened to **"His Imperial Majesty"** (*Tennō Heika*). In writing, the emperor is also referred to formally as "The Reigning Emperor" (*kinjō tennō*). The Era of Akihito's reign bears the name "Heisei" ( ), and according to custom he will be renamed **"Emperor Heisei"** (*Heisei tennō*; see "posthumous name") by order of the cabinet after his death. At the same time, the name of the next era under his successor will also be established.[1]

Biography

Akihito is the eldest son and the fifth child of Emperor Hirohito (the Shōwa Emperor) and Empress Kōjun. Titled Prince Tsugu (*Tsugu-no-miya*) as a child, he was raised and educated by his private tutors and then attended the

Akihito

Emperor Akihito and Empress Michiko (background) visiting the Richmond Olympic Oval in Richmond, B.C., Canada on July 10, 2009.

elementary and secondary departments of the Peers' School (*Gakushūin*) from 1940 to 1952.[2] Unlike his predecessors in the Imperial Family, he did not receive a commission as an Army officer, at the request of his father, Hirohito.

During the American firebombing raids on Tokyo in March 1945, he and his younger brother, HIH Prince Masahito, were evacuated from the city. During the American occupation of Japan following World War II, Prince Akihito was tutored in English and Western manners by Elizabeth Gray Vining. He briefly studied at the Department of Political Science at Gakushuin University in Tokyo, though he never received a degree. Although he was Heir-Apparent to the Chrysanthemum Throne from the moment of his birth, his formal Investiture as Crown Prince (*Rittaishi-no-rei*) was held at the Tokyo Imperial Palace on 10 November 1952. In June 1953, Crown Prince Akihito represented Japan at the coronation of Queen Elizabeth II in London.[2]

Then-Crown Prince Akihito and Crown Princess Michiko made official visits to thirty-seven countries. As an Imperial prince, Akihito compared the role of Japanese royalty to that of a robot; and he expressed the hope that he would like to help in bringing the Imperial family closer to the people of Japan.[3]

Imperial Standard

After the death of Emperor Hirohito on 7 January 1989, the crown prince received the succession (*senso*).[4] Emperor Akihito formally acceded to the throne (*sokui*)[4] on 12 November 1990.[2] In 1998, during a state visit to the United Kingdom, he was invested with The Most Noble Order of the Garter.

On 23 December 2001, during his annual birthday meeting with reporters, the Emperor, in response to a reporter's question about tensions with Korea, remarked that he felt a kinship with Koreans and went on to explain that in the *Shoku Nihongi* the mother of Emperor Kammu (736–806) is related to Muryeong of Korea, King of Baekje.[5]

Emperor Akihito underwent surgery for prostate cancer in January 2003.[6] Since succeeding to the throne, Emperor Akihito has made an effort to bring the Imperial Family closer to the Japanese people. The Emperor and Empress of Japan have made official visits to eighteen countries, as well as all forty-seven Prefectures of Japan.[2]

In response to the 2011 Tōhoku earthquake and tsunami and the Fukushima I nuclear crisis, the Emperor made a historic televised appearance[7] urging his people not to give up hope and to help each other. The Emperor had never been featured in a prerecorded televised message before, and so this event is historic and showed the scale of this disaster.[8] The Emperor and the Empress also made a visit on Wednesday, 30 March 2011 to a temporary shelter housing refugees of the disaster, in order to inspire hope in the people. This kind of event is also extremely rare, though in line with the Emperor's attempts to bring the Imperial Family closer to the people.[9]

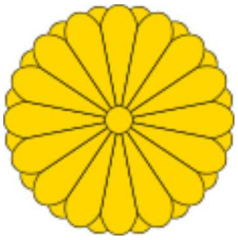
Later in 2011 he was admitted to hospital suffering from pneumonia.[10] In February 2012, it was announced

that the Emperor would be having a coronary examination.[11] He underwent successful heart bypass surgery on 18 February 2012.[12]

Marriage and children

On 10 April 1959, he married Michiko Shōda (born 24 October 1934), the eldest daughter of Hidesaburo Shōda, the president and later honorary chairman of Nisshin Flour Milling Company.[2][13] The new Crown Princess was the first commoner to marry into the imperial family. The Emperor and the Empress have three children:

- HIH The Crown Prince Naruhito (b. 23 February 1960, titled Hiro-no-miya or Prince Hiro),
- HIH The Prince Akishino (Fumihito, b. 30 November 1965, titled Aya-no-miya or Prince Aya) and
- Sayako Kuroda, formerly HIH The Princess Sayako (titled Nori-no-miya or Princess Nori, b. 18 April 1969).[2]



Official functions

Despite being strictly constrained by his constitutional position, he also issued several wide-ranging statements of remorse to Asian countries, for their suffering under Japanese occupation, beginning with an expression of remorse to China made in April 1989, three months after the death of his father, Emperor Hirohito.

In June 2005, the Emperor visited the US territory of Saipan, the site of a battle in World War II from 15 June to 9 July 1944 (Battle of Saipan). Accompanied by Empress Michiko, he offered prayers and flowers at several memorials, honoring not only the Japanese who died, but also American soldiers, Korean laborers, and local islanders. It was the first trip by a Japanese monarch to a World War II battlefield abroad. The Saipan journey was received with high praise by the Japanese people, as were the Emperor's visits to war memorials in Tokyo, Hiroshima, Nagasaki, and Okinawa in 1995.

On 6 September 2006, the Emperor celebrated the birth of his first grandson, Prince Hisahito, the third child of the Emperor's younger son. Prince Hisahito is the first male heir born to the Japanese imperial family in 41 years (since his father Prince Akishino) and could avert a possible succession crisis as the Emperor's elder son, the Crown Prince, has only one daughter, Princess Aiko. Under Japan's current male-only succession law, Princess Aiko is not eligible for the throne. The birth of Prince Hisahito could mean that proposed changes to the law to allow Aiko to ascend the Chrysanthemum Throne will not go through after being temporarily shelved following the announcement of Princess

Ichthyological research

In extension of his father's interest in marine biology, the Emperor is a published ichthyological researcher, and has specialized studies within the taxonomy of the family *Gobiidae*.[14] He has written papers for scholarly journals, namely *Gene* and the *Japanese Journal of Ichthyology*.[15]

He has also written papers about the history of science during the Edo and Meiji eras, which were published in *Science*[16] and *Nature*.[17] In 2005, a newly described goby was named *Exyrias akihito* in his honour.

Imperial House of Japan

From Wikipedia, the free encyclopedia

For the administration of the Imperial household, see Imperial Household Agency.

The **Imperial House of Japan** (皇室 *kōshitsu*), also referred to as the **Imperial Family** or the **Yamato Dynasty**, comprises those members of the extended family of the reigning Emperor of Japan who undertake official and public duties. Under the present Constitution of Japan, the emperor is the symbol of the state and unity of the people. Other members of the imperial family perform ceremonial and social duties, but have no role in the affairs of government. The duties as an emperor are passed down the line to children and their children's children and so on.

The Japanese monarchy is the oldest continuous hereditary monarchy in the world. The imperial house recognizes 125 monarchs beginning with the legendary Emperor Jimmu (traditionally dated to February 11, 660 BC) and continuing up to the current emperor, Akihito; see its family tree. However, there is no historical evidence for the genealogical relationships, and in most cases even the existence of, the first 25 emperors.

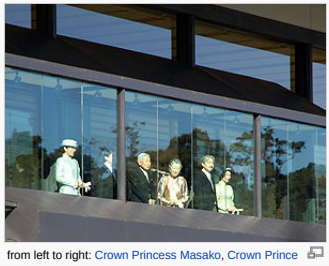
Titles	Emperor of Japan
Founder	Emperor Jimmu
Current head	Akihito
Founding	660 BC (traditional)
Cadet branches	Akishino-no-miya Hitachi-no-miya Mikasa-no-miya Katsura-no-miya Takamado-no-miya



List of current members

[edit]

The 1947 Imperial Household Law defines the imperial house as: the Emperor of Japan (天皇 *tennō*); the empress (皇后 *kōgō*); the empress dowager (皇太后 *kōtaigō*); the grand empress dowager (太皇太后 *tai-kōtaigō*); the crown prince (皇太子 *kōtaishi*) and his consort (皇太子妃 *kōtaishihi*); the imperial grandson who is heir apparent (*kōtaison*, 皇太孫) and his consort; the male-line Imperial grandsons (親王 *shinnō*) and their consorts; the unmarried male-line Imperial granddaughters (内親王 *naishinnō*); Imperial Princes (王 *ō*) and their consorts; and the Imperial Princesses (女王 *nyoō*). The legitimate children and male line grandchildren of an emperor are 親王 *shinnō* (imperial princes) in the case of males and 内親王 *naishinnō* (imperial princesses) in the case of females. More distant male line descendants are *ō* (princes) or *nyoō* (princesses).

After the removal of eleven collateral branches from the Imperial House in October 1947, the official membership of the imperial family has effectively been limited to the male line descendants of the Emperor Taishō, excluding females who married outside the imperial family and their descendants.

There are presently 23 members of the imperial family:

from left to right: Crown Princess Masako, Crown Prince Naruhito, Emperor Akihito, Empress Michiko, Prince Akishino, Princess Akishino; on the occasion of the Emperor's Birthday at the Tokyo Imperial Palace; 2005

- **The Emperor** was born at the Imperial Palace in Tokyo on 23 December 1933, the elder son and sixth child of the Shōwa Emperor and Empress Kōjun. He was married on 10 April 1959 to Michiko Shōda. Emperor Akihito succeeded his father as emperor on 7 January 1989.
- **The Empress**, formerly Michiko Shoda, was born in Tokyo on 24 October 1934, the eldest daughter of Hidesaburo Shoda, president and honorary chairman of Nisshin Flour Milling Inc..
  - **The Crown Prince**, the eldest son of the Emperor and the Empress, was born at the Tsugo Palace in Tokyo on 23 February 1960. He became heir apparent upon his father's ascension to the throne. Crown Prince Naruhito was married on 10 June 1993 to Masako Owada. The Crown Prince and Crown Princess have one daughter.
  - **The Crown Princess** was born on 9 December 1963, the daughter of Hisashi Owada, a former vice minister of foreign affairs and former permanent representative of Japan to the United Nations.
    - **The Princess Toshi**, who was born on 1 December 2001 and who holds the childhood title "Princess Toshi".
  - **The Prince Akishino**, the Emperor's second son, was born on 11 November 1965. His childhood title was Prince Aya. He received the title Prince Akishino and permission to start a new branch of the imperial family upon his marriage to Kawashima Kiko on 29 June 1988.
  - **The Princess Akishino** was born on 11 September 1966, the daughter of Kawashima Tatsuhiko, professor of economics at Gakushuin University. Prince and Princess Akishino have two daughters and a son:
    - **Princess Mako of Akishino** (born 23 October 1991)
    - **Princess Kako of Akishino** (born 29 December 1994)
    - **Prince Hisahito of Akishino** (born 6 September 2006)
- **The Prince Hitachi** was born on 28 November 1935, the second son and seventh child of the Emperor Shōwa and Empress Kojun. His childhood title was Prince Yoshi. He received the title Prince Hitachi and permission to set up a new branch of the imperial family on 1 October 1961, the day after his wedding.
- **The Princess Hitachi** was born on 19 July 1940, the daughter of former Count Tsugaru Yoshitaka. Prince and Princess Hitachi have no children.
- **The Prince Mikasa** was born on 2 December 1915, the fourth son of the Taisho Emperor and Empress Teimei. He is the surviving brother of Emperor Shōwa and the surviving paternal uncle of Emperor Akihito. His childhood title was Prince Sumi (Sumi-no-miya). He received the title Prince Mikasa and permission to start a new branch of the imperial family on 2 December 1935. He married on 22 October 1941.
- **The Princess Mikasa** was born on 6 June 1923, the second daughter of Viscount Takagi Masanori. Prince and Princess Mikasa have two daughters and three sons.
  - **Prince Tomohito of Mikasa** is the eldest son of the Prince and Princess Mikasa and a first cousin of Emperor Akihito. He is also heir apparent to his father's title, Mikasa-no-miya. He was born on 5 January 1946. Prince Tomohito married Aso Nobuko on 7 November 1980.
  - **Princess Tomohito of Mikasa** was born on 9 April 1955, the daughter of Aso Takakichi, chairman of Aso Cement Co. and his wife, Kazuko, a daughter of former prime minister Yoshida Shigeru. Prince and Princess Tomohito of Mikasa have two daughters:
    - **Princess Akiko of Mikasa** (born 20 December 1981)
    - **Princess Yōko of Mikasa** (born 25 October 1983)
  - **The Prince Katsura** is the second son of Prince and Princess Mikasa and a first cousin of Emperor Akihito. He was born on 11 February 1948. Originally known as Prince Yoshihito of Mikasa, he received the title Prince Katsura (Katsura-no-miya) and authorization to start a new branch of the imperial family on 1 January 1988.
  - **The Princess Takamado** is the widow of the Prince Takamado (born 29 December 1954, died 21 November 2002), the third son of the Prince and the Princess Mikasa and a first cousin of Emperor Akihito. The princess was born 10 July 1953, the daughter of Tottori Shigejiro. She married the prince on 6 December 1981. Originally known as Prince Norihito of Mikasa, he received the title Prince Takamado and permission to start a new branch of the imperial family on 1 December 1981. Princess Takamado has three daughters:
    - **Princess Tsuguko of Takamado** (born 6 March 1986)
    - **Princess Noriko of Takamado** (born 22 July 1988)
    - **Princess Ayako of Takamado** (born 15 September 1990)

URL: http://en.wikipedia.org/wiki/Imperial_House_of_Japan

Panoramic view of Tokyo Imperial Palace as seen from Marunouchi.

The following family tree shows the lineage of the current members of the Imperial family (living members in **bold**). Princesses who left the imperial family upon their marriage are indicated in *italics*:[1]

Living former members [edit]

Under the terms of the 1947 Imperial Household Law, *naishinnō* (imperial princesses) and *nyoō* (princesses) lose their titles and membership in the imperial family upon marriage, unless they marry the Emperor or another member of the imperial family. Three of the five daughters of Emperor Shōwa, the two daughters of Prince Mikasa, and most recently, the only daughter of the Emperor Akihito left the imperial family upon marriage, taking the surnames of their husbands. The eldest daughter of Emperor Shōwa married the eldest son of Prince Higashikuni Naruhiko in 1943. The Higashikuni family lost its imperial status along with the other collateral branches of the imperial family in October 1947. The living former imperial princesses are:

- Atsuko Ikeda, born 7 March 1931, fourth daughter of Emperor Shōwa and surviving elder sister of Emperor Akihito.
- Takako Shimazu, born 2 March 1939, fifth daughter and youngest child of Emperor Shōwa and younger sister of Emperor Akihito.
- Yasuko Konoe, born 26 April 1944, eldest daughter and eldest child of Prince and Princess Mikasa.
- Masako Sen, born 23 October 1951, second daughter and fourth child of Prince and Princess Mikasa.
- Sayako Kuroda, born 18 April 1969, third child and only daughter of Emperor Akihito and Empress Michiko.

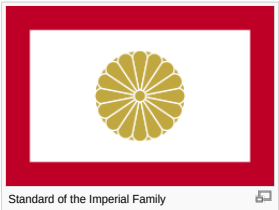
In addition to these former princesses, there are also several people of Imperial descent in the eleven cadet branches of the dynasty (Asaka, Fushimi, Higashi-Fushimi, Higashi-kuni, Kan'in, Kaya, Kitashirakawa, Kuni, Nashimoto, Takeda, and Yamashina) that left the imperial family in October 1947. The Shōwa emperor's eldest daughter, Higashikuni Morihito (Shigeko), and his third daughter, Takatukasa Toshimichi (Kazuko), died in 1961 and 1989, respectively.

Succession [edit]

See also: See also: Emperor of Japan –Succession

Crown Prince Naruhito is heir apparent to the Japanese throne

Historically, the succession to the Chrysanthemum Throne has generally passed in male line of the imperial lineage. The imperial clan previously included specially designated collateral lines or shinnōke (princely houses), too. The surviving shinnōke and several other branches of the extended imperial clan (the ōke) were reduced to commoner status in 1947.



Before the Meiji Restoration, Japan had eight female *tennō* or reigning empresses, all of them daughters of male line of the imperial clan. None ascended purely as a wife or as a widow of an emperor. None of these empresses married or gave birth after ascending the throne.

Article 2 of the Constitution of Japan provides that "the Imperial Throne shall be dynastic and succeeded to in accordance with the Imperial Household Law passed by the Diet." *The Imperial Household Law of 1947* enacted by the 92nd and last session of the Imperial Diet, retained the exclusion on female dynasts found in the 1889 law. The government of Prime Minister Yoshida Shigeru hastily cobbled together the legislation to bring the Imperial House in compliance with the American-written Constitution of Japan that went into effect in May 1947. In an effort to control the size of the imperial family, the law stipulates that only legitimate male descendants in the male line can be dynasts; that *naishinnō* (imperial princesses) and *nyoō* (princesses) lose their status as imperial family-members if they marry outside the imperial family; that *shinnō* (imperial princes), other than the crown prince, *ō* (princes), unmarried imperial princesses and princesses, and the widows of imperial princes and princesses may, upon their own request or in the event of special circumstances, renounce their membership in the imperial family with approval of the Imperial House Council; and that the Emperor and other members of the imperial family may not adopt children.

Before September 2006, there was a potential succession crisis since no male child had been born into the imperial family since Prince Akishino in 1965. Following the birth of Princess Aiko, there was some public debate about amending the Imperial House Law to allow female descendants of an emperor and their descendants to succeed to the throne. In January 2005, Prime Minister Koizumi Junichiro appointed a special panel of judges, university professors, and civil servants to study changes to the Imperial House Law and to make recommendations to the government. On October 25, 2005, the commission recommended amending the law to allow females in the male line of imperial descent to succeed to the throne. Since the birth of a male son to another of Akihito's children the issue has been left in abeyance by both the public and successive governments. Also see Japanese Imperial succession controversy.

History of titles [edit]

Ō (王) is a title (commonly translated "prince") given to male members of the Japanese Imperial Family who do not have the higher title of shinnō. The female equivalent is joō/nyoō (女王). Ō can also be translated as "king". The origin of this double meaning is a copying of the Chinese pattern. Unlike in China, however, ō was only used for imperial family members.

Standard of the Imperial Family

Historically, any male member of the Imperial Family was titled ō by default, with shinnō (親王; literally *relative-prince*) and its female equivalent naishinnō (内親王; literally *relative-princess*) being special titles granted by the Emperor. After the Meiji Restoration, the difference between ō and shinnō were altered. A shinnō or naishinnō was a legitimate Imperial Family member descended from an Emperor down to the great grandchild. The term "legitimate Imperial Family" excludes anyone not connected by a direct *male line* descent, as well as the descendants of anyone who renounced their membership in the Imperial Family, or were expelled from the Imperial Family. Shinnō also included the heads of any of the shinnōke. A provision of law which never had an opportunity to be applied also stipulated that if the head of a shinnōke succeeded to the Chrysanthemum Throne, then his brothers would acquire the title of shinnō, as well as their descendants (down to the grandchildren?). The Emperor could also specially grant the title of shinnō to any ō.

In 1947, the law was changed so that shinnō only extended to the male-line grandchildren of an Emperor. The Imperial Family was also drastically pruned, disestablishing the ōke and shinnōke. The consort of an ō or shinnō has the suffix -hi (妃) to ō or shinnō.

Thailand

From Wikipedia, the free encyclopedia

Thailand (/ˈtaɪlænd/ *TY-land* or /ˈtaɪlənd/;[7] Thai: ประเทศไทย, RTGS: Prathet Thai), officially the **Kingdom of Thailand** (Thai: ราชอาณาจักรไทย, RTGS: Ratcha Anachak Thai; IPA: [râːt.tɕʰā ʔāːnāːtɕàk tʰāj] (listen)), formerly known as **Siam** (Thai: สยาม; RTGS: Sayam), is a country located at the centre of the Indochina peninsula in Southeast Asia. It is bordered to the north by Burma and Laos, to the east by Laos and Cambodia, to the south by the Gulf of Thailand and Malaysia, and to the west by the Andaman Sea and the southern extremity of Burma. Its maritime boundaries include Vietnam in the Gulf of Thailand to the southeast, and Indonesia and India in the Andaman Sea to the southwest.

The country is a constitutional monarchy, headed by King Rama IX, the ninth king of the House of Chakri, who, having reigned since 1946, is the world's longest-serving head of state and the longest-reigning monarch in Thai history.[8] The king of Thailand is titled Head of State, Head of the Armed Forces, the Upholder of the Buddhist religion, and the Defender of all Faiths.

Thailand is the world's 51st-largest country in terms of total area, with an area of approximately 513,000 km^2 (198,000 sq mi), and is the 20th-most-populous country, with around 64 million people. The capital and largest city is Bangkok, which is Thailand's political, commercial, industrial and cultural hub. About 75% of the population is ethnically Thai, 14% is of Chinese origin, and 3% is ethnically Malay;[1] the rest belong to minority groups including Mons, Khmers and various hill tribes. The country's official language is Thai. The primary religion is Buddhism, which is practiced by around 95% of the population.

Thailand experienced rapid economic growth between 1985 and 1995, and is presently a newly industrialized country and a major exporter. Tourism also contributes significantly to the Thai economy, as the country is home to a number of well-known tourist destinations, including Ayutthaya, Pattaya, Bangkok, Phuket, Krabi, Chiang Mai, Hua Hin and Ko Samui.[9][10] There are approximately 5.2 million legal and illegal migrants in Thailand,[11] and the country has also attracted a number of expatriates from developed countries.[12]

Etymology

The country's official name was *Siam* (Thai: สยาม RTGS: Sayam, pronounced [sàjǎːm]) until 23 June 1939,[13] when it was changed to Thailand. It was then renamed Siam from 1945 to 11 May 1949, after which it was again renamed Thailand. Also spelled *Siem*, *Syâm* or *Syâma*, it has been identified with the Sanskrit *Śyâma* (श्याम, meaning "dark" or "brown"). The names Shan and A-hom seem to be variants of the same word, and Śyâma is possibly not its origin but a learned and artificial distortion.[14]

The word *Thai* (ไทย) is not, as commonly believed,[*citation needed*] derived from the word *Tai* (ไท) meaning "freedom" in the Thai language; it is, however, the name of an ethnic group from the central plains (the Thai people).[*citation needed*] A famous Thai scholar argued that Tai (ไท) simply means "people" or "human being" since his investigation shows that in some rural areas the word "Tai" was used instead of the usual Thai word "khon" (คน) for people.[15]

The Thai use the phrase "land of the free" to express pride in the fact that Thailand is the only country in Southeast Asia never colonized by a European power. While the Thai people will often refer to their country using the polite form *Prathet Thai* (Thai: ประเทศไทย), they most commonly use the more colloquial word *Mueang Thai* (Thai: เมืองไทย) or simply *Thai* (Thai: ไทย); the word *mueang* (Thai: เมือง) meaning nation but most commonly used to refer to a city or town. *Ratcha Anachak Thai* (Thai: ราชอาณาจักรไทย) means "Kingdom of Thailand" or "Kingdom of Thai".

Etymologically, its components are: -*Ratcha*- (from Sanskrit *raja*, meaning "king, royal, realm") ; -*ana*- (from Pāli *āṇā*, "authority, command, power", itself from Sanskrit *ājñā*, same meaning) -*chak* (from Sanskrit *cakra* or *cakraṃ* meaning "wheel", a symbol of power and rule). The Thai National Anthem (Thai: เพลงชาติ), composed and written by Peter Feit during the extremely "patriotic" 1930s, refers to the Thai nation as: prathet-thai (Thai: ประเทศไทย). The first line of the national anthem is: *prathet thai ruam lueat nuea chat chuea thai* (Thai: ประเทศไทยรวมเลือดเนื้อชาติเชื้อไทย) and was translated in 1939 by Colonel Luang Saranuprabhandi as: "Thailand is the unity of Thai blood and body."

History

Main articles: History of Thailand and People of Thailand

An example of pottery discovered near Ban Chiang in Udon Thani province, the earliest dating to 2100 BCE.

The region known as Thailand has been inhabited by humans at least about 4,000 years ago. Similar to other regions in Southeast Asia, it was heavily influenced by the culture and religions of India, starting with the kingdom of Funan around the 1st century CE.[16]

The ruins of Wat Chaiwatthanaram at Ayutthaya, the city was burned and sacked in 1767 by a Burmese army under the King Hsinbyushin.

After the fall of the Khmer Empire in the 13th century, various states thrived there, such as the various Tai, Mon, Khmer and Malay kingdoms, as seen through the numerous archaeological sites and artifacts that are scattered throughout the Siamese landscape. Prior to the 12th century however, the first Thai or Siamese state is traditionally considered to be the Buddhist kingdom of Sukhothai, which was founded in 1238.

Following the decline and fall of the Khmer empire in the 13th–15th century, the Buddhist Tai kingdoms of Sukhothai, Lanna and Lan Xang (now Laos) were on the ascension. However, a century later, the power of Sukhothai was overshadowed by the new kingdom of Ayutthaya, established in the mid-14th century in the lower Chao Phraya River or Menam area.

Phanom Rung, a temple in Thailand from the former Khmer Empire

The Ayutthaya period immense 19 meter high seated bronze Buddha in Wat Phanan Choeng from 1324 pre-dates the founding of the city in 1351

Ayutthaya's expansion centred along the Menam while in the northern valley the Lanna Kingdom and other small Tai city-states ruled the area. In 1431, the Khmer abandoned Angkor after the Ayutthaya forces invaded the city.[17] Thailand retained a tradition of trade with its neighbouring states, from China to India, Persia and Arab lands. Ayutthaya became one of the most vibrant trading centres in Asia. European traders arrived in the 16th century, beginning with the Portuguese, followed by the French, Dutch and English.

After the fall of Ayutthaya in 1767 to the Burmese, King Taksin the Great moved the capital of Thailand to Thonburi for approximately 15 years. The current Rattanakosin era of Thai history began in 1782, following the establishment of Bangkok as capital of the Chakri dynasty under King Rama I the Great. According to *Encyclopædia Britannica*, "A quarter to a third of the population of some areas of Thailand and Burma were slaves in the 17th through the 19th centuries."[18][19]

Despite European pressure, Thailand is the only Southeast Asian nation that has never been colonized.[20] This has been ascribed to the long succession of able rulers in the past four centuries who exploited the rivalry and tension between French Indochina and the British Empire. As a result, the country remained a buffer state between parts of Southeast Asia that were colonized by the two colonizing powers, Great Britain and France. Western influence nevertheless led to many reforms in the 19th century and major concessions, most notably being the loss of a large territory on the east side of the Mekong to the French and the step-by-step absorption by Britain of the Malay Peninsula.

Kosa Pan presents King Narai's letter to Louis XIV at Versailles, 1 September 1686

20th century

The losses initially included Penang and eventually culminated in the loss of four predominantly ethnic-Malay southern provinces, which later became Malaysia's four northern states, under the Anglo-Siamese Treaty of 1909.

In 1932, a bloodless revolution carried out by the Khana Ratsadon group of military and civilian officials resulted in a transition of power, when King Prajadhipok was forced to grant the people of Siam their first constitution, thereby ending centuries of absolute monarchy.

During World War II, the Empire of Japan demanded the right to move troops across Thailand to the Malayan frontier. Japan invaded the country and engaged the Thai Army for six to eight hours before Plaek Pibulsonggram ordered an armistice. Shortly thereafter Japan was granted free passage, and on 21 December 1941, Thailand and Japan signed a military alliance with a secret protocol wherein Tokyo agreed to help Thailand regain territories lost to the British and French. Subsequently, Thailand declared

war on the United States and the United Kingdom on 25 January 1942 and undertook to 'assist' Japan in its war against the Allies, while at the same time maintaining an active anti-Japanese resistance movement known as the Seri Thai. Approximately 200,000 Asian labourers (mainly romusha) and 60,000 Allied POWs worked on the Thailand–Burma Death Railway.[21]

After the war, Thailand emerged as an ally of the United States. As with many of the developing nations during the Cold War, Thailand then went through decades of political instability characterised by coups d'état as one military regime replaced another, but eventually progressed towards a stable prosperity and democracy in the 1980s.[*citation needed*]

The southern region

See also: South Thailand insurgency

Thailand controlled the Malay Peninsula as far as Malacca in the 1400s and held much of the peninsula, including Temasek (Singapore) some of the Andaman Islands and a colony on Java, but eventually failed when the British used force to guarantee their suzerainty over the sultanate.

Mostly the northern states of the Malay Sultanate presented annual gifts to the Thai king in the form of a golden flower, which understood the gesture to be tribute and an acknowledgement of vassalage. The British intervened in the Malay State and with the Anglo-Siamese Treaty tried to build a railway from the south to Bangkok. Thailand relinquished sovereignty over what are now the northern Malay provinces of Kedah, Perlis, Kelantan and Terengganu to the British. Satun and Pattani provinces were given to Thailand. The Malay peninsula provinces were infiltrated by the Japanese during World War II, and by the Malayan Communist Party (CPM) from 1942 to 2008, when they decided to sue for peace with the Malaysian and Thai governments after the CPM lost its support from Vietnam and China subsequent to the Cultural Revolution. Recent insurgent uprisings may be a continuation of separatist fighting which started after World War II with Sukarno's support for the PULO, and the intensification. Most victims since the uprisings have been Buddhist and Muslim bystanders.

Politics and government

Main articles: Politics of Thailand, Constitutions of Thailand, Law of Thailand, and Government of Thailand

The politics of Thailand is currently conducted within the framework of a constitutional monarchy, whereby the Prime Minister is the head of government and a hereditary monarch is head of state. The judiciary is independent of the executive and the legislative branches.

Rama IX, The current King of Thailand.

History

Bangkok's Democracy Monument: a representation of the 1932 Constitution sits on top of two golden offering bowls above a turret.

Since the political reform of the absolute monarchy in 1932, Thailand has had 17 constitutions and charters.[22][23] Throughout this time, the form of government has ranged from military dictatorship to electoral democracy, but all governments have acknowledged a hereditary monarch as the head of state.[24][25]

28 June 1932

Prior to 1932, the Kingdom of Siam did not possess a legislature, as all legislative powers were vested within the person of the monarch. This had been the case since the foundation of the Sukhothai Kingdom in the 12th century: as the king was seen as a "Dharmaraja" or "King who rules in accordance with Dharma" (the Buddhist law of righteousness). However on 24 June 1932 a group of civilians and military officers, calling themselves the Khana Ratsadon (or People's Party) carried out a bloodless revolution, in which the 150 years of absolute rule of the House of Chakri was ended. In its stead the group advocated a constitutional form of monarchy with an elected legislature.

The "Draft Constitution" of 1932 signed by King Prajadhipok, created Thailand's first legislature, a **People's Assembly** with 70

appointed members. The assembly met for the first time on 28 June 1932, in the Ananda Samakhom Throne Hall. The Khana Ratsadon decided that the people were not yet ready for an elected assembly; however they later changed their minds. By the time the "permanent" constitution came into force in December of that year, elections were scheduled for 15 November 1933. The new constitution also changed the composition of the assembly to 78 directly elected and 78 appointed (by the Khana Ratsadon) together compromising 156 members.

1933 to 1997

For events subsequent to the abdication of the king, including the name change of 1939, up to the coup d'état of 1957, see Plaek Pibulsonggram. For additional history to 1997, refer to his successors in the List of Prime Ministers of Thailand.

1997 to 2006

See also: 1997 Constitution of Thailand

The 1997 Constitution was the first constitution to be drafted by popularly elected Constitutional Drafting Assembly, and was popularly called the "People's Constitution".[26] The 1997 Constitution created a bicameral legislature consisting of a 500-seat House of Representatives (**สภาผู้แทนราษฎร**, sapha phutaen ratsadon) and a 200-seat Senate (**วุฒิสภา**, wuthisapha). For the first time in Thai history, both houses were directly elected.

Ananda Samakhom Throne Hall the old meeting place of the National Assembly, now only the State Opening is held there.

Many human rights are explicitly acknowledged, and measures were established to increase the stability of elected governments. The House was elected by the first past the post system, where only one candidate with a simple majority could be elected in one constituency. The Senate was elected based on the province system, where one province can return more than one senator depending on its population size.

The two houses of the National Assembly have two different terms. In accordance with the constitution the Senate is elected to a six year term, while the House is elected to a four year term. Overall the term of the National Assembly is based on that of the House. The National Assembly each year will sit in two sessions an "ordinary session" and a "legislative session". The first session of the National Assembly must take place within thirty days after the general election of the House of Representatives. The first session must be opened by the king in person by reading a Speech from the Throne; this ceremony is held in the Ananda Samakhom Throne Hall. He may also appoint the crown prince or a representative to carry out this duty. It is also the duty of the king to prorogue sessions through a Royal Decree when the House term expires. The king also has the prerogative to call extraordinary sessions and prolong sessions at his discretion.

Parliament House the meeting place of the two chambers of the National Assembly of Thailand.

The National Assembly may host a "Joint-sitting" of both Houses under several circumstances. These include: The appointment of a regent, any alteration to the 1924 Palace Law of Succession, the opening of the first session, the announcement of policies by the Cabinet of Thailand, the approval of the declaration of war, the hearing of explanations and approval of a treaty and the amendment of the Constitution.

Members of the House of Representatives served four-year terms, while senators served six-year terms. The 1997 People's Constitution also promoted human rights more than any other constitutions. The court system (**ศาล**, saan) included a constitutional court with jurisdiction over the constitutionality of parliamentary acts, royal decrees, and political matters.

The January 2001 general election, the first election under the 1997 Constitution, was called the most open, corruption-free election in Thai history.[27] The subsequent government was the first in Thai history to complete a four-year term. The 2005 election had the highest voter turnout in Thai history.[28][29] Despite efforts to clean up the system, vote buying and electoral violence remained problems of electoral quality in 2005.[30]

The PollWatch Foundation, Thailand's most prominent election watchdog, declared that vote buying in this election, specifically in the North and the Northeast, was more serious than in the 2001 election. The organization also accused the government of violating the election law by abusing state power in presenting new projects in a bid to seek votes.

2006 coup d'état

See also: 2006 Thai coup d'état

Without meeting much resistance, a military junta overthrew the interim government of Thaksin Shinawatra on 19 September 2006. The junta abrogated the constitution, dissolved Parliament and the Constitutional Court, detained and later removed several members of the government, declared martial law, and appointed one of the king's Privy Counselors, General Surayud Chulanont, as the Prime Minister. The junta later wrote a highly abbreviated interim constitution and appointed a panel to draft a new permanent constitution. The junta also appointed a 250-member legislature, called by some critics a "chamber of generals" while others claimed that it lacks representatives from the poor majority.[31][32]

In this interim constitution draft, the head of the junta was allowed to remove the prime minister at any time. The legislature was not allowed to hold a vote of confidence against the cabinet and the public was not allowed to file comments on bills.[33] This interim constitution was later surpassed by the permanent constitution on 24 August 2007. Martial law was partially revoked in January 2007. The ban on political activities was lifted in July 2007,[34] following the 30 May dissolution of the Thai Rak Thai party. The new constitution was approved by referendum on 19 August, which led to a return to a democratic general election on 23 December 2007.

Political crisis

See also: 2008–2010 Thai political crisis

The People's Power Party (Thailand), led by Samak Sundaravej formed a government with five smaller parties. Following several court rulings against him in a variety of scandals, and surviving a vote of no confidence, and protesters blockading government buildings and airports, in September 2008, Sundaravej was found guilty of conflict of interest by the Constitutional Court of Thailand (due to being a host in a TV cooking program),[35] and thus, ended his term in office.

Yellow shirts rally on Sukhumvit Road in 2008.

He was replaced by PPP member Somchai Wongsawat. As of October 2008, Wongsawat was unable to gain access to his offices, which were occupied by protesters from the People's Alliance for Democracy. On 2 December 2008, Thailand's Constitutional Court in a highly controversial ruling found the Peoples Power Party[36] guilty of electoral fraud, which led to the dissolution of the party according to the law. It was later alleged in media reports that at least one member of the judiciary had a telephone conversation with officials working for the Office of the Privy Council and one other. The phone call was taped and has since circulated on the Internet. In it, the callers discuss finding a way to ensure the ruling PPP party would be disbanded. Accusations of judicial interference were levelled in the media but the recorded call was dismissed as a hoax. However, in June 2010, supporters of the eventually disbanded PPP were charged with tapping a judge's phone.

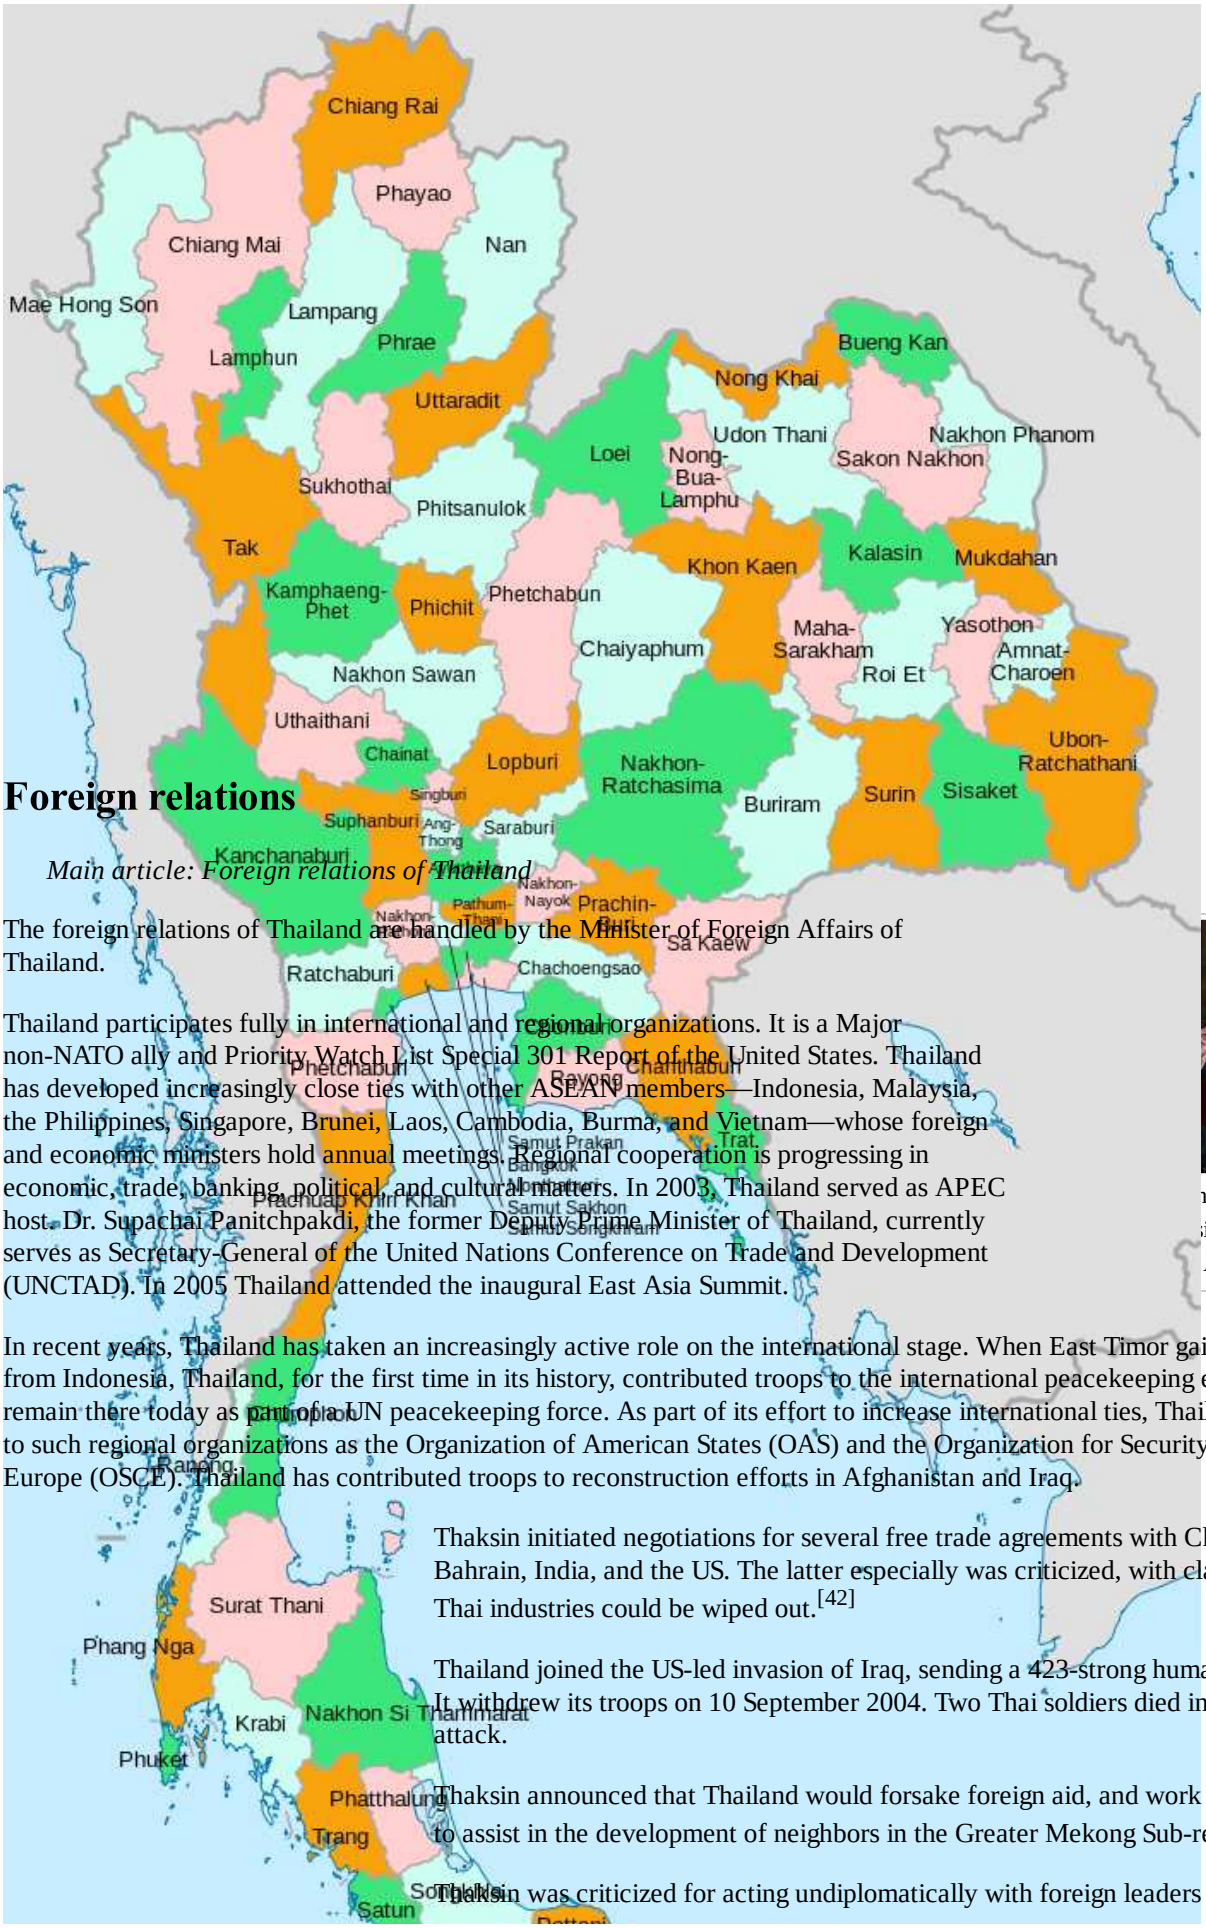
Red Shirts protest on Ratchaprasong intersection in 2010.

Immediately following what many media described as a "judicial coup", a senior member of the Armed Forces met with factions of the governing coalition to get their members to join the opposition and the Democrat Party was able to form a government, a first for the party since 2001. The leader of the Democrat party, and former leader of the opposition, Abhisit Vejjajiva was appointed and sworn-in as the 27th Prime Minister, together with the new cabinet on 17 December 2008.

Thailand remains an active member of ASEAN (Association of South East Asian Nations).

In of April 2010, a set of new protests by the Red Shirt opposition movement resulted in 87 deaths (mostly civilian and some military) and 1,378 injured.[37] When the army tried to disperse the protesters on 10 April 2010, the army was met with automatic gunfire, grenades, and fire bombs from the opposition faction in the army, known as the "watermelon". This resulted in the army returning fire with rubber bullets and some live ammunition. During the time of the "red shirt" protests against the government, there have been numerous grenade and bomb attacks against government offices and the homes of government officials. Grenades were fired at protesters, that were protesting against the "red shirts" and for the government, by unknown gunmen killing one pro-government protester, the government stated that the Red Shirts protesters were firing the weapons at civilians.[38][39][40][41]

On 3 July 2011, the oppositional Pheu Thai Party led by Yingluck Shinawatra (the youngest sister of Thaksin Shinawatra) won the general election by a landslide (265 seats in the House of Representatives). They could form a coalition government presided over by Yingluck.



Administrative divisions

Main article: Subdivisions of Thailand

Thailand is divided into 76 provinces (**จังหวัด**, changwat), which are gathered into 5 groups of provinces by location. There are also 2 special governed districts: the capital Bangkok (Krung Thep Maha Nakhon) and Pattaya, of which Bangkok is at provincial level and thus often counted as a province.

Each province is divided into districts and the districts are further divided into sub-districts (tambons). As of 2006 there are 877 districts (**อำเภอ**, amphoe) and the 50 districts of Bangkok (**เขต**, khet). Some parts of the provinces bordering Bangkok are also referred to as Greater Bangkok (**ปริมณฑล**, pari monthon). These provinces include Nonthaburi, Pathum Thani, Samut Prakan, Nakhon Pathom and Samut Sakhon. The name of each province's capital city (**เมือง**, mueang) is the same as that of the province. For example, the capital of Chiang Mai province (*Changwat Chiang Mai*) is *Mueang Chiang Mai* or *Chiang Mai*.

A clickable map of Thailand exhibiting its provinces.

Foreign relations

Main article: Foreign relations of Thailand

The foreign relations of Thailand are handled by the Minister of Foreign Affairs of Thailand.

Thailand participates fully in international and regional organizations. It is a Major non-NATO ally and Priority Watch List Special 301 Report of the United States. Thailand has developed increasingly close ties with other ASEAN members—Indonesia, Malaysia, the Philippines, Singapore, Brunei, Laos, Cambodia, Burma, and Vietnam—whose foreign and economic ministers hold annual meetings. Regional cooperation is progressing in economic, trade, banking, political, and cultural matters. In 2003, Thailand served as APEC host. Dr. Supachai Panitchpakdi, the former Deputy Prime Minister of Thailand, currently serves as Secretary-General of the United Nations Conference on Trade and Development (UNCTAD). In 2005 Thailand attended the inaugural East Asia Summit.

with former Prime
in Shinawatra before
APEC Summit in 2003

In recent years, Thailand has taken an increasingly active role on the international stage. When East Timor gained independence from Indonesia, Thailand, for the first time in its history, contributed troops to the international peacekeeping effort. Its troops remain there today as part of a UN peacekeeping force. As part of its effort to increase international ties, Thailand has reached out to such regional organizations as the Organization of American States (OAS) and the Organization for Security and Cooperation in Europe (OSCE). Thailand has contributed troops to reconstruction efforts in Afghanistan and Iraq.

Thaksin initiated negotiations for several free trade agreements with China, Australia, Bahrain, India, and the US. The latter especially was criticized, with claims that high-cost Thai industries could be wiped out.[42]

Thailand joined the US-led invasion of Iraq, sending a 423-strong humanitarian contingent. It withdrew its troops on 10 September 2004. Two Thai soldiers died in Iraq in an insurgent attack.

Thaksin announced that Thailand would forsake foreign aid, and work with donor countries to assist in the development of neighbors in the Greater Mekong Sub-region.[43]

Thaksin was criticized for acting undiplomatically with foreign leaders and the international

bama on 23 September 2009, in New York

community and there were allegations of gaffes at international meetings.[44]

Thaksin was ambitious to position Thailand as a regional leader, initiating various development projects in poorer neighbouring countries like Laos. More controversially, he established close, friendly ties with the Burmese dictatorship, including extending the impoverished country a 4 billion baht credit line so it could conclude a satellite telecom deal with his family business.[45]

Thaksin energetically supported his former foreign minister Surakiart Sathirathai's somewhat improbable campaign to become UN Secretary General.

Abhisit appointed Peoples Alliance for Democracy leader Kasit Piromya as Foreign Minister. Prior to his appointment, Kasit had led anti-Cambodia protests and called Cambodian Prime Minister Hun Sen a "gangster minded (**ใจนักเลง** *jai-nak-leng*)" (he later claimed the word he used actually meant "a person who is lionhearted, a courageous and magnanimous gentleman"). In April 2009, "large-scale fighting" erupted between Thai and Cambodian troops on territory immediately adjacent to the 900-year-old ruins of Cambodia's Preah Vihear Hindu temple near the border. The Cambodian government claimed its army had killed at least four Thais and captured 10 more, although the Thai government denied that any Thai soldiers were killed or injured. Two Cambodian soldiers were killed and three Thai soldiers were killed. Both armies blamed the other for firing first and denied entering the other's territory.[46][47]

Military

Main article: Royal Thai Armed Forces

The **Royal Thai Armed Forces** (Thai: **กองทัพไทย**: *Kongthap Thai*) constitutes the military of the Kingdom of Thailand. It consists of the Royal Thai Army (**กองทัพบกไทย**), the Royal Thai Navy (**กองทัพเรือไทย**, **ราชนาวีไทย**) and the Royal Thai Air Force (**กองทัพอากาศไทย**). It also incorporates various paramilitary forces.

The HTMS *Chakri Naruebet*, an aircraft carrier of the Royal Thai Navy.

Currently, the Royal Thai Armed Forces has a combined manpower of about 800,000 personnel. The Head of the Thai Armed Forces (**จอมทัพไทย**: *Chomthap Thai*) is King Bhumibol Adulyadej (Rama IX),[48] although this position is only nominal. The Armed Forces is managed by the Ministry of Defence of Thailand, which is headed by the Minister of Defence (a member of the Cabinet of Thailand) and commanded by the Royal Thai Armed Forces Headquarters, which in turn is headed by the Chief of Defence Forces of Thailand.[49]

F-16 Block 15OCUs of the Royal Thai Air Force in flight.

According to the Constitution of the Kingdom, serving in the Armed Forces is a duty of all Thai citizens.[50] However only males over the age of 21, who have not gone through reserve training of the Army Reserve Force Students are given the option of whether they want to volunteer for the armed forces, or pick the random draft. The candidates are subjected to varying lengths of training from 6 months to 2 years of fulltime service depending on their education, whether they have partially completed the reserve training course, and whether they volunteered prior to the drafting date (usually 1 April every year).

Candidates with a recognized bachelor's degree will be subjected to 1 year of full-time service if they picked the random draft, or 6 months if they volunteer at their respective district office (Sasadee).

Likewise, the training length is also reduced for those who have partially completed the 3-year reserve training course (Ror Dor). A person who completed 1 year out of 3 will only have to serve full-time for 1 year. Those completed 2 years of reserve training will only have to do 6 months of full-time training. While those who complete 3 years or more of reserve training will be exempted.

The Royal Thai Armed Forces Day is celebrated on 18 January to commemorate the victory of King Naresuan the Great in battle against the Crown Prince of Burma in 1593.

Geography

Main article: Geography of Thailand

View of the Luang Prabang Range straddling the Thai/Lao border in northern Thailand.

Totalling 513,120 square kilometres (198,120 sq mi),[1] Thailand is the world's 51st-largest country by total area. It is slightly smaller than Yemen and slightly larger than Spain.

Thailand is home to several distinct geographic regions, partly corresponding to the provincial groups. The north of the country is the mountainous area of the Thai highlands, with the highest point being Doi Inthanon in the Thanon Thong Chai Range at 2,565 metres (8,415 ft) above sea level. The northeast, Isan, consists of the Khorat Plateau, bordered to the east by the Mekong River. The centre of the country is dominated by the predominantly flat Chao Phraya river valley, which runs into the Gulf of Thailand.

Satellite image of flooding in Thailand in October 2011.

Southern Thailand consists of the narrow Kra Isthmus that widens into the Malay Peninsula. Politically, there are six geographical regions which differ from the others in population, basic resources, natural features, and level of social and economic development. The diversity of the regions is the most pronounced attribute of Thailand's physical setting.

The Chao Phraya and the Mekong River are the sustainable resource of rural Thailand. Industrial scale production of crops use both rivers and their tributaries. The Gulf of Thailand covers 320,000 square kilometres (124,000 sq mi) and is fed by the Chao Phraya, Mae Klong, Bang Pakong and Tapi Rivers. It contributes to the tourism sector owing to its clear shallow waters along the coasts in the Southern Region and the Kra Isthmus. The Gulf of Thailand is also an industrial centre of Thailand with the kingdom's main port in Sattahip along with being the entry gates for Bangkok's Inland Seaport.

The Andaman Sea is regarded as Thailand's most precious natural resource as it hosts the most popular and luxurious resorts in Asia. Phuket, Krabi, Ranong, Phang Nga and Trang and their lush islands all lay along the coasts of the Andaman Sea and despite the 2004 Tsunami, they continue to be and ever more so, the playground of the rich and elite of Asia and the world.

Plans have resurfaced of a logistical connection of the two bodies of water which would be coined the Thai Canal, analogous to the Suez and the Panama Canal. Such an idea has been greeted with positive accounts by Thai politicians as it would cut fees charged by the Ports of Singapore, improve ties with China and India, lower shipping times and increase ship safety owing to pirate fears in the Strait of Melaka and, support the Thai government's policy of being the logistical hub for Southeast Asia.

The ports would improve economic conditions in the south of Thailand, which relies heavily on tourism income, and it would also change the structure of the Thai economy moving it closer to a services centre of Asia. The canal would be a major engineering project and has expected costs of 20–30 billion dollars.

The local climate is tropical and characterized by monsoons. There is a rainy, warm, and cloudy southwest monsoon from mid-May to September, as well as a dry, cool northeast monsoon from November to mid-March. The southern isthmus is always hot and humid.

Education

Main article: Education in Thailand

Thailand enjoys a high level of literacy, and education is provided by a well-organized school system of kindergartens, primary, lower secondary and upper secondary schools, numerous vocational colleges, and universities. The private sector of education is well developed and significantly contributes to the overall provision of education which the government would not be able to meet through the public establishments. Education is compulsory up to and including age group 14, and the government provides free education through to age group 17.

Primary school students in Thailand

Thailand has never been colonized, and its teaching relies heavily on rote rather than on student-centred methodology.

The establishment of reliable and coherent curricula for its primary and secondary schools

Chulalongkorn University, established in 1917 is the oldest university in Thailand.

is subject to such rapid changes that schools and their teachers are not always sure what they are supposed to be teaching, and authors and publishers of textbooks are unable to write and print new editions quickly enough to keep up with the volatile situation. The issue concerning university entrance has therefore also been in constant upheaval for a number of years. Nevertheless, education has seen its greatest progress in the years since 2001. Most of the present generation of students are computer literate, and knowledge of English is on the increase at least in quantity if not in quality.

Extensive nationwide IQ tests were carried out in December 2010 to January 2011 on 72,780 Thai students. The average IQ was found to be at 98.59, which is higher than previous studies have found. The IQ levels are not consistent throughout the country though, with the lowest average of 88.07 found in the southern region of Narathiwat and the highest average of 108.91 reported in Nonthaburi province. The Thai Ministry of Public Health blames the discrepancies on iodine deficiency and steps are being taken to require that iodine be added to table salt, a practice common in many Western countries.[51]

Science and technology

Main article: Science and technology in Thailand

14" telescope Astronomical Seeing Test project by the Ministry of Science & Technology.

The National Science and Technology Development Agency is an agency of the government of Thailand which supports research in science and technology and their application in the Thai economy.

From the agency's website:

The National Science and Technology Development Agency (NSTDA) reflects the Thai government's deep commitment to apply scientific and technological capabilities to promote and sustain the nation's economic, social development and growth through the promotion of linkage and collaboration between the public and private sectors. Since its inception in 1991, NSTDA has grown into an active organization with a diverse program focusing on cutting-edge S&T research, design, development and engineering. NSTDA offers a full potential and opportunity for cooperative challenges and investment. Through such a convergence, the organization brings a layered, multi-faceted approach to the scholarly and most practical description of scientific and technological discoveries and advancement to serve national needs and maintain a sustained linkage with the international community.

Eastern Water Public Company Limited headquarters in Bangkok.

The Synchrotron Light Research Institute (SLRI) is a Thai research institution on physics, chemistry, material science and life sciences. It is located on the Suranaree University of Technology Campus (SUT), in Nakhorn Ratchaseema, about 300 km north east of Bangkok. The Institute, financed by the Ministry of Science and Technology (MOST), houses the only large scale synchrotron in South East Asia. It was originally built as the SORTEC synchrotron in Japan and later moved to Thailand and modified for 1.2 GeV operation. It provides users with regularly scheduled light.

Economy

Main article: Economy of Thailand

Thailand is an emerging economy and considered as a newly industrialized country. After enjoying the world's highest growth rate from 1985 to 1996 – averaging 12.4% annually – increased pressure on Thailand's currency, the baht, in 1997, the year in which the economy contracted by 1.9% led to a crisis that uncovered financial sector weaknesses and forced the Chavalit Yongchaiyudh administration to float the currency, however, Prime Minister Chavalit Yongchaiyudh was forced to resign after his cabinet came under fire for its slow response to the crisis. The baht was pegged at 25 to the US dollar from 1978 to 1997, however, the baht reached its lowest point of 56 to the US dollar in January 1998 and the economy contracted by 10.8% that year. This collapse prompted the Asian financial crisis.

Bangkok, the largest city, business and industrial centre of the country

Thailand's economy started to recover in 1999, expanding 4.2% and 4.4% in 2000, thanks

largely to strong exports. Growth (2.2%) was dampened by the softening of the global economy in 2001, but picked up in the subsequent years owing to strong growth in Asia, a relatively weak baht encouraging exports and increasing domestic spending as a result of several mega projects and incentives of Prime Minister Thaksin Shinawatra, known as Thaksinomics. Growth in 2002, 2003 and 2004 was 5–7% annually. Growth in 2005, 2006 and 2007 hovered around 4–5%. Due both to the weakening of the US dollar and an increasingly strong Thai currency, by March 2008, the dollar was hovering around the 33 baht mark.

Thailand exports an increasing value of over $105 billion worth of goods and services annually.[1] Major exports include Thai rice, textiles and footwear, fishery products, rubber, jewellery, cars, computers and electrical appliances. Thailand is the world's no.1 exporter of rice, exporting more than 6.5 million tons of milled rice annually. Rice is the most important crop in the country. Thailand has the highest percentage of arable land, 27.25%, of any nation in the Greater Mekong Subregion.[52] About 55% of the arable land area is used for rice production.[53]

Substantial industries include electric appliances, components, computer parts and cars, while tourism in Thailand makes up about 6% of the economy. Prostitution in Thailand and sex tourism also form a de facto part of the economy. Cultural milieu combined with poverty and the lure of money have caused prostitution and sex tourism in particular to flourish in Thailand. One estimate published in 2003 placed the trade at US$4.3 billion per year or about three percent of the Thai economy.[54] According to research by Chulalongkorn University on the Thai illegal economy, prostitution in Thailand in the period between 1993 and 1995, made up around 2.7% of the GDP.[55] It is believed that *at least* 10% of tourist dollars are spent on the sex trade.[56]

Thailand is the largest rice exporter in the world

The economy of Thailand is an emerging economy which is heavily export-dependent, with exports accounting for more than two thirds of gross domestic product (GDP) The exchange rate is Baht 33.00/USD.

Thailand has a GDP worth 8.5 trillion Baht (on a purchasing power parity (PPP) basis), or US$627 billion (PPP). This classifies Thailand as the 2nd largest economy in Southeast Asia after Indonesia. Despite this, Thailand ranks midway in the wealth spread in Southeast Asia as it is the 4th richest nation according to GDP per capita, after Singapore, Brunei and Malaysia.

It functions as an anchor economy for the neighboring developing economies of Laos, Burma, and Cambodia. Thailand's recovery from the 1997–1998 Asian financial crisis depended mainly on exports, among various other factors. Thailand ranks high among the world's automotive export industries along with manufacturing of electronic goods.

Between 1997 and 2010, 4'306 mergers & acquisitions with a total known value of USD$81 billion with the involvement of Thai firms have been announced.[57] The year 2010 was a new record in terms of value with USD$12 billion of transactions. The largest transaction with involvement of Thai companies has been: PTT Chemical PCL merged with PTT Aromatics and Refining PCL valued at USD$3.8 billion in 2011.[58]

49% of Thailand's labor force is employed in agriculture, however this is less than the 70% employed in 1980.[59] Agriculture has been experiencing a transition from labour intensive and transitional methods into a more industrialised and competitive sector.[59] Between 1962 and 1983, the agricultural sector grew by 4.1% on average a year and continued to grow at 2.2% between 1983 and 2007.[59] However, the relative contribution of agriculture to GDP has declined while exports of goods and services have increased.

Tourism revenues are on the rise. With the instability surrounding the recent coup and the military rule, however, the GDP growth of Thailand has settled at around 4–5% from previous highs of 5–7% under the previous civilian administration, as investor and consumer confidence has been degraded somewhat due to political uncertainty.

Sites like The Sanctuary of Truth help the tourist economy.

The incumbent elected civilian administration under Samak Sundaravej in power from 29 January to 9 September 2008 stated that the economy will have grown by 5.5% to 6% by the end of 2008. Due to rising oil and food prices, the annual inflation rate for 2008 shot up to 9.2% in July; a 10-year high.

Thailand generally uses the metric system but traditional units of measurement for land area are used, and imperial measure (feet, inches etc.) are occasionally used with building materials such as wood and plumbing sizes. Years are numbered as B.E. (Buddhist Era) in

education, the civil service, government, and on contracts and newspaper datelines; in banking, however, and increasingly in industry and commerce, standard Western year (Christian or Common Era) counting prevails.[60]

Language

Ethnic map of Thailand

The official language of Thailand is Thai, a Tai–Kadai language closely related to Lao, Shan in Burma, and numerous smaller languages spoken in an arc from Hainan and Yunnan south to the Chinese border. It is the principal language of education and government and spoken throughout the country. The standard is based on the dialect of the central Thai people, and it is written in the Thai alphabet, an abugida script that evolved from the Khmer script. Several other dialects exist, and coincide with the regional designations. Southern Thai is spoken in the southern provinces, and Northern Thai is spoken in the provinces that were formally part of the independent kingdom of Lannathai.

Thailand is also host to several other minority languages, the largest of which is the Lao dialect of Isan spoken in the northeastern provinces. Although sometimes considered a Thai dialect, it is a Lao dialect, and the region in where it is traditionally spoken was historically part of the Lao kingdom of Lan Xang. In the far south,

Historical populations

Year	Pop.	±%
1910	8,131,247	—
1919	9,207,355	+13.2%
1929	11,506,207	+25.0%
1937	14,464,105	+25.7%
1947	17,442,689	+20.6%

Yawi, a dialect of Malay, is the primary language of the Malay Muslims. Varieties of Chinese are also spoken by the large Chinese population, with Teochew being best represented.

Numerous tribal languages are also spoken, including those belonging to the Mon–Khmer family, such as Mon, Khmer, Viet, Mlabri and Orang Asli; Austronesian family, such as Cham and Moken; Sino-Tibetan family such as Lawa, Akhan, and Karen; and other Tai languages such as Nyaw, Phu Thai, and Saek. Hmong is a member of the Hmong–Mien languages, which is now regarded as a language family of its own.

English is a mandatory school subject, but the number of fluent speakers remains very low, especially outside the cities.

Religion

Main article: Religion in Thailand

Religion Composition[1]

religion	percent
Buddhism	94.6%
Islam	4.6%
Christianity	0.7%
Others	0.1%

The national religion is Theravada Buddhism. Thai Buddhism ranks amongst the highest in the world. According to the last census (2000) 94.6% of the total population are Buddhists of the Theravada tradition. Muslims are the second largest religious group in Thailand at 4.6%.[1][70] Thailand's southernmost provinces – Pattani, Yala, Narathiwat and part of Songkhla Chumphon have dominant Muslim populations, consisting of both ethnic Thai and Malay. The southern tip of Thailand is mostly ethnically Malay, and most Malays are Sunni Muslims. Christians represent 0.7% of the population. A small community of Sikhs in Thailand and some Hindus also live in the country's cities. There is also a small Jewish community in Thailand, dating back to the 17th century.

Culture

Main article: Culture of Thailand

See also: Music of Thailand, Isan, and Cinema of Thailand

Thai culture has been shaped by many influences, including Indian, Lao, Burmese, Cambodian, and Chinese.

Theravada Buddhism is highly respected in Thailand.

Its traditions incorporate a great deal of influence from India, China, Cambodia, and the rest of Southeast Asia. Thailand's national religion Theravada Buddhism is important to modern Thai identity. Thai Buddhism has evolved over time to include many regional beliefs originating from Hinduism, animism as well as ancestor worship. The official calendar in Thailand is based on the Eastern version of the Buddhist Era, which is 543 years ahead of the Gregorian (western) calendar. For example, the year AD 2011 is 2554 BE in Thailand.

Several different ethnic groups, many of which are marginalized, populate Thailand. Some of these groups overlap into Burma, Laos, Cambodia, and Malaysia and have mediated change between their traditional local culture, national Thai and global cultural influences. Overseas Chinese also form a significant part of Thai society, particularly in and around Bangkok. Their successful integration into Thai society has allowed for this group to hold positions of economic and political power.

Khon Show is the most stylised form of Thai performance.

The traditional Thai greeting, the *wai*, is generally offered first by the younger of the two people meeting, with their hands pressed together, fingertips pointing upwards as the head is bowed to touch their face to the hands, usually coinciding with the spoken word "Sawasdee khrap" for male speakers, and "Sawasdee ka" for females. The elder then is to respond afterwards in the same way. Social status and position, such as in government, will also have an influence on who performs the *wai* first. For example, although one may be considerably older than a provincial governor, when meeting it is usually the visitor who pays respect first. When children leave to go to school, they are taught to *wai* to their parents to represent their respect for them. They do the same when they come back. The wai is a sign of respect and reverence for another, similar to the namaste greeting of India and Nepal.

Muay Thai, or Thai boxing, is the national sport in Thailand and its native martial art call "Muay". In the past "Muay" was taught to royal soldiers for combat on battlefield if unarmed. After they retired from the army,

these soldiers often became Buddhist monks and stayed at the temples. Most of the Thai people's lives are closely tied to Buddhism and temples; they often send their sons to be educated with the monks. "Muay" is also one of the subjects taught in the temples.[71] Muay Thai achieved popularity all over the world in the 1990s. Although similar martial arts styles exist in other Southeast Asian countries, few enjoy the recognition that Muay Thai has received with its full-contact rules allowing strikes including elbows, throws and knees.

Association football, however, has possibly overtaken Muay Thai's position as most widely viewed and liked sport in contemporary Thai society and it is not uncommon to see Thais cheering their favourite English Premier League teams on television and walking around in replica kits. Another widely enjoyed pastime, and once a competitive sport, is kite flying.

Thousands of Khom Fai in Mae Cho, Loi Krathong festivals Chiang Mai

Thai seafood curry, an example of Thai cuisine.

Thai cuisine blends five fundamental tastes: sweet, spicy, sour, bitter and salty. Some common ingredients used in Thai cuisine include garlic, chillies, lime juice, lemon grass, and fish sauce. The staple food in Thailand is rice, particularly jasmine variety rice (also known as Hom Mali rice) which is included in almost every meal. Thailand is the world's largest exporter of rice, and Thais domestically consume over 100 kg of milled rice per person per year.[53] Over 5000 varieties of rice from Thailand are preserved in the rice gene bank of the International Rice Research Institute (IRRI), based in the Philippines. The king of Thailand is the official patron of IRRI.[72]

Like most Asian cultures, respect towards ancestors is an essential part of Thai spiritual practice. Thais have a strong sense of hospitality and generosity, but also a strong sense of social hierarchy. Seniority is an important concept in Thai culture. Elders have by tradition ruled in family decisions or ceremonies. Older siblings have duties to younger ones.

Taboos in Thailand include touching someone's head or pointing with the feet, as the head is considered the most sacred and the foot the dirtiest part of the body. Thai society has been influenced in recent years by its widely available multi-language press and media. There are some English and numerous Thai and Chinese newspapers in circulation; most Thai popular magazines use English headlines as a chic glamor factor. Many large businesses in Bangkok operate in English as well as other languages.

Thailand is the largest newspaper market in Southeast Asia with an estimated circulation of at least 13 million copies daily in 2003. Even upcountry, out of Bangkok, media flourishes. For example, according to Thailand's Public Relations Department Media Directory 2003–2004, the nineteen provinces of Isan, Thailand's northeastern region, hosted 116 newspapers along with radio, TV and cable.

Sports

Muay Thai (Thai: มวยไทย, RTGS: Muai Thai, [muɛj tʰaj], lit. "Thai Boxing") is a form of hard martial art practiced in large parts of the world, including Thailand and other Southeast Asian countries. The art is similar to others in Southeast Asia such as: Pradal Serey in Cambodia, Lethwei in Burma, Tomoi in Malaysia, and Muay Lao in Laos. Muay Thai has a long history in Thailand and is the country's national sport.

Muay Thai is Thailand's national sport

Pone Kingpetch was a Thai boxer, from Hua Hin, who defeated Pascal Perez, an Argentinean boxer to become the first Thai WBC Flyweight Champion on 16 April 1960 and later a 3 time WBC Flyweight Champion. Pone Kingpetch originally known as Mana Sidokbuab, assumed this name from his training camp; Kingpetch. Thai fighters traditionally take on the name of the camps they train for. That owner of the gym and head coach's, Thongtos Intratat is present in these pictures. Thongtos Intratat is also known for being the first person to officially formulate and bottle Namman Muay (Thai Liniment) which is desired for his fighter, Pone Kingpetch. Namman Muay (Thai Liniment) is still only produced by his direct descendants in Thailand.

Traditional Muay Thai practiced today varies significantly from the ancient art Muay Boran and uses kicks, punches and knee and elbow strikes in a ring with gloves similar to those used in Western boxing and this has led to Thailand gaining medals at the

Olympic Games in Boxing.

Takraw (Thai: ตะกร้อ) is a sport native to Thailand, which the players hit a rattan ball and only be allowed to use their feet, knees, chest and head to touch the ball. Sepak Takraw is a form of this sport which appears in volley ball style, the players must volley a ball over a net and force it to hit the ground on oppnent's side. It is a popular in other countries in Southeast Asia also. A rather similar game but played only with the feet is Buka ball.

Rajamangala National Stadium

Rugby is also a growing sport in Thailand with the Thailand national rugby union team rising to be ranked 61st in the world.[73] Thailand became the first country in the world to host an international 80 kg welterweight rugby tournament in 2005.[74] The national domestic Thailand Rugby Union (TRU) competition includes several universities and services teams such as Chulalongkorn University, Mahasarakham University, Kasetsart University, Prince of Songkla University, Thammasat University, Rangsit University, the Thai Police, the Thai Army, the Thai Navy and the Royal Thai Air Force. Local sports clubs which also compete in the TRU include the British Club of Bangkok, the Southerners Sports Club (Bangkok) and the Royal Bangkok Sports Club.

Thailand has been called the Golf Capital of Asia[75] as it is a popular destination for golf. The country attracts a large number of golfers from Japan, Korea, Singapore, South Africa and Western countries who come to play golf in Thailand every year.[76] The growing popularity of golf, especially among the middle classes and expats, is evident since there are more than 200 world-class golf courses nationwide,[77] and some of them are chosen to host PGA and LPGA tournaments, such as Amata Spring Country Club, Alpine Golf & Sports Club, Thai Country Club and Black Mountain Golf Club.

Thammasat Stadium is a multi-purpose stadium in Bangkok, Thailand. It is currently used mostly for football matches. The stadium holds 25,000. It is located in Thammasat University's Rangsit campus.

It was built for the 1998 Asian Games by construction firm Christiani and Nielsen, the same company that constructed the Democracy Monument in Bangkok.

Its appearance is that of a scaled down version of the Rajamangala Stadium. The tribunes form a continuous ring which are quite low behind each goal but rise up on each side. Unlike the Rajamangala though, Thammasat has a roof covering both side tribunes. Most striking about this stadium are the floodlights. Thai architects usually favour concrete pylons but these are the steel variety. As viewed from the exterior of the stadium the base of each pylon seems to grip the outside of the stadium and they dramatically lean over the tribunes so as to better illuminate the playing area.

Thammasat was going to be used for PEA FC's match against Singapore Armed Forces FC in an Asian Champions League qualifier in February 2009 but the pitch was deemed unplayable and the match was switched to the Rajamangala.

Muay Thai Pone Kingpetch, 1960s Muay Thai champion.

Rajamangala National Stadium is the biggest sporting arena in Thailand. It currently has a capacity of 65,000. It is located in Bang Kapi, Bangkok. The stadium was built in 1998 for the 1998 Asian Games and is the home stadium of Thailand national football team up to present.

Other sports in Thailand are slowly growing as the country develops its sporting infrastructure. The success in sports like weightlifting and Taekwondo at the last two Summer Olympic Games has demonstrated that boxing is no longer the only medal chance for Thailand.

History of Thailand

From Wikipedia, the free encyclopedia

Tai peoples who originally lived in southwestern China, migrated into mainland Southeast Asia over a period of many centuries. The oldest known mention of their existence in the region by the exonym *Siamese* is in a 12th century A.D. inscription at the Khmer temple complex of Angkor Wat in Cambodia, which refers to *syam,* or "dark brown" people.[1] It was believed that *Siam* derived from the Malay word *sagûm*, or brown race, with a contemptuous signification.[2] During the reign of Rama III (1824–1851,) a Scottish trader had experimental coins struck in England at the king's behest, Though not adopted for use, the name of the country put on these first coins was *Muang Thai*, not Siam.[3] Also spelled *Siem, Syâm* or *Syâma*, it has been identified with the Sanskrit *Śyâma* (श्याम, meaning "dark" or "brown"). The names Shan and A-hom seem to be variants of the same word, and Śyâma is possibly not its origin but a learned and artificial distortion.[4]

The country's designation as Siam by Westerners likely came from Portuguese, the first Europeans to give a coherent account of the country. Portuguese chronicles noted that the king of Sukhothai had sent an expedition to Malacca at the southern tip of the Malay Peninsula in 1455. Following their conquest of Malacca in 1511, the Portuguese sent a diplomatic mission to Ayutthaya. A century later, on August 15, 1612, *The Globe*, an East India Company merchantman bearing a letter from King James I, arrived in "the Road of Syam" .[5] "By the end of the 19th century, *Siam* had become so enshrined in geographical nomenclature that it was believed that by this name and no other would it continue to be known and styled."[6]

Indianized kingdoms such as the Mon, Khmer and Malay kingdoms had ruled the region. Thai people established their own states starting with Sukhothai, Chiang Saen and Chiang Mai and Lanna Kingdom and then Ayutthaya kingdom. These states fought each other and were under constant threat from the Khmers, Burma and Vietnam. Much later, the European colonial powers threatened in the 19th and early 20th centuries, but Thailand survived as the only Southeast Asian state to avoid European colonial rule. After the end of the absolute monarchy in 1932, Thailand endured sixty years of almost permanent military rule before the establishment of a democratic elected-government system.

Initial states of Thailand

Prior to the southwards migration of the Tai people from Yunnan in the 10th century, the Indochina peninsula had been a home to various indigenous animistic communities for as far back as 500,000 years ago. The recent discovery of Homo erectus fossils such as Lampang man is but one example. The remains were first discovered during excavations in Lampang province, Thailand. The finds have been dated from roughly 1,000,000-500,000 years ago in the Pleistocene. There are myriad sites in Thailand dating to the Bronze (1500 BC-500 BC) and Iron Ages (500 BC-AD 500). The most thoroughly researched of these sites are located in the country's Northeast, especially in the Mun and Chi River valleys. The Mun River in particular is home to many 'moated' sites which comprise mounds surrounded by ditches and ramparts. The mounds contain evidence of prehistoric occupation.

Around the 1st century AD, according to Funan epigraphy and the records of Chinese historians (Coedes), a number of trading settlements of the South appear to have been organized into several Malay states, among the earliest of which are believed to be Langkasuka and Tambralinga.

Ancient civilizations

Prior to the arrival of the Tai people and culture into what is now Thailand, the region hosted a number of indigenous Mon-Khmer and Malay civilizations. Yet little is known about Thailand before the 13th century as the literary and concrete sources are scarce and most of the knowledge about this period is gleaned from archeological evidence.

Dvaravati

Main article: Dvaravati

A 13 meter long reclining Buddha, Nakhon Ratchasima

The Chao Phraya valley in what is now Central Thailand had once been the home of Mon Dvaravati culture, which prevailed from the 7th century to the 10th century.[7] The existence of the civilizations had long been forgotten by the Thai when Samuel Beal discovered the polity among the Chinese writings on Southeast Asia as “Tou-lo-po-ti”. During the early 20th century the archeologists led by George Coedès made grand excavations on what is now Nakorn Pathom and found it to be a center of Dvaravati culture. The constructed name Dvaravati was confirmed by a Sanskrit plate inscription containing the name “Dvaravati”.

Later on, many more Dvaravati sites were discovered throughout the Chao Phraya valley. The two most important sites were Nakorn Pathom and Uthong (in the present Suphanburi Province). The inscriptions of Dvaravati were in Sanskrit and Mon using the script derived from the Pallava script of the Pallava dynasty. The religion of Dvaravati is thought to be Theravada through contacts with Sri Lanka, with the ruling class also participating in Hindu rites. The Dvaravati art, including the Buddha sculptures and stupas, showed strong similarities to those of the Gupta dynasty. The most prominent production of Dvaravati art are the *Thammachakra*s or the Stone Wheels signifying Buddhist principles. The eastern parts of the Chao Phraya valley

were subjected to a more Khmer and Hindu influence as the inscriptions are found in Khmer and Sanskrit.[8]

Khmer period Thai sculpture of Vishnu, ~10th century

Dvaravati was not a kingdom but a network of city-states paying tributes to more powerful ones according to the *mandala* model. Dvaravati culture expanded into Isan as well as southwards as far as the Isthmus of Kra. Dvaravati was a part of ancient international trade as Roman artifacts were also found and Dvaravati tributes to the Tang court are recorded. The culture came to an end around the 10th century when it was replaced by a more unified Lavo-Khmer polity.

Si Kottaboon

In what is considered as present day Isan another Indianized kingdom of Si Kottaboon rose with the capital of Nakhon Phanom. The territory of Si Khottaboon covered mostly in northern Isan and central Laos.

Southern Thailand

Below the Isthmus of Kra was the place of Malay civilizations. Primordial Malay kingdoms are described as tributaries to Funan by 2nd century Chinese sources – though most of them proved to be tribal organizations instead of full-fledged kingdoms.[9] From the 6th century onwards, two major mandalas ruled Southern Thailand – the Kanduli and the Langkasuka. Kanduli centered on what is now Surat Thani Province and Langasuka on Pattani. Southern Thailand was the center of Hinduism and Mahayana. The Tang dynasty monk I Ching stopped at Langkasuka to study Pali grammar and Mahayana during his journey to India around 800 AD. At that time, the kingdoms of Southern Thailand quickly fell under the influences of the Malay kingdom of Srivijaya from Sumatra.

Classical era

From about the 10th century to the 14th century Thailand was known through archeological findings and a number of local legends. The period saw the Khmer domination over a large portion of Chao Phraya basin and the Isan. The expansion of Tai people and culture southwards also happened during the classical era.

Hariphunchai

Main article: Hariphunchai

According to the Jamadevivamsa, the city of Hariphunchai (modern Lamphun) was founded by the hermits; Jamadevi, a Lavo princess, was invited to rule the city in around 700 AD. However, the date is considered too early for the foundation of Hariphunchai as Jamadevi brought no Thammachakras to the north. Hariphunchai may be a later (about the 10th century) offshoot of the Lavo kingdom or instead related to the Thaton kingdom.

Hariphunchai was the center of Theravada in the north. The kingdom flourished during the reign of King Attayawong who built the Dhatu of Hariphunchai in 1108. The kingdom had strong relations to another Mon kingdom of Thaton. During the 11th century, Hariphunchai waged lengthy wars with the Tai Ngoenyang kingdom of Chiang Saen. Weakened by Tai invasions, Hariphunchai eventually fell in 1293 to Mangrai the Great, king of Lanna, the successor state of the Ngoenyang kingdom.

Arrival of the Tais

The most recent and accurate theory about the origin of the Tai people stipulates that Guangxi province in China is really the Tai motherland instead of Yunnan province. A large number of Tai people, known as the Zhuang, still live in Guangxi today. Around 700 AD, Tai people who did not come under Chinese influence settled in what is now Dien Bien Phu in modern Vietnam according to the Khun Borom legend. From there, the Tais began to radiate into northern highlands and founded the cities of Luang Prabang and Chiang Saen.

A Buddha from Wat Kukkut, Lamphun

The *Simhanavati legend* tells us that a Tai chief named Simhanavati drove out the native Wa people and founded the city of Chiang Saen around 800 AD. For the first time, the Tai people made contact with the Indianized civilizations of Southeast Asia. Through Hariphunchai, the Tais of Chiang Saen adopted Theravada Buddhism and Sanskrit royal names. The Dhatu of Doi Tung, constructed around 850 AD, signified the piety of Tai people on the Theravada religion. Around 900 AD, major wars were fought between Chiang Saen and Hariphunchai. The Mon forces captured Chiang Saen and its king fled. In 937, Prince Prom the Great took Chiang Saen back from the Mon and inflicted severe defeats on Hariphunchai.

Around 1000 AD, Chiang Saen was destroyed by an earthquake with all the inhabitants killed. A council was established to govern the kingdom for a while, and then a local Wa man known as Lavachakkaraj was elected the King of the new city of Chiang Saen or Ngoenyang. The Lavachakkaraj dynasty would rule over the region for about 500 years.

The overpopulation might have encouraged the Tais to seek their fortune further southwards. By 1100 AD, the Tai had established themselves as *Po Khun*s (ruling fathers) at Nan, Phrae, Songkwae, Sawankhalok, Chakangrao, etc. on the upper Chao Phraya valley. These southern Tai princes faced Khmer influence from Lavo. Some of them became subordinates to the Lavo-Khmer polity.

Chao Phraya Basin under the Tai

There are several legends about the Tai coming to rule mandalas of Central Thailand including Lavo and Suphannabhum. The Suphannabhum mandala had been independent from Khmer influence and composed originally the Western Provinces of modern Thailand including Suphanburi, Ratchaburi, and Phetchaburi.

In the 12th century, the Tai *Po Khun*s of the upper Chao Phraya coalesced around the *Po Khun* of Sukhothai - an important Khmer outpost. With the weakened Khmer authority, *Po Khun* Si Nau Namthom of Sukhothai gained the autonomy of upper Chao Phraya valley. However, during the reign of Jayavarman VII, the Khmer power was strengthened and the Tai *Po Khun*s were subdued and brought under Khmer suzerainty. Suphannabhum was also weakened by Khmer invasions and only the city of Suphanburi itself was left.

Lavo

Main article: Lavo kingdom

Around the 10th century, the city-states of Dvaravati merged into two mandalas – the Lavo (modern Lopburi) and the Supannabhum (modern Suphanburi). According to a legend in the Northern Chronicles, in 903, a king of Tambralinga invaded and took Lavo and installed a Malay prince to the Lavo throne. The Malay prince was

married to a Khmer princess who had fled an Angkorian dynastic bloodbath. The son of the couple contested for the Khmer throne and became Suryavarman I, thus bringing Lavo under Khmer domination through personal union. Suryavarman I also expanded into Isan, constructing many temples.

The Khmer temple of Wat Phra Prang Sam Yod in Lopburi

Suryavarman, however, had no male heirs and again Lavo was independent. King Anawratha of Bagan invaded Lavo in 1057 and took a Lavo princess as his wife. The power of the Lavo kingdom reached the zenith in the reign of Narai (1072–1076). Lavo faced Burmese invasions under Kyanzittha, whose mother was the Lavo princess, in 1080 but was able to repel. After the death of Narai, however, Lavo was plunged into bloody civil war and the Khmer under Suryavarman II took advantage by invading Lavo and installing his son as the King of Lavo.

The repeated but discontinued Khmer domination eventually "Khmerized" Lavo. Lavo was transformed from a Theravadic Monic Dvaravati city into a Hindu Khmer one. Lavo became the entrepôt of Khmer culture and power of the Chao Phraya river basin. The bas-relief at Angkor Wat showed a Lavo army as one of the subordinates to Angkor. However, one interesting note is that a Tai army was shown as a part of Lavo army, a century before the establishment of the Sukhothai kingdom.

Sukhothai and Lanna

Main article: Sukhothai kingdom

Main article: Lanna

Southeast Asia c.1300 CE, showing Khmer Empire in red, Lavo kingdom in light blue, Sukhothai empire in orange, Champa in yellow, Dai Viet in blue and Kingdom of Lanna in purple.

The ruins of Wat Mahathat, Sukhothai Historical Park

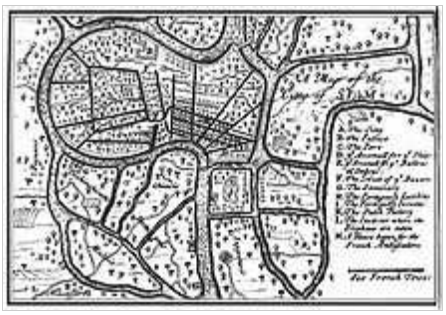
Thai city-states gradually became independent from the weakened Khmer Empire. It is said that Sukhothai was established as a sovereign, strong kingdom by Pho Khun Si Indrathit in 1238 AD. A political feature which "classic" Thai historians call "father governs children" existed at this time. Everybody could bring their problems to the king directly, as there was a bell in front of the palace for this purpose. The city briefly dominated the area under King Ramkhamhaeng, who established the Thai alphabet, but after his death in 1365, Sukothai fell into decline and became subject to another emerging Thai state: the Ayutthaya Kingdom in the lower Chao Phraya area.

Another Thai state that coexisted with Sukhothai was the eastern state of Lanna, centred in Chiang Mai. King Phya Mangrai was its founder. This city-state emerged in the same period as Sukhothai. Evidently Lanna became closely allied with Sukhothai. After the Ayutthaya kingdom had emerged and expanded its influence from the Chao Phraya valley, Sukhothai was finally subdued. Fierce battles between Lanna and Ayutthaya also constantly took place and Chiang Mai was eventually subjugated, becoming Ayutthaya's 'vassal'.

Lanna's independent history ended in 1558, when it finally fell to the Burmese; thereafter it was dominated by Burma until the late 18th century. Local leaders then rose up against the Burmese with the help of the rising Thai kingdom of Thonburi of king Taksin. The 'Northern City-States' then became vassals of the lower Thai kingdoms of Thonburi and Bangkok. In the early 20th century they were annexed and became part of modern Siam, the country now called Thailand.

Ayutthaya

Main article: Ayutthaya kingdom



Southeast Asia c.1400 CE, showing Khmer Empire in red, Ayutthaya Kingdom in violet, Lan Xang kingdom in teal, Sukhothai Kingdom in orange, Champa in yellow, Kingdom of Lanna in purple, Dai Viet in blue.

The city of Ayutthaya was located on a small island, encircled by three rivers. Due to its superior location, Ayutthaya quickly became powerful, politically and economically. Ayutthaya had different, various names ranging from 'Ayothaya', derived from Ayodhya, an Indian holy city,'Krung Thep', 'Phra Nakorn' and 'Dvaravati'.

The first ruler of the Kingdom of Ayutthaya, King Ramathibodi I (ruled 1351 to 1369), made two important contributions to Thai history: the establishment and promotion of Theravada Buddhism as the official religion – to differentiate his kingdom from the neighbouring Hindu kingdom of Angkor – and the compilation of the Dharmashastra, a legal code based on Hindu sources and traditional Thai custom. The Dharmashastra remained a tool of Thai law until late in the 19th century. In the 417 years of existence, the Ayutthaya kingdom was frequently plagued by internal fighting but this did not prevent its rise as a major power on mainland Southeast Asia.

Kosa Pan to Louis XIV in 1686, by Jacques Vigouroux Duplessis

Ayutthaya in the 17th century

Ayutthaya's culture and traditions became the model for the next period in Thai history, the Bangkok based Rattanakosin Kingdom of the Chakri Dynasty.

Beginning with arrival of Portuguese ambassador Duarte Fernandes in 1511, Ayutthaya, known to the Europeans as 'Kingdom of Siam', came into contact with the West during the 16th century. It became one of the most prosperous cities in East Asia. According to George Modelski, Ayutthaya is estimated to have been the largest city in the world in 1700 CE, with a population of around 1 million.[10] Trade flourished with the Dutch and French among the most active foreigners in the kingdom together with the Chinese and Japanese.

The Ayutthaya period is known as "Golden age of medicine in Thailand" due to progress in the field of medicine at that time.[11]

Ayutthaya expanded its sphere of influence over a considerable area, ranging from the Islamic states on the

Malay Peninsula, the Andaman ports of present day Myanmar, the Angkor kingdom of Cambodia, to states in northern Thailand. In the 18th century, the power of the Ayutthaya Kingdom gradually declined as fighting between princes and officials plagued its political arena. Outlying principalities became more and more independent, ignoring the capital's orders and decrees.

In the 18th century, the last phase of the kingdom arrived. The Burmese, who had taken control of Lanna and had also unified their kingdom under the powerful Konbaung Dynasty, launched several blows against Ayutthaya in the 1750s and 1760s. Finally, in 1767, after several months of siege, the Burmese broke through Ayutthaya's walls, sacked the city and burned it down. The royal family fled the city and Ayutthaya's last king Ekkathat died of starvation ten days later while in hiding. The Ayutthaya royal line had been extinguished. Overall there had been 33 kings in this period, including an unofficial king.

In the Year 1563 a.d., 15 years after Suriyothai passed away,Prince Bayinnong Ascended to the throne as the King of Hongsawadee, the heir of the King Tabengchaweti.he led his army past Maelamao border taking over the Northern cities on his way to the Kingdom of Ayodhya. Once King Bayinnong had control over Kampaenphet, Sukhothai and Sawankhalok, he led his forces to the northern kingdom of Phitisanulok. King Bayinnong Defeated Phitisanulok taken the eldest son of the King of Phitisanulok,Prince Ong Dam. (or Prince Naresuan)Prince Ekkathat is Prince Naresuan Younger Brother that trained Military skills and tradition of Burma and in 1581 King Bayinnong passed away of a illness from his coming of a conflict battle against the Kingdom of Yakkai.The son of King Bayinnong became King afterwards. Some of the Northern states revolted against Hongsadee including Phitsanulok Ayodhya, and Mon. To gain their Independence.

Five dynasties ruled the Ayutthaya Kingdom:

1. U-Thong Dynasty which consisting of 3 kings
2. Suphanabhumi Dynasty consisting of 13 kings
3. Sukhothai Dynasty consisting of 7 kings
4. Prasart Thong (Golden Palace) Dynasty consisting of 4 kings
5. Bann Plu Dynasty consisting of 6 kings

Thonburi and Bangkok period

Main article: History of Thailand (1768–1932)

After more than 400 years of power, in 1767, the Kingdom of Ayutthaya was brought down by invading Burmese armies, its capital burned, and the territory split. General Taksin (now known as King Taksin the Great) managed to reunite the Thai kingdom from his new capital of Thonburi and declared himself king in 1769. However, later due to stress and many factors, King Taksin went mad. General Chakri (later becoming Rama I) helped run the empire instead. The King Taksin ordained as a monk and ventured into the forest and never to be seen again. General Chakri succeeded him in 1782 as Rama I, the first king of the Chakri dynasty. In the same year he founded the new capital city at Bangkok, across the Chao Phraya river from Thonburi, Taksin's capital. In the 1790s Burma was defeated and driven out of Siam, as it was then called. Lanna also became free of Burmese occupation, but the king of a new dynasty who was installed in the 1790s was effectively a tributary ruler of the Chakri monarch.

The heirs of Rama I became increasingly concerned with the threat of European colonialism after British victories in neighboring Burma in 1826. The first Thai recognition of Western power in the region was the Treaty of Amity and Commerce with the United Kingdom in 1826. In 1833, the United States began diplomatic exchanges with Siam, as Thailand was called until 1939, and again between 1945 and 1949. However, it was during the later reigns of King Mongkut (1804–1868), and his son King Chulalongkorn (1853–1910), that

Thailand established firm rapprochement with Western powers. It is a widely held view in Thailand that the diplomatic skills of these monarchs, combined with the modernising reforms of the Thai government, made Siam the only country in Southeast Asia to avoid European colonisation. This is reflected in the country's modern name, *Prathet Thai* or *Thai-land*, used since 1939 (although the name was reverted to Siam during 1945–49), in which *prathet* means "nation".

The Anglo-Siamese Treaty of 1909 defined the modern border between Siam and British Malaya by securing Thai authority over the provinces of Pattani, Yala, Narathiwat and Satun, which were previously part of the semi-independent Malay sultanates of Pattani and Kedah. A series of treaties with France fixed the country's current eastern border with Laos and Cambodia.

End of absolute monarchy, and military rule

Main article: History of Thailand (1932–1973)

The Siamese revolution of 1932 was led by a group of young military officers and civil servants. The group held key figures, ministers who were of the royal blood as hostages while the king, Rama VII, was at the summer palace in Hua Hin. The coup, usually called 'The Revolution of 1932', transformed the Government of Thailand from an absolute to a constitutional monarchy. The cabinet was presided by the prime minister. Military men always played a significant role in the politics even before 1932. Already in 1912, during the Rama VI reign, young soldiers had been arrested who had plotted a coup urging a constitution and a change of the king's status.

King Rama VII, Prajadhipok initially accepted this change, granting the Constitution but later abdicated from his position due to conflicts with the government. The revolutionary government decided to install his ten year old nephew, Ananda Mahidol as the new monarch. Upon his abdication, King Prajadhipok said that the duty of a ruler was to reign for the good of the whole people, not for a selected few. Within a decade Thai politics ran into turmoil as the revolutionary government plunged into factions; military and civilian figures. Fear of communism, extreme revolutionary ideas and ultranationalism caused the sharp fighting among the new ruling elites. Eventually the military faction emerged. The regime became authoritarian under the prime minister Plaek Phibunsongkhram, one of the members of the Revolutionary military wing. His regime was also famous in promoting the 'Pan - Thaism', the ultra - nationalist policy aiming at unifying Tai, Thai - speaking people nearby into the kingdom. Moreover, in 1941, Phibun regime decided to ally with Japan.

The young King Ananda Mahidol (Rama VIII) died in 1946 under somewhat mysterious circumstances, the official explanation being that he shot himself by accident while cleaning his gun. He was succeeded by his brother Bhumibol Adulyadej, the longest reigning king of Thailand, and very popular with the Thais. Although nominally a constitutional monarchy, Thailand was ruled by a series of military governments, most prominently led by Plaek Phibunsongkhram and Sarit Dhanarajata, interspersed with brief periods of democracy.

In early January 1941, Thailand invaded French Indochina, beginning the French-Thai War. The Thais, well equipped and slightly outnumbering the French forces, easily reclaimed Laos. The French, outnumbering the Thai navy force, decisively won the naval Battle of Koh Chang.

The Japanese mediated the conflict, and a general armistice was declared on January 28. On May 9 a peace treaty was signed in Tokyo, with the French being coerced by the Japanese into relinquishing their hold on the disputed territories.

On December 8, 1941, a few hours after the attack on Pearl Harbor, Japan demanded the right to move troops across Thailand to the Malayan frontier. Japan invaded Thailand and engaged the Thai army for six to eight hours before Phibunsongkhram ordered an armistice. Shortly thereafter Japan was granted free passage, and on

December 21, 1941, Thailand and Japan signed a military alliance with a secret protocol wherein Tokyo agreed to help Thailand regain territories lost to the British and French (i.e. the Shan States of Burma, Malaya, Singapore, & part of Yunnan, plus Laos & Cambodia) Subsequently, Thailand undertook to 'assist' Japan in its war against the Allies. NOTE: Japan's distrust of Thailand extended to the point of rearming their 'ally' with controlled munitions, including the famous Siamese Mauser, which was manufactured in an unusual caliber. The Seri Thai (Free Thai Movement) was an underground resistance movement against Japan founded by Seni Pramoj, the Thai ambassador in Washington, with the assistance of the United States Office of Strategic Services (OSS.) Led from within Thailand from the office of the regent Pridi, it operated freely, often with support from members of the Royal family such as Prince Chula Chakrabongse, and members of the government.

After Japan's defeat in 1945, due to the help of Seri Thai, American support mitigated Allied terms, although the British demanded repatriations in the form of rice sent to Malaya, and the French, return of territories lost in the Franco-Thai War. In exchange for supporting Thailand's admission to the United Nations, the Soviet Union demanded repeal of anticommunist legislation. It should also be noted that some former British POW's erected a monument expressing gratitude to the citizens of Ubon Ratchathani. In the postwar period, Thailand had close relations with the United States, which it saw as a protector from communist revolutions in neighboring countries. See United States Air Force in Thailand.

Communist guerrillas existed in the country from early '60s up to 1987, counting almost 12,000 full-time fighters at the peak of movement, but never posed a serious threat to the state.

Recently, Thailand also has been an active member in the regional Association of Southeast Asian Nations (ASEAN), especially after democratic rule was restored in 1992.

Democracy

Main article: History of Thailand since 1973

Main article: 2008–2010 Thai political crisis

Post-1973 has been marked by a struggle to define the political contours of the state. It was won by the King and General Prem Tinsulanonda, who favored a monarchy constitutional order.

The post-1973 years have seen a difficult and sometimes bloody transition from military to civilian rule, with several reversals along the way. The revolution of 1973 inaugurated a brief, unstable period of democracy, with military rule being reimposed after the 6 October 1976 Massacre. For most of the 1980s, Thailand was ruled by Prem Tinsulanonda, a democratically inclined strongman who restored parliamentary politics. Thereafter the country remained a democracy apart from a brief period of military rule from 1991 to 1992. The populist Thai Rak Thai party, led by prime minister Thaksin Shinawatra, came to power in 2001. He was popular with the subaltern and rural and urban poor for his populist social programs, his rule came under attack from the elites who saw danger of his parliamentary dictatorship. Also in mid-2005, Sondhi Limthongkul, a well-known media tycoon, became the foremost Thaksin critic. Eventually Sondhi and his alliances developed the movement into a mass protest and later unified under the name of People's Alliance for Democracy (PAD).

On September 19, 2006, after the dissolution of the parliament, Thaksin then became the provisional government. While he was in New York for a meeting of the UN, Army Commander-in-Chief Lieutenant General Sonthi Boonyaratglin launched the bloodless September 2006 Thailand military coup d'état supported by anti-Thaksin elements in civil society and among the Democrat Party. A general election on 23 December 2007 restored a civilian government, led by Samak Sundaravej of the People's Power Party, as a successor to Thai Rak Thai.

In mid-2008, the People's Alliance for Democracy (PAD) led large protests against the government of Prime Minister Samak Sundaravej, whom they criticized for his ties to former Prime Minister Thaksin Shinawatra. On 26 August 2008, the protesters illegally occupied several government ministries, including the Government House which they sacked, to force the government to give in to demands.[12] Beginning August 29, protesters disrupted air and rail infrastructure, including Suvarnabhumi airport. They have never been prosecuted.[13] The chaos ended in December when three of the parties that formed the government were dissolved by the Constitutional Court for election fraud.[14] After this decision, many previous coalition partners of the government then defected and joined the main opposition party, the Democrat party, and refusing elections to immediately form a new government in the favour of the old guard elites.[15] On July 3, 2011, opposition Pheu Thai Party won general elections in a landslide.

Monarchy of Thailand

From Wikipedia, the free encyclopedia

The **Monarchy of Thailand** (also referred to as the **King of Thailand** or historically as **King of Siam**) (Thai: พระมหากษัตริย์ไทย) refers to the constitutional monarchy and monarch of the Kingdom of Thailand (formerly Siam). The King of Thailand is the head of state and head of the ruling Royal House of Chakri. The king's power is limited to being a symbolic figurehead, but the institution commands the respect and reverence of the Thai people.[1]

The current monarch of Thailand is His Majesty King Bhumibol Adulyadej. The king has reigned since 9 June 1946, making him the world's longest reigning current monarch and the world's longest serving head of state. Most of the king's powers are exercised by his elected government in accordance with the current post-coup constitution. The king still retains many powers such as: being head of the Royal Thai Armed Forces, the prerogative of royal assent and the power of pardon. He is also the defender of the Buddhist faith in Thailand.

Since the end of the absolute monarchy in 1932, each constitution has maintained the king as *"enthroned in a position of revered worship and shall not be violated."* His Majesty, however, in his 2005 national birthday broadcast, specifically indicated he was unhappy with the provision and wanted to be violated and criticized. Despite this royal wish, Thai state authorities have steadfastly refused to permit not just criticism but what they deem to be inappropriate discussion. The constitution exempts the king and the royal family from legal actions, but confers no other legal rights. Therefore, the monarchy is protected against any physical or defamatory threats. This provision against defaming the monarchy is known in the West as the *lèse majesté* law.[2] Violations of this law have led to arrests of travelers to Thailand who have been alleged to have made disparaging comments or been linked to deemed-to-be disparaging information on the internet.[3] To date legal scholars and law firms in Thailand have been totally reluctant to challenge the constitutional nature of the lese majeste law, which is in part linked closely with another often abused criminal code provision - that dealing with criminal defamation.

King (Rama) of Thailand
พระมหากษัตริย์ไทย

MONARCHY

Emblem of Thailand

Incumbent:
Bhumibol Adulyadej (Rama IX)

Style:	His Majesty
Heir apparent:	Maha Vajiralongkorn
First monarch:	Sri Indraditya of Sukhothai
Formation:	1238

The king is assisted in his work and duties by the Private Secretary to the King of Thailand and the Privy Council of Thailand, in consultation with the head of the cabinet, the Prime Minister. In accordance with the constitution the king is no longer the originator of all laws in the kingdom; that prerogative is entrusted to the National Assembly of Thailand. All bills passed by the legislature, however, require his royal assent to become law. The monarchy's household and finances are managed by the Bureau of the Royal Household and the Crown Property Bureau respectively, these agencies are not considered part of the Thai government and all personnel are appointed by the king.[4]

The heir apparent to the Thai monarchy is the Crown Prince of Thailand, Prince Maha Vajiralongkorn. The succession to the throne is governed by the 1924 Palace Law of Succession, promulgated by King Vajiravudh. The rule of succession is male agnatic primogeniture, where only males are accepted and inheritance is between male lines, from father to son. However, the last two Constitutions of Thailand included provisions to permit for the amendment of the Palace Law to allow females to succeed. This seems unlikely with the birth of Prince Dipangkorn Rasmijoti in 2005, yet scholars continue to debate the subject.

The Thai monarchy has been in continuous existence since the founding of the Kingdom of Sukhothai in 1238. The institution reached its current constitutional form in 1932 after a coup revolution, which ended the absolute monarchy. The monarchy's official residence is the Grand Palace in Bangkok, Thailand. However the present king spends most of his time at the Chitralada Palace (also in Bangkok) and the Klai Kangwon Villa in Hua Hin.

History

Pho Khun Ramkhamhaeng the Great

Origin

The current concept of Thai kingship has evolved through 800 years of absolute rule, and in contemporary times, especially after the 2006 coup, has become the subject of generally secret debate and watchful state spying. The first king of a unified Thailand was the founder of the Kingdom of Sukhothai: King Sri Indraditya in 1238. The idea of this early kingship is said to be based on two concepts derived from Hinduism (which the Thais inherited from its previous rulers the Khmers) and Theravada Buddhist beliefs. The first concept is based on the Vedic-Hindu caste of "Kshatriya" (Thai: กษัตริย์), or warrior-ruler, in which the king derives his powers from military might. The second is based on the Theravada Buddhist concept of "Dhammaraja" (Thai: ธรรมราชา), Buddhism having been introduced to Thailand somewhere around the sixth century A.D. The idea of the Dhammaraja (or kingship under Dharma), is that the king should rule his people in accordance with Dharma and the teachings of the Buddha.

These ideas were briefly replaced in 1279, when King Ramkhamhaeng came to the throne. Ramkhamhaeng departed from the Khmer tradition and created instead a concept of "paternal rule" (Thai: พ่อปกครองลูก), in which the King governs his people as a father would govern his children.[5] This idea is reinforced in the title and name of the King, as he is still known today, *Pho Khun Ramkhamhaeng* (Thai: พ่อขุนรามคำแหง) ("Pho" is Thai for Father). However this lasted only briefly, by the end of the kingdom the two old concepts had returned as symbolized by the change in the style of the kings; "Pho" was changed to "Phya" or Lord.

Kings of Ayutthaya

The Kingdom of Sukhothai was eventually supplanted by the Kingdom of Ayutthaya, which was founded in 1351 by King Ramathibodhi I. During the Ayutthayan period the idea of kingship changed. Due to ancient Khmer tradition in the region, Hindu concept of kingship was applied for the status of the leader. Brahmins took charge in the royal coronation. The king was believed to be the reincarnation of Hindu gods. Ayutthaya historical documents show the official titles of the kings in great variation; Indra, Shiva and Vishnu, or Rama. Seemingly, Rama was the most popular, as in 'Ramathibodhi'. However, Buddhist influence was also evident as many times the king's title and 'unofficial' name related to Bodhisattava, Dhammaraja, or King of Dharma, and the 'sprout of Buddha'. The two former concepts were re-established, with a new third concept taking a more serious hold. This new concept was called "Dhevaraja" (Thai: เทวราชา) (or Divine-King), which was an ideal borrowed from Hinduism and especially the Brahmins. This concept centered on the idea that the king was an incarnation (Avatar) of the god Vishnu and that he was a Bodhisattva (enlightened one), therefore basing his power on his religious power, moral power and purity of blood.

The king, portrayed by state interests as a semi-divine figure, then became - through a rigid cultural implementation - an object of worship and veneration to his people. From then on the monarchy was largely removed from the people and continued under a system of absolute rule. Living in palaces designed after Mount Meru (Home of the gods in Hinduism), the kings turned themselves into a "Chakravartin" or literally from Sanskrit "whose wheels are moving", where the King became an absolute and universal lord of his realm. Kings demanded that the universe be envisioned as resolving around them, and expressed their powers through elaborate rituals and ceremonies. For four centuries these kings ruled Ayutthaya, presiding over some of the greatest period of cultural, economic and military growth in Thai History.

Sakdina and Rachasap

The kings of Ayutthaya; especially King Trailokanat created many institutions to support their rule such as the bureaucracy and a system of *Sakna* or *Sakdina,* (ศักดินา: literally, *power over fields* but usually translated as feudalism; and the creation of "Rachasap" ({{lang-th|ราชาศัพท์} Royal Thai) reserved exclusively for addressing the king or talking about royalty. The king's power was absolute and sovereign: as the "Lord of the Land" ({{lang|th|พระเจ้าแผ่ดิน} *Phra Chao Phaendin*) and Lord of Life (เจ้าชีวิต *Chao Chevit*). The king was also the chief administrator, chief legislator and chief judge. Therefore all laws, orders, verdict and punishments theoretically originated from his person. All of this came to an end in 1767 when a Burmese army under the Alaungpaya Dynasty invaded, sacked and burned the city of Ayutthaya.

Chakri Kings

After a brief interlude filled first by civil war then the short-lived Thonburi Kingdom under King Taksin. In 1782 a new kingdom was established by King Buddha Yodfa Chulaloke (or Rama I) and moved the capital from Thonburi to Bangkok. King Rama I also founded the House of Chakri, the current ruling house of Thailand.

King Buddha Yodfa Chulaloke or Rama I, founder of the Chakri Dynasty.

During the Rattanakosin Period the Chakri kings tried to continue the concepts of Ayutthayan kingship once again emphasizing the connection between the sovereign and his subjects. On the other hand they continued to not relinquish any authority of the throne. During this period (King Rama II, Rama III and Rama IV) tried to create the first semblance of a modern government, creating ministries and appointing chief ministers to help with the running of the government. Most notable of these was Somdet Chao Phraya Prayurawongse and Si Suriyawongse, who both acted as Chief Ministers for King Mongkut and (as regent until 1873) to King Chulalongkorn, respectively.

King Chulalongkorn (or Rama V) ascended the throne as king of Siam in 1868. King Chulalongkorn; himself educated by westerners, was intent on reforming the monarchy along western lines. First he abolished the practice of kneeling and crawling in front of the monarch [a practice reinstated under the 9th Dynasty] and repealed many laws concerning the relationship between the monarch and his people. Instead he created a monarchy based on western lines of an 'enlightened ruler'; absolute but enlightened. However he continued to preserve many ancient aspects and rituals of the old kingship, including his religious and feudal powers. In 1874 the King created a privy council, copied from the European tradition to help him rule his Kingdom. During his reign Siam was pressured to relinquished control of it old tributaries of Laos and northern Malaya to Western powers, Siam itself narrowly avoided being colonized. His son King Vajiravudh (or Rama VI) (succeeded in 1910) continued his father's zeal for reform and brought the monarchy into the 20th century. He was succeeded by his brother King Prajadhipok (or Rama VII) in 1925.

Change

King Prajadhipok signing the Constitution of Siam on December 10, 1932.

In June 1932, a group of foreign educated students and military men called "the Promoters" carried out a bloodless Revolution, seizing power and demanded that King Prajadhipok, grant the people of Siam a constitution. The king agreed and in December 1932 the people were granted a constitution, ending 150 years of absolute Chakri rule. From then on the role of the monarch was relegated to that of a symbolic head of state. His powers from then on was exercised by the Prime Minister and the National Assembly

In 1935 King Pradhipok abdicated the throne, following disagreements with the increasingly authoritarian government. Rama VII lived in exile in the United Kingdom until his death. The king was replaced by his young nephew Ananda Mahidol (or Rama VIII). The new king was 10 years old and was living abroad in Switzerland; a council of regents was appointed in his place. During this period the roles and powers of the King was entirely usurped by the fascist government of Plaek Phibunsongkhram, who aligned Siam on the side of the Axis powers during the Second World War. By the end of the war Phibunsongkhram was removed and the young King returned. During the War many of the King's relatives were part of the Free Thai movement, which provided resistance to foreign occupation during the war and helped rehabilitate Thailand after the war.

After the Rama VIII's mysterious death in 1946 his brother, Prince Bhumibol Adulyadej (or Rama IX), aged 19 years old, became the new monarch, Rama IX. To date he is the world's longest still-serving Head of State and longest reigning monarch (of current monarchs still serving).

Beginning approximately in 2000, the role of the Thai monarchy was increasingly addressed by scholars, media, observers and traditionalists as the current king's health deteriorated with advancing age, and as more educated pro-democracy interests began to express their rights to speech. In reaction to these academic and political inquiries, the Thai state enacted a series of laws and measures claimed - without demonstrated to relate to protection of national security. Almost without exception international scholars, and those daring to speak within the kingdom, have protested against what they view as inappropriate state censorship. This in turn led to dozens of arrests, hundreds of criminal investigations, multiple imprisonments and explanations to the foreign diplomatic community that national security was under threat. To date, no real legal challenges have been introduced into Thai courts to test the legitimacy of these laws and other emergency measures. n

Royal Regalia

The present set of Royal Regalia of Thailand (Thai: **เบญจราชกกุธภัณฑ์**) and the Royal Utensils was created mostly during the reign of King

Rama I and Rama IV, after the previous set was lost during the sack of Ayutthaya by the Burmese in 1767. The Regalia is used mainly during the coronation ceremony of the king at the beginning of every reign. The Regalia is presently on display in the Museum of the Grand Palace in Bangkok.[6][7]

- Royal Nine-Tiered Umbrella (**พระมหาเศวตฉัตร**)- the most important regalia; currently there are seven, distributed at various palaces.
- Great Crown of Victory (**พระมหาพิชัยมงกุฎ**)- official headgear and the main symbol of kingship.
- Sword of Victory (**พระแสงขรรค์ชัยศรี**)- found in Tonlé Sap in 1784, the sword represents military power.
- Royal Staff (**ธารพระกร**)- symbol of justice
- Royal Fan and Flywhisk (**วาลวีชนี**)- Royal Fan made of gold and the Royal Flywhisk made from the tail of a white elephant.
- Royal Slippers (**ฉลองพระบาท**)- official footwear made of gold

Coronation of King Bhumibol at the Grand Palace, 5 May 1950.

The Thai Royal Utensils (Phra Khattiya Rajuprapoke) are also for the personal use of the monarch,[7] comprising:

- the Betel Nut Set
- the Water Urn
- the Libation Vessel
- the Receptacle.

These unique objects are always placed on either side of the king's throne or his seat during royal ceremonies.

Other Symbols of Kingship

- Royal Thrones of Thailand- currently there are six, distributed at various Throne Halls in the Grand Palace.[8]
- Royal White Elephant- usually one to represent each reign, the current one resides at Dusit zoo, the king also has 10 others.
- The Royal Garuda- Emblem of the king and of Thailand
- Royal Standard of Thailand- Official standard of the king
- Royal Flags- Personal flags of the king and royal family
- Sansoen Phra Barami- The Royal Anthem

Royal Ceremonies

His Majesty the King and other members of the royal family carry-out many royal ceremonies per year, some dating from the 13th century.

- Royal Coronation Ceremony
- Royal Barge Procession
- Royal Ploughing Ceremony
- The Changing of the Robes of the Emerald Buddha[9]
- Trooping of the Colours
- Oath of Allegiance Ceremony
- Speech from the Throne to the National Assembly of Thailand

The Royal Barge Procession in 2005.

Royal Orders and Decorations

The king is sovereign of several Royal Orders and Decorations, the prerogative to appoint and remove any persons from these orders are at the king's discretion. However sometimes recommendations are made by the Cabinet of Thailand and the Prime Minister.

Bhumibol Adulyadej

From Wikipedia, the free encyclopedia

Bhumibol Adulyadej (RTGS: **Phumiphon Adunyadet**; Thai: ภูมิพลอดุลยเดช, pronounced [pʰūː.míˑ.pʰōn ʔà.dūn.jā.dèːt] (listen); see full title below; born 5 December 1927) is the current Monarch of Thailand. He is known as **Rama IX**. Having reigned since 9 June 1946, he is the world's longest-serving current head of state and the longest-reigning monarch in Thai history.[1]

Although Bhumibol is legally a constitutional monarch, he has made several decisive interventions in the Thai political sphere. He was credited with facilitating Thailand's transition to democracy in the 1990s, although he has supported numerous military regimes, including Sarit Dhanarajata's during the 1960s and the Council for National Security in 2006–8. During his long reign, he has authorized over 15 coups, 16 constitutions, and 27 changes of prime ministers.[2] He has also used his influence to stop military coups, including attempts in 1981 and 1985. Bhumibol is advised by a hand-picked Privy Council.

Bhumibol is respected[3][4] and revered by many Thais.[5] He is, by law passed by the Thai parliament, considered "inviolable" and lèse majesté, i.e. offence against the dignity of the monarch, may be punished.[5] In 1957, the overthrow of the government was justified with allegations of lese majeste.[6][7] Bhumibol however invited public criticism in a 2005 speech.[8]

Bhumibol is credited with a social-economic theory of self-sufficiency. His personal wealth is tremendous: Forbes estimated Bhumibol's personal fortune, including property managed by the Crown Property Bureau which is considered national property,[9] to be US$30 billion in 2010, and he has been consistently placed at number one of the magazine's list of "The World's Richest Royals".[10][11] The Crown Property Bureau spends money on public welfare such as youth development, however it does not pay taxes and its finances are reported only to Bhumibol.[12] Bhumibol himself has made donations to numerous development projects in Thailand, in areas including agriculture, environment, public health, occupational promotion, water resources, communications and public welfare.[13] Commemoration of Bhumibol's contributions to Thailand are ubiquitous in the Thai media.[14]

Early life

Bhumibol (center) with his mother and siblings Ananda Mahidol (left) and Galyani Vadhana (right).

He was born at the Mount Auburn Hospital in Cambridge, Massachusetts, in the United States on 5 December 1927.[15] He was the younger son of HRH Prince Mahidol Adulyadej and Mom Sangwan (later HRH Princess Srinagarindra, the Princess Mother: Somdet Phra Si Nakharinthra Boromaratchachonnani). His name, Bhumibol Adulyadej, means "Strength of the Land, Incomparable Power".[16] His father was enrolled in the Public Health program at Harvard University, hence his unusual place of birth for a monarch.

He came to Thailand in 1928, after Prince Mahidol obtained a certificate from Harvard. He briefly attended Mater Dei school in Bangkok but in 1933 his mother took the family to Switzerland, where he continued his education at the Ecole Nouvelle de la Suisse Romande in Lausanne. He received the *baccalauréat des lettres* (high-school diploma with major in French literature, Latin, and Greek) from the Gymnase Classique Cantonal of Lausanne, and by 1945 had begun studying science at the University of Lausanne, when World War II ended and the family returned to Thailand.[17]

Succession and marriage

Bhumibol and Sirikit after their wedding.

Bhumibol ascended the throne following the death by gunshot wound of his brother, King Ananda Mahidol, on 9 June 1946, in mysterious circumstances.[18] Bhumibol returned to Switzerland in order to complete his education, and his uncle, Rangsit, Prince of Chainat, was appointed Prince Regent. Bhumibol then switched over his field of study to law and political science.

While finishing his degree in Switzerland, Bhumibol visited Paris frequently. It was in Paris that he first met Mom Rajawongse Sirikit Kitiyakara, daughter of the Thai ambassador to France.[19]

On 4 October 1948, while Bhumibol was driving a Fiat Topolino on the Geneva-Lausanne road, he collided with the rear of a braking truck 10 km outside of Lausanne. He hurt

his back and incurred cuts on his face that cost him the sight of his right eye.[20][21] While he was hospitalised in Lausanne, Sirikit visited him frequently. She met his mother, who asked her to continue her studies nearby so that Bhumibol could get to know her better. Bhumibol selected for her a boarding school in Lausanne, Riante Rive. A quiet engagement in Lausanne followed on 19 July 1949, and the couple were married on 28 April 1950, just a week before his coronation.

- Lady Sirikitiya Jensen
- HRH Princess Soamsawali
- Lady Dasanavalaya Sorasongkram

Bhumibol and his wife Queen Sirikit have four children:

- (Formerly HRH) Princess Ubol Ratana, born 5 April 1951 in Lausanne, Switzerland;
- HRH The Crown Prince Maha Vajiralongkorn, born 28 July 1952;
- HRH The Princess Maha Chakri Sirindhorn, born 2 April 1955;
- HRH The Princess Chulabhorn Walailak, born 4 July 1957.

One of Bhumibol's grandchildren, Bhumi Jensen, was killed in the tsunami caused by the 2004 Indian Ocean earthquake. He was the autistic son of Princess Ubol Ratana.[22]

Coronation and titles

Bhumibol at his coronation at the Grand Palace.

Bhumibol was crowned King of Thailand on 5 May 1950 at the Royal Palace in Bangkok where he pledged that he would "reign with righteousness for the benefit and happiness of the Siamese people" ("**เราจะครองแผ่นดินโดยธรรม เพื่อประโยชน์สุขแห่งมหาชนชาวสยาม**").[23] Notable elements associated with the coronation included the Bahadrabith Throne beneath the Great White Umbrella of State; and he was presented with the royal regalia and utensils.[24]

Bhumibol addresses a joint session of the United States Congress in 1960

In 1950 on Coronation Day, Bhumibol's consort was made Queen (Somdej Phra Boromarajini). The date of his coronation is celebrated each 5 May in Thailand as Coronation Day, a public holiday. On 9 June 2006, Bhumibol celebrated his 60th anniversary as the King of Thailand, becoming the longest reigning monarch in Thai history.

Following the death of his grandmother Queen Savang Vadhana, Bhumibol entered a 15-day monkhood (22 October 1956 – 5 November 1956) at Wat Bowonniwet, as is customary for Buddhist males on the death of elder relatives.[25] During this time, Sirikit was appointed his regent. She was later appointed Queen Regent (Somdej Phra Boromarajininat) in recognition of this.

Although Bhumibol is sometimes referred to as King Rama IX in English, Thais refer to him as **Nai Luang** or **Phra Chao Yu Hua** (**ในหลวง** or **พระเจ้าอยู่หัว**: both mean "the King" or "Lord Upon our Heads"). He is also called **Chao Chiwit** ("Lord of Life").[26] Formally, he would be referred to as **Phrabat Somdej Phra Chao Yu Hua** (**พระบาทสมเด็จพระเจ้าอยู่หัว**) or, in legal documents, **Phrabat Somdej Phra Paramінthara Maha Bhumibol Adulyadej** (**พระบาทสมเด็จพระปรมินทรมหาภูมิพลอดุลยเดช**), and in English as His Majesty King Bhumibol Adulyadej. He signs his name as **ภูมิพลอดุลยเดช ป.ร.** (Bhumibol Adulyadej Por Ror; this is the Thai equivalent of Bhumibol Adulyadej R[ex]).

Role in Thai politics

Plaek Pibulsonggram era

Marshal and Mrs. Pibulsonggram with Eleanor Roosevelt

In the early years of his reign, during the government of military dictator Plaek Pibulsonggram, Bhumibol had no real power and was little more than a ceremonial figure under the military-dominated government. In August 1957, 6 months after parliamentary elections, General Sarit Dhanarajata accused the government of Field Marshal Pibulsonggram of lèse majesté due to its conduct of the 2,500th anniversary celebration of Buddhism.[27][7] On 16 September 1957, Pibulsonggram went to Bhumibol to seek support for his government.[28] Bhumibol told the Field Marshal to resign to avoid a coup; Pibulsonggram refused. That evening, Sarit Dhanarajata seized power, and two hours later Bhumibol imposed martial law throughout the Kingdom.[29] Bhumibol issued a Proclamation appointing Sarit as "Military Defender of the Capital" without anyone countersigning this Proclamation. It included the following statements:[30]

> “ Whereas it appears that the public administration of the government under the premiership of Field Marshal P. Phibunsonggram is untrustworthy, and that it could not maintain the public order, the military, led by Field Marshal Sarit Dhanarajata, has successfully taken over the public administration and now acts as the Military Defender of the Capital. I, hereby, appoint Field Marshal Sarit Dhanarajata as the Military Defender of the Capital, and command that all the citizens shall remain calm while all the public servants shall serve the orders issued by Field Marshal Sarit Dhanarajat. This Proclamation shall come into force immediately. Done this 16th Day of September, Buddhist Era 2500 (1957). ”

Sarit Dhanarajata era

During Sarit's dictatorship, the monarchy was revitalised. Bhumibol attended public ceremonies, toured the provinces and patronised development projects. Under Sarit, the practice of crawling in front of royalty during audiences, banned by King Chulalongkorn, was revived in certain situations and the royal-sponsored Thammayut Nikaya order was revitalised. For the first time since the absolute monarchy was overthrown, a king was conveyed up the Chao Phraya River in a Royal Barge Procession to offer robes at temples.[31][32]

Other disused ceremonies from the classical period of the Chakri dynasty, such as the royally-patronised ploughing ceremony (Thai: **พิธีพืชมงคล**), were also revived.[33] Bhumibol's birthday (5 December) was declared the national day, replacing the previous national day, the anniversary of the Siamese Revolution of 1932 (24

June).[34] Upon Sarit's death in 8 December 1963, an unprecedented 21 days of mourning were declared in the palace. A royal five-tier umbrella shaded his body while it lay in state. Long-time royal adviser Phraya Srivisarn Vacha later noted that no Prime Minister ever had such an intimate relationship with Bhumibol as Sarit.[35]

Contemporary thinkers differ in their views about the relationship between Bhumibol and Sarit. Paul Handley, writer of *The King Never Smiles* views Sarit as Bhumibol's tool, whereas political scientist Thak Chaloemtiarana asserts that Sarit used Bhumibol in order to build his own credibility.[36][37]

Thanom Kittikachorn era and short democratic phase

Field Marshal Thanom Kittikachorn was appointed premier a day after Sarit's death in 1963. He continued most of Sarit's policies for a decade. In October 1973 after massive protests and the deaths of a large number of pro-democracy demonstrators, Bhumibol opened the gates of the Chitralada Palace to fleeing protesters, and held an audience with student leaders. Bhumibol subsequently appointed the Thammasat University Rector Sanya Dharmasakti as the new Prime Minister, replacing Thanom. Thanom subsequently moved to the United States and Singapore. A succession of civilian governments followed, but the return of Field Marshal Thanom and his ordination as a novice monk at Wat Bowonniwet in 1976 led to renewed conflict, culminating in the 6 October 1976 Massacre at Thammasat University by royalist paramilitary forces.

Prem Tinsulanond era

The ensuing chaos was used as a pretext for a military coup. The junta submitted three names to the king to choose from to become the next Premier: Deputy President of the king's Privy Council Prakob Hutasingh, right-wing Bangkok Governor Thamnoon Thien-ngern, and conservative Supreme Court judge Tanin Kraivixien.[38] Bhumibol chose Tanin as the most suitable. However, Tanin proved to be very right-wing himself, causing student protesters to flee to join the communists in the jungle. Tanin was himself overthrown in a military coup in October 1977 led by General Kriangsak Chomanan. Kriangsak was succeeded in 1980 by the popular Army Commander-in-Chief, General Prem Tinsulanond, later the Privy Council President.

Bhumibol's refusal to endorse military coups in 1981 (the April Fool's Day coup) and 1985 (the Share Rebellion) ultimately led to the victory of forces loyal to the government, despite some violence – including in 1981, the seizure of Bangkok by rebel forces. The coups led many to believe that Bhumibol had misjudged Thai society and that his credibility as an impartial mediator between various political and military factions had been compromised.[39][40][41]

Crisis of 1992

Royal intervention on the night of 20 May. Left to right: Chamlong Srimuang, Suchinda

Main article: Black May (1992)

In 1992, Bhumibol played a key role in Thailand's transition to a democratic system. A coup on 23 February 1991 returned Thailand back under military dictatorship. After a general election in 1992, the majority parties invited General Suchinda Kraprayoon, a leader of the coup group, to be the Prime Minister. This caused much dissent, which escalated into demonstrations that led to a large number of deaths when the military was brought in to control the protesters. The situation became increasingly critical as police and military forces clashed with the protesters. Violence and riot spread out in many areas of the capital with rumours of a rift among the

Kraprayoon and the King (seated).

armed forces.[42]

Amidst the fear of civil war, Bhumibol intervened. He summoned Suchinda and the leader of the pro-democracy movement, retired Major General Chamlong Srimuang, to a televised audience, urged them to find a peaceful resolution. At the height of the crisis, the sight of both men appearing together on their knees (in accordance with royal protocol) made a strong impression on the nation, and led to Suchinda's resignation soon afterwards.

It was one of the few occasions in which Bhumibol directly and publicly intervened in a political conflict. A general election was held shortly afterward, leading to a civilian government.[43]

2003 War on Drugs

With then President Vladimir Putin in Bangkok on 22 October 2003.

In his 4 December 2002 speech on the eve of his birthday, King Bhumibol spoke about the rise in drug use, the high social costs and deaths caused by drugs, and called for a "War on Drugs."[44] Privy Councillor General Phichit Kunlawanit called on the Thaksin Shinawatra government to use its majority in parliament to establish a special court to deal with drug dealers, stating that “if we execute 60,000 the land will rise and our descendants will escape bad karma”.[45]

On 14 January 2003, Thaksin launched a campaign to rid "every square inch of the country" of drugs.[46] His War on Drugs campaign consisted of setting provincial arrest and seizure targets including "blacklists", awarding government officials for achieving targets and threatening punishment for those who failed to make the quota, targeting dealers, and "ruthless" implementation. In the first three months, Human Rights Watch reported that 2,275 people were killed, almost double the number normally killed in drug-related violence.[47] Human rights critics claimed a large number were extrajudicially executed.[48][49] The War on Drugs was widely criticized by the international community.[50]

According to the Narcotics Control Board, the campaign was effective in reducing drug consumption, especially in schools.[51] The War on Drugs was one of the most popular policies of the Thaksin government. Bhumibol, in a 2003 birthday speech, praised Thaksin and criticized those who counted only dead drug dealers while ignoring deaths caused by drugs.[52]

> "ไอ้การชัยชนะของการปราบไอ้ยาเสพติดนี่ ดีที่ปราบ แล้วก็ที่เขาตำหนิบอกว่า เอ้ย คนตาย ตั้ง ๒,๕๐๐ คน อะไรนั่น เรื่องเล็ก ๒,๕๐๐ คน ถ้านายกฯ ไม่ได้ทำ นายกฯ ไม่ได้ทำ ทุกปี ๆ จดไว้นะ มีมากกว่า ๒,๕๐๐ คนที่ตาย" "Victory in the War on Drugs is good. They may blame the crackdown for more than 2,500 deaths, but this is a small price to pay. If the prime minister failed to curb [the drug trade], over the years the number of deaths would easily surpass this toll.[53] "

Bhumibol also asked the commander of the police to investigate the killings.[54] Police Commander Sant Sarutanond reopened investigations into the deaths, and again claimed that few of the deaths were at the hands of the police.

After the 2006 coup, the military junta appointed a committee led by former Attorney General Kanit Na Nakorn to investigate deaths in the War on Drugs.[55] The committee found no evidence linking Thaksin or members of his government to any extrajudicial killings. However, critics claimed that the true findings of the committee

were suppressed.[56]

While he was opposition leader, Abhisit Vejjajiva accused Thaksin of crimes against humanity for the War on Drugs. After he became Prime Minister, Abhisit opened an investigation led by former attorney-general Kampee Kaewcharoen, claiming that a successful probe could lead to prosecution by the International Criminal Court.[47][57][58] As of the August 2011 parliamentary elections, Abhisit's investigation failed to find or publicize any evidence linking Thaksin or members of his Government to any extrajudicial killings.

Crisis of 2005–2006 and the September 2006 coup

Main articles: Thailand political crisis 2005-2006, Finland Plot, and 2006 Thailand coup d'état

Background to the coup

See also: Thailand political crisis 2005-2006

Weeks before the April 2006 legislative election, the Democrat Party-led opposition and the People's Alliance for Democracy petitioned Bhumibol to appoint a replacement prime minister and cabinet. Demands for royal intervention met with much criticism from the public. Bhumibol, in a speech on 26 April 2006, responded, "Asking for a Royally-appointed prime minister is undemocratic. It is, pardon me, a mess. It is irrational".[59]

After publicly claiming victory in the boycotted April parliamentary elections, Thaksin Shinawatra had a private audience with the king. A few hours later, Thaksin appeared on national television to announce that he would be taking a break from politics.

In May 2006, the Sondhi Limthongkul-owned Manager Daily newspaper published a series of articles describing the "Finland Plot", alleging that Thaksin and former members of the Communist Party of Thailand planned to overthrow the king and seize control of the nation. No evidence was ever produced to verify the existence of such a plot, and Thaksin and his Thai Rak Thai party vehemently denied the accusations and sued the accusers.

In a rare, televised speech to senior judges, Bhumibol requested the judiciary to take action to resolve the political crisis.[59] On 8 May 2006, the Constitutional Court invalidated the results of the April elections and ordered new elections scheduled for 15 October 2006.[60] The Criminal Court later jailed the Election Commissioners.[61][62]

On 14 July 2006, Privy Council President Prem Tinsulanonda addressed graduating cadets of the Chulachomklao Royal Military Academy, telling them that the Thai military must serve the King – not the Government.[63]

On 20 July, Bhumibol signed a royal decree endorsing new House elections for 15 October 2006. In an unprecedented act, the King wrote a note on the royal decree calling for a clean and fair election. That very day, Bhumibol underwent spinal surgery.[64]

The coup

See also: 2006 Thailand coup

In the evening of 19 September, the Thai military overthrew the Thaksin government and seized control of Bangkok in a bloodless coup. The junta, led by the Sonthi Boonyaratglin, Commander of the Army, called itself

the Council for Democratic Reform under the Constitutional Monarchy, accused the deposed prime minister and his regime of many crimes, including lèse majesté, and pledged its loyalty to Bhumibol. Martial law was declared, the Constitution repealed and the October elections cancelled. Protests and political meetings were banned.[65] On 20 September, Bhumibol endorsed the coup, and ordered civil servants to take orders from Sonthi.

The King's role in the coup was the subject of much speculation among Thai analysts and the international media, although publication of such speculation was banned in Thailand. The King had an audience with Privy Council President Prem Tinsulanonda at the same time as the First Special Forces were ordered mobilised.[66] Anti-coup protesters claimed that Prem was a key mastermind of the coup, although the military claimed otherwise and banned any discussion of the topic. In a BBC interview, Thitinan Pongsudhirak of Chulalongkorn University noted, "This coup was nothing short of Thaksin versus the King... He is widely seen as having implicitly endorsed the coup." In the same interview, social critic Sulak Sivaraksa claimed, "Without his involvement, the coup would have been impossible." Sulak added that the King is "very skillful. He never becomes obviously involved. If this coup goes wrong, Sonthi will get the blame, but whatever happens, the King will only get praise."[67] On Saturday 23 September 2006, the junta warned they would "urgently retaliate against foreign reporters whose coverage has been deemed insulting to the monarchy."[68] The President of Bhumibol's Privy Council, General Prem Tinsulanonda, supported the coup. The junta later appointed Privy Council member General Surayud Chulanont as Prime Minister.

On 20 April 2009, Thaksin claimed in an interview with the Financial Times that Bhumibol had been briefed by Privy Councillors Prem Tinsulanonda and Surayud Chulanont about their plans to stage the 2006 coup. He claimed that General Panlop Pinmanee, a leader of the People's Alliance for Democracy, had told him of the briefing.[69][70] The Thai embassy in London denied Thaksin's claims.

After the coup

The junta appointed a Constitutional Tribunal to rule on the alleged poll fraud cases concerning the Thai Rak Thai and Democrat political parties. Guilty rulings would have dissolved both parties, Thailand's largest and oldest, respectively, and banned the parties' leadership from politics for five years. The weeks leading up to the verdicts saw rising political tensions. On 24 May 2007, about a week before the scheduled verdict, Bhumibol gave a rare speech to the Supreme Administrative Court (the President of which is also a member of the Constitutional Tribunal). "You have the responsibility to prevent the country from collapsing," he warned them in the speech, which was shown on all national television channels simultaneously during the evening. “The nation needs political parties.... In my mind, I have a judgment but I cannot say," he said. "Either way the ruling goes, it will be bad for the country, there will be mistakes."[71][72][73] The Tribunal later acquitted the Democrat Party but dissolved the Thai Rak Thai party and banned 111 of its executives from politics for five years.

The junta-appointed Constitution Drafting Assembly later tried to use the King in a propaganda campaign to increase public support for its widely criticised draft constitution. The CDA placed billboards saying, *"Love the King. Care about the King. Vote in the referendum.* throughout the Northeast of Thailand, where opposition to the junta was greatest.[74]

2008 crisis

Main article: 2008–2010 Thai political crisis

The military's constitution passed the referendum, and general election was held in December 2007. The People's Power Party, consisting of many former Thai Rak Thai Party MPs and supporters, won the majority and

formed a government.[75] The People's Alliance for Democracy (PAD) refused to accept the election results and started protests, eventually laying siege to Government House, Don Muang Airport, and Suvarnabhumi Airport. Although the PAD claimed they were defending the monarchy, Bhumibol remained silent. However, after a PAD supporter died in a clash with police, Queen Sirikit presided over her cremation. Princess Sirindhorn, when asked at a US press conference whether the PAD was acting on behalf of the monarchy, replied, "I don't think so. They do things for themselves."[76] Questioning and criticism over Bhumibol's role in the crisis increased, particularly from the international press.[77][78][79][80][81][82][83] "It is more and more difficult for them to hold the illusion that the monarchy is universally adored," says a Thai academic.[84]

In April 2008, Bhumibol appointed alleged coup plotter General Surayud Chulanont to Privy Council of Thailand. In the weeks leading up to 2011 general election, Bhumibol appointed Air Chief Marshal Chalit Pukbhasuk, a leader of the 2006 military coup, to his Privy Council.[85]

Bhumibol was admitted to Siriraj Hospital in September 2009 for flu and pneumonia.[86] Rumors about his ill-health caused Thai financial markets to tumble in October 2009.[87]

Royal powers

Constitutional powers

> *For a historical perspective on how Bhumibol's constitutional powers have changed over time, see the Constitutions of Thailand article*

Bhumibol retains enormous powers, partly because of his immense popularity and partly because his powers – although clearly defined in the Thai constitution – are often subject to conflicting interpretations. This was highlighted by the controversy surrounding the appointment of Jaruvan Maintaka as Auditor-General. Jaruvavn had been appointed by The State Audit Commission. However, the Constitutional Court ruled in July 2004 that her appointment was unconstitutional. Jaruvan refused to vacate her office without an explicit order from Bhumibol, on the grounds that she had previously been royally approved. When the Senate elected a replacement for Jaruvan, Bhumibol refused to approve him.[88] The Senate declined to vote to override Bhumibol's veto.[89] Finally in February 2006 the Audit Commission reinstated Jaruvan when it became clear from a memo from the Office of the King's Principal Private Secretary that King Bhumibol supported her appointment.

Bhumibol has vetoed legislation very rarely. In 1976, when the Parliament voted 149–19 to extend democratic elections down to district levels, Bhumibol refused to sign the law.[90] The Parliament refused to vote to overturn the King's veto. In 1954, Bhumibol vetoed parliamentary-approved land reform legislation twice before consenting to sign it.[91] The law limited the maximum land an individual could hold to 50 rai (80,000 square metres (860,000 sq ft)), at a time when the Crown Property Bureau was the Kingdom's largest land-owner. The law was not enforced as General Sarit soon overthrew the elected government in a coup and repealed the law.

Bhumibol has the constitutional prerogative to pardon criminals, although there are several criteria for receiving a pardon, including age and remaining sentence. The 2006 pardoning of several convicted paedophiles, including an Australian rapist and child pornographer, caused controversy.[92][93][94] However under the Thailand Constitution, the King has the prerogative to grant a pardon and all laws, Royal Prescripts and Royal Commands relating to State affairs must be countersigned by a Minister unless otherwise provided in this Constitution. The pardon list is created and proposed by the government official, which was under the Shinawatra's 2006 government.

Network monarchy and extraconstitutional powers

Several academics outside of Thailand, including Duncan McCargo and Federico Ferrara have noted the active political involvement of Bhumibol through a "network monarchy," whose most significant proxy is Privy Council President Prem Tinsulanond. McCargo claimed that Bhumibol's deeply conservative network worked behind the scenes to establish political influence in the 1990s, but was deeply threatened by the landslide election victories of Thaksin Shinawatra in 2001 and 2005.[95] Ferrara claimed, shortly before the Thai Supreme Court delivered its verdict to seize Thaksin Shinawatra's assets, that the judiciary was a well-established part of Bhumibol's network and represented his main avenue to exercise extra-constitutional prerogatives despite having the appearance of being constitutional. He also noted how, in comparison to the Constitutional Court's 2001 acquittal of Thaksin, the judiciary was a much more important part of the "network" than it was in the past.[96]

City decoration in observance of King Bhumibol's birthday in Phitsanulok, Thailand

The network's ability to exercise power is based partly on Bhumibol's popularity and strict control of Bhumibol's popular image. Bhumibol's popularity was demonstrated following the 2003 Phnom Penh riots in Cambodia, when hundreds of Thai protesters, enraged by rumors that Cambodian rioters had stomped on photographs of Bhumibol, gathered outside the Cambodian embassy in Bangkok. Photographs of the stomping were not published in Thailand, but were available on the internet. The situation was resolved peacefully only when Police General Sant Sarutanonda told the crowd that he had received a call from royal secretary Arsa Sarasin conveying Bhumibol's request for calm. The crowd dispersed.[97]

Royal projects

History

> The development of the country must be fostered in stages. It must start with the construction of infrastructure, that is, the provision of food and basic necessities for the people by methods which are economic, cautious and conforming with principles. Once the foundation is firmly established, progress can be continually, carefully and economically promoted. This approach will prevent incurring mistakes and failures, and lead to the certain and complete achievement of the objectives.
>
> —Bhumibol's speech at Kasetsart University Commencement Ceremony on 19 July 1974.[98]

Bhumibol Dam

Bhumibol has been involved in many social and economic development projects. The nature of his involvement has varied by political regime.[99]

The government of Plaek Pibulsonggram (1951–1957) limited Bhumibol to a ceremonial role. During that period Bhumibol produced some films and operated a radio station from Chitlada Palace using his own personal funds.

In the military governments of Sarit Dhanarajata and his successors (1958–1980), Bhumibol was re-portrayed as the "Development King" and the inspiration of the economic and political goals of the regime. Royally-ordered projects were implemented under the financial and political support of the government, including projects in rural areas and communities under the influence of the Communist Party of Thailand. Bhumibol's visits to these projects were heavily promoted by the Sarit government and broadcast on the state-controlled media.

During the governments of General Prem Tinsulanond (1981–1987), the relationship between the Thai state and the monarch was at its closest. Prem, later to become President of Bhumibol's Privy Council, officially allocated government budgets and manpower to support royal projects. Most activities in this period involved the development of large scale irrigation projects in rural areas.

During the modern period (post-1988), the structured development of the Royal Projects reached its apex. Bhumibol's Chaipattana Foundation was established, promoting his "sufficiency economy" theory, an alternative to the export-oriented policies adopted by the period's elected governments. Following the 2006 coup, establishment of a "sufficiency economy" was enshrined in the constitution as being a primary goal of the government, and government financial support for royal projects boomed.

Example projects

- Rama VIII Bridge. Suggested by Bhumibol, funded by the government
- Huai Ongkod land reform project, Kanchanaburi province. Suggested by Bhumibol, using government-owned land.
- Royal Medical Team. Bhumibol's private physicians accompanying him on village tours were encouraged to provide medical care for local residents. In addition, the Royal Household sends letters of support to physicians who volunteer to serve in hospitals in provinces where royal palaces are situated.[100]

Awards

Bhumibol has received numerous royal and state orders as befitting of his stature. In addition, the king was awarded the William J. Donovan Medal, Award of Friendship OSS, New York, U.S.A.presented by the Office of Strategic Services (soon to be CIA) on 29 October 1987.[101]

King Bhumibol Adulyadej, President Dwight D. Eisenhower, Queen Sirikit and Mamie Eisenhower at the White House in June 1960.

Bhumibol, who serves as head of The National Scout Organization of Thailand, was presented the Bronze Wolf award on 20 June 2006, the highest award of the World Organization of the Scout Movement, for his support and development of Scouting in Thailand by Carl XVI Gustaf, King of Sweden and Honorary President of the World Scout Foundation. The presentation took place at Chitralada Palace in Thailand and was witnessed by Chairman of the World Scout Committee Herman Hui.

In May 2006, UN Secretary-General, Kofi Annan, presented the United Nations' first and only Human Development Lifetime Achievement Award to Bhumibol.[102]

Bhumibol set a world record for receiving the greatest number of honorary university degrees (136) in 1997.[103] Most of his degrees came from Thai universities: for instance, Kasetsart University awarded him ten

honorary doctoral degrees at once.

60th Anniversary celebrations

Main article: 60th Anniversary Celebrations of Bhumibol Adulyadej's Accession

Also called the Diamond Jubilee, the 60th Anniversary Celebrations of His Majesty the King's Accession to the Throne were a series of events marking Bhumibol's reign. Events included the royal barge procession on the Chao Phraya River, fireworks displays, art exhibitions, pardoning 25,000 prisoners,[104] concerts and dance performances.

Tied in with the anniversary, United Nations Secretary-General Kofi Annan presented Bhumibol with the United Nations Development Programme's first Human Development Lifetime Achievement Award on 26 May 2006. National holidays were on 9 June and 12–13 June 2006. On 9 June, the King and Queen appeared on the balcony of Ananta Samakhom Throne Hall before hundreds of thousands of people. The official royal barge procession on 12 June was attended by the King and Queen and royal visitors from 26 other countries. On 13 June, a state banquet for the royal visitors was held in the newly constructed Rama IX Throne Hall at the Grand Palace, the first official function for the hall. The Chiang Mai Royal Flora Expo was also held to honour the anniversary.

On 16 January 2007, the CDRM officially declared the end of the 60th anniversary celebrations and commenced year-long celebrations of Bhumibol's 80th birthday.[105]

Private life

Bhumibol is a painter, musician, photographer, author and translator. His book *Phra Mahachanok* is based on a traditional *Jataka* story of Buddhist scripture. *The Story of Thong Daeng* is the story of his dog Thong Daeng.[106]

In his youth, Bhumibol was greatly interested in firearms. He kept a carbine, a Sten gun, and two automatic pistols in his bedroom, and he and his elder brother, King Ananda Mahidol, often used the gardens of the palace for target practice.[107]

There are two English language books that provide extensive detail – albeit not always verifiable – about Bhumibol's life, especially his early years and then throughout his entire reign. One is *The Revolutionary King* by William Stevenson, the other is *The King Never Smiles* by Paul M. Handley. A third and earlier work, *The Devil's Discus*, is also available in Thai and English. All three books are banned in Thailand.

Bhumibol's creativity in, among other things, music, art, and invention, was the focus of a 2 minute long documentary created by the government of Abhibisit Vejjajiva that was screened at all branches of the Major Cineplex Group and SF Cinema City, the two largest cinema chains in Thailand.[108]

Bhumibol suffers from lumbar spinal stenosis, a narrowing of the canal that contains the spinal cord and nerve roots, which results in back and leg pain and numbness in the legs. He received a microsurgical decompression in July 2006.[109][110]

Bhumibol was taken to Bangkok's Siriraj Hospital on 13 October 2007, complaining he felt weak down his right side; doctors later found out through scans that he had a blood shortage to his brain.[111] He was discharged on 7 November 2007.[112]

On 19 September 2009, he was once again admitted to Siriraj Hospital, apparently with the flu and pneumonia. US diplomatic cables from 2009, published by Wikileaks in 2011, reported that the king is suffering from Parkinson's disease and depression.[113] His youngest daughter HRH Princess Chulabhorn Walailak confirmed in an April 2011 television interview that the king remains in the hospital.[114]

On 17 November 2011, Bhumibol was diagnosed with diverticulitis while being confined in Siriraj Hospital. He is also forced to remain in fast until the disease is cured, the Bureau of the Royal Household announced.[115] He received further treatment for the condition in January 2012.

Music

Bhumibol is an accomplished jazz musician and composer, particularly for his works on the alto saxophone. He was the first Asian composer awarded honorary membership of the Academy of Music and Dramatic Arts in Vienna at the age of 32.[116] He used to play jazz music on air on the Or Sor radio station. In his travels, he has played with such jazz legends as Benny Goodman, Jack Teagarden, Lionel Hampton, Maynard Ferguson, and Preservation Hall Jazz Band. His songs can often be heard at social gatherings and concerts. In 2003, the University of North Texas College of Music awarded him an Honorary Doctorate in Music. The king's abilities as a jazz musician were mentioned by Aunt Jenny (Imogene Coca) in an episode of *The Brady Bunch* titled "Jan's Aunt Jenny", which originally aired on 21 January 1972.[117]

Sailing

Bhumibol is an accomplished sailor and sailboat designer.[118] He won a gold medal for sailing in the Fourth Southeast Asian Peninsular (SEAP) Games in 1967, together with HRH Princess Ubol Ratana whom he tied for points.[119] This accomplishment is all the more remarkable given Bhumibol's lack of binocular depth perception. Bhumibol has also sailed the Gulf of Thailand from Hua Hin to Toey Harbour in Sattahip, covering 60 nautical miles (110 km) in a 14-hour journey on the "Vega 1," an OK Class dinghy he built.[107]

Like his father, a former military naval engineer, Bhumibol was an avid boat designer and builder. He produced several small sail-boat designs in the International Enterprise, OK, and Moth Classes. His designs in the Moth class include the “Mod,” “Super Mod,” and “Micro Mod.”[120]

Patents

Bhumibol is the only Thai monarch to hold a patent.[121][122] He obtained one in 1993 for a waste water aerator named "Chai Pattana", and several patents on rainmaking since 1955: the "sandwich" rainmaking patent in 1999 and lately the "supersandwich" patent in 2003.[123][124][125]

Wealth

Estimates of the post-devaluation (circa 1997–1998) wealth of the royal household range from 10 billion to 20 billion USD.[126] In August 2008, Forbes came out with its 2008 version of *The World's Richest Royals*. King Bhumibol took first place on the list with an estimated wealth of $35 billion.[127] A few days later the Ministry of Foreign Affairs of Thailand issued a statement that the Forbes report erred in attributing wealth owned by the Crown Property Bureau (CPB) solely to Bhumibol.[128] In the 2009 version of its list, Forbes acknowledged the government's objections, but justified the continued inclusion of the CPB's assets on the ground that Bhumibol was its trustee.[10] The 2009 estimate was down to $30 billion due to declines in real estate and stocks.[10]

The wealth and properties of Bhumibol and the royal family are managed by the Crown Property Bureau and the Privy Purse. The CPB was established by law but is managed independently of the Thai Government and reports only to Bhumibol.[107][129]

Through the CPB, Bhumibol and the royal family own land and equity in many companies and massive amounts of land, including 3,493 acres in Bangkok.[130] The CPB is the majority shareholder of Siam Cement (the largest Thai industrial conglomerate), Christiani & Nielsen (one of the largest Thai construction firms), Deves Insurance (which holds a monopoly on government property insurance and contract insurance), Siam Commercial Bank (one of the largest Thai banks), and Shin Corporation (a major Thai telecommunications firm, through the CPB's holdings in Siam Commercial Bank). The CPB also rents or leases about 36,000 properties to third parties, including the sites of the Four Seasons Hotel Bangkok, the Suan Lum Night Bazaar, Siam Paragon and the Central World Tower. The CPB spearheaded a plan to turn Bangkok's historical Rajadamnoen Avenue into a shopping street known as the "Champs-Élysées of Asia" and in 2007, shocked longtime residents of traditional marketplace districts by serving them with eviction notices.[131] Bhumibol's substantial income from the CPB, estimated to be at least five billion baht in 2004 alone, is exempt from taxes.[131][132] The CPB receives many state privileges. Although the Ministry of Finance technically runs the CPB, decisions are made solely by Bhumibol. The CPB's annual report is for the eye of Bhumibol alone; the annual report is not released to the public.[131]

In addition, Bhumibol has numerous personal investments independent of the CPB. He is personally the majority shareholder of the Thai Insurance Company and Sammakorn, as well as many other companies.[133] He currently holds 30% in Siam Cement,[134] and 20% in the Siam Commercial Bank.[135]

The CPB has a fleet of three aircraft for the use of the royal family, including a Boeing 737-800 and an Airbus A319. The newer Airbus had been purchased by the Thaksin Shinawatra government for government use, but after the 2006 coup, the junta offered it to the king. The other planes are used by members of the royal family.[136]

Among other vehicles, Bhumibol owns two custom-built stretch limousines from LCW Automotive Corp.[137] The Golden Jubilee Diamond, the largest faceted diamond in the world, was given to him by businessman Henry Ho.

Lèse majesté

Scope of the law

Although Bhumibol is held in great respect by many Thais[*citation needed*], he is also protected by *lèse majesté*

laws which allow critics to be jailed for three to fifteen years.[138] The laws were toughened during the dictatorship of royalist Premier Tanin Kraivixien, such that criticism of any member of the royal family, the royal development projects, the royal institution, the Chakri Dynasty, or any previous Thai King was also banned.[139] Jail terms for Thai citizens committing *lèse majesté* are usually harsher than for foreigners.

Politician Veera Musikapong was jailed and banned from politics for *lèse majesté*, despite the palace's opinion that the remarks were harmless. Frenchman Lech Tomacz Kisielwicz refused to switch off a reading light on a Thai Airways flight he shared with two Thai princesses and was jailed under *lèse majesté* for two weeks after his flight landed in Bangkok.[140] He was acquitted after apologizing to the King. Thossaporn Ruethaiprasertsung was arrested and charged with lèse majesté for making photocopies of leaflets with contents allegedly against the monarchy and the Privy Council.[141]

In 2009, Daranee "Da Torpedo" Chanchoengsilpakul was sentenced to 18 years in prison without suspension for "intending to insult" Bhumibol and Sirikit at a political protest.[142] She did not actually mention the monarchs in her speech (she criticized, among other things, the "ruling class"), however, the court ruled that the prosecution "brought evidence that makes it possible to interpret that the defendant meant the King and Queen Sirikit."[143] Social critic Sulak Sivaraksa has been charged several times with *lèse majesté*, but has always been acquitted.

Arrests have also occurred for sending text messages (SMSs) criticizing Bhumibol – although Bhumibol was not the recipient of the messages.[144]

During the government of Abhisit Vejjajiva, numerous people were charged with insulting Bhumibol using body language. [145]

There is controversy over whether criticism of members of Bhumibol's Privy Council also qualifies as criticism of Bhumibol.[146] Police Special Branch Commander Lt-General Theeradech Rodpho-thong refused to file charges of *lèse majesté* against activists who launched a petition to oust Privy Council President Prem Tinsulanonda, claiming that the law only applied to members of the royal family.[147] Two days later, he was demoted by Police Commander Seripisut Temivavej.[148] During the Songkran 2009 unrest, Thaksin Shinawatra accused the Privy Council President of masterminding the 2006 military coup. Royalists interpreted this as an attack on Bhumibol.

The website of Same Sky Books, publishers of Fah Diao Kan magazine, was shut down by the military government after comments on its bulletin board questioned claims made by the Thai media that the entire country was in mourning over the death of Princess Galyani Vadhana.[149]

During his 2005 birthday speech, Bhumibol invited criticism; a widespread barrage of criticisms resulted, followed by a sharp rise in lese majeste prosecutions. "Actually, I must also be criticised. I am not afraid if the criticism concerns what I do wrong, because then I know. Because if you say the king cannot be criticised, it means that the king is not human", he claimed. "If the king can do no wrong, it is akin to looking down upon him because the king is not being treated as a human being. But the king can do wrong."[8] Lese majeste cases rose from five or six a year pre-2005 to 478 in 2010.[150]

Calls to reform the lese majeste laws have themselves resulted in charges with lèse majesté.[151] Political scientist Giles Ungpakorn noted that "the *lèse majesté* laws are not really designed to protect the institution of the monarchy. In the past the laws have been used to protect governments, to protect military coups. This whole [royal] image is created to bolster a conservative elite well beyond the walls of the palace."[152]

In 2011 an American citizen, Joe Gordon (Lerpong Wichaikhammat), was arrested on charges he insulted the country's monarchy, in part by posting a link on his blog to a banned book about the ailing king. He is also suspected of translating, from English into Thai, portions of *The King Never Smiles* – and posting them online along with articles he wrote that allegedly defame the royal family.[153] "I want President Obama and Hillary Clinton to intervene on on my behalf," he is quoted as saying.[154] On 9 December 2011, a court in Thailand sentenced Joe Gordon to two and a half years in prison for defaming the country's royal family by translating excerpts of a locally banned biography of the king and posting them online[www.cbsnews.com/8301-202_162-57339098/thailand-jails-u.s-man-for-insulting-king/].

Political use of the lèse majesté law

Lèse majesté has often been used to silence discussion about Bhumibol's role in politics, particular after the 2006 coup. Dozens of radio stations have been shut down due to alleged insults.[155] As of December 2010, nearly 60,000 websites have been banned for alleged insults against Bhumibol. Chiranuch Premchaiporn, webmaster of news website Prachatai, has been jailed without bail for nearly a year for not removing an allegedly insulting comment from an article fast enough. Although the comments did not directly mention Bhumibol or members of his family, the court found that Chiranuch displayed insulting intent. Arrested in September 2010, she could face up to 50 years imprisonment if found guilty.[156][157]

Premier Thaksin Shinawatra and royalist activist Sondhi Limthongkul both filed charges of lèse majesté against each other during the 2005–2006 political crisis. Thaksin's alleged lèse majesté was one of the stated reasons for the Thai military's 2006 coup.[158][159][160][161]

In 2005, the Department of Special Investigation (DSI) issued arrest warrants for two Swedish citizens, Abdulrosa Jehngoh and Chipley Putra Jehngoh, claiming that their Manusaya.com website contained content insulting to Bhumibol.[162][163]

After the 2006 coup, there were an increasing number of claims that Bhumibol or his advisers knew of the 2006 coup before it actually occurred. Such lines of thought was suppressed with the lese majeste law: the number of people jailed for this alleged "insult" skyrocketed to an unprecedented number.[164]

In May 2008, Minister Jakrapob Penkair of the People's Power Party resigned due to a lese majeste charge against him for statements during the interview in Bangkok's Foreign Correspondents' Club of Thailand (FCCT) on 29 August 2007.[*citation needed*].

Academics have been investigated, imprisoned, and forced into exile for lèse majesté. In 2007, Assistant Professor Boonsong Chaisingkananon of Silpakorn University was the subject of a police investigation for asking students in an exam if the institution of the monarchy was necessary for Thai society and if it could be reformed to be consistent with the democratic system. The university handed in students' answer sheets and the professor's marks.[165] Prominent historian Somsak Jeamteerasakul was arrested for proposing an eight-point plan on the reform of the monarchy. Somsak claimed that he never proposed to overthrow the monarchy and never insulted Bhumibol personally.[166][167] Associate Professor Giles Ji Ungpakorn went into exile after his book, *A Coup for the Rich*, questioned Bhumibol's role in the 2006 coup.[168]

Australian Harry Nicolaides was arrested upon arriving in Thailand and sentenced for 3 years in jail for self-publishing the book *Verisimilitude*. The book, which sold a mere 7 copies, mentioned the "romantic entanglements and intrigues" of members of the royalty. Nicolaides was given a pardon after spending a month in jail and then deported.[169]

Jonathan Head, the head of the Bangkok bureau of the British Broadcasting Corporation (BBC) was accused of lese majeste on numerous occasions, and eventually fled to Turkey. Among his alleged insults was authoring an article where he investigated whether Bhumibol or his advisers provided backing to People's Alliance for Democracy and allowing a picture of a politician to be placed above a picture of King Bhumibol on a BBC Web site.[170][171]

Australian foreign correspondent Eric Campbell and the entire Bangkok bureau of the Australian Broadcasting Corporation were banned from entering Thailand after they aired an investigation of Bhumibol's role in the military's violent 2010 crackdown on protesters. The report was broadcast only in Australia on the *Foreign Correspondent* series.

Amnesty International considers anyone jailed for insulting Bhumibol to be a political prisoner.[172]

Insults to Bhumibol's image

Acts deemed insulting to Bhumibol's image are also criminal offences in Thailand. In 2007, Oliver Jufer, a Swiss man, was sentenced to 10 years in jail for daubing black paint on portraits of Bhumibol while drunk.[173] The Thai press was requested not to publish any information about the case. "This is a delicate issue and we don't want the public to know much about it," noted chief prosecutor Manoon Moongpanchon.[174] The man originally pleaded innocent, but eventually pleaded guilty to five acts of lèse majesté. Foreign reporters were barred from the hearing.[175] Saprang Kalayanamitr publicly suspected that Jufer was hired to perform the vandalism and ordered a military investigation.[176] Jufer was pardoned by the king less than a month after his conviction and deported.

Suwicha Thakor was arrested and sentenced to 20 years in prison, later commuted to 10, for posting a picture on an internet web board that was deemed insulting to Bhumibol, in violating Article 112 of the Criminal Code and violating the Computer Crime Act of 2007. The CCA was passed by the military junta that followed 2006 coup; Suwicha's conviction was the first time that it had been successfully used to prosecute lèse majesté.[177][178]

Other insults to Bhumibol's image that have resulted in arrests for lèse majesté include placing photographs of anybody above photographs of the king on websites and not standing while the Royal Anthem is played at cinemas.[179][180]

Internet blocking measures

The government through the Office of Prevention and Suppression of Information Technology Crimes maintains a "war room" where about a dozen computer specialists monitor the content of the internet for pages which disparage the monarchy or pose a threat to national security. A web crawler is used to search widely. When an offending image or language is found the office obtains a court order blocking the site. As of 2011 70,000 pages had been blocked over a four-year period.[181] On 4 April 2007, the Thai government blocked Thai access to YouTube as a result of a video clip which it deemed insulting to the king.[182][183] Various leaders of the military junta claimed that the clip was an attempt to undermine the monarchy, attack Thailand as a country, and threaten national security.[184] On 28 October 2008, The Ministry of Information and Communication Technology (ICT) announced plans to spend about 100 million to 500 million baht to build a gateway to block websites with contents defaming the royal institution.[185] "More than 4,800 webpages have been blocked since March last year, an ICT official told AFP, notionally because they contain content deemed insulting to Thailand's deeply-revered royal family."[186]

On 29 April 2010, Wipas Raksakulthai was arrested following a post to his Facebook account allegedly insulting Bhumibol.[187] The arrest was reportedly the first lèse majesté charge against a Thai Facebook user.[188] In response, Amnesty International named Wipas Thailand's first prisoner of conscience in nearly three decades.[189]

Biographies

American journalist Paul Handley, who spent thirteen years in Thailand, wrote the biography *The King Never Smiles*. The Information and Communications Ministry banned the book and blocked the book's page on the Yale University Press website in January 2006. In a statement dated 19 January 2006, Thai National Police Chief General Kowit Wattana said the book has "contents which could affect national security and the good morality of the people."[190] The book provides a detailed discussion of Bhumibol's role in Thai political history and also analyzes the factors behind Bhumibol's popularity.

William Stevenson, who had access to the Royal Court and the Royal Family, wrote the biography *The Revolutionary King* in 2001.[191] An article in *Time* says the idea for the book was suggested by Bhumibol.[192] Critics noted that the book displays intimate knowledge about personal aspects of Bhumibol. However, the book has been unofficially banned in Thailand and the Bureau of the Royal Household warned the Thai media about even referring to it in print. An official ban was not possible as it was written with Bhumibol's blessing. The book has been criticised for factual inaccuracies, disrespecting Bhumibol (it refers to him by his personal nickname "Lek"), and proposing a controversial theory explaining the death of King Ananda. Stevenson said, "The king said from the beginning the book would be dangerous for him and for me."[192]

Succession to the throne

Bhumibol's only son, Prince Vajiralongkorn, was given the title "Somdej Phra Boroma Orasadhiraj Chao Fah Maha Vajiralongkorn Sayam Makutrajakuman" (Crown Prince of Siam) on 28 December 1972 and made heir apparent (**องค์รัชทายาท**) to the throne in accordance with the Palace Law on Succession of 1924.[193]

The King's royal cypher and personal flag.

On 5 December 1977, Princess Sirindhorn was given the title, "Siam Boromrajakumari" (Princess Royal of Siam). Her title is often translated by the English-language press as "Crown Princess", although her official English-language title is simply "Princess".[194]

Although the constitution was later amended to allow the Privy Council to appoint a princess as successor to the throne, this would only occur in the absence of an heir apparent. This amendment is retained in Section 23 of the 1997 "People's Constitution." This effectively allowed Princess Sirindhorn to potentially be second in line to the throne, but did not affect Prince Vajiralongkorn's status as heir apparent.

Recent constitutions of Thailand have made the amendment of the Palace Law of Succession the sole prerogative of the reigning king. According to Gothom Aryan, former election commissioner, this allows the reigning king, if he so chooses, to appoint his son or any of his daughters to the throne.[195]

Titles and styles

King Bhumibol Adulyadej's Thai full title is **"Phra Bat Somdet Phra Poramintharamaha Bhumibol Adulyadej Mahitalathibet Ramathibodi Chakkrinaruebodin Sayamminthrathirat Borommanatbophit"** (Thai: **พระบาทสมเด็จพระปรมินทรมหาภูมิพลอดุลยเดช มหิตลาธิเบศรรามาธิบดี จักรีนฤบดินทร สยามินทราธิราช บรมนาถบพิตร**; listen), which is referred to in the chief legal documents; and in general documents, the title is shorthened to *"Phra Bat Somdet Phra Poramintharamaha Bhumibol Adulyadej Sayamminthrathirat Borommanatbophit"* or just *"Phra Bat Somdet Phra Poramintharamaha Bhumibol Adulyadej."*

Monarchical styles of
King Bhumibol Adulyadej
Rama IX of Thailand

Reference style	His Royal Majesty
Spoken style	Your Royal Majesty
Alternative style	*Sir*

The literal translation of the title is as follows:[196]

- *Phra*—a third person pronoun referring to the person with much higher status than the speaker, meaning "excellent" in general. The word is from Sanskrit *vara* ("excellent").
- *Bat*—"foot," from Sanskrit *pāda.*
- *Somdet*—"lord," from Khmer "samdech" ("excellency").
- *Poraminthara*—"the great," from Sanskrit *parama* ("great") + *indra* ("leader")
- *Maha*—"great," from Sanskrit, "maha"
- *Bhumibol*—"Strength of the Land," from Sanskrit *bhumi* ("land") +*bala* ("strength")
- *Adulyadej*—"Incomparable power," from Sanskrit *atulya* ("incomparable") +*teja* ("power")
- *Mahitalathibet*—"Son of Mahidol"
- *Ramathibodi*—"Rama, the Avatar of God Vishnu to become the great ruler"; from Sanskrit *rama* + *adhi* ("great") + *patī* ("president")
- *Chakkrinaruebodin*—"Leader of the People who is from the House of Chakri", from Sanskrit *Cakrī* + *nari* ("men") + *patī* ("president")
- *Sayamminthrathirat*—"the Great King of Siam," from Sanskrit *Siam* (former name of Thailand) + *indra* + *ati* ("great") + *rāja* ("king)
- *Borommanatbophit*— "the Royalty who is the Great Shelter", from Sanskrit *parama* ("great") + *nādha* ("the one who others can depend on" or "Power/Right") + "pavitra" ("royalty")

139. ^ The original penalty was a maximum of 7 years imprisonment, but was toughened to a minimum of 3 years and a maximum of 15 years. This harsher sentence has been retained to the current day, see Colum Murphy (September 2006). "A Tug of War for Thailand's Soul". *Far Eastern Economic Review*. As stipulated under the Constitution, *lèse majesté* only applied to criticism of the King, Queen, Crown Prince, and Regent. Tanin, a former Supreme Court justice, reinterpreted this as a blanket ban against criticism of royal development projects, the royal institution, the Chakri Dynasty, or any Thai King. See David Streckfuss. "Kings in the Age of Nations: The Paradox of Lèse-Majesté as Political Crime in Thailand". *Comparative Studies in Society and History* **33** (3): 445–475. The reinterpretation has stood to the present day.

Chakri Dynasty

From Wikipedia, the free encyclopedia

The **Chakri Dynasty** (also known as the **House of Chakri**) (Thai: ราชวงศ์จักรี: Rajawongse Chakri) is the current ruling royal house of the Kingdom of Thailand, the Head of the house is the King of Thailand. The dynasty has ruled Thailand since the founding of the Ratthanakosin era and the city of Bangkok in 1782 following the end of King Taksin of Thonburi's reign, when the capital of Siam shifted to Bangkok. The Royal house was founded by King Buddha Yodfa Chulaloke an Ayutthayan military leader.

Prior to the founding of the dynasty, King Buddha Yodfa Chulaloke (Rama I), held the title of **Chao Pharaya Chakri** for over ten years. This title was held by the greatest warlords of Ayuthaya and was meant to reflect the prowess of the holder on the battlefield. In the founding of the dynasty King Rama I himself chose both name and emblem for the dynasty. The Chakri which provides both name and emblem to the house of Chakri, is composed of the discus (Chakra) and the trident (Trisula, sometimes shortened to "Tri" in Thai language), the celestial weapon of the God Narayana (an Avatar of Vishnu) of whom the Siamese king is seen as a personification. The coined name Chakri thus denotes the transcending force of divine strength and stability upon the physical realm. The current Head of the Dynasty is King Bhumibol Adulyadej since 1946, the Heir Apparent to the headship is Crown Prince Maha Vajiralongkorn. The House's dynastic seat is the Grand Palace in Bangkok.

Royal Family of Thailand

The present Royal Family of Thailand is descended from HRH Prince Mahidol Adulyadej of Songkla (1898–1929) and Srinagarindra (later Princess Mother) (1900–1995) forming the **House of Mahidol** (ราชสกุลมหิดล) (a cadet branch of the Dynasty). The Prince was a son of King Chulalongkorn the Great and his wife Queen Consort Savang Vadhana. The Prince was also the half-brother of both King Vajiravudh and King Prajadhipok. After the death of King Ananda Mahidol (Prince Mahidol's elder son), the present monarch, King Bhumibol Adulyadej (the Prince's younger son) ascended the throne in 1946. In 1949 the King married his first cousin once removed, Mom Rajawongse Sirikit Kitiyakara (a daughter of Mom Chao Nakkhatra Mangkala Kitiyakara, a grandson of King Chulalongkorn).

Members

This is a list of current members of the Royal Family:

- HM The King
- HM The Queen (his consort)

- Princess Ubolratana Rajakanya (the King's eldest daughter)
- TRH The Crown Prince Maha Vajiralongkorn and Princess Srirasmi (the King's eldest son and his consort)
  - HRH Princess Bajrakitiyabha (the Crown Prince's eldest daughter)
  - HRH Princess Siriwannawari Nariratana (the Crown Prince's younger daughter)
  - HRH Prince Dipangkorn Rasmijoti (the Crown Prince's youngest son)
- HRH Princess Maha Chakri Sirindhorn (the King's second eldest daughter)
- HRH Princess Chulabhorn Walailak (the King's youngest daughter)
  - HRH Princess Siribhachudhabhorn (Princess Chulabhorn's eldest daughter)
  - HRH Princess Adityadhornkitikhun (Princess Chulabhorn's younger daughter)

Other Members

- HRH Princess Soamsavali (the Crown Prince's former consort and mother of Princess Bajrakitiyabha)
- Khun Ploypailin Jensen (Princess Ubolratana's elder daughter)
- Khun Sirikitiya Jensen (Princess Ubolratana's younger daughter)
- Thanpuying Dhasanawalaya Sornsongkram (the King's niece, daughter of the late Princess Galyani Vadhana)

Recently deceased members

- HRH Princess Bejaratana Rajasuda, the King's cousin (the only daughter of King Vajiravudh) (2011)
- HRH Princess Galyani Vadhana, the Princess of Naradhiwas (the King's elder sister) (2008)
- Khun Bhumi Jensen (Princess Ubolratana's son) (2004)
- HRH Princess Srinagarindra, the Princess Mother (the King's mother, also mother of King Rama VIII) (1995)

List of Chakri Kings

King Buddha Yodfa Chulaloke, founder of the Chakri Dynasty.

Reign	Monarch	Reign Starts	Reign ends
First Reign	**Buddha Yodfa Chulalok the Great** (Rama I) พระบาทสมเด็จพระพุทธยอดฟ้าจุฬาโลกมหาราช	6 April 1782	7 September 1809
Second Reign	**Buddha Loetla Nabhalai** (Rama II) พระบาทสมเด็จพระพุทธเลิศหล้านภาลัย	7 September 1809	21 July 1824
Third Reign	**Jessadabodindra** (Rama III) พระบาทสมเด็จพระนั่งเกล้าเจ้าอยู่หัว	21 July 1824	2 April 1851
Fourth Reign	**Mongkut** (Rama IV) พระบาทสมเด็จพระจอมเกล้าเจ้าอยู่หัว	3 April 1851	1 October 1868

Fifth Reign	**Chulalongkorn the Great** (Rama V) **พระบาทสมเด็จพระจุลจอมเกล้าเจ้าอยู่หัว "พระปิยมหาราช"**	2 October 1868	23 October 1910
Sixth Reign	**Vajiravudh** (Rama VI) **พระบาทสมเด็จพระมงกุฎเกล้าเจ้าอยู่หัว**	23 October 1910	26 November 1925
Seventh Reign	**Prajadhipok** (Rama VII) **พระบาทสมเด็จพระปกเกล้าเจ้าอยู่หัว**	26 November 1925	2 March 1935
Eight Reign	**Ananda Mahidol** (Rama VIII) **พระบาทสมเด็จพระปรเมนทรมหาอานันทมหิดล พระอัฐมรามาธิบดินทร**	2 March 1935	9 June 1946
Ninth Reign	**Bhumibol Adulyadej the Great** (Rama IX) **พระบาทสมเด็จพระปรมินทรมหาภูมิพลอดุลยเดชมหาราช**	9 June 1946	*Present*

Vice-Kings

Main article: Front Palace

The **Vice-King of Siam** or the **Krom Phrarajawang Bavorn Sathan Mongkol** (**กรมพระราชวังบวรสถานมงคล**) was an office created during the Ayutthaya period. Until 1885 every Chakri king had a vice-king or (Maha Uparaja (**มหาอุปราช**), also often translated as *Second King*) who lived in the Front Palace (**วังหน้า**) (a palace complex to the north of the Grand Palace, now the site of the National Museum). Usually the younger brother of the monarch, the vice-king was designated heir to the throne, however only Prince Isarasundhorn was able to ascend the throne as King Buddha Loetla Nabhalai. The office was extremely prestigious and carried with it almost equal status to the king, this can be seen in Prince Chutamani (younger brother of King Mongkut), who was elevated to King Pinklao in 1851 (he carried with him the styles and titles of a King). The system was abolished by King Chulalongkorn when his vice-king and cousin Prince Bovorn Vichaicharn died. He then declared his oldest son the Crown Prince of Siam, but not vice-king.

List of Chakri Vice-Kings

Monarch	**Vice King**	**Reign Starts**	**Reign ends**
First Reign	Prince **Maha Sura Singhanat** **สมเด็จพระบวรราชเจ้ามหาสุรสิงหนาท**	1782	1802
First Reign	Prince **Isarasundhorn** (Rama II)	1806	1809
Second Reign	Prince **Maha Senanurak** **สมเด็จพระบวรราชเจ้ามหาเสนานุรักษ์**	1809	1817

Third Reign	Prince **Maha Sakdi Polsep** **สมเด็จพระบวรราชเจ้ามหาศักดิ์พลเสพ**	1824	1832
Fourth Reign	King **Pinklao** **พระบาทสมเด็จพระปิ่นเกล้าเจ้าอยู่หัว**	1851	1866
Fifth Reign	Prince **Bovorn Vichaichan** **กรมพระราชวังบวรวิไชยชาญ**	1868	1885

Deputy vice king

Krom Phrarajawang Boworn Sathan Phimuk (**กรมพระราชวังบวรสถานพิมุข**) or the **Rear Palace**, was another office inherited from the Kingdom of Ayutthaya. However since the founding of the dynasty there has only been one rear palace. Prince Anurak Devesh was the nephew of King Buddha Yodfa Chualoke (his mother Princess Thepsuthavadi was the king's elder sister) was appointed to the office in 1785.

Monarch	Deputy Vice King	Reign Starts	Reign ends
First Reign	Prince Anurak Devesh **สมเด็จเจ้าฟ้ากรมพระอนุรักษ์เทเวศร์ กรมพระราชวังบวรสถานพิมุข**	1785	1806

Crown Princes

Main article: Crown Prince of Thailand

The **Crown Prince of Thailand** or **Sayam Makutrajakuman** (**สยามมกุฎราชกุมาร**) is the designated and heir apparent to the throne and headship of the dynasty. The title was created in 1886 when King Chulalongkorn appointed his eldest son by Princess Consort Savang Vadhana, Prince Vajirunhis as Sayam Makutrajakuman. The title was copied directly from the Western tradition. Since then, there has only been three crown princes. The present crown prince is HRH Prince Maha Vajiralongkorn who was invested with the title in 1972. The succession is governed by the 1924 Palace Law of Succession passed by King Vajiravudh.

List of Crown Princes

Monarch	Crown Prince	Tenure Starts	Tenure ends
Fifth Reign	Crown Prince **Maha Vajirunhis** **สมเด็จพระบรมโอรสาธิราช เจ้าฟ้ามหาวชิรุณหิศ สยามมกุฎราชกุมาร**	1886	1895 (died before he could succeed)
Fifth Reign	Crown Prince **Maha Vajiravudh** (later King Rama VI) **สมเด็จพระบรมโอรสาธิราช เจ้าฟ้ามหาวชิราวุธ สยามมกุฎราชกุมาร (รัชกาลที่ 6)**	1895	1910

Ninth Reign	Crown Prince **Maha Vajiralongkorn สมเด็จพระบรมโอรสาธิราช เจ้าฟ้ามหาวชิราลงกรณ สยามมกุฎราชกุมาร**	1972	*Present*

Regents

The **Regent of Thailand** (ผู้สำเร็จราชการแทนพระองค์) as stated in the Constitution of Thailand is appointed either by the monarch himself or by the Privy Council of Thailand, the appointment must be countersigned by the President of the National Assembly of Thailand. The circumstances for appointment of a regent in the constitution is unclear it states that a regent can be appointed : *"Whenever the king is absent from the kingdom or unable to perform His functions for any reason whatsoever"* (Chapter 2, Section 18). So far a regent has only been appointed when the monarch has been in minority, when the monarch takes a foreign trip and when the monarch enters the Sangha as a monk. A regent can be both a commoner or a member of the royal family depending on the circumstances.

List of Regents

During the **Fifith Reign** (Chulalongkorn)

- Somdet Chao Phraya Si Suriyawongse (1868–1873): until King Chulalongkorn reached his majority (20 years old)
- Queen Regent Saovabha (1897): while King Chulalongkorn traveled to Europe in his First Grand Tour in 1897
- Crown Prince Maha Vajiravudh (1907): while King Chulalongkorn traveled to Europe in his Second Grand Tour in 1907

During the **Seventh Reign** (Prajadhipok)

- Prince Narisaranuwadtiwongse (1934–1935): When the king left Siam for medical treatment in Europe

During the **Eighth Reign** (Ananda Mahidol): While the king was a minor and in Switzerland, a Regency Council of three was established, it was composed of:

- Prince Oscar Anuvatana (1935)
- Prince Athitaya Dibhabha (1935–1944)
- Chao Phraya Yomarath (Pan Sukhum) (1935–1938)
  - General Chao Phraya Phit Yenthornyothin (Um Inthornyothin) (August 1935- 1942): appointed to replace Prince Oscar after his death, he himself later died in office (was then not replaced).
  - Dr. Pridi Banomyong (1941–1946): appointed to replace Chao Phraya Yomarath, after the resignation of Prince Athitaya became the sole regent, until the return of the king in 1946.

During the **Ninth Reign** (present):Before the King's coronation, a regency council composed entirely of the privy council was appointed as regent:

- Prince Rangsit Prayurasakdi, Prince of Chainat, President of the Council (1946)
  - Prince Dhanivat Bidyalabh Bridhyakon (1946)
  - Prince Alongkorn Adireksorn Udomsakdi (1946)
  - Phraya Manovaratsevi (Phlod na Songkhla) (1946)
  - Police General Adul Adulyadejchrat (1946)
- Prince Dhanivat Bidyalabh Bridhyakon (1946–1950): until King Bhumibol Adulyadej finished his studies

in Switzerland.
- Queen Regent Sirikit Kitiyakara (1956): while the king was a Buddhist monk.
- Princess Mother Srinagarindra (1960): while King Bhumibol Adulyadej and Queen Sirikit traveled on a world tour.

Tonga

From Wikipedia, the free encyclopedia

Tonga, officially the **Kingdom of Tonga** (Tongan: *Pule'anga Fakatu'i 'o Tonga*), is a sovereign state and an archipelago in the South Pacific Ocean, comprising 176 islands scattered over 700,000 square kilometres (270,000 sq mi) of ocean in the South Pacific. Fifty-two of the islands are inhabited.[4]

The Kingdom stretches over a distance of about 800 kilometres (500 mi) in a north-south line located at about a third of the distance from New Zealand to Hawaii.

Tonga also became known as the **Friendly Islands** because of the friendly reception accorded to Captain James Cook on his first visit there in 1773. He happened to arrive at the time of the *'inasi* festival, the yearly donation of the first fruits to the Tu'i Tonga, the islands' paramount chief, and received an invitation to the festivities. According to the writer William Mariner, in reality the chiefs had wanted to kill Cook during the gathering, but could not agree on a plan.[5]

Tonga is also the only island nation in the region to have avoided formal colonisation.[6] In 2010, Tonga took a decisive step towards becoming a fully functioning constitutional monarchy after legislative reforms paved the way for its first ever fully representative elections which resulted in the election of Noble Siale'ataongo Tu'ivakanō as its first democratically elected Prime Minister.

Etymology

In many Polynesian languages, Tongan included, the word *tonga* means

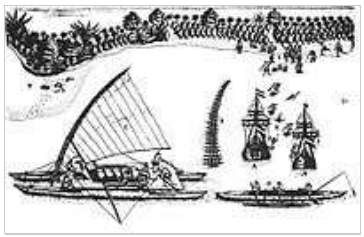
Kingdom of Tonga
Pule'anga Fakatu'i 'o Tonga

Flag

Coat of arms

Motto: *Ko e 'Otua mo Tonga ko hoku tofi'a*
God and Tonga are my Inheritance

Anthem: *Ko e fasi 'o e tu'i 'o e 'Otu Tonga*
The Song of the King of the Tongan Islands



Capital (and largest city)	Nuku'alofa 21°08′S 175°12′W
Official language(s)	English Tongan
Demonym	Tongan
Government	Unitary parliamentary constitutional monarchy
- King	'Aho'eitu 'Unuaki'otonga Tuku'aho
- Prime Minister	Siale'ataongo Tu'ivakanō
Independence	
- from British protection	June 4, 1970
Area	
- Total	748 km^2 (186th) 289 sq mi
- Water (%)	4.0
Population	
- 2011 census	103,036[1]

"south", as the archipelago is the southernmost group of islands of central Polynesia. The name is pronounced as ['toŋa].[7] The pronunciation /'tɒŋgə/, popular in American English,[*citation needed*] is incorrect. The name of *Tonga* is cognate to the Hawaiian region of *Kona*.

History

Main article: History of Tonga

An Austronesian-speaking group linked to the archaeological construct known as the Lapita cultural complex reached and colonised Tonga around 1500–1000 BCE.[8] Scholars continue to debate the exact dates of the initial settlement of Tonga. Not much is known about Tonga before European contact because of the lack of a writing system. However, oral history has survived and been recorded after the arrival of the Europeans. The Tongan people first encountered Europeans in 1616 when the Dutch vessel *Eendracht* made a short visit to the islands to trade.

Arrival of Abel Tasman in Tongatapu, 1643, drawing by Isaack Gilsemans

By the 12th century Tongans, and the Tongan paramount chief, the Tuʻi Tonga, had a reputation across the central Pacific – from Niue, Samoa, Rotuma, Wallis & Futuna, New Caledonia to Tikopia – leading some historians to speak of a 'Tongan Empire'. In the 15th century and again in the 17th, civil war erupted. Into this situation the first European explorers arrived, beginning in 1616 with the Dutch explorers Willem Schouten and Jacob Le Maire (who called on the northern island of Niuatoputapu), and in 1643 with Abel Tasman (who visited Tongatapu and Haʻapai). Later noteworthy European visitors included James Cook (British Navy) in 1773, 1774, and 1777, Alessandro Malaspina (Spanish Navy) in 1793, the first London missionaries in 1797, and the Wesleyan Methodist Rev. Walter Lawry in 1822.

1 Based on 2005 figures.

In 1845 the ambitious young warrior, strategist, and orator Tāufaʻāhau united Tonga into a kingdom. He held the chiefly title of Tuʻi Kanokupolu, but had been baptised with the name *Jiaoji* ("George") in 1831. In 1875, with the help of missionary Shirley Waldemar Baker, he declared Tonga a constitutional monarchy, formally adopted the western royal style, emancipated the "serfs", enshrined a code of law, land tenure, and freedom of the press, and limited the power of the chiefs.

Tonga became a British-protected state under a Treaty of Friendship on 18 May 1900, when European settlers and rival Tongan chiefs tried to oust the second king. Within the British Empire, which posted no higher permanent representative on Tonga than a British Consul (1901–1970), Tonga formed part of the British Western Pacific Territories (under a colonial High Commissioner, residing on Fiji) from 1901 until 1952. Although under the protection of Britain, Tonga remained the only Pacific nation never to have given up its monarchical government – as did Tahiti and Hawaiʻi. The Tongan monarchy follows an uninterrupted succession of hereditary rulers from one family. In 1918 the influenza epidemic that spread through the world caused the deaths of 1,800 people in Tonga, approximately 8% of the population.[9]

The Treaty of Friendship and Tonga's protectorate status ended in 1970 under arrangements established by Queen Salote Tupou III prior to her death in 1965. Tonga joined the Commonwealth of Nations in 1970 (atypically as an autochthonous monarchy, that is one with its own local monarch rather than that of the United Kingdom – compare Malaysia, Lesotho, and Swaziland), and became a member of the United Nations in September 1999. While exposed to colonial pressures, Tonga has never lost indigenous governance, a fact that makes Tonga unique in the Pacific and gives Tongans much pride, as well as confidence in their monarchical system. As part of cost cutting measures across the British Foreign Service, the British Government closed the British High Commission in Nukuʻalofa in March 2006, transferring representation of British interests in Tonga to the UK High Commissioner in Fiji. The last resident British High Commissioner was Paul Nessling.[10]

Geography

Main article: Geography of Tonga

Administratively Tonga sub-divides into five divisions: 'Eua, Ha'apai, Niuas, Tongatapu, and Vava'u.[11][12]

Nuku Island Vava'u

Climate

Tonga has a tropical climate with only two seasons, summer and winter. Most rain falls around February and April. The tropical cyclone season lasts from November to April.

Politics

Main article: Politics of Tonga

Tonga operates as a constitutional monarchy. Reverence for the monarch replaces that held in earlier centuries for the sacred paramount chief, the Tuʻi Tonga. Criticism of the monarch is held to be contrary to Tongan culture and etiquette. A direct descendant of the first monarch, King George Tupou VI, his family, some powerful nobles, and a growing non-royal elite caste live in much wealth, with the rest of the country living in relative poverty. The effects of this disparity are mitigated by three factors: education, medicine, and land tenure.

Tonga provides for its citizens:

- free and mandatory education for all
- secondary education with only nominal fees
- and foreign-funded scholarships for post-secondary education

Tāufaʻāhau, King of Tonga (1845–1893).

Tongans enjoy a relatively high level of education, with a 98.9% literacy rate,[14] and higher education up to and including medical and graduate degrees (pursued mostly overseas).

Tongans also have universal access to a national health care system. The Tongan constitution protects land ownership: land cannot be sold to foreigners (although it may be leased). While there is a land shortage on the urbanized main island of Tongatapu (where 70% of the population resides), there is farm land available in the outlying islands. The majority of the population engages in some form of subsistence production of food, with approximately half producing almost all of their basic food needs through farming, sea harvesting, and animal husbandry. Women and men have equal access to education and health care, and are fairly equal in employment, but women are discriminated against in land holding, electoral politics, and

government ministries. However, in Tongan tradition women enjoy a higher social status than men[*citation needed*], a cultural trait that is unique among the insular societies of the Pacific.

The pro-democracy movement in Tonga promotes reforms, including better representation in the Parliament for the majority commoners, and better accountability in matters of state. An overthrow of the monarchy itself is not part of the movement and the institution of monarchy continues to hold popular support, even while reforms are advocated. Until recently, the governance issue was generally ignored by the leaders of other countries, but major aid donors and neighbours New Zealand and Australia are now expressing concerns about some Tongan government actions.

Following the precedents of Queen Sālote and the counsel of numerous international advisors, the government of Tonga under King Tāufaʻāhau Tupou IV (reigned 1965–2006) monetized the economy, internationalized the medical and education system, and enabled access by commoners to increasing forms of material wealth (houses, cars, and other commodities), education, and overseas travel. The government has supported Olympic and other international sports competition.

The Tongan government supported the American "coalition of the willing" action in Iraq, and a small number of Tongan soldiers were deployed, as part of an American force, to Iraq in late 2004. However, the contingent of 40+ troops returned home on 17 December 2004.[15] In 2007, a second contingent was sent to Iraq while two more were sent during 2008 to be part of Tonga's continuous support for the coalition. This Tongan involvement was finally concluded at the end of 2008 with no loss of Tongan life reported.

In 2010, Tongan Brigadier General Tau'aika 'Uta'atu, Commander of the Tonga Defence Services, signed an agreement in London committing a minimum of 200 Tongan troops to cooperate with Britain's International Security Assistance Force (ISAF) in Afghanistan.[16]

Tonga has also contributed troops and police to the Bougainville conflict and the Australian led RAMSI force in the Solomon Islands.

The previous king, Tāufaʻāhau Tupou IV and his government made some problematic economic decisions and were accused of wasting millions of dollars in poor investments.[17] The problems have mostly been driven by attempts to increase national revenue through a variety of schemes, considering making Tonga a nuclear waste disposal site (an idea floated in the mid-90s by the current crown prince);[18] selling Tongan Protected Persons Passports (which eventually forced Tonga to naturalize the purchasers, sparking ethnicity-based concerns within Tonga);[19] registering foreign ships (which proved to be engaged in illegal activities, including shipments for al-Qaeda);[20] claiming geo-orbital satellite slots (the revenue from which seems to belong to the Princess Royal, not the state);[21] holding a long-term charter on an unusable Boeing 757 that was sidelined in Auckland Airport, leading to the collapse of Royal Tongan Airlines;[22] building an airport hotel and potential casino with an Interpol-accused criminal;[*citation needed*] and approving a factory for exporting cigarettes to China (against the advice of Tongan medical officials, and decades of health promotion messaging).[23]

The king proved vulnerable to speculators with big promises and lost several million (reportedly 26 million USD) to Jesse Bogdonoff, a financial adviser who called himself the king's Court Jester.[17] The police have imprisoned pro-democracy leaders, and the government repeatedly confiscated the newspaper *The Tongan Times* (which was printed in New Zealand and sold in Tonga) because the editor had been vocally critical of the king's mistakes.[24] Notably, the *Keleʻa*, produced specifically to critique the government and printed in Tonga by pro-democracy leader ʻAkilisi Pōhiva, was not banned during that time. Pōhiva, however, had been subjected to harassment in the form of frequent lawsuits.[25]

In mid-2003 the government passed a radical constitutional amendment to "Tonganize" the press, by licensing and limiting freedom of the press, so as to protect the image of the monarchy. The amendment was defended by the government and by royalists on the basis of traditional cultural values. Licensure criteria include 80% ownership by Tongans living in the country. As of February 2004, those papers denied licenses under the new act included the *Taimi ʻo Tonga* (*Tongan Times*), the *Keleʻa* and the *Matangi Tonga*, while those which were permitted licenses were uniformly church-based or pro-government.

The bill was opposed in the form of a several-thousand-strong protest march in the capital, a call by the Tuʻi Pelehake (a prince, nephew of the king and elected member of parliament) for Australia and other nations to pressure the Tongan government to democratize the electoral system, and a legal writ calling for a judicial investigation of the bill. The latter was supported by some 160 signatures, including seven of the nine elected "People's Representatives".

The former Crown Prince and current monarch, Tupoutoʻa, and Pilolevu, the Princess Royal, remained generally silent on the issue. In total, the changes threatened to destabilize the polity, fragment support for the status quo, and place further pressure on the monarchy.

The Royal palace of Tonga.

In 2005 the government spent several weeks negotiating with striking civil-service workers before reaching a settlement. The civil unrest that ensued was not limited to just Tonga; protests outside the king's New Zealand residence made headlines, too. A constitutional commission is currently (2005–06) studying proposals to update the constitution.[26]

Prime Minister Prince ʻAhoʻeitu ʻUnuakiʻotonga Tukuʻaho (Lavaka Ata ʻUlukālala) resigned suddenly on February 11, 2006, and also gave up his other cabinet portfolios. The elected Minister of Labour, Dr Feleti Sevele, replaced him in the interim.

On July 5, 2006 a driver in Menlo Park, California caused the deaths of Prince Tu'ipelehake ʻUluvalu, his wife, and their driver. Tu'ipelehake, 55, was the co-chairman of the constitutional reform commission, and a nephew of the King.

The Tongan public expected some changes when Siaosi Tupou V (later King George Tupou V) succeeded his father in September 2006. On November 16, 2006, rioting broke out in the capital city of Nuku'alofa when it seemed that the parliament would adjourn for the year without having made any advances in increasing democracy in government. Pro-democracy activists burned and looted shops, offices, and government buildings. As a result, more than 60% of the downtown area was destroyed, and as many as 6 people died.[27]

On July 29, 2008 the Palace announced that King George Tupou V would relinquish much of his power and would surrender his role in day-to-day governmental affairs to the Prime Minister. The royal chamberlain said that this was being done to prepare the monarchy for 2010, when most of the first parliament will be elected, and added: "The Sovereign of the only Polynesian kingdom... is voluntarily surrendering his powers to meet the democratic aspirations of many of his people." The previous week, the government said the king had completed the sale of his ownership of state assets which had contributed to much of the royal family's wealth.[28]

On March 15, 2012, King George Tupou V contracted pneumonia and was hospitalized at Queen Mary Hospital in Hong Kong. He was later diagnosed with leukemia. His health deteriorated significantly sortly thereafter, and he died at 3:15 p.m. on March 18, 2012. [29]

Economy

Main article: Economy of Tonga

Tonga's economy is characterized by a large non-monetary sector and a heavy dependence on remittances from the half of the country's population which lives abroad (chiefly in Australia, New Zealand, and the United States). The royal family and the nobles dominate and largely own the monetary sector of the economy - particularly the telecommunications and satellite services. Tonga was named the sixth most corrupt country in the world by Forbes magazine in 2008.[30]

A Tongan one cent (seniti taha) coin

Tonga was ranked the 165th safest investment destination in the world in the March 2011 Euromoney Country Risk rankings.[31]

The manufacturing sector consists of handicrafts and a few other very small scale industries, all of which contribute only about 3% of GDP. Commercial business activities also are inconspicuous and, to a large extent, are dominated by the same large trading companies found throughout the South Pacific. In September 1974, the country's first commercial trading bank, the Bank of Tonga, opened. There are no patent laws in Tonga.[32]

Rural Tongans rely on plantation and subsistence agriculture. Coconuts, vanilla beans, bananas, coffee beans and root crops

such as yams, taro and cassava, are the major cash crops. The processing of coconuts into copra and desiccated (dried) coconut was once the only significant industry but deteriorating prices on the world market has brought this once vibrant industry, as everywhere throughout the island nations of the south Pacific, to a complete standstill. In addition, the feudal land ownership system meant that farmers had no incentive to invest in planting long-term tree crops on land they did not own. Pigs and poultry are the major types of livestock. Horses are kept for draft purposes, primarily by farmers working their 'api 'uta (a plot of bushland). More cattle are being raised, and beef imports are declining. The export of squash to Japan once brought relief to a struggling economy but recently local farmers are increasingly wary of this market due to price fluctuations, not to mention the huge financial risks involved.[33]

Tonga's development plans emphasize a growing private sector, upgrading agricultural productivity, revitalizing the squash and vanilla bean industries, developing tourism, and improving the island's communications and transportation systems. Substantial progress has been made, but much work remains to be done. A small but growing construction sector is developing in response to the inflow of aid monies and remittances from Tongans abroad. In recognition of such a crucial contribution the present Tongan government has created a new department within the Prime Minister's Office with the sole purpose of catering for the needs of Tongans living abroad. Furthermore, in 2007 the Tongan Parliament amended citizenship laws to allow Tongans to hold dual citizenship.[34]

The tourist industry is relatively undeveloped; however, the government recognizes that tourism can play a major role in economic development, and efforts are being made to increase this source of revenue. Cruise ships often stop in Vavaʻu, a place that has a reputation for its whale watching, game fishing, surfing, beaches and is increasingly becoming a major player in the South Pacific tourism market.[35]

Tonga's postage stamps, which feature colorful and often unusual designs (including heart-shaped and banana-shaped stamps) are popular with philatelists around the world.[36]

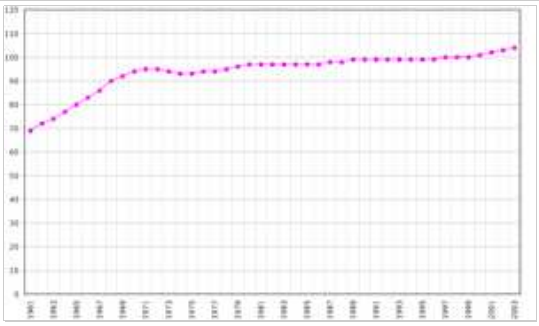
In 2005 the country became eligible to become a member of the World Trade Organization. After an initial voluntary delay, Tonga became a full member of the WTO on July 27, 2007.

The Tonga Chamber of Commerce and Industry (TCCI), incorporated in 1996, endeavours to represent the interests of its members, private sector businesses, and to promote economic growth in the Kingdom.

Energy

Tonga has begun implementing tailor-made policies to power its remote islands in a sustainable way – without turning to expensive grid-extensions. A number of islands within the Kingdom of Tonga lack a basic electricity supply. A supply entirely coming from imported diesel. Also, in 2009, 19% of Tonga's GDP and 25% of its imports consisted of diesel purchases.

In view of the decreasing reliability of fossil-fuel electricity generation, its increasing costs and negative environmental side-effects, renewable energy solutions have attracted the government’s attention. Together with IRENA, Tonga has charted out a renewable energy based strategy to power the main and outer islands alike. The strategy focuses on Solar Home Systems that turn individual households into small power plants. In addition, it calls for the involvement of local operators, finance institutions and technicians to provide sustainable business models as well as strategies to ensure the effective operation, management and maintenance once the systems are installed.[37]



With the assistance of IRENA, Tonga has developed the 2010–2020 Tonga Energy Road Map (TERM), which aims for a 50% reduction of diesel importation. This will be accomplished through a range of appropriate renewable technologies, including wind and solar, as well as innovative efficiencies.[38]

Demographics

Main article: Demographics of Tonga

Over 70% of the 101,991 inhabitants of the Kingdom of Tonga live on its main island, Tongatapu. Although an increasing number of Tongans have moved into the only urban and commercial centre, Nukuʻalofa, where European and indigenous cultural and living patterns have blended, village life and kinship ties remain influential throughout the country. Despite emigration, the Tonga grew in population from about 32,000 in the 1930s to more than 90,000 by 1976.[39]

According to the government portal, Tongans, Polynesian by ethnicity with a very small mixture of Melanesian, represent more than 98% of the inhabitants. 1.5% are mixed Tongans and the rest are European (the majority are British), mixed European, and other Pacific Islanders. According to a New Zealand paper in 2001 there were approximately 3,000 or 4,000 Chinese in Tonga, thus comprising 3 or 4% of the total Tongan population.[40] In 2006, Nukuʻalofa riots mainly targeted Chinese-owned businesses, leading to the emigration of several hundred Chinese.[41] so that only about 300 remain.

Demographics of Tonga, data of FAO, year 2005; number of inhabitants in thousands

Primary education between ages 6 and 14 is compulsory and free in state schools. Mission schools provide about 8% of the primary and 90% of the secondary level of education. State schools make up for the rest. Higher education includes teacher training, nursing and medical training, a small private university, a woman's business college, and a number of private agricultural schools. Most higher education is pursued overseas.

The Tongan language is the official language of the islands, along with English. Tongan, a Polynesian language is closely related to Wallisian (Uvean), Niuean, Hawaiian, and Samoan.

Ninety percent of the nation's population are considered overweight, with more than 60% of those obese.[42] 70% of Tongan women aged 15–85 are obese. Tonga and nearby Nauru have the world's highest overweight and obese populations.[43]

Religion

Everyday life is heavily influenced by Polynesian traditions and especially by the Christian faith; for example, all commerce and entertainment activities cease from midnight Saturday until midnight Sunday, and the constitution declares the Sabbath to be sacred, forever. As of 2006 somewhat more than a third of Tongans adhered to the Methodist tradition[44] [see figures below] with Catholics and Mormon populations equalling another third of the adherents. A minority of worshippers are part of the Free Church of Tonga. The official figures from the latest government census of 2006 (http://www.spc.int/prism/Country/TO/stats/Census06/social/religion.htm) show that about 98% of the population are affiliated with a Christian church or sect with the four major church affiliations in the kingdom as follows:

The Free Wesleyan Church

- Free Wesleyans/Methodists (38,052 or 37%)
- LDS Church (Mormons) (17,109 or 17%)
- Roman Catholics (15,992 or 16%)
- Free Church of Tonga (11,599 or 11%)

Culture and diaspora

Main article: Culture of Tonga

Humans have lived in Tonga for perhaps 3,000 years, since settlement in late Lapita times. Before the arrival of European explorers in the late 17th and early 18th centuries, the Tongans had frequent contacts with their nearest oceanic neighbours, Fiji and Niue. In the 19th century, with the arrival of Western traders and missionaries, Tongan culture changed especially in religion so that today almost 98% of residents are Christian. The people discarded some old beliefs and habits, and adopted others.

Kava culture

Contemporary Tongans often have strong ties to overseas lands. Many Tongans have emigrated to Australia, New Zealand, or the United States to seek employment and a higher standard of living. U.S. cities with significant Tongan American populations include Seattle, Washington; Portland, Oregon; Anchorage, Alaska; Inland Empire, California; San Mateo, California; East

The start of a Tongan tau'olunga dance

Palo Alto, California; San Bruno, California; Oakland, California; San Jose, California; Inglewood, California; Los Angeles, California; Salt Lake City, Utah; Kona, Hawaii; Lahaina, Hawaii; Reno, Nevada, St. Petersburg, Florida; and Euless, Texas (in the Dallas/Fort Worth metroplex). Large Tongan communities also live in Tutuila (American Samoa), in Auckland (New Zealand) and in Melbourne and Sydney (Australia). It is estimated that as many as 100,000 Tongans live overseas. In New Zealand alone there are approximately 50,000 Tongan people.[45] The Tongan diaspora retains close ties to relatives at home, and a significant portion of Tonga's income derives from remittances to family members (often aged) who prefer to remain in Tonga.

Sport

See also: Sport in Tonga

Rugby union is the national sport in Tonga,[*citation needed*] and the national team ('Ikale Tahi, or Sea Eagles) has performed quite well on the international stage. Tonga has competed in five Rugby World Cups since 1987. The 2007 Rugby World Cup was its most successful to date, with Tonga winning both of its first two matches, against the USA, 25–15, and Samoa, 19–15; and came very close to upsetting the eventual winners of the 2007 tournament, the South African Springboks, losing 30–25 in the end. A loss to England, 36–20 in their last pool game ended their hopes of making the knockout stages, but they were by no means disgraced. In fact, by picking up third place in their pool games behind South Africa and England, Tonga earned automatic qualification for the 2011 Rugby World Cup in New Zealand. At this competition, they beat the 5th ranked national team and eventual losing finalists,[46] France, 19-14.[47]

Tonga's best result prior to 2007 came in 1995, when they beat Ivory Coast 29–11, and 1999 when they beat Italy 28–25 (although with only 14 men they lost heavily to England, 10–101). Tonga perform the Ikale Tahi (war dance) before their matches. Tonga used to compete in the Pacific Tri-Nations against Samoa and Fiji, now replaced by the IRB Pacific 6 Nations involving Japan, the second string All Blacks (Junior All Blacks) and Wallabies (Australia A) although from 2008 the Junior All Blacks would be replaced by the Maori All Blacks. At club level, there are the Datec Cup Provincial Championship and the Pacific Rugby Cup. Rugby union is governed by the Tonga Rugby Football Union, which is also a member of the Pacific Islands Rugby Alliance. Tonga contributes to the Pacific Islanders rugby union team. Jonah Lomu, Viliami (William) 'Ofahengaue and George Smith, Wycliff Palu, Doug Howlett, Tatafu Polota-Nau are all of Tongan descent. Rugby is popular in the nation's schools and students from schools such as Tonga College, Tupou College are regularly offered scholarships from New Zealand, Australia and Japan.

Rugby league has also gained some success in Tonga. In the 2008 Rugby League World Cup Tonga recorded wins against Ireland and Scotland. In addition to the success of the national team, many players of Tongan descent make it big in the Australian National Rugby League competition. These include Willie Mason, Manu Vatuvei, Brent Kite, Willie Tonga, Anthony Tupou, Antonio Kaufusi, Israel Folau, Taniela Tuiaki, Michael Jennings, Tony Williams, Feleti Mateo, Fetuli Talanoa, to name but a few. Subsequently, some Tongan Rugby League players have established successful careers in the British Super League.[48]

Tongan Boxer Paea Wolfgram won the silver medal in the Super Heavyweight division (>91 kg) at the 1996 Atlanta Summer Olympics. Thus far, he remains the only athlete to have won an Olympic medal from the island nations of the South Pacific outside Australia and New Zealand.[*citation needed*]

Tongan women have a reputation as skilful jugglers.[49]

History of Tonga

From Wikipedia, the free encyclopedia

Seafarers associated with the Lapita diaspora first settled the islands making up the Kingdom of Tonga about 1500 BC.[1] The area served (along with Fiji and Samoa) as a gateway into the rest of the Pacific region known as Polynesia.[2] Ancient Tongan mythologies recorded by early European explorers report the islands of 'Ata and Tongatapu as the first islands being hauled to the surface from the deep ocean by Maui. [3] .[4]

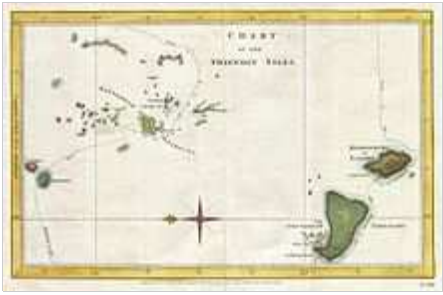
Pre-contact

The dates of the initial settlement of Tonga are still subject to debate, nonetheless one of the oldest occupied sites is found in the village of Pea on Tongatapu. Based on radiocarbon dating of a shell found at the site dates the occupation at 3180 ± 100 BP (Before Present).[5] Some of the oldest sites pertaining to the first occupants of the Tongan Islands are found on Tongatapu which is also where the first Lapita ceramics were found by WC McKern in 1921.[6] Nonetheless, reaching the Tongan islands (without Western navigational tools and techniques) was a remarkable feat accomplished by the Lapita peoples. Not much is known about Tonga before European contact because of the lack of a writing system during prehistoric times other than the oral history told to the early European explorers. The first time the Tongan people encountered Europeans was in 1616 when the Dutch vessel Eendracht made a short visit to the islands to trade.

Early culture

Main article: Early history of Tonga

Centuries before Westerners arrived, Tongans created large monumental stoneworks, most notably, the Haʻamonga ʻa Maui and the Langi (terraced tombs). The Haʻamonga is 5 meters high and made of three coral-lime stones that weigh more than 40 tons each. The Langi are low, very flat, two or three tier pyramids that mark the graves of former kings.



Tongan Maritime empire

Main article: Tu'i Tonga Empire

By the 12th century, Tongans, and the Tongan kings, the Tu'i Tonga, were known across the Pacific, from Niuē, Samoa to Tikopia they ruled these nations for over 400 years, sparking some historians to refer to a "Tongan Empire," although it was more so a network of interacting navigators, chiefs, and adventurers. It is unclear whether chiefs of the other islands actually came to Tonga regularly to acknowledge their sovereign. Distinctive pottery and Tapa cloth designs also show that the Tongans have travelled from the far reaches of Micronesia, all the way to Fiji and even Hawaii.[*citation needed*]

European arrival and Christianisation

In the 15th century and again in the 17th, civil war erupted. It was in this context that the first Europeans arrived, beginning with Dutch explorers Willem Schouten and Jacob Le Maire. Between April 21 to 23 1616 they moored at the Northern Tongan islands "Cocos Island" (Tafahi) and "Traitors Island" (Niuatoputapu), respectively. The kings of both of these islands boarded the ships and Le Maire drew up a list of Niuatoputapu words, a language now extinct. On 24 April 1616 they tried to moor at the "Island of Good Hope" (Niuafo'ou), but a less welcoming reception there made them decide to sail on.

Cook's map of 1777

On 21 January 1643, the Dutch explorer Abel Tasman was the first European to visit the main island (Tongatapu) and Haʻapai after rounding Australia and New Zealand. The most significant impact had the visits of Captain Cook visits in 1773, 1774, and 1777, followed by the first London missionaries in 1797, and the Wesleyan Methodist Walter Lawry in 1822. Around that time most Tongans converted en masse to the Wesleyan (Methodist) or Catholic faiths. Later other denominations followed like Pentecostals, Mormons, Seventh-day Adventists and most recently the Bahá'í faith.

Tāufaʻāhau Tupou I

Unification

In 1799 the 14th q Tuʻi Kanokupolu, Tukuʻaho was murdered, which sent Tonga into a civil war for fifty years. Finally the islands were united into a Polynesian kingdom in 1845 by the ambitious young warrior, strategist, and orator Tāufaʻāhau. He held the chiefly title of Tu'i Kanokupolu, but was baptised with the name King George Tupou I. In 1875, with the help of missionary Shirley Baker, he declared Tonga a constitutional monarchy, at which time he emancipated the 'serfs', enshrined a code of law, land tenure, and freedom of the press, and limited the power of the chiefs. Tonga became a British protected state under a Treaty of Friendship on 18 May 1900, when European settlers and rival Tongan chiefs tried to oust the second king. The Treaty of Friendship and protected state status ended in 1970 under arrangements established prior to her death by the third monarch, Queen Sālote. Tonga joined the Commonwealth of Nations in 1970, and the United Nations in 1999. While exposed to colonial forces, Tonga has never lost indigenous governance, a fact that makes Tonga unique in the Pacific and gives Tongans much pride, as well as confidence in the monarchical system. The British High Commission in Tonga closed in March 2006.

Tonga's current king, George Tupou V, traces his line directly back through five generations of monarchs. The king, born in 1948, continued to have ultimate control of the government until July 2008. At that point, concerns over financial irregularities and calls for democracy led to his relinquishing most of his day-to-day powers over

the government.[7]

List of monarchs of Tonga

From Wikipedia, the free encyclopedia

This is a **list of monarchs of Tonga** since 1875, after the constitutional role of the monarch was put forth. Tonga is the only kingdom in Oceania that is not a Commonwealth realm. The first monarch was George Tupou I.

In July 2008, three days before his coronation, King George Tupou V announced that he would relinquish most of his power and be guided by his Prime Minister's recommendations on most matters.[1]

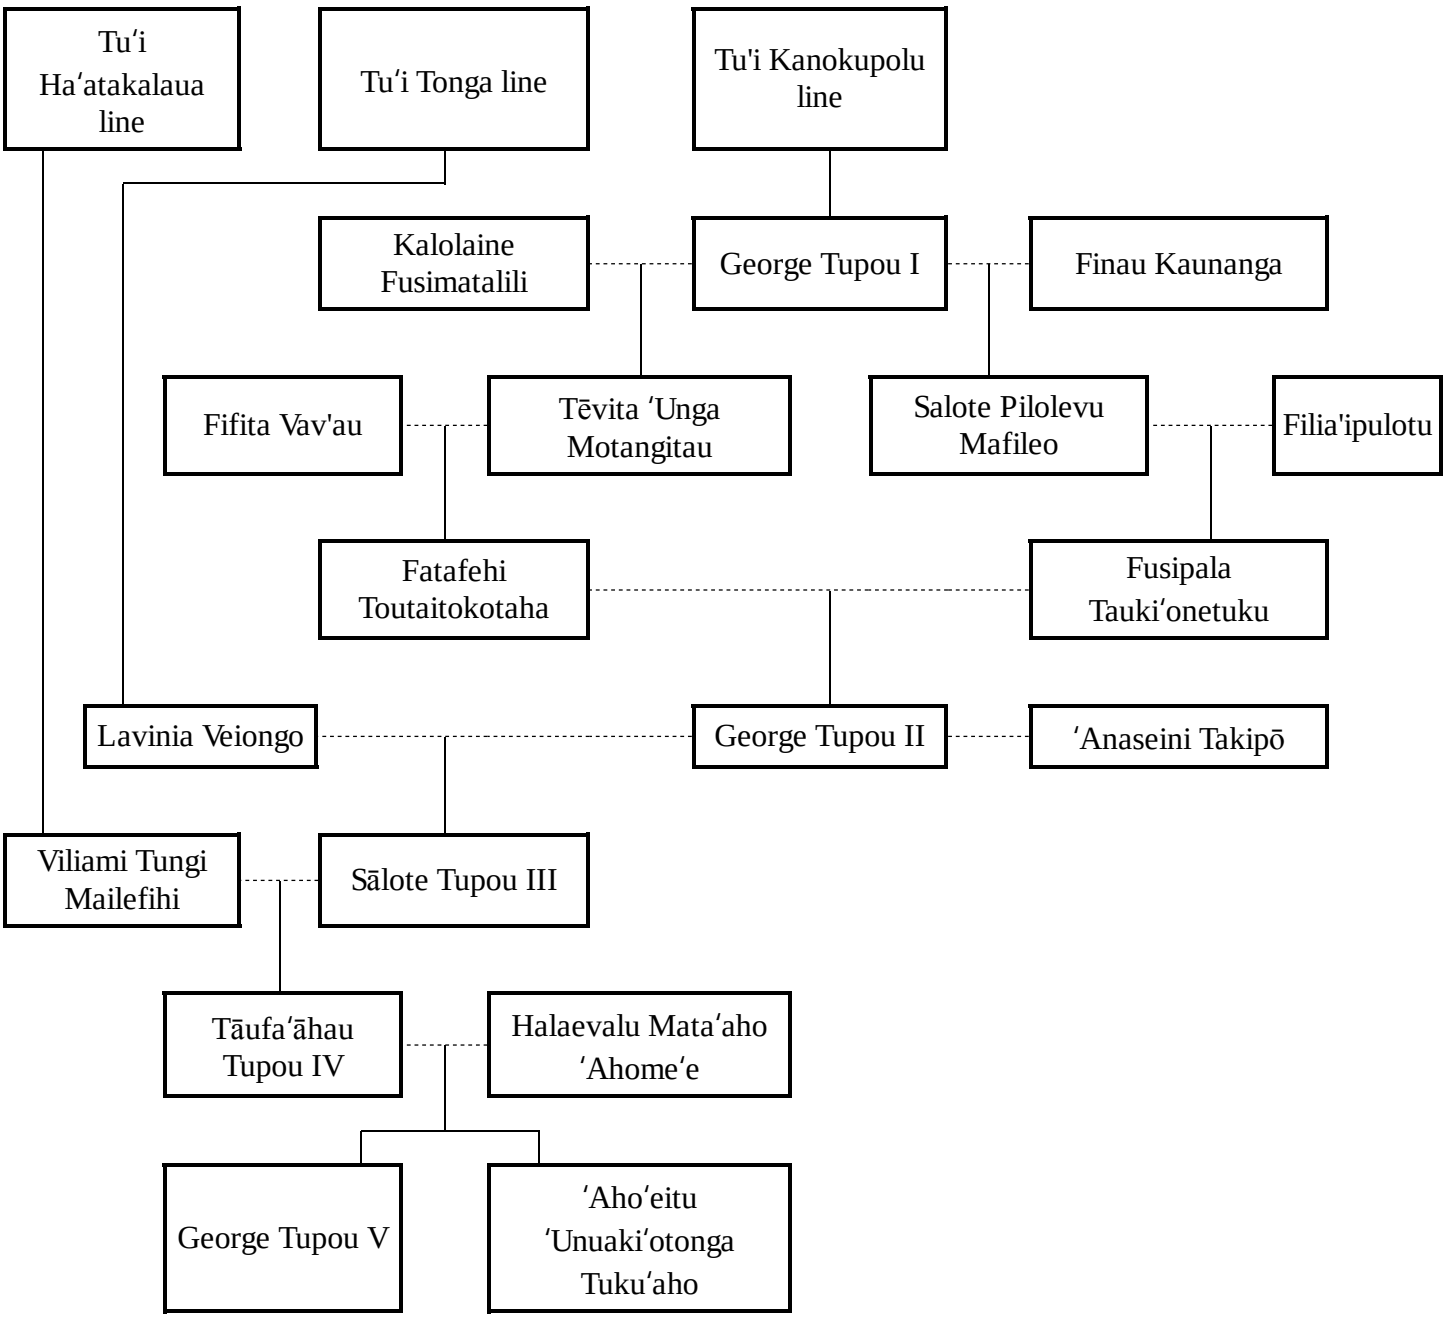
Lists of earlier monarchs of Tonga

- Tuʻi Tonga, rulers of Tonga from c.950 to c.1470.
- Tuʻi Haʻatakalaua, rulers of Tonga from c.1470 to c.1600.
- Tuʻi Kanokupolu, rulers of Tonga from c.1600 to the present day. George Tupou I, the first king of Tonga, was the 19th Tu'i Kanokupolu.

List of monarchs of Tonga (1875–present)

The following monarchs have reigned since the constitutional role of the Tongan monarchy was set forth in 1875 (see Line of succession to the Tongan Throne):

Name	Portrait	Birth	Reign	Death	Events[2]
George Tupou I 1875–1893		1797	17 years, 2 months, 14 days	18 February 1893 (aged 95–96)	Foundation of the Kingdom of Tonga as a constitutional monarchy.



George Tupou II 1893–1918		18 June 1874	25 years, 1 month, 18 days	5 April 1918 (aged 43)	Tonga becomes a British protectorate under the 1900 Treaty of Friendship
Sālote Tupou III 1918–1965		13 March 1900	47 years, 8 months, 11 days	16 December 1965 (aged 65)	Women's suffrage
Tāufaʻāhau Tupou IV 1965–2006		4 July 1918	40 years, 8 months, 23 days	10 September 2006 (aged 88)	Tonga regains full sovereignty and joins the Commonwealth of Nations; foundation of the pro-democracy movement; joins the United Nations; 2005 mass march for democracy; Feleti Sevele becomes the first commoner Prime Minister
George Tupou V 2006–2012		4 May 1948	5 years, 6 months, 7 days	18 March 2012 (aged 63)	2006 Nuku'alofa riots; political reforms lead to the 2010 general election
Tupou VI 2012–Present		12 July 1959

ʻAhoʻeitu ʻUnuakiʻotonga Tukuʻaho

From Wikipedia, the free encyclopedia

ʻAhoʻeitu ʻUnuakiʻotonga Tukuʻaho Tupou VI (born 12 July 1959) is the King of Tonga. He is the younger brother and successor of the late King George Tupou V. He was officially confirmed by his brother on 27 September 2006 as the heir presumptive to the Tongan throne, as his brother (a bachelor) had no legitimate children.[1] He also served as Tonga's High Commissioner to Australia, and resided in Canberra[2][3] until the death of King George Tupou V on 18 March 2012, when ʻAhoʻeitu ʻUnuakiʻotonga Tukuʻaho became King of Tonga, with the regnal name Tupou VI.[4]

Life

He was born the third son and youngest child of King Tāufaʻāhau Tupou IV. He started his career in the military, joining the naval arm of the Tonga Defence Services in 1982 and becoming a Lieutenant-Commander in 1987. From 1990 to 1995 he commanded the Pacific-class patrol boat VOEA *Pangai* and his time in charge included peacekeeping operations in Bougainville.

In 1998 he ended his military career to become part of the government, first as the defence minister and the foreign minister at the same time, from October 1998 until August 2004. He took over these posts from his elder brother Siaosi Tupou V, at that time still the crown prince and as such known as Tupoutoʻa (see below). Soon he was appointed as Prime Minister on 3 January 2000, a function he kept until his sudden resignation on 11 February 2006, for which the reason has never become clear, but was most likely due to the unrest in the country since mid-2005, a series of pro-democracy protests calling for a lesser role for the royal family in government. His appointed successor, Feleti Sevele, was

ʻAhoʻeitu ʻUnuakiʻotonga Tukuʻaho Tupou VI

Heir apparent	Siaosi Manumataongo
Prime Ministers	***See list***

Prime Minister of Tonga

Reign	3 January 2000 – 11 February 2006
Predecessor	Baron Vaea
Successor	Feleti Sevele
Monarch	***See list***
Spouse	Nanasipauʻu Tukuʻaho
Issue	ʻAngelika Lātūfuipeka Halaʻevalu Mataʻaho Napuaʻokalani Tukuʻaho Siaosi Manumataongo Viliami ʻUnuaki-ʻo-Tonga Mumui Lalaka-Mo-e-ʻEiki Tukuʻaho
House	House of Tupou
Father	Tāufaʻāhau Tupou IV
Mother	Halaevalu Mataʻaho ʻAhomeʻe

Born	12 July 1959

Tonga's first prime minister who was not a hereditary estate holder or a member of the aristocracy (made of 33 noble titles). In 2008 ʻAhoʻeitu was appointed Tonga's first High Commissioner to Australia, a post he held until his succession to the Tongan throne in 2012.[5]

ʻAhoʻeitu is married to a daughter of the high chief Vaea, Nanasipauʻu and the couple has 3 children:

- ʻAngelika Lātūfuipeka Halaʻevalu Mataʻaho Napuaʻokalani Tukuʻaho
- Siaosi Manumataongo ʻAlaivahamamaʻo ʻAhoʻeitu Konstantin Tukuʻaho
- Viliami ʻUnuaki-ʻo-Tonga Mumui Lalaka-Mo-e-ʻEiki Tukuʻaho

In January 2012, Prince Siaosi, known as Prince ʻUlukalala, announced his engagement to the Sinaitakala Fakafanua.[6]

Ancestry

Name and titles

It is customary in Tongan culture that princes get a traditional chiefly title, by which they then are commonly known (and no longer by their baptised name). As such for many years, until his confirmation as heir presumptive, ʻAhoʻeitu was known by either one or all three of the titles which were bestowed on him over the time: **Lavaka** from Pea, **Ata** from Kolovai and ʻAtatā, and **ʻUlukālala** from Vavaʻu. These titles may be used in any order, (the one belonging to the area from which the speaker is coming usually first). Nevertheless the sequences **Lavaka Ata ʻUlukālala** and **ʻUlukālala Lavaka Ata** were most common.

Tupoutoʻa-Lavaka (centre) uncombed, unshaven and in mourning dress for his recently deceased father, king Tāufaʻāhau Tupou IV, flanked by his two sons, the new chiefs ʻUlukālala (left) and Ata (right)

Since his confirmation as heir presumptive, he got the traditional title of Tupoutoʻa, reserved for crown princes, which his older brother (the second) had to give up because he married a commoner, while two of his previous titles went to his sons. As such he is currently known as **Tupoutoʻa Lavaka**. His oldest son, Siaosi, is to be addressed by the prestigious title of **ʻUlukālala**, while his second son, Viliami, was bestowed with **Ata**.

Samoa

From Wikipedia, the free encyclopedia

Samoa (/səˈmoʊ.ə/; Samoan: *Sāmoa*, IPA: [ˌsaːˈmoa]), officially the **Independent State of Samoa** (Samoan: *Malo Sa'oloto Tuto'atasi o Sāmoa*), formerly known as **Western Samoa**, is a country encompassing the western part of the Samoan Islands in the South Pacific Ocean. It became independent from New Zealand in 1962. The two main islands of Samoa are Upolu and one of the biggest islands in Polynesia, Savai'i. The capital city, Apia, and Faleolo International Airport are situated on the island of Upolu.

Samoa was admitted to the United Nations on 15 December 1976.[6] The entire island group, inclusive of American Samoa, was called *Navigators Islands* by European explorers before the 20th century because of the Samoans' seafaring skills.[7]

History

Main article: History of Samoa

The oldest date so far from pre-historic remains in Samoa has been calculated by New Zealand scientists to a likely true age of circa 3,000 years ago from a Lapita site at Mulifanua

Independent State of Samoa ***Malo Sa'oloto Tuto'atasi o Sāmoa***	
 Flag	 Coat of arms
Motto: *Fa'avae i le Atua Sāmoa* (English: Samoa is founded on God)

Demonym	Samoan
Government	Unitary Parliamentary republic
- O le Ao o le Malo (Head of State)	Tufuga Efi
- Prime Minister	Tuilaepa Aiono Sailele Malielegaoi

during the 1970s.[8]

The origins of the Samoans is closely linked to modern research about Polynesia in various scientific disciplines such as genetics, linguistics and anthropology. Scientific research is ongoing although a number of different theories exist; including one proposing that the Samoans originated from Austronesian predecessors during the terminal eastward Lapita expansion period from Southeast Asia and Melanesia between 2,500 and 1,500 BCE.[9] The Samoan origins are currently being reassessed due to new scientific evidence and carbon dating findings from 2003 and onwards.

Intimate sociocultural and genetic ties were maintained between the eastern Lapita colonies and the archaeological record supports oral tradition and native genealogies that indicate inter-island voyaging and intermarriage between prehistoric Samoans, Fijians, and Tongans.

Contact with Europeans began in the early 18th century. Jacob Roggeveen (1659–1729), a Dutchman, was the first known European to sight the Samoan islands in 1722. This visit was followed by a French explorer by the name of Louis-Antoine de Bougainville (1729–1811), the man who named them the *Navigator Islands* in 1768. Contact was limited before the 1830s which is when English missionaries and traders began arriving.

Mission work in Samoa had begun in late 1830 by John Williams, of the London Missionary Society arriving in Sapapali'i from The Cook Islands and Tahiti.[10] By that time, the Samoans had gained a reputation of being savage and warlike, as violent altercations had occurred between natives and French, British, German and American forces, who, by the late nineteenth century, valued Samoa as a refueling station for coal-fired shipping and whaling. According to Barbara A. West, "The Samoans were also known to engage in “headhunting,” a ritual of war in which a warrior took the head of his slain opponent to give to his leader, thus proving his bravery."[11]

1 Since 31 December 2011.[4]

2 Since 7 September 2009.[5]

Studio photo depicting preparation of the Samoa 'ava ceremony c. 1911.

The Germans in particular began to show great commercial interest in the Samoan Islands, especially on the island of 'Upolu where German firms monopolized copra and cocoa bean processing; the United States laid its own claim and formed alliances with local native chieftains, most conspicuously on the islands of Tutuila and Manu'a (which were later formally annexed to the USA as American Samoa).

Britain also sent troops to protect British business enterprise, harbour rights, and consulate office. There followed an eight-year civil war, where each of the three powers supplied arms, training, and in some cases, combat troops to the warring Samoan parties. The

Samoan crisis came to a critical juncture in March 1889 when all three colonial contenders sent warships into Apia harbour, and a larger-scale war seemed imminent, until a massive storm on the 15th March 1889 damaged or destroyed the warships, ending the military conflict.[12]

Interior of Samoan house, Apia, Urville 1842.

The Second Samoan Civil War was a conflict that reached a head in 1898 when Germany, the United Kingdom, and the United States were locked in dispute over who should have control over the Samoa Islands. The Siege of Apia occurred during the Second Samoan Civil War in March 1899 at Apia. Samoan forces loyal to Prince Tanu were besieged by a larger force of Samoan rebels loyal to Mata'afa Iosefo. Supporting Prince Tanu were landing parties from four British and American warships. Over the course of several days of fighting, the Samoan rebels were defeated.[13] American and British warships shelled Apia on March 15, 1899; including the USS *Philadelphia*. Germany, the United Kingdom and the United States quickly resolved to end the hostilities; with the partitioning of the island chain at the Tripartite Convention of 1899.[14]

Wilhelm Solf, German governor of Samoa 1900-1910

20th century

The Tripartite Convention of 1899 partitioned the Samoan Islands into two parts:[14] the eastern island group became a territory of the United States (the Tutuila Islands in 1900 and officially Manu'a in 1904) and is today known as American Samoa; the western islands, by far the greater landmass, became known as German Samoa after Britain vacated all claims to Samoa and accepted termination of German rights in Tonga and certain areas in the Solomon Islands and West Africa.[15]

Mata'afa Iosefo (1832-1912) paramount chief & rival for the kingship of Samoa

By 1912 the German administration had apparently achieved its long-term objective of understanding the traditional forces in Samoa politics while maintaining a semblance of local participation in government. There was no more *Tupu* (King), nor even *alii sili* (similar to a governor), but the two *Fautua* (Advisors) were appointed. *Tumua* and *Pule* (traditional governments of Upolu and Savaii) were for a time silent; all decisions on matters affecting lands and titles were under the control of the Governor. To complete the process, the *Fa'alupega* for all Samoa was revised. In a culture based on oratory, the *Fa'alupega* is a formal greeting which acknowledges those being greeted and their status. The *Fa'alupega*, which had been nationally accepted from at least the late 19th century (and probably for much longer than that), was as follows:

"*Tulouna a Tumua ma Pule,*
Tulouna a Itu'au ma Alataua,
Tulouna a Aiga-i-le-Tai,
Ma le Va'a-o-Fonoti,
Tulouna a Tama ma a latou aiga
Po'o aiga ma a latou tama".

This firstly recognized the authority and identity of principal districts of Samoa through their spokesmen – Tumua ma Pule, Itu'au ma Alataua, Aiga-i-le-Tai, and the Va'a-o-Fonoti – and the highest titles which were bestowed by these groups. It concludes with the recognition of the great maximal descent groups of Samoa and their "sons" who had been chosen to hold the highest titles.

The new *Fa'alupega* of German Samoa, which in its first line recognises the Kaiser (*Kaisa*), apparently required Malietoa Tanunafili and Tupua Tamasese to be sworn on oath to become advisors to the governing council:

"*Tulouna a lana Maiesitete le Kaisa o le tupu mamalu o lo tatou malo kasialika aoao.*
Tulouna a lana afioga le kovana kasialika o le sui o le kaisa I Samoa nei.
Susu mai Malietoa, Afio mai Tupua
Ua fa'amanatuiana ai aiga e lua I o oulua tofiga Kasialika o le Fautua.
Tulouna a le vasega a Faipule Kasialika o e lagolago malosi I le Malo.
Afifio mai le nofo a vasega o tofiga Kasialika o e usu fita I le tautua I le malo".

The first German Governor, Wilhelm Solf, later went on to become Secretary for the Colonies of Imperial Germany. New Zealand troops landed on 'Upolu unopposed on 29 August 1914 and seized control from the German authorities, following a request by Britain for New Zealand to perform their "great and urgent imperial service."[16]

Exiled orator Lauaki Namulauulu Mamoe

From the end of World War I until 1962, New Zealand controlled Samoa as a Class C Mandate under trusteeship through the League of Nations.[17] There followed a series of New Zealand administrators who were responsible for two major incidents. In the first incident, approximately one fifth of the Samoan population died in the influenza epidemic of 1918-1919.[18] In 1919 The Royal Commission of Inquiry into the Epidemic concluded that there had been no epidemic of pneumonic influenza in Western Samoa before the arrival of the 'SS Talune' from Auckland on the 7 November 1918. The NZ administration allowed the ship to berth in breach of quarantine; within seven days of this ship's arrival influenza became epidemic in Upolu and then spread rapidly throughout the rest of the territory.[19]

The second major incident arose out of an initially peaceful protest by the Mau (which literally translates as "strongly held opinion"), a non-violent popular movement which had its beginnings in the early 1900s on Savai'i, led by Lauaki Namulauulu Mamoe, an orator chief deposed by Solf. In 1909, Lauaki was exiled to Saipan and died en route back to Samoa in 1915.

People in attendance at Tupua Tamesese's funeral.

By 1918, Samoa had population of some 38,000 Samoans and 1,500 Europeans.[20] By the late 1920s the resistance movement against colonial rule had gathered widespread support during the mistreatment of the Samoan people by the New Zealand administration. One of the Mau leaders was Olaf Frederick Nelson, a half Samoan and half Swedish merchant.[21] Nelson was eventually exiled during the late 1920s and early 1930s, but he continued to assist the organization financially and politically. In accordance with the Mau's non-violent philosophy, the newly elected leader, High Chief Tupua Tamasese Lealofi, led his fellow uniformed Mau in a peaceful demonstration in downtown Apia on 28 December 1929.[22]

The New Zealand police attempted to arrest one of the leaders in the demonstration. When he resisted, a struggle developed between the police and the Mau. The officers began to fire randomly into the crowd and a Lewis machine gun, mounted in preparation for this demonstration, was used to disperse the demonstrators.[23] Chief Tamasese was shot from behind and killed while trying to bring calm and order to the Mau demonstrators,

screaming "Peace, Samoa". Ten others died that day and approximately 50 were injured by gunshot wounds and police batons.[24]

That day would come to be known in Samoa as Black Saturday. The Mau grew, remaining steadfastly non-violent, and expanded to include a highly influential women's branch. After repeated efforts by the Samoan people, Western Samoa gained independence in 1962 and signed a Friendship Treaty with New Zealand. Samoa, the first small-island country in the Pacific to become independent, joined the Commonwealth of Nations on 28 August 1970. In 2002, New Zealand's prime minister Helen Clark, on a trip to Samoa, formally apologised for New Zealand's role in the events of 1918 and 1929.[25][26]

In July 1997 the government amended the constitution to change the country's name from *Western Samoa* to *Samoa*.[27] The U.S. territory of American Samoa protested the move, asserting that the change diminished its own identity. As of 2012 American Samoans still use the terms *Western Samoa* and *Western Samoans* to describe the independent State of Samoa and its inhabitants.

While the two Samoas share language and ethnicity, their cultures have recently followed different paths, with American Samoans often emigrating to Hawai'i and the U.S. mainland, and adopting many U.S. customs, such as the playing of American football and baseball. Western Samoans have tended to emigrate instead to New Zealand, whose influence has made the sports of rugby and cricket more popular in the western islands. Travel writer Paul Theroux noted marked differences between the societies in Samoa and American Samoa.[28]

21st century

Effective 7 September 2009, the government has changed the driving orientation for motorists and Samoans now drive on the left side of the road. This brings Samoa into line with many other countries in the region. Samoa is the first country in recent years, and the first country in the 21st century, to switch to driving on the left.[29]

At the end of 29 December 2011, Samoa jumped forward by one day, omitting 30 December from the local calendar, when the nation moved to the west of the International Date Line.[30] This is anticipated to help the nation boost its economy by doing business with Australia and New Zealand. Before this change, Samoa was 21 hours behind Sydney, but the change means they are now three hours ahead. The previous timezone was agreed on 4 July 1892, to work in line with American traders based in California.[31]

Politics

Main articles: Politics of Samoa and Fa'amatai

Government buildings in Apia

The 1960 Constitution, which formally came into force with independence from New Zealand in 1962, is based on the British pattern of parliamentary democracy, modified to take account of Samoan customs.[32] The national modern Government of Samoa is referred to as the 'Malo'. Samoa's first Prime Minister was Fiame Mata'afa Faumuina Mulinu'u II, one of the four highest ranking paramount chiefs in the country. Two other paramount chiefs at the time of independence were appointed joint heads of state for life. Tupua Tamasese Mea'ole, who died in 1963, leaving Malietoa Tanumafili II sole head of state until his death on 11 May 2007, upon which Samoa transitioned from a constitutional monarchy to a Parliamentary republic.[33] The next Head of State

Tuiatua Tupua Tamasese Efi was elected by the legislature on 17 June 2007 for a fixed 5 year term.[34]

The unicameral legislature (Fono) consists of 49 members serving 5-year terms. Forty-seven are *matai* title holders elected from territorial districts by Samoans; the other two are chosen by non-Samoans with no chiefly affiliation on separate electoral rolls.[35] Universal suffrage was extended in 1990, but only chiefs (matai) may stand for election to the Samoan seats. There are more than 25,000 matais in the country, about 5% of whom are women.[36] The prime minister is chosen by a majority in the Fono and is appointed by the head of state to form a government. The prime minister's choices for the 12 cabinet positions are appointed by the head of state, subject to the continuing confidence of the Fono.

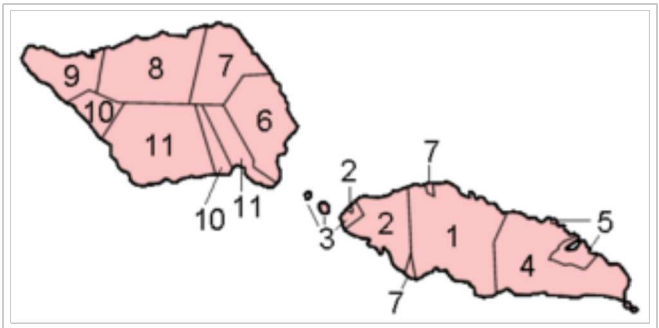
Prominent women in Samoan politics include the late Laulu Fetauimalemau Mata'afa (1928–2007) from Lotofaga constituency, the wife of Samoa's first prime minister. Their daughter Fiame Naomi Mata'afa is a paramount chief and a long-serving senior member of cabinet. Other women in politics include Samoan scholar and eminent professor Aiono Fanaafi Le Tagaloa, orator-chief Matatumua Maimoana and Safuneitu'uga Pa'aga Neri, the current Minister of Communication and Technology.

The judicial system is based on English common law and local customs. The Supreme Court of Samoa is the court of highest jurisdiction. Its chief justice is appointed by the head of state upon the recommendation of the prime minister.

Districts

Main article: Districts of Samoa

Samoa is made up of eleven *itūmālō* (political districts). These are the traditional eleven districts that were established well before European arrival. Each district has its own constitutional foundation (faavae) based on the traditional order of title precedence found in each district's faalupega (traditional salutations).



The capital village of each district administers and coordinates the affairs of the district and confers each districts' paramount title, amongst other responsibilities. For example, the District of A'ana has its capital at Leulumoega. The paramount title of A'ana is the TuiA'ana. The orator group which confers this title - the Faleiva (House of Nine) - is based at Leulumoega. This is also the same for the other districts. In the district of Tuamasaga, the paramount title of the district - The Malietoa title - is conferred by the FaleTuamasaga based in Afega.

Upolu

Geography

Main article: Geography of Samoa

Map of Samoa.

Samoa is located south of the equator, about halfway between Hawai'i and New Zealand in the Polynesian region of the Pacific Ocean. The total land area is 2,934 km² (1,133 sq mi) (slightly smaller than the U.S. state of Rhode Island), consisting of the two large islands of Upolu and Savai'i which account for 99% of the total land area, and eight small islets. The land area is about the size of the two Hawaii islands Oahu and Maui combined.

These are the three islets in the Apolima Strait (Manono Island, Apolima and Nu'ulopa), the four Aleipata Islands off the eastern end of Upolu (Nu'utele, Nu'ulua, Namua, and Fanuatapu), and Nu'usafe'e (less than 0.01 km² - 2½ acres - in area and about 1.4 km (0.9 mi) off the south coast of Upolu at the village of *Vaovai*).[37] The main island of Upolu is home to nearly three-quarters of Samoa's population, and its capital city is Apia.

View of Falefa Valley from Le Mafa Pass, east Upolu.

The Samoan islands have been produced by vulcanism, the source of which is the Samoa hotspot which is probably the result of a mantle plume.[38][39] While all of the islands have volcanic origins, only Savai'i, the western most island in Samoa, is volcanically active with the most recent eruptions in Mt Matavanu (1905–1911), Mata o le Afi (1902) and Mauga Afi (1725). The highest point in Samoa is Mt Silisili, at 1858 m (6,096 ft). The Saleaula lava fields situated on the central north coast of Savai'i are the result of the Mt Matavanu eruptions which left 50 km² (20 sq mi) of solidified lava.[40]

Samoa was previously located east of the international date line but in 2011, Samoan Prime Minister Tuilaepa Sailele announced his country would move the International Date Line to the east of the country, so that Samoa would lie to the west of the date line.[41] This change took effect on the night of 29 December, so that the Friday was skipped altogether and the following day was Saturday 31 December.[42]

The climate is equatorial/monsoonal, with an average annual temperature of 26.5°C (79.7°F), and a rainy season from November to April.[43] Savai'i is the largest of the Samoan islands and the sixth largest Polynesian island after New Zealand's North, South and Stewart Islands and the Hawaiian islands of Hawai'i and Maui. The population of Savai'i is 42,000 people.

Environment

See also: List of birds of Samoa and List of protected areas of Samoa

Samoa is located within the Samoan tropical moist forests ecoregion. Since human habitation began, about 80% of the lowland rain forests has been lost. Within the ecoregion about 28% of plants and 84% of land birds are endemic.[44]

Economy

Main article: Economy of Samoa

View above the Falealupo Rainforest canopy walkway, Savaii.

Gross Domestic Product (GDP) in purchasing power parity (PPP) in 2006 was estimated at $1.218 billion USD.[*citation needed*] The industrial sector is the largest component of GDP at 58.4%, followed by the services sector at 30.2% (2004 est.). Agriculture represents only 11.4% of GDP (2004 est.). Samoan labor force is estimated at 90,000. [*citation needed*]

The country currency is the Samoan tālā, issued and regulated by the Central Bank of Samoa.[45] The economy of Samoa has traditionally been dependent on agriculture and fishing at the local level. In modern times, development aid, private family remittances from overseas, and agricultural exports have become key factors in the nation's economy. Agriculture employs two-thirds of the labour force, and furnishes 90% of exports, featuring coconut cream, coconut oil, noni (juice of the *nonu* fruit, as it is known in Samoan), and copra.[46]

Outside of a large automotive wire harness factory (Yazaki Corporation), the manufacturing sector mainly processes agricultural products. Tourism is an expanding sector which now accounts for 25% of GDP. Tourist arrivals have been increasing over the years with more than 100,000 tourists visiting the islands in 2005, up from 70,000 in 1996.

The Samoan government has called for deregulation of the financial sector, encouragement of investment, and continued fiscal discipline.[*citation needed*] Observers point to the flexibility of the labour market as a basic strength for future economic advances.[*citation needed*] The sector has been helped enormously by major capital investment in hotel infrastructure, political instability in neighboring Pacific countries, and the 2005 launch of Virgin Samoa a joint-venture between the government and Virgin Australia (then Virgin Blue).

In the period before German colonization, Samoa produced mostly copra. German merchants and settlers were active in introducing large scale plantation operations and developing new industries, notably cocoa bean and rubber, relying on imported labourers from China and Melanesia. When the value of natural rubber fell

Taro, a root crop, traditionally was Samoa's largest export, generating more than half of all export revenue in 1993. But a fungal blight decimated the plants, and in each year since 1994 taro exports have accounted for less than 1% of export revenue.

drastically, about the end of the Great War (World War I), the New Zealand government encouraged the production of bananas, for which there is a large market in New Zealand.[*citation needed*]

Because of variations in altitude, a large range of tropical and subtropical crops can be cultivated, but land is not generally available to outside interests. Of the total land area of 2,934 km² (725,000 acres), about 24.4% is in permanent crops and another 21.2% is arable. About 4.4% is Western Samoan Trust Estates Corporation (WSTEC).[*citation needed*]

The staple products of Samoa are copra (dried coconut meat), cocoa bean (for chocolate), and bananas. The annual production of both bananas and copra has been in the range of 13,000 to 15,000 metric tons (about 14,500 to 16,500 short tons). If the rhinoceros beetle in Samoa were eradicated, Samoa could produce in excess of 40,000 metric tons (44,000 short tons) of copra. Samoan cocoa beans are of very high quality and used in fine New Zealand chocolates. Most are Criollo-Forastero hybrids. Coffee grows well, but production has been uneven. WSTEC is the biggest coffee producer. Rubber has been produced in Samoa for many years, but its export value has little impact on the economy.[*citation needed*]

Other agricultural industries have been less successful. Sugarcane production, originally established by Germans in the early 20th century, could be successful. Old train tracks for transporting cane can be seen at some plantations east of Apia. Pineapples grow well in Samoa, but beyond local consumption have not been a major export.

Demographics

Main article: Demographics of Samoa

A Samoan family.

Samoa has a population of 182,265 of which 92.6% are Samoans, 7% Euronesians (people of mixed, European and Polynesian ancestors) and 0.4% are Europeans, per the CIA World Factbook. About three-quarters of the population live on the main island of Upolu.[32] Only the Māori of New Zealand outnumber Samoans among Polynesian groups.

Samoans' religious adherence includes the following: Christian Congregational Church of Samoa 35.5%, Roman Catholic 19.6%, Methodist 15%, Latter-day Saints 12.7%, Samoan Assemblies of God 10.6%, Seventh-day Adventist 3.5%, Worship Centre 1.3%, unspecified 0.8% (2001 census).[47] The Head of State until 2007, His Highness Malietoa Tanumafili II, was a Bahá'í convert. Samoa hosts one of seven Bahá'í Houses of Worship in the world; completed in 1984 and dedicated by the Head of State, it is located in Tiapapata, 8 km (5 mi) from Apia.

Culture

Main article: Culture of Samoa

See also: Music of Samoa

The fa'a Samoa, or traditional Samoan way, remains a strong force in Samoan life and politics. Despite centuries of European influence, Samoa maintains its historical customs, social and political systems, and language. Cultural customs such as the Samoa 'ava ceremony are significant and solemn rituals at important occasions including the bestowal of *matai* chiefly titles. Items of great cultural value include the finely woven *'ie toga*.

Roman Catholic cathedral Immaculate Conception of Mary, now demolished.

Samoan mythology includes many gods with creation stories and figures of legend such as Tagaloa and the goddess of war Nafanua, the daughter of Saveasi'uleo, ruler of the spirit realm Pulotu. Other legends include the well known story of Sina and the Eel which explains the origins of the first coconut tree.

Some Samoans are spiritual and religious, and have subtly adapted the dominant religion of Christianity to 'fit in' with fa'a Samoa and vice versa. As such, ancient beliefs continue to co-exist side-by-side with Christianity, particularly in regard to the traditional customs and rituals of fa'a Samoa. The Samoan culture is centered around the principle of vāfealoa'i, the relationships between people. These relationships are based on respect, or fa'aaloalo. When Christianity was introduced in Samoa, most Samoan people converted. Currently 98% of the population identify themselves as Christian. The other 2 percent either identify themselves as irreligious, or do not belong to any congregation.

A Samoan fire dancer.

Some Samoans live a communal way of life, participating in activities collectively. Examples of this are the traditional Samoan *fale* (houses) which are open with no walls, using blinds made of coconut palm fronds during the night or bad weather.

The Samoan word for dance is *siva* with unique gentle movements of the body in time to music and which tells a story, although the Samoan male dances can be more physical and snappy.[48] The *sasa* is also a traditional dance where rows of dancers perform rapid synchronised movements in time to the rhythm of wooden drums *(pate)* or rolled mats. Another dance performed by males is called the *fa'ataupati* or the slap dance, creating rhythmic sounds by slapping different parts of the body. This is believed to have been derived from slapping insects on the body.

The form and construction of traditional architecture of Samoa was a specialised skill by *Tufuga fai fale* that was also linked to other cultural artforms.

Tattooing

As with other Polynesian cultures (Hawai'ian, Tahitian and Māori) with significant and unique tattoos, Samoans have two gender specific and culturally significant tattoos. For males, it is called the Pe'a and consists of intricate and geometrical patterns tattooed that cover areas from the knees up towards the ribs. A male who possesses such a tatau is called a soga'imiti. A Samoan girl or *teine* is given a malu, which covers the area from just below her knees to her upper thighs.[49]

Contemporary culture

Albert Wendt is a significant Samoan writer whose novels and stories tell the Samoan experience. In 1989, his

A man with a Pe'a, a male Samoan tattoo.

A Samoan woman with a traditional malu.

novel *Flying Fox in a Freedom Tree* was made into a feature film in New Zealand, directed by Martyn Sanderson.[50] Another novel *Sons for the Return Home* had also been made into a feature film in 1979, directed by Paul Maunder.[51] Other Samoan poets and writers include Sapa'u Ruperake Petaia, Eti Sa'aga and Savea Sano Malifa, the editor of the Samoa Observer.

The late John Kneubuhl, born in American Samoa, was an accomplished playwright and screenwriter and writer. Sia Figiel won the 1997 Commonwealth Writers' Prize. Momoe Von Reiche is an internationally recognised poet and artist. Dan Taulapapa McMullin is an artist and writer. Popular bands include The Five Stars, Penina o Tiafau and Punialava'a. There are also many contemporary Samoan artists living around the world. These Samoan artists include writers, filmmakers, visual artists, actors, directors, singers and dancers. In contemporary dance in New Zealand Lemi Ponifasio is a director and choreographer who is prominent internationally with his Company MAU[52] and Neil Ieremia'sc company Black Grace has also received international acclaim with tours to Europe and New York. The arts organisation *Tautai* is a collective of visual artists including Fatu Feu'u, Johnny Penisula, Shigeyuki Kihara, Iosefa Leo, Michel Tuffery, John Ioane and Lily Laita.[53]

In film, director Sima Urale is an award-winning filmmaker. Urale's short film *O Tamaiti* won the prestigious Best Short Film at the Venice Film Festival in 1996. Her first feature film *Apron Strings* opened the 2008 NZ International Film Festival. The feature film Siones Wedding, co-written by Oscar Kightley, was financially successful following premieres in Auckland and Apia. In music, the cover of the song *Sweet Inspiration* by The Yandall Sisters reached number one on the charts while King Kapisi was the first hip hop artist to receive the prestigious New Zealand APRA Silver Scroll Award in 1999 for his song *Reverse Resistance*. His music video *Reverse Resistance* was filmed in Savai'i at his villages. Other successful Samoan hip hop artists include rapper Scribe, Dei Hamo, Savage and Tha Feelstyle whose music video *Suamalie* was filmed in Samoa.

In comedy, Laughing Samoans, the Naked Samoans and Kila Kokonut Krew have enjoyed sold-out tours. Actor and director Nathaniel Lees has featured in many theatre productions and films including his role as Captain Mifune in The Matrix movie trilogy. In theatre, published playwrights include Oscar Kightley, Victor Rodger, Makerita Urale and Niuean Samoan playwright Dianna Fuemana.[54] Tusiata Avia is a performance poet. Her first book of poetry *Wild Dogs Under My Skirt* was published by Victoria University Press in 2004.

International influences like hip hop impact on Samoan culture. According to Katerina Martina Teaiwa, PhD from the University of Hawai'i at Manoa, "Hip hop culture in particular is popular amongst Samoan youth."[55] This is not surprising considering the large amounts of migration between Samoa, Hawaii, and the United States mainland, specifically California. In addition, the integration of hip hop elements into Samoan tradition also "testifies to the transferability of the dance forms themselves," and to the "circuits through which people and all their embodied knowledge travel."[56] Dance both in its traditional form and its more modern forms has remained a central cultural currency to Samoans, especially youths.[55]

Sport

See also: Sport in Samoa

Samoa (blue) vs. South Africa in June 2007.

The main sports played in Samoa are rugby union, Samoan cricket and netball. Rugby union is the national football code of Samoa. In Samoan villages, volleyball is also popular.

Rugby union is very popular in Samoa and the national team, nicknamed the Manu Samoa, is consistently competitive against teams from vastly more populous nations. Samoa has competed at every Rugby World Cup since 1991, and made the quarter finals in 1991, 1995 and the second round of the 1999 world cup.[57] At the 2003 world cup, Manu Samoa came close to beating eventual world champions, England. Samoa also played in the Pacific Nations Cup and the Pacific Tri-Nations The sport is governed by the Samoa Rugby Football Union, who are members of the Pacific Islands Rugby Alliance, and thus, also contribute to the international Pacific Islanders rugby union team.

At club level there is the National Provincial Championship and Pacific Rugby Cup Prominent Samoan players include Pat Lam and Brian Lima. In addition many Samoans have played for or are playing for the New Zealand All Blacks. They also took home the cup at Wellington and the Hong Kong Rugby Sevens in 2007—for which the Prime Minister of Samoa, also Chairman of the national rugby union, Tuila'epa Sa'ilele Malielegaoi, declared a national holiday. They also were the IRB World Sevens Series Champions in 2010 capping a year of achievement for the Samoans, following wins in the USA, Australia, Hong Kong and Scotland Sevens tournaments.

Rugby league is also popular amongst Samoans, with Samoa reaching the quarter finals of the 2000 Rugby League World Cup. Many Samoans and New Zealanders or Australians of Samoan descent play in the Super League and National Leagues in Britain. Examples are Va'aiga Lealuga Tuigamala who represented the New Zealand All Blacks, then became the first million dollar player to be contracted out to Rugby League to play for Wigan, then played Rugby Union for Newcastle Falcons before representing Samoa. Ta'ane Lavulavu of Workington Town, Maurie Fa'asavalu of St Helens and David Fatialofa of Whitehaven. Other noteworthy players have represented the Samoan National team.

Samoans have been very visible in boxing, kickboxing, wrestling, and sumo; some Samoan sumo wrestlers, most famously Musashimaru and Konishiki have reached the highest rank of *Ozeki* and *yokozuna*.

American football is occasionally played in Samoa, reflecting its wide popularity in American Samoa, where the sport is played under high school sanction. About 30 ethnic Samoans, many from American Samoa, currently play in the National Football League. A 2002 article from *ESPN* estimated that a Samoan male (either an American Samoan, or a Samoan living in the mainland United States) is 40 times more likely to play in the NFL than a non-Samoan American.[58]

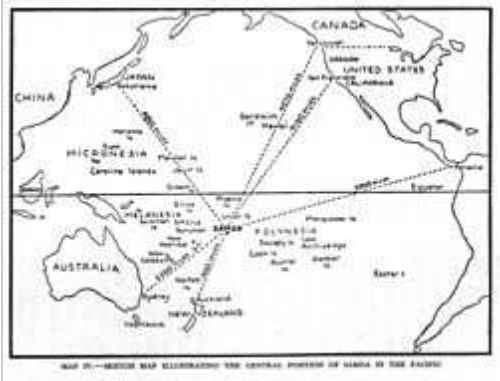
Myths

According to legend, Samoa shares the common Polynesian ancestor of Tagaloa; according to many legends, Samoa was Tagaloa's first creation. Oral traditions trace Samoan ancestry back to pre-history.[1]

Samoa is recognized as the center of Polynesia, from where people migrated eastward to the Marquesas, southward to Niue and the Pukapuka islands of Rarotonga, and northward to the Tokelau and Tuvalu island groups; in all these islands, oral tradition is maintained of ancestral voyages from the Samoan islands. These migrations reflect the extraordinary courage of these seafaring people in navigating without instruments to sail throughout the vast Pacific Ocean.

Samoa before the arrival of Europeans



Main article: Archaeology in Samoa

Archeologists place the earliest human settlement of the Samoan archipelago at around 1500 B.C. This date is based upon the ancient lapita pottery shards found throughout the islands. Samoan oral history, however, extends only as far back as 1000 A.D. Whatever occurred between 1500 B.C. and 1000 A.D. remains a mystery, though this may have been the period of great migrations that led to the settlement of present-day Polynesia.

Another mystery is why the making of pottery suddenly stopped. There is no oral tradition in reference to pottery use, but it abounds with proverbs on the starmounts used in the ancient sport of pigeon snarling, once popular among Samoan nobility. Linguistically, the Samoan language is part of the Austronesian language family.

Prior to the arrival of the Europeans in the early 1700s, Samoa's history was interwoven with that of certain chiefdoms of Fiji as well as the history of the kingdom of Tonga. The oral history of Samoa preserves the memories of many battles fought between Samoa and neighboring islands. Too, intermarriage of Tongan and

Fijian royalty to noble Samoan women has helped build close relationships between these island nations that exists even to the present day; these royal blood ties are acknowledged at special events and cultural gatherings. Samoan folklore tells of the arrival of two maidens from Fiji who brought the art of tatau, or tattoo, to Samoa, whence came the traditional Samoan *malofie* (*malofie* is also known as *pe'a* for men and as *malu* for women). Oral traditions record the use of the Samoan fine mat as a garment of atonement, draped over a Samoan maiden to pardon her from a Tongan king's wrath and criminal indictment.

1934 Sketch map showing the central position of the Samoa Islands in the Pacific.

Bestowal of the highly reverential title "Malietoa" marked a period in Samoan history when the islands were officially recognized as independent of Tongan rule. The title refers to the parting words of Tongan warriors, "Malie toa, malie tau" (literally, "Brave warrior, bravely fought"). Hence, the title was amended as part of the more ancient royal courts and titles of Tui-Aana, Tui-Atua.

These tales reflect Samoa's colorful and at times fierce past.[2]

European contact

18th Century

Contact with Europeans began in the early 18th century but did not intensify until the arrival of the British. In 1722, Dutchman Jacob Roggeveen was the first European to sight the islands. This visit was followed by the French explorer Louis-Antoine de Bougainville (1729–1811), the man who named them the *Navigator Islands* in 1768.

The United States Exploring Expedition (1838-42) under Charles Wilkes reached Samoa in 1839 and appointed of Englishman John C. Williams as acting U.S. consul.[3] However this appointment was never confirmed by the U.S. State Department; John C. Williams was merely recognized as "Commercial Agent of the United States".[4] A British consul was already residing at Apia.

19th Century

Missionaries and traders arrived in the 1830s. In 1855 J.C. Godeffroy & Sohn expanded its trading business into the Samoan Islands, which were then known as the Navigator Islands. During the second half of the 19th century German influence in Samoa expanded with large scale plantation operations being introduced for coconut, cacao and hevea rubber cultivation, especially on the island of 'Upolu where German firms monopolized copra and cocoa bean processing. British business enterprises, harbour rights, and consulate office were the basis on which the United Kingdom had cause to intervene in Samoa. The United States begin operations at the excellent harbor of Pago Pago on Tutuila in 1877 and formed alliances with local native chieftains, most conspicuously on the islands of Tutuila and Manu'a (which were later formally annexed as American Samoa).

In the latter part of 19th century, the United Kingdom, Germany and the United States all claimed parts of the kingdom of Samoa, and established trade posts. The rivalry between these powers exacerbated the indigenous factions that were struggling to preserve their ancient political system.

The First Samoan Civil War and the Samoan crisis

See also: Samoan crisis

Wrecked vessels at Apia. 1889.

The First Samoan Civil War was fought roughly between 1886 and 1894, primarily between rival Samoan factions though the rival powers intervened on several occasions with military forces. There followed an eight-year civil war, where each of the three powers supplied arms, training, and in some cases, combat troops to the warring Samoan parties. The Samoa Crisis came to a critical juncture in March 1889 when all three colonial contenders sent warships into Apia harbour, and a larger-scale war seemed imminent, until a massive storm on 15 March 1889 damaged or destroyed the warships, ending the military conflict.[5]

Robert Louis Stevenson arrived in Samoa in 1889 and built a house at Vailima. He quickly became passionately interested, and involved, in the attendant political machinations. His influence spread to the Samoans, who consulted him for advice, and he soon became involved in local politics. These involved the three colonial powers battling for control of Samoa - America, Germany and Britain - and the indigenous factions struggling to preserve their ancient political system. He was convinced the European officials appointed to rule the Samoans were incompetent, and after many futile attempts to resolve the matter, he published *A Footnote to History*. The book covers the period from 1882 to 1892.[6] This was such a stinging protest against existing conditions that it resulted in the recall of two officials, and Stevenson feared for a time it would result in his own deportation.[7]

The Second Samoan Civil War and the Siege of Apia

See also: Second Samoan Civil War

See also: Siege of Apia

German, British and American warships in Apia harbour, 1899. Alfred John Tattersall

The Second Samoan Civil War was a conflict that reached a head in 1898 when Germany, the United Kingdom, and the United States were locked in dispute over who should have control over the Samoa Islands.

The **Siege of Apia**, or the **Battle of Apia**, occurred during the Second Samoan Civil War in March 1899 at Apia. Samoan forces loyal to Prince Tanu were besieged by a larger force of Samoan rebels loyal to Mata'afa Iosefo. Supporting Prince Tanu were landing parties from four British and American warships. Over the course of several days of fighting, the Samoan rebels were defeated.[8]

American and British warships shelled Apia on 15 March 1899; including the USS *Philadelphia*. Germany, the United Kingdom and the United States quickly resolved to end the hostilities; with the partitioning of the island chain at the Tripartite Convention of 1899.[3]

Division of islands

See also: German Samoa

The Samoa Tripartite Convention, a joint commission of three members composed of Bartlett Tripp for the United States, C. N. E. Eliot, C.B. for Great Britain, and Freiherr Speck von Sternburg for Germany, agreed to divide the islands.

The Tripartite Convention gave control of the islands west of 171 degrees west longitude to Germany, (later known as Western Samoa), containing Upolu and Savaii (the current Samoa) and other adjoining islands. These islands became known as German Samoa. The United States accepted the eastern islands of Tutuila and Manu'a, (present-day American Samoa).[3] In exchange for United Kingdom ceding claims in Samoa, Germany transferred their protectorates in the North Solomon Islands and other territories in West Africa. The monarchy was also abolished.

Independence

See also: Mau movement

From 1908, with the establishment of the Mau movement ("opinion movement"), Western Samoans began to assert their claim to independence. The early beginnings of the national Mau movement began in 1908 with the 'Mau a Pule' resistance on Savai'i, led by orator chief Lauaki Namulau'ulu Mamoe. Lauaki and Mau a Pule chiefs, wives and children were exiled to Saipan in 1909. Many died in exile.[9]

Exiled group aboard German warship taking them to Saipan. Standing 3rd from the left is Lauaki Namulauulu Mamoe, 1909.

Shortly after the outbreak of World War I, in August 1914, New Zealand sent an expeditionary force to seize and occupy German Samoa. Although Germany refused to officially surrender the islands, no resistance was offered and the occupation took place without any fighting. New Zealand continued the occupation of Western Samoa throughout World War I. In 1919, under the Treaty of Versailles, Germany relinquished its claims to the islands.

The Mau movement gained momentum with Samoa's royal leaders becoming more visible in supporting the peoples movement but strongly opposed violence. On 28 December 1929 Tupua Tamasese was shot along with eleven others during a peaceful demonstration in Apia. Tupua Tamasese died the following day, with the advice that no more blood should be shed.

New Zealand sailors removing the white strip from lava-lava, the insignia of the Mau uniform, circa 1930

New Zealand administered Western Samoa first as a League of Nations Mandate and then as a United Nations trusteeship until the country received its independence on 1 January 1962 as Western Samoa.[10] Samoa's first prime minister following independence was paramount chief Fiame Mata'afa Faumuina Mulinu'u II.

Samoa was the first Polynesian people to be recognized as a sovereign nation in the 20th century. In 1977, Queen Elizabeth II visited the Samoa during her tour of the Commonwealth.

In July 1997 the constitution was amended to change the country's name from "Western Samoa" to "Samoa." Samoa had been known simply as "Samoa" in the United Nations since joining the organization in 1976. The neighboring U.S. territory of American Samoa protested the move, feeling that the change diminished its own Samoan identity. American Samoans still use the terms "Western Samoa" and "Western Samoans."

In 2002, New Zealand's prime minister Helen Clark formally apologized for two incidents during the period of New Zealand's administration: a failure in 1918 to quarantine the SS Talune, which carried the 'Spanish 'flu' to Samoa, leading to an epidemic which devastated the Samoan population, and the shooting of leaders of the non-violent Mau movement during a ceremonial procession in 1929.

In 2007, Samoa's first Head of State, His Highness Malietoa Tanumafili II, died at the age of 95. He held this title jointly with Tupua Tamasese Lealofi until his death in 1963. The late Malietoa Tanumafili II was Samoa's Head of State for 45 years. He was the son of Malietoa Tanumafili I, who was the last Samoan king recognized by Europe and the Western World.

Samoa's current Head of State is His Highness Tui-Atua Tupua Tamasese Tupuola Efi, who was anointed the Head of State title with the unanimous endorsement of Samoa's Parliament. A symbol of traditional Samoan protocol in alignment with Samoan decision making stressing the importance of consensus in the 21st century.

Fa'amatai

From Wikipedia, the free encyclopedia

Fa'amatai is the chiefly system of Samoa, central to the organization of Samoan society.[1] It is the traditional indigenous form of governance in the Samoa Islands, comprising American Samoa and the Independent State of Samoa. The term comprises the prefix *fa'a* (Samoan for "in the way of") and the word *matai* (family name or title).

Of central importance in the system are the *matai*,[2] the holders of family chief titles, and their role in looking after their family. *Fa'amatai* is the key socio-political system of governance and way of life (*fa'a Samoa*) in Samoan culture. Inherent in the *fa'amatai* system is the welfare and well-being of the extended family (*'aiga*) and the protection of family property, consisting most importantly of customary land.

In the 49-seat parliament of independent Samoa, all 47 *Samoan* Members of Parliament are also *matai*, performing dual roles as chiefs and modern politicians, with the exception of the two seats reserved for non-Samoans.[3]

The *fa'amatai* system is significant in modern Samoa where most of the land, about 81% (567,000 acres), is under customary ownership with the rest under the national government (*malo*) as public lands with another 4% freehold.[1]

The 2006 official census of independent Samoa identified a total of 15,783 *matai* (8.7%) living in the country from a total population of 180,741. Of the total number of *matai*, 12,589 (79.8%) were male and 3,194 (20.2%) were female.[4]

The *Fa'amatai* system has been greatly impacted upon by colonialism as well as Samoa's modern politics which came into effect when the country gained independence in 1962.

Three *matai*, the two older men bearing the symbols of orator chief status – the *fue* (flywhisk made of organic sennit rope with a wooden handle) over their left shoulder. The central elder holds the orator's wooden staff (*to'oto'o*) of office and wears an 'ie toga, fine matting. The other two men wear tapa cloth with patterned designs.

The architecture of Samoa dictate seating areas for *matai* and orators according to their status, rank, role and ceremony.

Governance

Samoa's chiefly system revolves around family (*'aiga*) kinship, based on the culture's communal and extended family relationships. The term '*aiga* includes not only the immediate family (father, mother and children), but also the whole union of families of a clan and even those who although not related are subject to the family control.[5]

Lepea village with round meeting houses where *matai* meetings take place and open commons area (*malae*) for outdoor ceremonies.

At the local level, much of the country's civil and criminal matters are dealt with by some 360 village chief councils, *Fono o Matai*, according to traditional law, a practice further strengthened by the 1990 Village Fono Law.[6]

Most Samoans live in villages consisting of groups of families with close ties and history. The influence of the *matai* is felt not only in the village but also in the district and even beyond. The active factor in the life of the village is the village council or *fono o matai* and its members are the *matai*. The *fono of matai* is the executive and judicial authority[7] of every village in Samoa. If a matter is of importance the assembly is held on the *malae*, the open space in front of the village.

The speakers address the assembly and stand to do so. The listeners are comfortably seated on mats. Those not taking part in these assemblies are described as *tagatanu'u* (people of the village) and include untitled men, women and children. Democratic ideas do not prevail at these *fono*s and decisions are independent of majority or minority rule. The decision of one or more *matai sili* (senior *matai*) is decisive. The remainder who are merely at the *fono* to listen, agree with the decisions given. It is permissible for the minor *matai* to discuss the matter with and endeavour to try to influence the *matai sili* before the *fono* commences.

Before the *fono* commences preliminary councils are held (*taupulega*) by the different groups and at these

councils the single family heads exchange opinions and endeavour to convince each other and to create harmony in order that when the actual *fono* eventuates everything will move smoothly. Some *matai* are permitted to speak at these *fono* without having any right to make a decision.[5]

The 2006 census of Samoa also revealed that 96% of the country's *matai* were actively involved in village activities as part of their *matai* responsibilities. The 4% 'not active' was explained as possibly due to the *matai* holding more than one title or living away from the village where their title belonged.[4]

Authority

The authority of the *matai* has some limits. They are called upon to discuss all important matters with everyone of significance belonging to the family union. If the matter is of minor importance and only of interest to the immediate village family, more distant relations may be omitted from discussion. *Matai* subject to a senior *matai* (*matai sili*) are independent in family matters concerning their own single family unless they have a *tuaigoa* shared title name only, in which case they are not referred to at all in family matters and may be deprived of their names at the will of their superior at any time.

Modern politics

Main article: Politics of Samoa

Government Building in the capital Apia housing administrative ministerial offices.

The *fa'amatai* system is entrenched in Samoan politics. From the country's independence in 1962, only *matai* could vote and stand as candidates in elections to parliament. In 1990, the voting system was changed by the Electoral Amendment Act which introduced universal suffrage and the right to vote for adults aged 21-years and over. However, the right to stand for elections remains with *matai*, who are themselves selected by consensus of their families, including non-matai family members. Therefore, every Samoan Member of Parliament is also a *matai*, performing dual roles as a 'chief' as well as duties in the Samoan parliament.[3] This applies to most Samoans in positions of public responsibility from the Prime Minister of Samoa to the country's Head of State, who is referred to as *O le Ao o le Malo* (the chieftain of the government).

Colonial influences

Coat of arms of German Samoa.

As *matai* are the heads of their families representing their villages, communities and districts, important high ranking title holders played significant roles in colonial politics with the advent of western powers and rivalry from the 19th century.

The colonial era saw Britain, Germany and the United States supporting different *matai* such as Mata'afa Iosefo and the youthful Malietoa Tanumafili I to gain political territory over Samoa. This led to the colonial powers bestowing the European title of king upon their own candidate during the tumultous years of the late 19th century, leading to warring among competing high ranking *matai* in different districts.

The Samoan term *tupu*, referring to paramount status over a particular region or the entire island group, has sometimes been translated incorrectly to the English language as 'king' in the European sense.[8] The relatively brief usage of the term 'king' died out with the end of colonialism.

In the early 20th century, *matai* leadership also played a pivotal role in the pro-independence Mau movement which eventually led to Samoa's independence in 1962.

Matai title

High chief Seumanutafa Pogai of Apia, circa 1890–1910. (photo by Thomas Andrew)

Each *matai* has a name (*suafa*) by and through which they exercise their rights in the family over which they preside. *Matai* names are for the most part very old ones and are handed down from generation to generation. *Matai* titles can be bestowed on one person or numerous family members who are distinguished from each other by their Christian name.

It is common for each '*aiga* to have a number of *matai* titles, however, one particular title will be the most important and serve as the main *matai* title. The title of a family *matai* which is peculiar and particular to that family is the subject of tradition and is faithfully recorded by the family and passed on from generation to generation.

It sometimes happens that new names are for some reason taken and the old ones discarded or passed on to lesser or junior chiefs.

In Samoan culture, the concept of serving and taking on the responsibility for the welfare of the family is integral to the *fa'amatai* system. Various members of the family are called upon in turn to support their *matai* in carrying out their role and responsibilities according to Samoan tradition, cultural obligations and duty.[5] This often involves the family contributing money and important cultural items such as *'ie toga* (fine mats) as well as food which the *matai* presents on behalf of the '*aiga* to ensure the family's obligations are met in their village or wider community.

Men and women have equal rights to *matai* titles in Samoa, although the role of women in Samoan society means female *matai* comprise a relatively small percentage.

Before the advent of European contact and influence, the authority (*pule*) of the *matai* extended to life and limb but this power has been altered and absorbed by a Western-style modern government (referred to as the *malo*) where the *matai*'s authority is confined and balanced against the national governance.

Ali'i and *tulafale*

Coat of Arms of American

There are two types of *matai*: *ali'i* (loosely translated *chief* or *high chief* depending on a specific title's rank) and *tulafale* (orator chief).[8]

In former times the term *matai* applied only to *tulafale*, but over time the term has become applied to *ali'i* generally.[5]

Samoan *gafa* (pedigree, ancestors, descent) is central to family kinship and will usually commence from the person who first brought the name into prominence and caused it to be respected. It does not necessarily mean that the family commenced from the institution of a name or that the individual holding the title was the founder of the family. Former *matai* of the family have by comparison become unimportant and their names have fallen into

disuse or become uninfluential.

The wife of an *ali'i* is referred to as *faletua*. The wife of a *tulafale* (orator status *matai*) is referred to as *tausi*.[9]

Samoa showing the symbols of *matai* status - *to'oto'o* orator's staff and *fue* fly whisk. The round *tanoa* (or *laulau*) vessel represents the 'ava ceremony, central to Samoan traditions.

Orator chiefs

Central to Samoan culture is the recording of history and genealogy which was achieved through oral history before the introduction of a written language. Orator chiefs (*tulafale*) and speakers (*failauga* - 'speech-maker') are terms used for Samoans holding the position of speakers or mouthpieces of chiefs and they are found in all villages. Important *matai* titles are also tied to certain orator *matai* titles. Orators serve the means of conveying the wishes of chiefs to the people or speaking on behalf of the family, village or district on important occasions. The orator is the recorder of family histories and pedigree (*fa'alupega*), genealogies (*gafa*) and events and is indispensable at public ceremonies. There are many Samoan public events at which the distribution of mats will take place. Many of these mats, particularly the fine mats (*'ie toga*), are valued very highly both from a monetary point of view and also from a historical and sentimental viewpoint. The more important mats bear respected names. The most noteworthy occasions on which mats are presented are marriages, births and deaths and the bestowal of a chiefly title.[5]

Customary land

The *matai* of the family is the administrator and representative of the family property which includes customary land. Most of the population in Samoa, 65% overall, live with their families in villages on customary land. However, the 2006 Samoa census showed that 34 out of 48 political districts had more than 80% of households living on customary land with the lowest figures (25%) in the more densely concentrated urbanised area around the capital Apia. On the island of Savai'i, where there are less people and fewer signs of western material culture, 93% of the 43,142 population live on customary land.[4]

View in Safune village.

Looking after the collective family land is one of the most important responsibilities of Samoan families and their *matai*.

A *matai* may make their wishes known and bequeath certain property to others such as a married daughter, but they cannot transfer land rights beyond their own.[5] Under the management of one or more *matai* the lands are divided amongst the various families for their own use and are viewed by these family members as their unassailable rights.

Apolima Tai village in Apolima Island, (1890 - 1910).

A Samoan proverb highlighting the importance of land in Samoa reads, *E le soifua umi le tagata fa'atau fanua* (The man who sells family land will not live to an old age - devils will bring about his early death).

With most of the country's land under customary ownership, the position of the *matai* is significant in modern day politics in Samoa in terms of the nation's economic development, conservation, sustainability, tourism, national infrastructure and access to natural resources such as water, forestry, road access, agriculture and farming.

An example in recent years is the *matai* from the village of Sili on the island of Savai'i turning down a government proposal to build a hydroelectric plant on village land because of environmental concerns.[10] In contrast, the *matai* in Sasina have agreed with government support to an unprecedented 120-year lease of prime oceanfront land to an American company to build a tourism resort estimated to cost US$450–500 million.[11] In conservation, the villages of Uafato in the Va'a-o-Fonoti district at the east end of Upolu[12] island and Falealupo at the west end of Savai'i have agreed to conservation covenants for their native forests.

Much of the land under the government today was alienated or sold during colonialism[13] and later came under the Samoa government when the colonial era ended. This includes large tracts of plantation land from the 19th century as well as later periods of colonial administration including German Samoa (1900–1914) followed by the New Zealand administration.

This has resulted in ongoing court cases for land claims between *matai* and the government, such as that of the village of Satapuala over land by Faleolo International Airport, disputes which directly impact upon the country's national infrastructure.

Matai selection

Young Samoan women preparing *'ava*, 1909

In effect, every Samoan, male or female, is an heir to a *matai* title pertaining to their kinship and ancestry. However, *matai* titles are not automatically passed from a *matai* to their children or direct descendants but are bestowed upon those whom the extended family agree will best serve their needs while also ensuring that different branches of the family are represented. A recent example of this Samoan custom and law is the stripping of the important Malietoa title from the son of the previous title holder, the late Head of State, Malietoa Tanumafili II (1913–2007). Following Malietoa Tanumafili II's death in 2007, one branch of the family bestowed the title upon his son Papali'i Fa'amausili Moli in the village of Malie. The other branches of the family filed petitions at the Samoa Land and Titles Court claiming the bestowal invalid in breach of Samoan law. In June 2008, the court agreed and ruled the bestowal of the Malietoa title upon the son illegal,[14] highlighting the unique nature of *matai* selection based on consensus, merit, custom and due process rather than automatic hereditary selection. Other cultural factors can also play a part in the complex decision making process including seniority in age (an important factor in Samoan society), leadership qualities, oratory and an individual's ability to contribute to the family's overall circumstances and well-being.

Title bestowal

See also: Samoa 'ava ceremony

Woven fine mat ('ie toga) which have an important cultural value in

Matai titles (*suafa*, literally "formal name") are bestowed upon family members during a cultural ceremony called a *saofa'i* which occurs only after discussion and consensus within the family. The *saofa'i* is a solemn ceremony which marks the formal acceptance of a new *matai* by their family and village into the circle of chiefs and orators. It involves the gathering of chiefs and orators in a *fale tele* meeting house, the exchanging of oratory speeches, the reciting of genealogies and a kava ceremony followed by a feast provided by the new *matai*'s family.[15] Architecture of Samoa dictates seating positions inside the meeting house during the title bestowal including the position of those making the kava being situated at

the rear. Once the ceremony is completed, the new *matai* is henceforth called by their new name.

Samoa.

In New Zealand, more people born in Samoa than any other foreign country officially change their names with the Department of Internal Affairs and it is believed that many of these are adding *matai* titles.[16]

Non-Samoans

Matai titles are sometimes conferred upon non-Samoans as an honour by Samoan families and their villages. An example is the title of 'Seiuli' conferred in 1993 by Samoa's Head of State, Malietoa Tanumafili II upon Barry Curtis, at the time Mayor of Manukau, a New Zealand city with a large Samoan population. Other non-Samoan New Zealanders bestowed with *matai* titles include prime ministers Robert Muldoon, David Lange and Jim Bolger, politician Winston Peters[17] and Auckland businessman Dick Hubbard who holds the title 'Galumalemana.' [18] In 1988, American ethnobotanist Paul Alan Cox received a title from the village of Falealupo, where Cox had lived for many years and later helped to set up a covenant to protect the native rainforest.[19] In 1978, the Governor-General of Fiji, Ratu Sir George Cakobau was bestowed the title 'Peseta' by Matautu on Savai'i island during his visit to Tui Fiti's sacred ground.[20]

Naming convention

A *matai* title is always first in naming convention as the most important name for a titled individual. When a person is appointed a *matai*, they retain their Christian name in addition to their new *matai* title. The *matai* title is appended to the beginning of their name so that their Christian name follows their new *matai* title. As one person may hold a number of different *matai* names from different branches of their genealogy, the new names are also added before their Christian name, with no set order in terms of general usage. An example is Mata'afa Faumuina Fiame Mulinu'u I whose first three names reveal individual high chief titles and thereby his genealogy and the different villages and families to which he belonged; the **Faumuina** title from Lepea, the **Fiame** title from Lotofaga and the Mata'afa title, one of the paramount names in the country.

As more than one family member can be bestowed the same *matai* title, each person's Christian name serves to distinguish them from each other. Dividing a family title so that it is shared among more than one family member is also agreed upon by consensus. The Samoans explain this by saying that a man has a *fasi igoa* – a piece of the title.[5]

Usoali'i refers to brother chiefs, those men in the family union holding *matai* names. They may all enjoy the same rights or be under the control of one *matai* who is termed *sao*, in which case the other chiefs are referred to as *tuaigoa*.

Women *matai*

Of Samoa's total population of 180,741 (2006 census), 87,064 were female, comprising 48% of the population. The male (52%) to female (48%) ratio for the country is higher than the world ratio. In 2006, there were 3,194 female *matai*, 20.2% of the 15,783 *matai* living in the country.[4]

A woman can hold a *matai* name and have the *pule* (authority) of the family but this does not often occur. Should she have both she will usually bestow her *matai* title on one of her family, probably her husband, and retain the *pule*.

In 2006, there were four female Members of Parliament in Samoa and three were cabinet ministers out of a 13-member cabinet.[4]

Prominent women *matai* in Samoa include scholar and historian Aiono Fanaafi Le Tagaloa (*matai* title **Aiono**), high chief and senior cabinet minister Fiame Naomi Mata'afa (*matai* title **Fiame**), politician Safuneitu'uga Pa'aga Neri (*matai* title **Safuneitu'uga**) and writer Letuimanu'asina Emma Kruse Va'ai (*matai* title **Letuimanu'asina**).

With many Samoans also living overseas in other countries, other prominent Samoan female *matai* includes New Zealand former Member of Parliament Luamanuvao Winnie Laban (*matai* title **Luamanuvao**).

Old age

Seniority in years and old age is a respectful status in Samoan society where elders, a familiar or complete stranger, are referred to as *tamā* (father) or *tinā* (mother). In this cultural context, a retired *matai* usually enjoys the respect of their family and is referred to as the *faʻatonutonu folau*, the steersperson of the boat. In this case they do not actually do the steering but ttheir advice is listened to and their family profits from their ripe experience.

Untitled men

The Samoan appellation for a male person who is not a *matai* is a *taule'ale'a*. The real meaning of the word, which is derived from the word *le'ale'a* (immature), is a young man who has not reached maturity. It is now-a-days applied to any male person who is not a *matai*. In the past the term was sometimes used to indicate that any male person, even a *matai*, was not an old man. In this sense, *taule'ale'a* signifies young or comparatively young, just as *toea'ina* is used to signify that a man is aged or elderly (a respectful status in Samoa) whether he be a *matai* or a *taule'ale'a*.

Young man dressed as a *manaia*, the son of a Samoan chief, in ceremonial attire including an elaborate headdress (*tuiga*), circa 1890–1910. (photo by Thomas Andrew)

It is permissible for a *taule'ale'a* (an untitled man) to change his name as often as he wishes. A chance remark or an outstanding incident will often be the determining factor in naming a *taule'ale'a*. This can apply to everyone else, including females in Samoa, where a family member, especially a child, might be called a new name to commemorate an important occasion.

Disputes resolution

Disputes over *matai* titles which cannot be resolved among family members within the wide extended 'aiga are dealt with by the Samoa Land and Titles Court which consists of cultural and judicial experts appointed by the Supreme Court of Samoa.

The Land and Titles Court hears disputes over *matai* title succession as well as disagreements pertaining to customary land.[21] The court derives from the Native Land and Titles Court put in place under the colonial German administration in 1901. Samoa's political stability is thought to be due in large part to the success of this court in hearing disputes.

O le Ao o le Malo

From Wikipedia, the free encyclopedia

See also: Fa'amatai

O le Ao o le Malo is the Samoan head of state, which is the title's rough translation. (A more literal translation might be "the chieftain of the government" — *ao* is a title generally reserved for chiefs (*matai*), while *malo* means "government").[1][2] The O le Ao o le Malo is styled as *His Highness*.

The position is provided for in Part III of the 1960 Samoan constitution.[3] At the time the constitution was adopted it was anticipated that future heads of state would be chosen from among the four Tama-a-Aiga "royal" paramount chiefs. However, this is not required by the constitution and for this reason Samoa can be considered a republic rather than a constitutional monarchy like the United Kingdom. The government Press Secretariat describes O le Ao o le Malo as a "ceremonial president". The current O le Ao o le Malo is Tui Atua Tupua Tamasese Tupuola Tufuga Efi, who was elected to a five year term on 16 June 2007.[4]

History

When Samoa became independent in 1962, the two highest[5] of the four paramount chiefs (Tama a Aiga) — Malietoa Tanumafili and Tupua Tamasese Mea'ole, were jointly named to the office by the 1960 Constitution for life. Each respectively represented the Malietoa and Tupua, which have been described as the "two main family lineages" of Samoa.[6] They were jointly known as O Ao o le Malo and severally as O le Ao o le Malo.[3] Tupua Tamasese Mea'ole died a year later in 1963, leaving Malietoa Tanumafili as the sole holder of the office until his death in 2007, aged 95.[7][8] His replacement, Tui Atua Tupua Tamasese Tupuola Tufuga Efi, who had served two prior terms as Prime Minister of Samoa, was elected by the Samoan Legislative Assembly, called the Fono, as the third O le Ao o le Malo, for a five year term beginning on 20 June 2007.[4] He is the elder son of Tupua Tamasese Mea'ole.

Qualifications

Article 18 of the Samoan constitution sets the qualifications for the position of O le Ao o le Malo. The O le Ao o le Malo must:

- be qualified to be elected as a Member of Parliament
- possess such qualifications as the Fono may determine from time to time by resolution
- not have been previously removed from the office of the Head of State on the grounds of misbehavior or infirmity.[3]

Term of office

The O le Ao o le Malo is elected by the Fono for five years and can be reelected. The exceptions to this were Malietoa Tanumafili and Tui Atua Tupua Tamasese Mea'ole, who were made exempt to the five year term provided for in Article 19.[3] The constitution does not set forth a limit on the number of terms an O le Ao o le Malo can serve. There is an understanding that the office is to alternate between the Malietoa and Tupua families.[6]

Removal from office can occur in four ways:

- resignation
- removal by the Fono on the grounds of misbehavior or mental or physical infirmity
- approval by two thirds of the Fono of a resolution for removal that is proposed and supported by at least a fourth of its members following at least 14 days between the notice of motion and debate on the motion[3]
- death

Duties and powers

The position is that of a ceremonial president, with actual power being held by the Prime Minister, whom the O le Ao o le Malo appoints on the recommendation of the Fono. While the O le Ao o le Malo "does not play an active role in government", he can dissolve the Fono and no act of parliament will become law without his approval.[9] The O le Ao o le Malo can also grant pardons.[10]

Tufuga Efi

From Wikipedia, the free encyclopedia

Tupua Tamasese Tupuola Tufuga Efi, also known as **Tuiatua Tupua Tamasese Efi,**[1][2] and formerly known as **Tupuola Efi**, (born March 1, 1938) is a Samoan political figure who has been Samoa's head of state since 2007. Previously he was Prime Minister of Samoa from 1976 to 1982 and again later in 1982.

On 16 June 2007 he was elected as O le Ao o le Malo, Samoa's head of state, for a five-year term.[3] He was officially sworn in as O le Ao o le Malo at Samoa's Parliament (Fono) on 20 June 2007.[1]

He is a member of one of the paramount Families of State (Aiga Tupu) where he holds the Tupua title of the *SaTupua* 'royal' family. He also holds the *Tama-a-Aiga Tamasese* title and the title of "*Tui Atua*".

Tupua first entered parliament and became Prime Minister under the title Tupuola.

Early and personal life

Tupua was born on March 1, 1938 at Moto'otua in Samoa.[1] He is the son of Tupua Tamasese Mea'ole and Noue Irene Gustava Ta'isi Nelson.[1]

Tupua attended primary school at the Marist Brothers School at Mulivai in the Samoan capital of Apia. He continued his education at St. Patrick's College in Silverstream, Wellington, New Zealand.[1] He was also educated at Victoria University

Personal details

Born	1 March 1938 Moto'otua, Samoa

of Wellington,[1] in New Zealand's capital city.

Tupua is married to Her Highness Masiofo Filifilia Imo,[1] who is also known as Masiofo Filifilia Tamasese.[1]

Tupua has been described as a defender and proponent of the Samoan language.

Political party	Samoan National Development Party Christian Democratic Party
Spouse(s)	Masiofo Filifilia Imo

Prime Minister of Samoa

Tupua began his political career in 1966 when he became an MP in Samoa's Fono, or Parliament.[1] He represented the Anoama'a East constituency[1] as MP as a member of the Christian Democratic Party. He served as Samoa's Minister of Works from 1970 until 1972.[1]

Tupua served as Prime Minister for two consecutive terms from 1976 to 1982.[1] He also served as Deputy Prime Minister from 1985 to 1988.[2] It was during his second term as Prime Minister that the Public Service Association went on a general strike in 1981, paralyzing the country for several months and paving the way for the opposition Human Rights Protection Party's entry to government in 1982. The Human Rights Protection Party still governs Samoa today.

Tupua became Leader of the Opposition following his Christian Democratic Party's election defeat in 1982.[1] He also headed the Samoan National Development Party. He continued to serve Anoama'a East as MP until 2004[1] when he became one of the two members of Samoa's Council of Deputies along with Tuimaleali'ifano Va'aletoa Sualauvi II.[2] Both Efi and Va'aletoa served as temporary acting heads of state (O le Ao o le Malo) following the death of Malietoa Tanumafili II in May 2007.[2]

O le Ao o le Malo (Head of state)

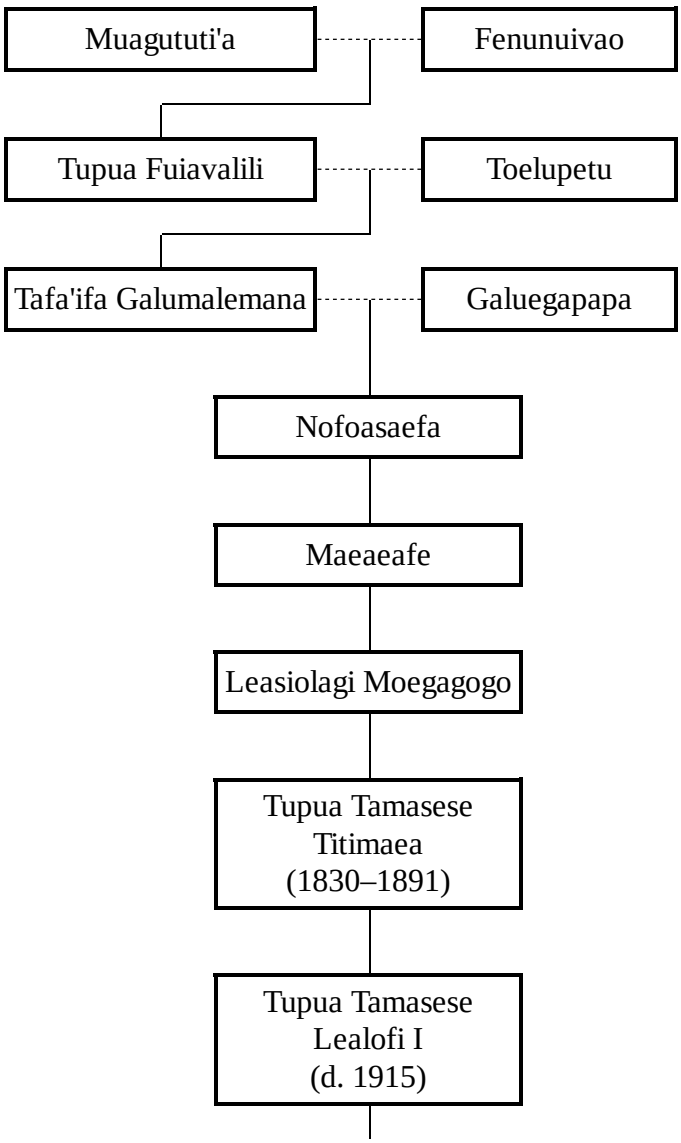
On May 11, 2007, following the death of Malietoa Tanumafili II, Samoa's head of state since independence in 1962, Tupua became one of the two acting heads of state as a member of the Council of Deputies.[2] Tupua was elected Head of state on 16 June 2007. His was the only nomination put forth in Samoa's Fono (parliament) and thus the decision was unanimous. His election was welcomed by many Samoans in New Zealand.[4] He was officially sworn into office on 20 June 2007.[5]

Academia

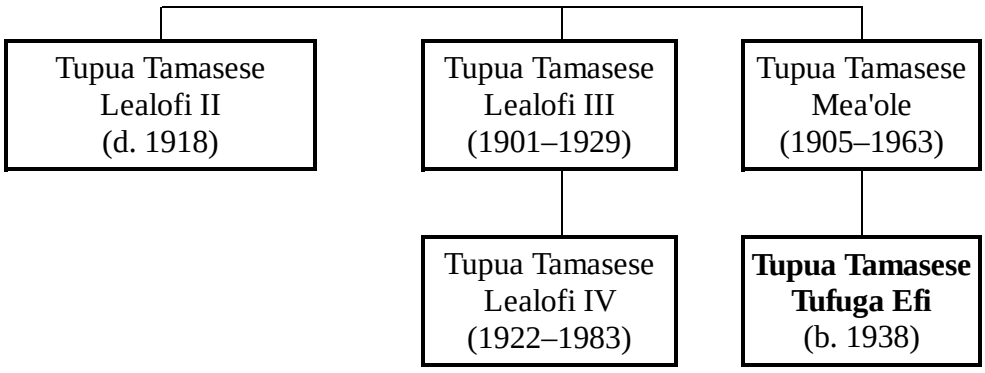
Tupua has held a number of academic positions during and after his political career as an MP and Prime Minister.

Tupua has served as an adjunct professor for Te Whare Wananga o Awanuiarangi in New Zealand.[1] He later went on to serve as an Associate Member of the Matahauariki Institute at Waikato University.[1] Additionally, he has held a position as PhD examiner at Australian National University in Canberra for Pacific and Samoan history.[1]

Tupua is a former resident scholar of the Pacific Studies Centre of the Australian National University and the Macmillan Brown Centre for Pacific Studies at University of Canterbury in New Zealand.[1]



Tupua has helped to begin excavations at Samoa's important Pulemelei Mound archaeological site. Samoans, under Tupua Tamasese, carried out a ceremony to honor Thor Heyerdahl for his contributions to Polynesia and the Pulemelei Mound excavations in 2003.[1] (http://www.kon-tiki.no/Events/indexeng.html)



In late 2007 Tupua established an overseas Boarding School Scholarship to St. Patrick's College, Silverstream, which allows one student per year to live and be schooled in New Zealand for the entirety of their college years, beginning in 2008.[6] Reaction to this saw a media storm as well as a flurry of Samoans living in Wellington to assemble at at the college. Attendees included Prime Minister Helen Clark, Catholic Archbishop John Dew and Victoria University of Wellington professor Galumalemale Hunkin. His visit back to Silverstream was timely as this was also the first year that a Samoan student was appointed Head Boy, Sofara Aiono and student leaders Johnson Taeao and Lafaele Mapusua-Faitoto'a.

Publications

Tupua is a writer and author due to his experiences in government and academia. He has written three books, as well as numerous scholarly journals and publications.[1]

Malietoa Tanumafili II

From Wikipedia, the free encyclopedia

Malietoa Tanumafili II, GCMG, CBE (4 January 1913 – 11 May 2007), also called **Susuga**, was the Malietoa, the title of one of Samoa's four paramount chiefs,[1] and the head of state, or *O le Ao o le Malo*, a position that he held for life, of Samoa from 1962 to 2007. He was co-chief of state in 1962 and became the sole head of state on 15 April 1963.[2] At the time of his death, he was the oldest national leader in the world.

Early and personal life

He was born in 1913 as the son and third child of his parents, Malietoa Tanumafili I and Momoe Lupeuluiva Meleisea. He became the Mālietoa in 1940 following his father's death in 1939.

Tanumafili was educated at the government run Leififi School in Samoa. He went on to enroll at St. Stephen's School and Wesley College in Pukekohe, both of which are in New Zealand. Malietoa was an active athlete during his younger years. His favorite sports included boxing, rugby and cricket.[3] Malietoa's interest in sports continued throughout his life and he was an avid golfer well into his 90s. He could often be seen driving his golf cart around Samoa.[1]

His wife, Lili Tunu, died in 1986.[4] Tanumafili had nine surviving children at the time of his death in 2007: Su'a Vainuupo, Faamausili Moli, Papali'itele Titiuatoa, Papali'itele Ioane, Papali'itele Douglas (sons) and Seiuli Tutai, Lola Tosi and Momoe (daughters). One child died in infancy, while his sons, Papaliitele Eti,died in 2005, Papali'itele Molioo Laupepa, died in 1985.[5][6]

Malietoa Tanumafili II was a follower of the Bahá'í Faith. He was the second royal (after Queen Marie of

Romania) to be a member of that religion. The Bahá'í House of Worship in Tiapapata, eight kilometers from the country's capital of Apia, was dedicated by him in 1984.

Public life

Malietoa Tanumafili II

Tanumafili officially inherited the royal title of Malietoa in 1940, following the 1939 death of his father, Malietoa Tanumafili I,[7] though some media reports claim that he received the title of Malietoa in 1939. Soon after becoming Malietoa, he was appointed to serve as a special adviser, also called *Fautua*,[8] to the New Zealand administration and governor of Samoa, known as the New Zealand Trusteeship of Samoa, until independence in 1962.[7]

Upon Samoa's independence in 1962, Malietoa Tanumafili II became joint O le Ao o le Malo, or head of state, with Tupua Tamasese Mea'ole. Tanumafili and Mea'ole would rule jointly as head of state for just 16 months.[1] When Mea'ole died in 1963, Tanumafili became the sole Samoan head of state, a post he held for life until his death in 2007. He is often credited for providing much of the stability that Samoa has enjoyed post independence.

Malietoa traveled extensively during his reign as the Samoan head of state (O le Ao o le Malo). He traveled to the People's Republic of China for an official state visit in 1976. Additionally, during his reign he also visited Australia, Fiji, Hawai'i, Japan, New Zealand, South Korea, Tonga, the United Kingdom and the former West Germany. Malietoa Tanumafili was among the foreign dignitaries who attended the funeral of Japanese Emperor Showa in 1989.[3]

Malietoa Tanumafili II was described as the last survivor of a generation of important Pacific leaders who guided their countries and peoples from colonialism to independence.[9] His death was the latest in a string of recent, high profile passings of members of this Pacific generation of leaders, which included the late Fijian president, Ratu Sir Kamisese Mara, the King of Tonga, Taufa'ahau Tupou IV, and New Zealand's Maori Queen, Dame Te Atairangikaahu.[10]

Death

Obverse of a 1976 tala depicting Malietoa Tanumafili II.

Malietoa Tanumafili II died at 6:45 P.M. on Friday 11 May 2007, at the Tupua Tamasese Meaole National Hospital at Moto'otua in Apia, Samoa. He was being treated as a patient for pneumonia at the hospital for approximately a week.[11] The cause of his death was from a heart attack.

His death was announced by Samoan Secretary of State Vaasatia Poloma Komiti on SBC TV1. "It is with deepest regret that we inform you of the passing of our Head of State Malietoa Tanumafili II."[12]

Malietoa Tanumafili II was the world's third longest reigning living monarch at the time of his death in May 2007 after Thailand's King Bhumibol Adulyadej, who has reigned since 1946 and Britain's Queen Elizabeth II, who has reigned since 1952.[13]

Funeral

Samoa entered a state of official mourning from the time of the Malietoa's death until his official funeral. All Samoan flags were lowered to half mast in his honour and remembrance. According to tradition, thousands of Samoans were expected to wear white and black as a sign of respect for the Malietoa from 15 May until his state funeral on May 18. The government of Samoa encouraged traditional Samoan dress for the funeral. Samoans were requested specifically to wear "a black lavalava or sulu and a white top with traditional elei patterns." Samoans were also asked to include the teuila flower, the national flower of Samoa, with their mourning attire.[14]

Malietoa Tanumafili II's body was taken from a private funeral home (Ligaliga Funeral) to his residence at Fa'ato'ialemanu on 16 May, which marked the beginning of his funeral services. Hundreds of the Malietoa's close and extended relatives, including his children, attended a special private family service that night.

The State funeral was a rare occasion when ancient rituals and exchanges were made to the Sa Malietoa (the national political 'family' or clan from which the Malietoa title belongs). Traditional cultural presentations (or Si'i Fa'atupu) from other districts and clans from within Samoa were made and ancient funeral rites were performed. The delegation (or auala) from Lufilufi, representing the TuiAtua, circled the Maota of Malietoa at Faatoialemanu where the late Malietoa lay in state, chanting the ancient funeral chants associated with the district of Atua and its relationship with the district of Tuamasaga (where the Malietoa is the paramount title). Traditional delegations representing the Tongan Royal Family and the Fijian Great Council of Chiefs also made cultural presentations to reflect the ancient genealogical ties between Samoa and her southern neighbours Tonga and Fiji.

The major village of the Malietoa title, Malie, played a major role in funeral ceremonies and exchanges. The 'aumaga (untitled men) of Malie, called the Aumaga a Laauli, and the 'aumaga (untitled men) of Falealili, called the Manu Samoa, provided hundreds of traditional guards in and around the compounds where the Malietoa lay in state. They also patrolled the roads around Faatoialemanu and provided escorting duties whenever the body was moved. On the day of the funeral the grounds of Tiafau Malae where the funeral was held were guarded by 300 men of the Aumaga a Laauli. Presiding over the body was the Salelesi (the ancient 'dog' of the Malietoa, from the village of Salelesi (District of Atua). His role is to guard the body and escort it into the tomb. All villages in the District of Tuamasaga and other villages connected to the Malietoa title cut palm leaves and branches of hundreds of coconut trees and laid them by the side of main roads in an ancient mark of mourning for the death of a paramount chief.

[15]

His body was then moved to the Samoan Parliament to lie in state on 17 May.

His funeral was held on 18 May in Apia.[16]

International reaction

American Samoa - **Governor Togiola Tulafono** stated: "I offer my condolence to the people and government of Samoa on the passing of His Highness Malietoa Tanumafili. May God guide the people of Samoa as they mourn his passing."[13] Many American Samoans considered Tanumafili to be the father of both Samoa and American Samoa. Tanumafili was a frequent visitor to the American territory's Flag Day celebrations.

Federated States of Micronesia - Newly elected Micronesian **President Manny Mori** sent a letter to Samoan Prime Minister Tuila'epa Sailele Malielegaoi stating that Malietoa Tanumafili II was a "great leader and

pioneer of Samoa...As a great leader of the Independent State of Samoa, His Highness Malietoa Tanumafili II was one of the prominent Samoan leaders leading up to its Independence in 1962...His wisdom, leadership and dedication contributed to the forgoing and eventual inception of the Samoan Nation...Our thoughts and prayers are with you during this time of national mourning."[17]

Malietoa Tanumafili II

New Zealand - **Prime Minister Helen Clark** reacted to the news of Tanumafili's death: "Through his long reign as Head of State, Malietoa represented Samoa with wisdom, humour and insight...Malietoa was educated at St. Stephens School near Auckland. He was a great friend of New Zealand as Head of State, and was well known to successive New Zealand governments and diplomats...It is significant that New Zealand has a Treaty of Friendship with only one country- Samoa- and our shared unique relationship was due in no small part to Malietoa's influence as a father of modern Samoa. New Zealanders of Samoan descent, together with their palagi counterparts, will be thinking of Samoa, at this sad time."[12]

South Africa - **President Thabo Mbeki** issued a statement of support to Samoan government: "It is with a sense of great sadness and shock that we have learnt of the passing away of His Highness, King Malietoa Tanumafili II on Friday, 11 May 2007. Despite this sad loss to the Samoan nation and people, the King will be long remembered for his passionate and committed service to Samoa and the broader Pacific Islands region...It was a testimony to his astute leadership that for the past 15 years Samoa had stood as a beacon of hope, stability and progress in the Pacific. South Africa therefore applauded the achievements of the King for having been a powerful and resonating voice for democracy and good governance as well as in articulating the development challenges unique to small developing island states."[18]

Bahá'í International Community - The governing body of the Bahá'ís, the Universal House of Justice wrote: "His service to the people of Samoa as Head of State was distinguished by the high principles, genuine compassion and personal humility that characterized the constancy of his concern for the welfare of all. As the first reigning sovereign to accept the Message of Bahá'u'lláh, he set a record that will forever illumine the annals of our Faith, one that future generations will increasingly extol. His great interest for well-nigh four decades in the Faith's progress was reflected in the enthusiastic affirmation of his belief whenever the opportunity presented itself and in the abiding joy with which he regarded the construction in 1984 of the Mother Temple of the Pacific Islands in Samoa...."[19]

Honours

Queen Elizabeth II visited Samoa for a single day in 1977 as part of her visit to the South Pacific on board the Royal Yacht Britannia. While in Samoa, Elizabeth presented Malietoa with the Collar Badge and Star of a Knight Grand Cross of the Order of St Michael and St George.[20]

Also bestowed on Malietoa was the title of Honorary Commander of the Order of the British Empire during his life.

Malietoa Tanumafili II

From Wikipedia, the free encyclopedia

Malietoa Tanumafili II, GCMG, CBE (4 January 1913 – 11 May 2007), also called **Susuga**, was the Malietoa, the title of one of Samoa's four paramount chiefs,[1] and the head of state, or *O le Ao o le Malo*, a position that he held for life, of Samoa from 1962 to 2007. He was co-chief of state in 1962 and became the sole head of state on 15 April 1963.[2] At the time of his death, he was the oldest national leader in the world.

Malietoa Tanumafili II

Malietoa of Samoa

Reign	5th July 1939 - 11th May 2007
Predecessor	Malietoa Tanumafili I
	Tupua Tamasese Tupuola Tufuga Efi (as head of state)
Father	Malietoa Tanumafili I
Mother	Momoe Lupeuluiva Meleisea
Born	4 January 1913 Samoa
Died	11 May 2007 (aged 94) Apia, Samoa
Burial	Mulinu'u

Early and personal life

He was born in 1913 as the son and third child of his parents, Malietoa Tanumafili I and Momoe Lupeuluiva Meleisea. He became the Mālietoa in 1940 following his father's death in 1939.

Tanumafili was educated at the government run Leififi School in Samoa. He went on to enroll at St. Stephen's School and Wesley College in Pukekohe, both of which are in New Zealand. Malietoa was an active athlete during his younger years. His favorite sports included boxing, rugby and cricket.[3] Malietoa's interest in sports continued throughout his life and he was an avid golfer well into his 90s. He could often be seen driving his golf cart around Samoa.[1]

His wife, Lili Tunu, died in 1986.[4] Tanumafili had nine surviving children at the time of his death in 2007: Su'a Vainuupo, Faamausili Moli, Papali'itele Titiuatoa, Papali'itele Ioane, Papali'itele Douglas (sons) and Seiuli Tutai, Lola Tosi and Momoe (daughters). One child died in infancy, while his sons, Papaliitele Eti,died in 2005, Papali'itele Molioo Laupepa, died in 1985.[5][6]

Malietoa Tanumafili II was a follower of the Bahá'í Faith. He was the second royal (after Queen Marie of

Romania) to be a member of that religion. The Bahá'í House of Worship in Tiapapata, eight kilometers from the country's capital of Apia, was dedicated by him in 1984.

Public life

Malietoa Tanumafili II

Tanumafili officially inherited the royal title of Malietoa in 1940, following the 1939 death of his father, Malietoa Tanumafili I,[7] though some media reports claim that he received the title of Malietoa in 1939. Soon after becoming Malietoa, he was appointed to serve as a special adviser, also called *Fautua*,[8] to the New Zealand administration and governor of Samoa, known as the New Zealand Trusteeship of Samoa, until independence in 1962.[7]

Upon Samoa's independence in 1962, Malietoa Tanumafili II became joint O le Ao o le Malo, or head of state, with Tupua Tamasese Mea'ole. Tanumafili and Mea'ole would rule jointly as head of state for just 16 months.[1] When Mea'ole died in 1963, Tanumafili became the sole Samoan head of state, a post he held for life until his death in 2007. He is often credited for providing much of the stability that Samoa has enjoyed post independence.

Malietoa traveled extensively during his reign as the Samoan head of state (O le Ao o le Malo). He traveled to the People's Republic of China for an official state visit in 1976. Additionally, during his reign he also visited Australia, Fiji, Hawai'i, Japan, New Zealand, South Korea, Tonga, the United Kingdom and the former West Germany. Malietoa Tanumafili was among the foreign dignitaries who attended the funeral of Japanese Emperor Showa in 1989.[3]

Malietoa Tanumafili II was described as the last survivor of a generation of important Pacific leaders who guided their countries and peoples from colonialism to independence.[9] His death was the latest in a string of recent, high profile passings of members of this Pacific generation of leaders, which included the late Fijian president, Ratu Sir Kamisese Mara, the King of Tonga, Taufa'ahau Tupou IV, and New Zealand's Maori Queen, Dame Te Atairangikaahu.[10]

Death

Obverse of a 1976 tala depicting Malietoa Tanumafili II.

Malietoa Tanumafili II died at 6:45 P.M. on Friday 11 May 2007, at the Tupua Tamasese Meaole National Hospital at Moto'otua in Apia, Samoa. He was being treated as a patient for pneumonia at the hospital for approximately a week.[11] The cause of his death was from a heart attack.

His death was announced by Samoan Secretary of State Vaasatia Poloma Komiti on SBC TV1. "It is with deepest regret that we inform you of the passing of our Head of State Malietoa Tanumafili II."[12]

Malietoa Tanumafili II was the world's third longest reigning living monarch at the time of his death in May 2007 after Thailand's King Bhumibol Adulyadej, who has reigned since 1946 and Britain's Queen Elizabeth II, who has reigned since 1952.[13]

Funeral

Samoa entered a state of official mourning from the time of the Malietoa's death until his official funeral. All Samoan flags were lowered to half mast in his honour and remembrance. According to tradition, thousands of Samoans were expected to wear white and black as a sign of respect for the Malietoa from 15 May until his state funeral on May 18. The government of Samoa encouraged traditional Samoan dress for the funeral. Samoans were requested specifically to wear "a black lavalava or sulu and a white top with traditional elei patterns." Samoans were also asked to include the teuila flower, the national flower of Samoa, with their mourning attire.[14]

Malietoa Tanumafili II's body was taken from a private funeral home (Ligaliga Funeral) to his residence at Fa'ato'ialemanu on 16 May, which marked the beginning of his funeral services. Hundreds of the Malietoa's close and extended relatives, including his children, attended a special private family service that night.

The State funeral was a rare occasion when ancient rituals and exchanges were made to the Sa Malietoa (the national political 'family' or clan from which the Malietoa title belongs). Traditional cultural presentations (or Si'i Fa'atupu) from other districts and clans from within Samoa were made and ancient funeral rites were performed. The delegation (or auala) from Lufilufi, representing the TuiAtua, circled the Maota of Malietoa at Faatoialemanu where the late Malietoa lay in state, chanting the ancient funeral chants associated with the district of Atua and its relationship with the district of Tuamasaga (where the Malietoa is the paramount title). Traditional delegations representing the Tongan Royal Family and the Fijian Great Council of Chiefs also made cultural presentations to reflect the ancient genealogical ties between Samoa and her southern neighbours Tonga and Fiji.

The major village of the Malietoa title, Malie, played a major role in funeral ceremonies and exchanges. The 'aumaga (untitled men) of Malie, called the Aumaga a Laauli, and the 'aumaga (untitled men) of Falealili, called the Manu Samoa, provided hundreds of traditional guards in and around the compounds where the Malietoa lay in state. They also patrolled the roads around Faatoialemanu and provided escorting duties whenever the body was moved. On the day of the funeral the grounds of Tiafau Malae where the funeral was held were guarded by 300 men of the Aumaga a Laauli. Presiding over the body was the Salelesi (the ancient 'dog' of the Malietoa, from the village of Salelesi (District of Atua). His role is to guard the body and escort it into the tomb. All villages in the District of Tuamasaga and other villages connected to the Malietoa title cut palm leaves and branches of hundreds of coconut trees and laid them by the side of main roads in an ancient mark of mourning for the death of a paramount chief.

[15]

His body was then moved to the Samoan Parliament to lie in state on 17 May.

His funeral was held on 18 May in Apia.[16]

International reaction

American Samoa - **Governor Togiola Tulafono** stated: "I offer my condolence to the people and government of Samoa on the passing of His Highness Malietoa Tanumafili. May God guide the people of Samoa as they mourn his passing."[13] Many American Samoans considered Tanumafili to be the father of both Samoa and American Samoa. Tanumafili was a frequent visitor to the American territory's Flag Day celebrations.

Federated States of Micronesia - Newly elected Micronesian **President Manny Mori** sent a letter to Samoan Prime Minister Tuila'epa Sailele Malielegaoi stating that Malietoa Tanumafili II was a "great leader and

pioneer of Samoa...As a great leader of the Independent State of Samoa, His Highness Malietoa Tanumafili II was one of the prominent Samoan leaders leading up to its Independence in 1962...His wisdom, leadership and dedication contributed to the forgoing and eventual inception of the Samoan Nation...Our thoughts and prayers are with you during this time of national mourning."[17]

Malietoa Tanumafili II

New Zealand - **Prime Minister Helen Clark** reacted to the news of Tanumafili's death: "Through his long reign as Head of State, Malietoa represented Samoa with wisdom, humour and insight...Malietoa was educated at St. Stephens School near Auckland. He was a great friend of New Zealand as Head of State, and was well known to successive New Zealand governments and diplomats...It is significant that New Zealand has a Treaty of Friendship with only one country- Samoa- and our shared unique relationship was due in no small part to Malietoa's influence as a father of modern Samoa. New Zealanders of Samoan descent, together with their palagi counterparts, will be thinking of Samoa, at this sad time."[12]

South Africa - **President Thabo Mbeki** issued a statement of support to Samoan government: "It is with a sense of great sadness and shock that we have learnt of the passing away of His Highness, King Malietoa Tanumafili II on Friday, 11 May 2007. Despite this sad loss to the Samoan nation and people, the King will be long remembered for his passionate and committed service to Samoa and the broader Pacific Islands region...It was a testimony to his astute leadership that for the past 15 years Samoa had stood as a beacon of hope, stability and progress in the Pacific. South Africa therefore applauded the achievements of the King for having been a powerful and resonating voice for democracy and good governance as well as in articulating the development challenges unique to small developing island states."[18]

Bahá'í International Community - The governing body of the Bahá'ís, the Universal House of Justice wrote: "His service to the people of Samoa as Head of State was distinguished by the high principles, genuine compassion and personal humility that characterized the constancy of his concern for the welfare of all. As the first reigning sovereign to accept the Message of Bahá'u'lláh, he set a record that will forever illumine the annals of our Faith, one that future generations will increasingly extol. His great interest for well-nigh four decades in the Faith's progress was reflected in the enthusiastic affirmation of his belief whenever the opportunity presented itself and in the abiding joy with which he regarded the construction in 1984 of the Mother Temple of the Pacific Islands in Samoa...."[19]

Honours

Queen Elizabeth II visited Samoa for a single day in 1977 as part of her visit to the South Pacific on board the Royal Yacht Britannia. While in Samoa, Elizabeth presented Malietoa with the Collar Badge and Star of a Knight Grand Cross of the Order of St Michael and St George.[20]

Also bestowed on Malietoa was the title of Honorary Commander of the Order of the British Empire during his life.

Swaziland

From Wikipedia, the free encyclopedia

Swaziland, officially the **Kingdom of Swaziland** (*Umbuso weSwatini*), and sometimes called **Ngwane** or **Swatini**, is a landlocked country in Southern Africa, bordered to the north, south and west by South Africa, and to the east by Mozambique. The nation, as well as its people, are named after the 19th century king Mswati II.

Swaziland is a small country, no more than 200 kilometres (120 mi) north to south and 130 kilometres (81 mi) east to west. The western half is mountainous, descending to a lowveld region to the east. The eastern border with Mozambique and South Africa is dominated by the escarpment of the Lebombo Mountains. The climate is temperate in the west, but may reach 40 °C (104 °F) in summer in the lowveld. Rainfall occurs mainly in the summer and may reach 2 metres (6.6 ft) in the west.

The area that Swaziland now covers has been continuously inhabited since prehistory. Today, the population is primarily ethnic Swazis whose language is siSwati, though English is spoken as a second language. The Swazi people descend from the southern Bantu who migrated from Central Africa in the 15th and 16th centuries. The Anglo-Boer War saw the United Kingdom make Swaziland a protectorate under its direct control. Swaziland gained independence in 1968. Swaziland is a member of the Southern African Development Community, the African Union, and the Commonwealth of Nations. The head of state is the king, who appoints the prime minister and a small number of representatives for both chambers of parliament. Elections are held every five years to determine the majority of the representatives. A new constitution was adopted in 2005.

Some 75% of the population are employed in subsistence farming, and 60% of the population live on less than the equivalent of US$1.25 per day.[4] Swaziland's main trading partner is South Africa, and its currency is pegged to the South African rand. Swaziland's economic growth and societal integrity is highly endangered by its disastrous HIV epidemic, to an extent where the United Nations Development Program has written that if it continues unabated, the "longer term existence of Swaziland as a country will be seriously threatened."[5] The infection rate in the country is unprecedented and the highest in the world at 26.1% of adults,[6] and over 50% of adults in their 20s.[5]

History

Lake with Hippopotami in the Mlilwane reserve, Swaziland, August 2003

Main article: History of Swaziland

Artifacts indicating human activity dating back to the early Stone Age 200,000 years ago have been found in the Kingdom of Swaziland. Prehistoric rock art paintings date from ca. 25,000 B.C. and continue up to the 19th century.

The earliest inhabitants of the area were Khoisan hunter-gatherers.They were largely replaced by the Bantu tribes during Bantu migrations who hailed from the Great Lakes regions of Eastern Africa. Evidence of agriculture and iron use dates from about the 4th century and people speaking languages ancestral to current Sotho and Nguni languages began settling no later than the 11th century. The Bantu people known as the Swazis established iron-working and settled farming colonies in the 15th century after crossing the Limpopo river. They experienced great economic pressure from the rival Ndwandwe clans from the south.[7]

Estimates for the country explicitly take into account the effects of excess mortality due to AIDS; this can result in lower life expectancy, higher infant mortality and death rates, lower population and growth rates, and changes in the distribution of population by age and sex than would otherwise be expected.

The country derives its name from a later king, Mswati I. However, *Ngwane* is an alternative name for Swaziland and Dlamini remains the surname of the royal house, while *Nkosi* means "king". Scholarly history of Swaziland shows that independent chiefdoms and small kingdoms dominated by various clans were initially conquered and incorporated into the growing Ngwane kingdom ruled by members of the Dlamini clan sometime in the 18th and 19th centuries, long before British colonisation.[8]

According to Swazi royalist tradition, these clans came to be classified in the Dlamini kingdom as the *Emakhandzambile* category of clans ("those found ahead", e.g. the Gamedze), meaning that they were on the land prior to Dlamini immigration and conquest, as opposed to the *Bomdzabuko* ("true Swazi") who accompanied the Dlamini kings, and the *Emafikemuva* ("those who came behind") who joined the kingdom later. *Emakhandzambile* clans initially were incorporated with wide autonomy, and often in part by granting them special ritual and political status (cf. mediatisation), but the extent of their autonomy was drastically curtailed by King Mswati II, who attacked and subdued some of the clans in the 1850s.[8]

The autonomy of the Swaziland Nation was dictated by British rule of southern Africa in the 19th and 20th centuries. In 1881 the British government signed a convention recognizing Swazi independence. However, controversial land and mineral rights concessions were made under the authority of the Foreign Jurisdiction Act of 1890 in terms of which the administration of Swaziland was also placed under that of the then South African Republic (Transvaal). Swaziland was indirectly involved in the Second Boer War (1899–1902).

The Swaziland independence Constitution was promulgated by Britain in November 1963 in terms of which a legislative Council and an Executive Council were established. This development was opposed by the Swazi National Council (liqoqo).

Despite such opposition, elections took place and the first Legislative Council of Swaziland was constituted on 9 September 1964. Changes to the original constitution proposed by the Legislative Council were accepted by Britain and a new Constitution providing for a House of Assembly and Senate was drawn up. Elections under this Constitution were held in 1967. Since 1973, Swaziland has seen a rather quiet struggle between pro-multiparty activists and supporters of the current Tinkhundla (constituencies) System of governance or Grass Roots Democracy System.

In June 2011, Swaziland, fearing bankruptcy, asked for a financial bailout from South Africa.[9]

Government

Main articles: Politics of Swaziland and Human rights in Swaziland

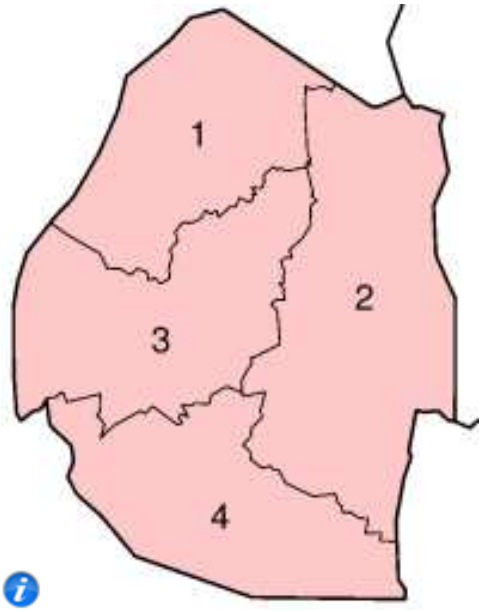
See also: Foreign relations of Swaziland and Military of Swaziland

The head of state is the king or *Ngwenyama* (lit. *Lion*), currently King Mswati III, who ascended to the throne in 1986 after the death of his father King Sobhuza II in 1982 and a period of regency. By tradition, the king reigns along with his mother or a ritual substitute, the *Ndlovukati* (lit. *She-Elephant*). The former was viewed as the administrative head of state and the latter as a spiritual and national head of state, with real power counter-balancing that of the king, but during the long reign of Sobhuza II the role of the *Ndlovukati* became more symbolic. The king appoints the prime minister from the legislature and also appoints a minority of legislators to both chambers of Libandla (parliament), with help from an advisory council. The king is allowed by the constitution to appoint some members to parliament for special interests. These special interests are citizens who might have been left out by the electorate during the course of elections or did not enter as candidates. This is done in order to balance views in parliament. Special interests could be people of gender, race, disability, business community, civic society, scholars, chiefs and so on. The Senate consists of 30 members which some are

appointed by the king on recommendation of the advisory council and others elected by the lower house. The House of Assembly has 65 seats, 55 of which are occupied by elected representatives from the 55 constituencies around the country, 10 appointed by the king on recommendation of the advisory council and the attorney general is the ex-officio member. Elections are held every five years.

Embassy of Swaziland in Washington, D.C. USA

In 1968, Swaziland adopted a Westminster-style constitution, but in 1973 King Sobhuza II on the advice of parliament at the time suspended it due to widespread complaints by citizens of the country. In 2001, King Mswati III appointed a committee to draft a new constitution. Drafts were released for comment in May 1999 and November 2000. These were strongly criticized by civil society organizations in Swaziland and human rights organizations elsewhere. In 2005, the constitution was put into effect, though there is still much debate in the country about the constitutional reforms. From the early seventies, there was active resistance to the royal hegemony. However despite complaints from progressive formations, strong support for the monarchy and the current political system by the majority of the population is still there. This is due to the fact that submissions were made by citizens around the country to commissions including the constitutional draft committee that they would prefer to maintain the current situation.



The Swazi bicameral Parliament or Libandla consists of the Senate (30 seats; 10 members appointed by the House of Assembly and 20 appointed by the monarch; to serve five-year terms) and the House of Assembly (65 seats; 10 members appointed by the monarch and 55 elected by popular vote; to serve five-year terms) elections: House of Assembly – last held 19 September 2008 (next to be held in 2013) election results: House of Assembly – balloting is done on a non-party basis; candidates for election are nominated by the local council of each constituency and for each constituency the three candidates with the most votes in the first round of voting are narrowed to a single winner by a second round.

Administrative divisions

Main article: Districts of Swaziland

Swaziland is divided into four districts:

- Hhohho
- Lubombo
- Manzini
- Shiselweni

Each district is further divided into tinkhundla. There are 55 tinkhundla in Swaziland and each elects one representative to the House of Assembly of Swaziland.

Geography

Main article: Geography of Swaziland

Swaziland lies across a geological fault which runs from the Drakensberg Mountains of Lesotho, north through the Eastern highlands of Zimbabwe, forms the Great Rift

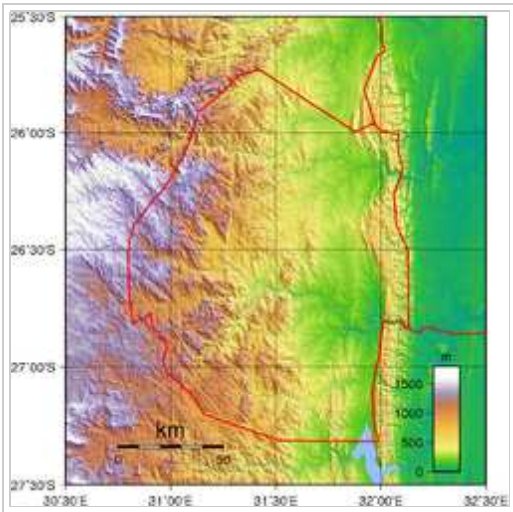
Valley of Kenya and, eventually, peters out in present-day Turkey.

A small, land-locked Kingdom, Swaziland is bordered in the North, West and South by the Republic of South Africa and by Mozambique in the East. Although Swaziland has a land area of only 17,364 km^2, roughly the size of Wales or the American State of New Jersey, it contains four separate geographical regions. These run from North to South and are determined by altitude.

Swaziland is located at approximately 26°30'S, 31°30'E.[10] Swaziland also offers a wide variety of landscapes, from the mountains along the Mozambican border to savannas in the east and rain forest in the northwest. Several rivers flow through the country, such as the Great Usuthu River.

Landscape in Swaziland

Along the eastern border with Mozambique is the Lubombo, a mountain ridge, at an altitude of around 600 meters. The mountains are broken by the canyons of three rivers, the Ngwavuma, the Usutu and the Mbuluzi River. This is cattle ranching country.



The western border of the country, with an average altitude of 1200 meters, lies on the edge of an escarpment. Between the mountains rivers rush through deep gorges making this a most scenic region. Mbabane, the capital, is located on the Highveld.

The Middleveld, lying at an average 700 meters above sea level is the most densely populated region of Swaziland with a lower rainfall than the mountains. Manzini, the principal commercial and industrial city, is situated in the Middleveld.

The Lowveld of Swaziland, at around 250 meters, is less populated than other areas and presents a typical African bush country of thorn trees and grasslands. Development of the region was inhibited, in early days, by the scourge of malaria.

Climate

Main article: Climate of Swaziland

Topographic map of Swaziland

The seasons are the reverse of those in the Northern Hemisphere with December being mid-summer and June mid-winter. Generally speaking, rain falls mostly during the summer months, often in the form of thunderstorms. Winter is the dry season. Annual rainfall is highest on the Highveld in the West, between 1,000 and 2,000 mm (39.4 and 78.7 in) depending on the year. The further East, the less rain, with the Lowveld recording 500 to 900 mm (19.7 to 35.4 in) per annum. Variations in temperature are also related to the altitude of the different regions. The Highveld temperature is temperate and, seldom, uncomfortably hot while the Lowveld may record temperatures around 40 °C (104 °F) in summer.

The average temperatures at Mbabane, according to seasons:

Spring	September – October	18 °C (64.4 °F)
Summer	November – March	20 °C (68 °F)
Autumn	April – May	17 °C (62.6 °F)
Winter	June – August	13 °C (55.4 °F)

Economy

Main article: Economy of Swaziland

Coins of Swaziland

Swaziland's economy is diversified, with agriculture, forestry and mining accounting for about 13% of GDP, manufacturing (textiles and sugar-related processing) representing 37% of GDP and services – with government services in the lead – constituting 50% of GDP. Title Deed Lands (TDLs), where the bulk of high value crops are grown (sugar, forestry, and citrus) are characterized by high levels of investment and irrigation, and high productivity. Nevertheless, the majority of the population – about 75%—is employed in subsistence agriculture on Swazi Nation Land (SNL), which, in contrast, suffers from low productivity and investment. This dual nature of the Swazi economy, with high productivity in textile manufacturing and in the industrialized agricultural TDLs on the one hand, and declining productivity subsistence agriculture (on SNL) on the other, may well explain the country's overall low growth, high inequality and unemployment.

Economic growth in Swaziland has lagged behind that of its neighbors. Real GDP growth since 2001 has averaged 2.8%, nearly 2 percentage points lower than growth in other Southern African Customs Union (SACU) member countries. Low agricultural productivity in the SNLs, repeated droughts, the devastating effect of HIV/AIDS and an overly large and inefficient government sector are likely contributing factors. Swaziland's public finances deteriorated in the late 1990s following sizable surpluses a decade earlier. A combination of declining revenues and increased spending led to significant budget deficits.

The considerable spending did not lead to more growth and did not benefit the poor. Much of the increased spending has gone to current expenditures related to wages, transfers, and subsidies. The wage bill today constitutes over 15% of GDP and 55% of total public spending; these are some of the highest levels on the African continent. The recent rapid growth in SACU revenues has, however, reversed the fiscal situation, and a sizable surplus was recorded since 2006. SACU revenues today account for over 60% of total government revenues. On the positive side, the external debt burden has declined markedly over the last 20 years, and domestic debt is almost negligible; external debt as a percent of GDP was less than 20% in 2006.

The Swazi economy is very closely linked to the South African economy, from which it receives over 90% of its imports and to which it sends about 70% of its exports. Swaziland's other key trading partners are the United States and the EU, from whom the country has received trade preferences for apparel exports (under the African Growth and Opportunity Act – AGOA – to the US) and for sugar (to the EU). Under these agreements, both apparel and sugar exports did well, with rapid growth and a strong inflow of foreign direct investment. Textile exports grew by over 200% between 2000 and 2005 and sugar exports increasing by more than 50% over the same period.

The continued vibrancy of the export sector is threatened by the removal of trade preferences for textiles, the accession to similar preferences for East Asian countries, and the phasing out of preferential prices for sugar to

the EU market. Swaziland will thus have to face the challenge of remaining competitive in a changing global environment. A crucial factor in addressing this challenge is the investment climate. The recently concluded Investment Climate Assessment provides some positive findings in this regard, namely that Swaziland firms are among the most productive in Sub-Saharan Africa, although they are less productive than firms in the most productive middle-income countries in other regions. They compare more favorably with firms from lower middle income countries, but are hampered by inadequate governance arrangements and infrastructure.

Swaziland's currency is pegged to the South African rand, subsuming Swaziland's monetary policy to South Africa. Customs duties from the Southern African Customs Union, which may equal as much as 70% of government revenue this year, and worker remittances from South Africa substantially supplement domestically earned income. Swaziland is not poor enough to merit an IMF program; however, the country is struggling to reduce the size of the civil service and control costs at public enterprises. The government is trying to improve the atmosphere for foreign direct investment.

Health

Swaziland is critically affected by the HIV and AIDS pandemic, which is now an existential threat to its society. As reported in the 2009 CIA World Factbook, Swaziland has the highest HIV infection rate in the world (26% of all adults; more in other reports) and also the lowest life expectancy at 32 years, which is 6 years lower than the next lowest average of Angola. From another perspective, the last available World Health Organization data in 2002 shows that 64% of all deaths in the country were caused by HIV/AIDS.[11] In 2009, an estimated 7,000 people died from AIDS-related causes,[12] from a total population of approximately 1,185,000.[13] This translates into an estimated 0.6% of the population dying from AIDS every year. Chronic illnesses that are the most prolific causes of death in the developed world account only for a minute fraction of deaths in Swaziland; for example, heart disease, strokes, and cancer cause fewer than 5% of deaths in Swaziland in total, compared to 55% of all deaths yearly in the US.[14]

In 2004, Swaziland acknowledged for the first time that it suffered an AIDS crisis, with 38.8% of tested pregnant women infected with HIV (see AIDS in Africa). Prime Minister Themba Dlamini declared a humanitarian crisis due to the combined effect of drought, land degradation, increased poverty, and HIV/AIDS. According to the 2011 UNAIDS Report, Swaziland is close to achieving universal access to HIV/AIDS treatment, defined as 80% coverage or greater. Estimates of treatment coverage range from 70% to 80% of those infected.[15]

Life expectancy has fallen from 61 years in 2000 to 32 years in 2009.[16] Tuberculosis is also a significant problem, with an 18% mortality rate. Many patients have a multi-drug resistant strain, and 83% are co-infected with HIV.[17]

Public expenditure was at 4% of the GDP of the country, whereas private expenditure was at 2.3%.[18] There were 16 physicians per 100,000 persons in the early 2000s.[18] Infant mortality was at 69 per 1,000 in 2005,[18] with the WHO showing that 47% of all deaths under 5 are caused by HIV/AIDS.[11]

Culture

The principal Swazi social unit is the homestead, a traditional beehive hut thatched with dry grass. In a polygamous homestead, each wife has her own hut and yard surrounded by reed fences. There are three

structures for sleeping, cooking, and storage (brewing beer). In larger homesteads there are also structures used as bachelors' quarters and guest accommodation.

Princess Sikhanyiso Dlamini at the Reed Dance festival in Swaziland in 2006

Central to the traditional homestead is the cattle byre, a circular area enclosed by large logs interspaced with branches. The cattle byre has ritual as well as practical significance as a store of wealth and symbol of prestige. It contains sealed grain pits. Facing the cattle byre is the great hut which is occupied by the mother of the headman.

The headman is central to all homestead affairs and he is often polygamous. He leads through example and advises his wives on all social affairs of the home as well as seeing to the larger survival of the family. He also spends time socializing with the young boys, who are often his sons or close relatives, advising them on the expectations of growing up and manhood.

Traditional homes in Swaziland

The Sangoma is a traditional diviner chosen by the ancestors of that particular family. The training of the Sangoma is called "kwetfwasa". At the end of the training, a graduation ceremony takes place where all the local sangoma come together for feasting and dancing. The diviner is consulted for various reasons, such the cause of sickness or even death. His diagnosis is based on "kubhula", a process of communication, through trance, with the natural super-powers. The Inyanga (a medical and pharmaceutical specialist in western terms) possesses the bone throwing skill ("kushaya ematsambo") used to determine the cause of the sickness.

The most important cultural event in Swaziland is the Incwala ceremony. It is held on the fourth day after the full moon nearest the longest day, December 21. Incwala is often translated in English as 'first fruits ceremony', but the King's tasting of the new harvest is only one aspect among many in this long pageant. Incwala is best translated as 'Kingship Ceremony' : when there is no king, there is no Incwala. It is high treason for any other person to hold an Incwala.

Every Swazi may take part in the public parts of the Incwala. The climax of the event is the fourth day of the Big Incwala. The key figures are the King, Queen Mother, royal wives and children, the royal governors (indunas), the chiefs, the regiments, and the "bemanti" or "water people".

Swaziland's most well-known cultural event is the annual Reed Dance. In the eight day ceremony, girls cut reeds and present them to the queen mother and then dance. (There is no formal competition.) It is done in late August or early September. Only childless, unmarried girls can take part. The aims of the ceremony are to preserve girls' chastity, provide tribute labour for the Queen mother, and to encourage solidarity by working together. The royal family appoints a commoner maiden to be "induna" (captain) of the girls and she announces over the radio the dates of the ceremony. She will be an expert dancer and knowledgeable on royal protocol. One of the King's daughters will be her counterpart.

Today's Reed Dance is not an ancient ceremony, but developed out of the old "umchwasho" custom. In "umchwasho", all young girls were placed in a female age-regiment. If any girl fell pregnant outside of marriage, her family paid a fine of one cow to the local chief. After a number of years, when the girls had reached a marriageable age, they would perform labour service for the Queen Mother, ending with dancing and feasting. The country was under the chastity rite of "umchwasho" until 19 August 2005.

Swaziland is also known for a strong presence in the handcrafts industry. The formalized handcraft businesses of Swaziland employ over 2,500 people, many of whom are women (per TechnoServe Swaziland Handcrafts Impact Study," February 2011). The products are unique and reflect the culture of Swaziland, ranging from housewares, to artistic decorations, to complex glass, stone, or wood artwork.

Education

Main article: Education in Swaziland

Education in Swaziland is now free at primary level mainly 1st and 2nd grades and also free for orphaned and vulnerable children but not compulsory.[19] In 1996, the net primary school enrollment rate was 90.8%, with gender parity at the primary level.[19] In 1998, 80.5% of children reached grade five.[19] The University of Swaziland provides higher education. The Swaziland National Library Service operates public community libraries throughout Swaziland and establishes school libraries in partnership with Fundza, a non-governmental organization and the African Library Project.[20]

Demographics

Main article: Demographics of Swaziland

Swazi people dancing in a cultural village show.

The majority of Swaziland's population is ethnically Swazi, mixed with a small number of Zulu and White Africans, mostly people of British and Afrikaner descent. Traditionally Swazi have been subsistence farmers and herders, but most now mix such activities with work in the growing urban formal economy and in government. Some Swazi work in the mines in South Africa.

Swaziland also received Portuguese settlers and African refugees from Mozambique. Christianity in Swaziland is sometimes mixed with traditional beliefs and practices. Many traditionalists believe that most Swazi ascribe a special spiritual role to the monarch. Residents of Swaziland have the lowest documented life expectancy in the world at 31.88 years, less than half the world average of 69.4.[21]

Languages

SiSwati[22] (also known as *Swati*, *Swazi* or *Seswati*) is a Bantu language of the Nguni Group, spoken in Swaziland and South Africa. It has 2.5 million speakers and is taught in schools. It is an official language of Swaziland (along with English) and one of the official languages of South Africa.

About 76,000 people in the country speak Zulu.[23] Tsonga, which is spoken by many people throughout the region is spoken by about 19,000 people in Swaziland. Afrikaans is also spoken by some residents of Afrikaner descent.

Religions

Main article: Religion in Swaziland

The most common religion in Swaziland is Christianity, which is adhered to by 82.70% of the total population.

Various Protestant and indigenous African churches, including African Zionist, constitute the majority of the Christians, followed closely by Roman Catholicism. There are also non-Christian religions practiced in the country such as Islam (0.95%), the Bahá'í Faith (0.5%), and Hinduism (0.15%).[24]

History of Swaziland

From Wikipedia, the free encyclopedia

According to tradition, the original followers of the present Dlamini clan of the Swazi country migrated south before the 16th century to what is now Mozambique. Following a series of conflicts with people living in the area of modern Maputo, the *Ngwane*, as they then called themselves, settled in northern Zululand in about 1750. Unable to match growing Zulu strength, the Ngwane moved the center of their kingdom northward in the 1810s and 1820s. Under King Sobhuza I they established themselves in the heartland of modern Swaziland, conquering and incorporating many long-established independent chiefdoms, whose descendants also make up much of the modern Swazi nation.

Flag of Swaziland

According to Swazi royalist tradition, these chiefdoms came to be classified in the Dlamini kingdom as the *Emakhandzambile* category of clans ("those found ahead", e.g. the Gamedze), meaning that they were on the land prior to Dlamini immigration and conquest, as opposed to the *Bomdzabuko* ("true Swazi") who accompanied the Dlamini kings, and the *Emafikemuva* ("those who came behind") who joined the kingdom later. *Emakhandzambile* clans initially were incorporated with wide autonomy, and often in part by granting them special ritual and political status (cf. mediatisation), but the extent of their autonomy was drastically curtailed by King Mswati II, who attacked and subdued some of the clans in the 1850s.[1]

The Dlamini clan consolidated their hold under several able leaders. The most important was Mswati II, from whom the Swazi derive their name. Under his leadership from the 1840s to 1865, the Swazi expanded their territory to the north and west, and stabilized the southern frontier with the Zulu.

British Colonialism

Contact with the British came early in Mswati's reign, when he asked British authorities in South Africa for assistance against Zulu raids into Swaziland. It was also during Mswati's reign that the first whites, Transvaal Boers, settled in the country. Following Mswati's death, the Swazis reached agreements with British and South African Republic authorities over a range of issues, including independence, claims on resources by Europeans, administrative authority, and security, though the white parties later reneged on those agreements. Over Swazi protests, the South African Republic with British concurrence established incomplete colonial rule over Swaziland from 1894 to 1899, when they withdrew their administration with the start of the Anglo-Boer War. In

1902 British forces entered the territory, proclaiming British overrule and jurisdiction in 1903, initially as part of the Transvaal. In 1906 Swaziland was separated administratively when the Transvaal Colony was granted responsible government.

South Africa, Lesotho and Swazuiland in 1885.

Anglo-Boer War

Swaziland was indirectly involved in the Second Boer War (1899–1902). The beginning of the conflict found it administrated by the South African Republic, with the colonial headquarters set at Bremersdorp. In September, 1899, with war considered imminent, the colonists started evacuating the area. Ngwane V of Swaziland (Bhunu) was informed that the area would be left in his care during the absence of the white residents. The Swaziland Police under Sgt Opperman started practicing for war while issuing rifles and ammunition to remaining burghers. On 4 October 1899, Special Commissioner Krogh issued an official notice of evacuation for "all white inhabitants" with the excecption of burghers eligible for active service. Most of the British subjects were escorted towards the border with Mozambique, women and other South African civilians were left heading for various destinations. People with dual nationality were still subject to the draft, though unwilling to fight against their own people. Unsurprisingly, several of them escaped towards Mozambique or the Colony of Natal.[2]

It was not long before skirmishes involved the Swaziland forces. On 28 October 1899, the newly formed Swaziland Commando unit moved against a British police post at Kwaliweni. The South African unit counted about 200 burghers, while the outpost only had 20 men. Bhunu managed to warn the police post of the approaching attack. The police retreated towards Ingwavuma, seat of a magistrate. The Commando burned the abandoned post and a nearby shop to the ground. Then Joachim Ferrera led them towards Ingwavuma. The village was not better guarded and had to also be evacuated. The Swaziland Commando burned it to the ground, while the magistrate and his people escaped to Nongoma.[2]

Meanwhile, the Swazi people had been warned by Piet Joubert to remain calm and not involve themselves in the conflict. Bhunu instead found himself unrestricted from colonial authorities for the first time. He soon felt free to settle old scores with political enemies. News of the violent deaths of diplomat Mnkonkoni Kunene and several others in time reached the Boer forces involved in the Siege of Ladysmith. Several of the dead had close ties to the colonial authorities. Joubert had to assure worried commanders that Swaziland was not turning against them. Indeed, spies reported that Bhunu feared he had been bewitched. He was striking against whoever he suspected of the deed. On 10 December 1899, Bhunu died due to a serious illness. He had blamed it on sorcery, though contemporaries suspect it was alcohol-induced. His mother Labotsibeni Mdluli became regent. She set about eliminating the surviving advisors and favourites of Bhunu.[2]

Swazi regiments were roaming the country during the internal conflicts. The South African authorities were worried that the violence could expand towards the south-western border of Swaziland, where Boer farms were cultivated by women and children. They had the farms evacuated and the population transferred to Piet Retief. The farmers from Piet Retief, Wakkerstroom and their vicinities had made a practice of trekking their ship into Swaziland for winter grazing. In January, 1900, Francis William Reitz, the State Secretary of the South African Republic, started issuing orders discouraging any sheep-herders from entering Swaziland. On 18 April 1900, any such entry was forbidden. The Swaziland Commando were by that point far from their initial homebase, fighting along the Tugela River.[2]

The British had their own concerns about Swaziland. They suspected that supplies from Mozambique could be smuggled to the Boers through Swaziland. Queen-regent Labotsibeni was however attempting to maintain

neutrality in the wider conflict, pre-occupied with securing the throne. Her grandson Sobhuza II of Swaziland was underage and there were other viable candidates for the throne among the House of Dlamini. In particular, Prince Masumphe. Masumphe was a cousin of Bhunu and a rival candidate for the throne since 1889. His line of the family maintained close relations with the Boers, the Prince himself educated at Pretoria. By May, 1900, the Queen was worried that the Boers would intervene against her in case of a succession dispute. She opened communications with the restored magistrate of Ingwavuma, arranging to flee to his area if needed.[2]

Her messages were passed to the government of Natal and from there to Cape Town, the capital of the Cape Colony. A reply by Johannes Smuts assured her that the British had not forgotten about the Swazi and British representatives would reliably return to Swaziland at an early date. The message might have reflected Smuts' own ambitions but his authority on such matters was rather questionable. But Frederick Roberts, Baron Roberts, a high-ranking military officer, was also convinced to start diplomatic contacts with the Queen. His representatives were to persuade the queen-regent of three things. First, the need to prevent the Boers from occupying the mountains of the area. Second, the necessity of formally appealing for British protection. Third, to make clear that the indiscriminate murders in Swaziland would have to end.[2]

The British contacts with the Swazi played a role in advance of their siege of Komatipoort, a nearby South African stronghold. In September 1900, once the town fell, the British were able to capture Barberton and its area. A number of Boers fled into Swaziland. Only for the Swazi to disarm them and confiscate their cattle. The end of South African presence in the area left open the question of what to do with Swaziland. Smuts had been campaigning since May to convince the British authorities to place Swaziland under their administration. By September, Smuts had gained some support from civil authorities. But not by military ones, since Roberts did not want to devote any of his forces to an invasion or occupation of the area. Nevertheless, Smuts attempted some diplomatic contacts with the Swazi. Not particularly successful ones. The indvuna Smuts met for discussions refused to give any information on the internal affairs of Swaziland or Boer activities.[2]

The fall of Komatipoort resulted in increasing the importace of Swaziland for the Boers. To maintain their communications with diplomatic and trade contacts in Lourenço Marques, Mozambique, the Boers had to sent messengers through Swaziland. Which was difficult since British forces were allowed to pass through certain Swazi areas. By November 1900, the Queen was able to assure both Roberts and Smuts that she "was doing her best to drive Boers out of her country". A few armed burghers and their African allies, hostile to her government, were still active at times.[2]

On 29 November 1900, Roberts was relieved of his command. His replacement was Herbert Kitchener, Baron Kitchener of Khartoum. By late December, Smuts contacted the military secretary office of Kitchener concerning the Swaziland situation. Smuts had secured the position of Resident Commissioner of Swaziland though the British had no actual authority over the area. He attempted to convince Kitchener it was time to establish a permanent military presence in Swaziland. With himself taking charge of the area. Kitchener had a different view. Starting his own correspondence with Labotsibeni, Kitchener insisted on three points. First, the Swazi were still required to not take part in the war. Second, no British forces would be send in Swaziland unless the area faced a Boer invasion. Third, the Swazis were now directly under the authority of the British Crown, owing their loyalty to Victoria of the United Kingdom.[2]

In December 1900-January 1901, there were information that retreating Boers were attempting to flee through Swaziland. Eight British columns were sent to either force the Boer commandos to surrender or flee to Swaziland. A certain column under Horace Smith-Dorrien proceeded all the way to the Swaziland border, managing to capture several Boer wagons and large numbers of cattle and sheep on 9 February 1901. Most of the captured Boers were sent to the concentration camp of Volksrust. On February 11, another column under Edmund Allenby was positioned at the southern border of Swaziland. On 14 February, Smith-Dorrien's forces reached Amsterdam. There he was contacted by envoys of the Queen-regent, requesting aid in driving the Boers

off her land. In response, the Imperial Light Horse and the Suffolk Regiment were send into Swaziland.[2]

Joined by armed Swazis, the two regiments were able to capture about 30 Boers in an initial skirmish. However heavy rains soon slowed their advance through the country. On 28 February 1901, other 200 men of the British mounted infantry entered Swaziland. Under Lt-Col Henry, this force managed to locate and capture the transport convoy of the Piet Retief Commando. About 65 Boers were captured in the operation. The remnants of the Commando retreated towards the southern border of Swaziland, only to get captured by the British forces stationed there. By early March, Smith-Dorrien noted that the Swazis were pillaging Boer residences. By this time, Allenby had reached Mahamba and set camp there, Henry was pursuing another Boer wagon convoys and Queen-regent Labotsibeni was ordering her Impis to clear their land from the Boers. Henry eventually managed to return to Derby with several prisoners, while Allenby and his forces reached the vicinity of Hlatikulu. The burthers had to limit themselves to "the hills of southwestern Swaziland".[2]

Surviving accounts from the Devonshire Regiment indicate that the Swazis were acting as "a ninth column, commanded by the Queen of the Swazis". On 8 March 1901, remnants of the Piet Retief Commando, accompanied by women and children, were attacked by forces supposedly under Chief Ntshingila Simelano. The latter consisted of about 40 men, including two riflemen. 13 Burghers and one African guide were killed, several wounded, the others were scattered. Some of the survivors later surrendered to the 18th Hussars. Ntshingila later denied any involvement in the massacre. In any case, the incident terrified several other Boers. Between 8 and 11 March, about 70 burghers and various women children chose to surrender to Allenby rather than face the Swazis. The British nevertheless warned Labotsibeni to cease further massacres.[2]

On 11 April 1901, Louis Botha corresponded with Kitchener, complaining that British Officers were inducing the Swazis to fight against the Boers. Claiming the result was the indiscriminate murders of Burghers, women and children by Swazi commandos. Allenby attributed the killings partly to Swazi anxiety to counter Boer incursions into their territory and partly to their fear of Boer reprisals. That is what the Boers would do when the British eventually left. Allenby himself refused to allow large numbers of armed Swazis to join his column, though he still used a few of them as guides. Smuts finally entered Swaziland during this month, though unable to establish his authority over any British forces.[2]

The presence of regular British troops allowed the Queen-regent to present to them her concerns over an irregular unit, "Steinaecker's Horse". Created early in the war as a unit of adventurers and mercenaries under British command, they were well-known for looting Boer property. But with the Boer inreasingly impoverished, they had turned their attention to the cattle of the Swazi. Labotsibeni complained to both sides that this unit consisted of common robbers occupying Bremersdorp. Botha responded by sending a Commansdo Unit against the Horse. They were to avoid antagonizing the Swazi in any way. The Swazi National Council agreed to let them pass. Between 21 and 23 July 1901, the Ermelo Commando succeeded in forcing most of the "Steinaecker's Horse" forces to retreat, capturing about 35 men, killing or wounding a few and burning Bremersdorp to the ground.[2]

Both the British and the Boers continued to have access to Swaziland with occasional skirmishes occurring. On 8 November 1901, for example, the 13th Hussars captured 14 burghers near Mahamba. The skirmishes ended in February 1902 with the defeat of the final Boer unit in Swaziland.[2]

Post-war

Throughout the colonial period from 1906 to 1968, Swaziland was governed by a resident commissioner who ruled according to decrees issued by the British High Commissioner for South Africa. Such decrees were formulated in close consultation with the resident commissioners, who in turn took informal and formal advice

from white settler interests and the Swazi royalty. In 1921 the British established Swaziland's first legislative body—a European Advisory Council (EAC) of elected white representatives mandated to advise the British high commissioner on non-Swazi affairs. In 1944, the high commissioner both reconstituted the basis and role of the EAC, and, over Swazi objections, issued a Native Authorities Proclamation constituting the paramount chief or Ingwenyama and King to the Swazis, as the British called the king, as the native authority for the territory to issue legally enforceable orders to the Swazis subject to restrictions and directions from the resident commissioner. Under pressure from royal non-cooperation this proclamation was revised in 1952 to grant the Swazi paramount chief a degree of autonomy unprecedented in British colonial indirect rule in Africa.

In 1921, after more than 20 years of regency headed by Queen Regent Labotsibeni, Sobhuza II became *Ngenyama* (lion) or head of the Swazi nation. In the early years of colonial rule, the British expected that Swaziland would eventually be incorporated into South Africa. After World War II, however, South Africa's intensification of racial discrimination induced the United Kingdom to prepare Swaziland for independence. Political activity intensified in the early 1960s. Several political parties were formed and jostled for independence and economic development. The largely urban parties had few ties to the rural areas, where the majority of Swazis lived. The traditional Swazi leaders, including King Sobhuza II and his Inner Council, formed the Imbokodvo National Movement (INM), a political group that capitalized on its close identification with the Swazi way of life. Responding to pressure for political change, the colonial government scheduled an election in mid-1964 for the first legislative council in which the Swazis would participate. In the election, the INM and four other parties, most having more radical platforms, competed in the election. The INM won all 24 elective seats.

Independence

Having solidified its political base, INM incorporated many demands of the more radical parties, especially that of immediate independence. In 1966, the UK Government agreed to discuss a new constitution. A constitutional committee agreed on a constitutional monarchy for Swaziland, with self-government to follow parliamentary elections in 1967. Swaziland became independent on September 6, 1968. Swaziland's post-independence elections were held in May 1972. The INM received close to 75% of the vote. The Ngwane National Liberatory Congress (NNLC) received slightly more than 20% of the vote which gained the party three seats in parliament.

In response to the NNLC's showing, King Sobhuza repealed the 1968 constitution on April 12, 1973 and dissolved parliament. He assumed all powers of government and prohibited all political activities and trade unions from operating. He justified his actions as having removed alien and divisive political practices incompatible with the Swazi way of life. In January 1979, a new parliament was convened, chosen partly through indirect elections and partly through direct appointment by the king.

King Sobhuza II died in August 1982, and Queen Regent Dzeliwe assumed the duties of the head of state. In 1984, an internal dispute led to the replacement of the prime minister and eventual replacement of Dzeliwe by a new Queen Regent Ntombi. Ntombi's only child, Prince Makhosetive, was named heir to the Swazi throne. Real power at this time was concentrated in the Liqoqo, a supreme traditional advisory body that claimed to give binding advice to the Queen Regent. In October 1985, Queen Regent Ntombi demonstrated her power by dismissing the leading figures of the Liqoqo. Prince Makhosetive returned from school in England to ascend to the throne and help end the continuing internal disputes. He was enthroned as Mswati III on April 25, 1986. Shortly afterwards he abolished the Liqoqo. In November 1987, a new parliament was elected and a new cabinet appointed.

Recent history

In 1988 and 1989, an underground political party, the People's United Democratic Movement (PUDEMO),

criticized the king and his government, calling for 'democratic reforms'. In response to this political threat and to growing popular calls for greater accountability within government, the king and the prime minister initiated an ongoing national debate on the constitutional and political future of Swaziland. This debate produced a handful of political reforms, approved by the king, including direct and indirect voting, in the 1993 national elections.

Mswati III

From Wikipedia, the free encyclopedia

Mswati III (born **Makhosetive Dlamini** on April 19, 1968[1]) is the King of Swaziland and head of the Swazi Royal Family. In 1986, he succeeded his father Sobhuza II as ruler of the southern African kingdom. He is generally considered to be one of the last absolute monarchs in the world, as he has the authority to appoint the country's Prime Minister, members of the cabinet, and the judiciary.[2] However, he is bound to a certain degree by Swazi traditions and he does not have the authority to choose his heir.

Mswati III is known for his taste for luxury and his practice of polygamy (although at least two wives are appointed by the state), and has been criticized abroad for pursuing his personal interests at the expense of his country, one of the poorest in the world. In 2001 he attempted to curb the AIDS epidemic by invoking an ancient chastity rite, the *umchwasho*, that banned women under the age of 18 from sex. Within Swaziland, Mswati is a respected and largely popular figure. However, his policies and opulent lifestyle have also triggered domestic protests and international criticism.[2]

Early life

He is one of many sons of king Sobhuza II (who had 70 wives, 210 children and at the time of his death left over 1000 grandchildren) and the only child of Ntombi Tfwala, also known as *Inkhosikati* LaTfwala, one of the king's younger wives. He was born at the Raleigh Fitkin Memorial Hospital, four months before Swaziland attained independence from Britain. When he and his mother were discharged from the hospital they went to live at one of king Sobhuza's residences of Etjeni near Masundwini Palace. His birth name was Makhosetive (King of

Nations).

As a young prince, Makhosetive attended Masundwini Primary School and Lozitha Palace School. He sat for the Swaziland Primary Certificate examination in December 1982 at Phondo Royal Residence and got a First Class with merit in Mathematics and English. He developed a great interest in the royal guard, becoming the first young cadet to join the Umbutfo Swaziland Defence Force (USDF).

When king Sobhuza II died in 1982, the Great Council of State (the *Liqoqo*) selected the 14-year-old prince Makhosetive to be the next king.[3] For the next four years two wives of the late king Sobhuza II, Queen Dzeliwe Shongwe (1982–1983) and Queen Ntombi Tfwala (1983–1986), served as regent while he continued his education in England, attending Sherborne School, before he was called back to take over.

King

He was introduced as Crown Prince in September 1983 and was crowned king on April 25, 1986, aged 18 years and 6 days, and thus making him the youngest reigning monarch until the ascension of King Jigme Khesar Namgyel Wangchuck of Bhutan on December 14, 2006; he was also the youngest head of state until Joseph Kabila took office on January 26, 2001 as President of the Democratic Republic of the Congo. The king and his mother, whose title is *Indlovukazi* (Great She-Elephant), rule jointly.

Today he is Africa's last absolute monarch in the sense that he has the power to choose the prime minister, other top government posts and top traditional posts. Even though he makes the appointments, he still has to get special advice from the queen mother and council, for example when he chooses the prime minister. In matters of cabinet appointments, he gets advice from the prime minister. He ruled by decree, but did restore the nation's Parliament, which had been dissolved by his father in order to ensure concentration of power remained with the king.

In 2004, Mswati promulgated a new constitution that allows freedom of speech and assembly for the media and public, while retaining the traditional *Tinkhundla* system. Although Amnesty International criticized the new constitution as inadequate in some respects, Swaziland's reporters have told conferences with regional media houses (MISA) that they are generally free to report as they please.

In an attempt to mitigate the HIV and AIDS pandemic in 2001, the king used his traditional powers to invoke a time-honoured chastity rite (*umcwasho*), which encouraged all Swazi maidens to abstain from sexual relations for five years.[2] This rite banned sexual relations for Swazis under 18 years of age from 9 September 2001 and 19 August 2005, but just two months after imposing the ban, he violated this decree when he married a 17-year-old girl, who became his 13th wife. As per custom, he was fined a cow by members of her regiment, which he duly paid.

Succession

Main article: Line of succession to the Swazi throne

The king currently has fourteen wives and 23 children. A Swazi king's first two wives are chosen for him by the

national councillors. There are complex rules on succession. According to tradition, he can only marry his fiancées after they have fallen pregnant, proving they can bear heirs. Until then, they are termed *liphovela*, or "brides".

Reed Dance

King Mswati at the Reed Dance 2006

The Reed Dance is a traditional opportunity for Swaziland's maidens to pay tribute to the Queen Mother. Although the King has used the occasion to choose wives a few times, the ceremony is not about him primarily. The king's own children partake in this event.

The annual Umhlanga (Reed) Dance is an assembly of about 20,000 young maidens (recently reaching 100,000) who bring tall (4 m) reeds to present to the Queen Mother. These reeds are then used to build windbreaks around the Queen Mother's residence. The Reed Dance usually lasts for a week and the king only attends the last day as a sign of respect to his mother. He also uses the occasion to thank the young girls who have traveled long distances to attend the event by slaughtering cattle and presenting them with a feast before they return home.

Controversies

Mswati's reign has brought some changes in the government and political transformation. However, critics such as the People's United Democratic Movement (PUDEMO)[4] believe that these changes are solely aimed at strengthening and perpetuating the traditional order.[5]

The king faced substantial criticism for his handling of the HIV/AIDS crisis. In 2000, he announced in a parliamentary debate that all HIV-positive people should be "sterilized and branded".[6]

Mswati III is generally considered to be an absolute monarch, and international media have frequently portrayed him as a dictator with few checks and balances. Supporters of the king argue[*citation needed*] that although he is not entirely bound by the Constitution, he is bound by tradition and shares power with the Queen Mother, and is therefore not an "absolute" monarch. They also claim that both the Empress and the *Tinkhundla* system are popular in Swaziland as they represent the wishes of the aristocracy.

An unofficial referendum was held by the Constitutional Draft Committee headed by Prince David during the constitutional review process. Before then, two more reviews had been held by Vusela, a committee headed by Prince Mahlalengangeni, and another unofficial referendum, which was headed by Prince Mangaliso. However,

critics argue that there has never been an actual or official referendum prior to the introduction of the new constitution.

Wealth

Mswati has been criticized for his lifestyle, especially by the media. Following criticism of his purchase of luxury cars, including a $500,000 luxury automobile, he banned the photography of his vehicles. According to the former CEO of the Office of the king, the purchases were personally funded and the king of Swaziland earns a high salary as Head of State, has investments within and outside the country and owns an unspecified amount of shares in different companies within Swaziland[*citation needed*].

According to the Forbes 2009 list of the World's Richest Royals, king Mswati is worth a reported $200 Million USD.[7] This does not include a sum of about $10 Billion USD that his father king Sobhuza II put in trust for the Swazi nation during his reign, in which Mswati III is the trustee.

In January 2004 the Times of Swaziland reported that the king requested his government to spend about $15-million to redecorate three main palaces and build others for each of his 11 wives.[8] The Prime Minister's Office issued a press statement saying the article in the Times of Swaziland was "reckless and untrue" and that the proposal was for the construction of 5 State Houses, not Palaces, and the cost was only E19.9 million.[9] Later that year the go-ahead was given to build five new palaces at a cost of more than $4-million out of public funds.[10]

In August 2008, Swazi scouts marched through the capital protesting against the cost of a shopping spree taken abroad by nine of the King's thirteen wives. The demonstration was organized by Positive Living, a non-governmental organization for Swazi women living with AIDS.[11]

LaMahlangu controversy

According to accusations by Amnesty International, Zena Mahlangu, a high school student, disappeared from her school in October 2002. Her mother, Lindiwe Dlamini, learned that her daughter had been taken by two men, Qethuka Sgombeni Dlamini and Tulujani Sikhondze, and she reported the matter to the police. Some time later, she was told that her daughter was at Ludzidzini Royal Village and was being prepared to be the next wife of the king.[12] She demanded that her daughter be returned to her custody, and threatened to sue.

Among the criteria for a future *Inkhosikati*, the girl must not be disabled, or a twin; Liphovela LaMahlangu was the other half of a brother-sister twin set.[13] Zena was 18 and had agreed to be taken by the King, but remained silent. The matter went to the High Court, but Swaziland's Attorney-General Phesheya Dlamini intervened.[14] The engagement of Mahlangu to the king was announced in November and she remained at the Royal Palace. She was officially made king Mswati's bride in a traditional marriage ceremony in May 2004 forcing the mother to officially drop the case after it became clear that Zena had gone to the palace out of her own free will and had no intention of returning home.[*citation needed*]

She has since had two children, and formally became the king's wife in 2010.[15]

House of Dlamini

From Wikipedia, the free encyclopedia

The **Dlaminis** (the reigning **Swazi Royal Family**) are an indigenous African royal house of Swaziland, a southern African nation of which Mswati III is king. Scholarly history of Swaziland shows that independent chiefdoms and small kingdoms dominated by various clans were initially conquered and incorporated into the growing Ngwane kingdom ruled by members of the Dlamini clan sometime in the 18th and 19th centuries, long before British colonisation.[1]

Lesotho

From Wikipedia, the free encyclopedia

Lesotho (/lɨˈsuːtuː/ *li-soo-too*), officially the **Kingdom of Lesotho**, is a landlocked country and enclave, completely surrounded by its only neighboring country, the Republic of South Africa. It is just over 30,000 km^2 (11,583 sq mi) in size with a population of approximately 2,067,000.[1] Its capital and largest city is Maseru. Lesotho is a member of the Commonwealth of Nations. The name **Lesotho** translates roughly into *the land of the people who speak Sesotho*.[4] About 40% of the population live below the international poverty line of US $1.25 a day.[5]

History

Main article: History of Lesotho

The earliest known inhabitants of the area were Khoisan hunter-gatherers. They were largely replaced by Wasja-speaking tribes during Bantu migrations. The Sotho-Tswana people colonized the general region of South Africa between

the 3rd and 11th centuries.

The present Lesotho (then called Basutoland) emerged as a single polity under king Moshoeshoe I in 1822. Moshoeshoe, a son of Mokhachane, a minor chief of the Bakoteli lineage, formed his own clan and became a chief around 1804. Between 1821 and 1823, he and his followers settled at the Butha-Buthe Mountain, joining with former adversaries in resistance against the Lifaqane associated with the reign of Shaka Zulu from 1818 to 1828.[*citation needed*]

Subsequent evolution of the state hinged on conflicts between British and Dutch colonists leaving the Cape Colony following its seizure from the French-occupied Dutch by the British in 1795, and subsequently associated with the Orange River Sovereignty and subsequent Orange Free State. Missionaries invited by Moshoeshoe I, Thomas Arbousset, Eugène Casalis and Constant Gosselin from the Paris Evangelical Missionary Society, placed at Morija, developed orthography and printed works in the Sotho language between 1837 and 1855. Casalis, acting as translator and providing advice on foreign affairs, helped to set up diplomatic channels and acquire guns for use against the encroaching Europeans and the Griqua people. [*citation needed*]

Boer trekkers from the Cape Colony showed up on the western borders of Basutoland and claimed land rights, beginning with Jan de Winnaar, who settled in the Matlakeng area in May–June 1838. As more farmers were moving into the area they tried to colonise the land between the two rivers, even north of the Caledon, claiming that it had been abandoned by the Sotho people. Moshoeshoe subsequently signed a treaty with the British Governor of the Cape Colony, Sir George Thomas Napier that annexed the Orange River Sovereignty that many Boers had settled. These outraged Boers were suppressed in a brief skirmish in 1848. In 1851 a British force was defeated by the Sotho army at Kolonyama, touching off an embarrassing war for the British. After repulsing another British attack in 1852, Moshoeshoe sent an appeal to the British commander that settled the dispute diplomatically, then defeated the Tlokoa in 1853.[*citation needed*]

[1] Estimates for this country explicitly take into account the effects of excess mortality due to AIDS; this can result in lower life expectancy, higher infant mortality and death rates, lower population and growth rates, and changes in the distribution of population by age and sex than would otherwise be expected.

In 1854 the British pulled out of the region, and in 1858 Moshoeshoe fought a series of wars with the Boers in the Free State-Basotho War, losing a great portion of the western lowlands. The last war in 1867 ended when Moshoeshoe appealed to Queen Victoria, who agreed to make Basutoland a British protectorate in 1868. In 1869, the British signed a treaty at Aliwal North with the Boers that defined the boundaries of Basutoland and later Lesotho, which by ceding the western territories effectively reduced Moshoeshoe's kingdom to half its previous size.[*citation needed*]

Following the cession in 1869, the British initially transferred functions from Moshoeshoe's capital in Thaba Bosiu to a police camp on the northwest border, Maseru, until administration of Basutoland was transferred to

the Cape Colony in 1871. Moshoeshoe died on March 11, 1870, marking the end of the traditional era and the beginning of the colonial era, and was buried at Thaba Bosiu. During their rule between 1871 and 1884, Basutoland was treated similarly to territories that had been forcefully annexed, much to the chagrin of the Basotho.[6] This led to the Gun War in 1881.[7] In 1884, Basutoland was restored its status as a Crown colony, with Maseru again its capital, but remained under direct rule by a governor, though effective internal power was wielded by traditional chiefs.

Basutoland gained its independence from Britain and became the Kingdom of Lesotho in 1966.[8]

In January 1970 the ruling Basotho National Party (BNP) lost the first post-independence general elections, with 23 seats to the Basutoland Congress Party's 36. Prime Minister Leabua Jonathan refused to cede power to the Basotho Congress Party (BCP), declared himself Tona Kholo (Sesotho translation of prime minister), [*citation needed*] and imprisoned the BCP leadership.

BCP began a rebellion and then received training in Libya for its Lesotho Liberation Army (LLA) under the pretense of being Azanian People's Liberation Army (APLA) soldiers of the Pan Africanist Congress (PAC). Deprived of arms and supplies by the Sibeko faction of the PAC in 1978, the 178-strong LLA was rescued from their Tanzanian base by the financial assistance of a Maoist PAC officer but launched the guerrilla war with only a handful of old weapons. The main force was defeated in northern Lesotho and later guerrillas launched sporadic but usually ineffectual attacks. The campaign was severely compromised when BCP's leader, Ntsu Mokhehle, went to Pretoria. In the early 1980s, several Basotho who sympathized with the exiled BCP were threatened with death and attacked by the government of Leabua Jonathan. In September 1981 the family of Benjamin Masilo was attacked. A few days later, Edgar Mahlomola Motuba was taken from his home and murdered.

The BNP ruled from 1966 till January 1970. What later ensued was a "de facto" government led by Dr Leabua Jonathan until 1986 when a military coup forced it out of office. The Military Council that came to power granted executive powers to King Moshoeshoe II, who was until then a ceremonial monarch. But in 1987 the King was forced into exile after coming up with a six-page memorandum on how he wanted the Lesotho's constitution to be, which would have given him more executive powers had the military government agreed. His son was installed as King Letsie III.

The chairman of the military junta, Major General Justin Metsing Lekhanya, was ousted in 1991 and replaced by Major General Elias Phisoana Ramaema, who handed over power to a democratically elected government of the BCP in 1993. Moshoeshoe II returned from exile in 1992 as an ordinary citizen. After the return to democratic government, King Letsie III tried unsuccessfully to persuade the BCP government to reinstate his father (Moshoeshoe II) as head of state.

In August 1994, Letsie III staged a military-backed coup that deposed the BCP government, after the BCP government refused to reinstate his father, Moshoeshoe II, according to Lesotho's constitution. The new government did not receive full international recognition. Member states of the Southern African Development Community (SADC) engaged in negotiations to reinstate the BCP government. One of the conditions Letsie III put forward for this was that his father should be re-installed as head of state. After protracted negotiations, the BCP government was reinstated and Letsie III abdicated in favor of his father in 1995, but he ascended the throne again when Moshoeshoe II died at the age of fifty-seven in a road accident, when his car plunged off a mountain road during the early hours of 15 January 1996. According to a government statement, Moshoeshoe had set out at 1 a.m. to visit his cattle at Matsieng and was returning to Maseru through the Maluti Mountains when his car left the road.[9]

In 1997, the ruling BCP split over leadership disputes. Prime Minister Ntsu Mokhehle formed a new party, the

Lesotho Congress for Democracy (LCD), and was followed by a majority of Members of Parliament, which enabled him to form a new government. Pakalitha Mosisili succeeded Mokhehle as party leader and the LCD won the general elections in 1998. Although the elections were pronounced free and fair by local and international observers and a subsequent special commission appointed by SADC, the opposition political parties rejected the results.

Makhaleng River Gorges in the Highlands of Lesotho, 2003.

Opposition protests in the country intensified, culminating in a peaceful demonstration outside the royal palace in August 1998. Exact details of what followed are greatly disputed, both in Lesotho and South Africa. While the Botswana Defence Force troops were welcomed, tensions with South African National Defence Force troops were high, resulting in fighting. Incidences of sporadic rioting intensified when South African troops hoisted a South African flag over the Royal Palace. By the time the SADC forces withdrew in May 1999, much of Maseru lay in ruins, and the southern provincial capital towns of Mafeteng and Mohale's Hoek had seen the loss of over a third of their commercial real estate. A number of South Africans and Basotho also died in the fighting.

An Interim Political Authority (IPA), charged with reviewing the electoral structure in the country, was created in December 1998. The IPA devised a proportional electoral system to ensure that the opposition would be represented in the National Assembly. The new system retained the existing 80 elected Assembly seats, but added 40 seats to be filled on a proportional basis. Elections were held under this new system in May 2002, and the LCD won again, gaining 54% of the vote. But for the first time, opposition political parties won significant numbers of seats, and despite some irregularities and threats of violence from Major General Lekhanya, Lesotho experienced its first peaceful election. Nine opposition parties now hold all 40 of the proportional seats, with the BNP having the largest share (21). The LCD has 79 of the 80 constituency-based seats. Although its elected members participate in the National Assembly, the BNP has launched several legal challenges to the elections, including a recount; none have been successful.

Politics

Main article: Politics of Lesotho

The Lesotho Government is a parliamentary or constitutional monarchy. The Prime Minister, Pakalitha Bethuel Mosisili, is head of government and has executive authority. The king serves a largely ceremonial function; he no longer possesses any executive authority and is prohibited from actively participating in political initiatives.

The Democratic Congress (DC) controls a slim majority in the National Assembly (the lower house of parliament) with 46 seats. The Lesotho Congress for Democracy (LCD), the former party in power, has become the main opposition. The All Basotho Convention. (ABC), Basotho National Party (BNP), the Alliance of Congress Parties (ACP) and the newly formed Basotho Batho Democratic Party (BBDP) and the Basotho Democratic National Party (BDNP) Lesotho are among the other six opposition parties represented.

The ABC has brought a dramatic change in the Lesotho's politics, because of its having won 17, mainly urban, seats out of 80 Constituency seats, only a few months after it was formed in September 2006. Of the 40 Proportional Representation (PR) seats, the National Independent Party (NIP), a parliamentary ally of the ruling party, has the highest number of seats at 21. The Lesotho Workers Party has the next highest number of proportional seats with 10. The BNP is the opposition party with the biggest loss in the February 2007 election with its representation reduced from 21 to 3 seats. A total of 12 political parties are represented in the

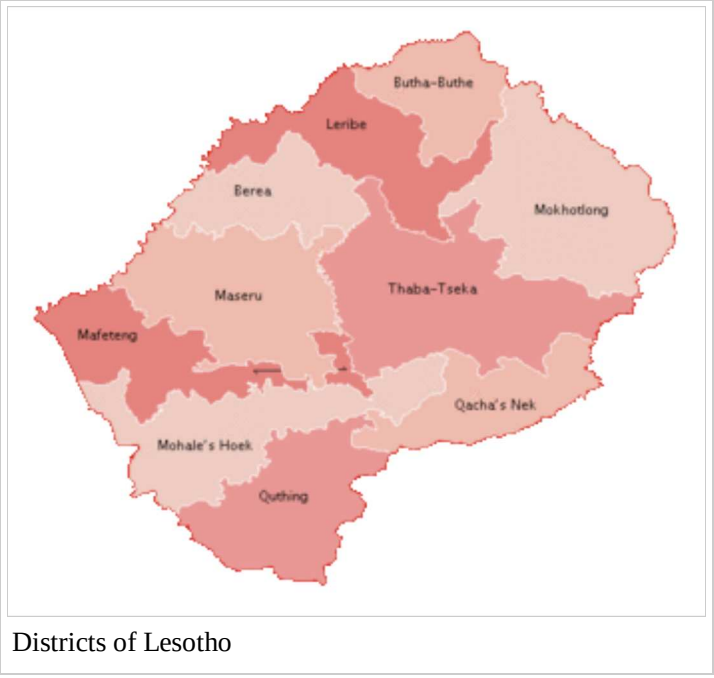
120-member parliament.

The upper house of parliament, called the Senate, is composed of twenty-two principal chiefs whose membership is hereditary, and eleven appointees of the king, acting on the advice of the prime minister.

The constitution provides for an independent judicial system, made up of the High Court, the Court of Appeal, Magistrate's Courts, and traditional courts that exist predominantly in rural areas. All but one of the Justices on the Court of Appeal are South African jurists. There is no trial by jury; rather, judges make rulings alone, or, in the case of criminal trials, with two other judges as observers.

The constitution also protects basic civil liberties, including freedom of speech, freedom of association, freedom of the press, freedom of peaceful assembly and freedom of religion. Lesotho was ranked 12th out of 48 sub-Saharan African countries in the 2008 Ibrahim Index of African Governance.[10]

However there is a growing movement, the *People's Charter Movement*, calling for the practical annexation of the country by South Africa due to the AIDS epidemic which infects a third of the population. The country faces high unemployment, economic collapse, a weak currency and poor travel documents restricting their movement. An African Union report called for economic integration of Lesotho with South Africa but stopped short of suggesting annexation. In May 2010 the Charter Movement delivered a petition to the South African High Commission requesting integration. South Africa's home affairs spokesman Ronnie Mamoepa rejected the idea that Lesotho should be treated as a special case. Quoting, "It is a sovereign country like South Africa. We sent envoys to our neighbours – Botswana, Zimbabwe, Swaziland and Lesotho – before we enforced the passport rule. When you travel from Britain to South Africa, don't you expect to use a passport?"[11]



Districts

Main article: Districts of Lesotho

For administrative purposes, Lesotho is divided into ten districts, each headed by a district administrator. Each district has a capital known as a *camptown*.

- Berea
- Butha-Buthe
- Leribe
- Mafeteng
- Maseru
- Mohale's Hoek
- Mokhotlong
- Qacha's Nek
- Quthing
- Thaba-Tseka

The districts are further subdivided into 80 constituencies, which consist of 129 local community councils.

Districts of Lesotho

Geography

Main article: Geography of Lesotho

Lesotho covers 30,355 km^2 (11,720 sq mi). It is the only independent state in the world that lies entirely above 1,000 metres (3,281 ft) in elevation. Its lowest point of 1,400 metres (4,593 ft) is thus the highest in the world. Over 80% of the country lies above 1,800 metres (5,906 ft). Lesotho is also the southernmost landlocked country in the world and is entirely surrounded by the country of South Africa. It lies between latitudes 28° and 31°S, and longitudes 27° and 30°E.

Satellite image of Lesotho

Climate

Main article: Climate of Lesotho

Because of its altitude, Lesotho remains cooler throughout the year than other regions at the same latitude. Most of the rain falls as summer thunderstorms. Maseru and surrounding lowlands often reach 30 °C (86 °F) in summer. Winters can be cold with the lowlands getting down to −7 °C (19 °F) and the highlands to −18 °C (−0 °F) at times. Snow is common in the highlands between May and September; the higher peaks can experience snowfalls year-round.

Landscape of Lesotho

Economy

Main article: Economy of Lesotho

Lesotho is geographically surrounded by South Africa and economically integrated with it as well. The economy of Lesotho is based on agriculture, livestock, manufacturing and mining, and depends heavily on inflows of workers' remittances and receipts from the Southern African Customs Union (SACU).[12] [13] The majority of households subsist on farming. The formal sector employment consist of mainly the female workers in the apparel sector, the male migrant labor, primarily miners in South Africa for 3 to 9 months and employment in the Government of Lesotho (GOL) . The western lowlands form the main agricultural zone. Almost 50% of the population earn income through informal crop cultivation or animal husbandry with nearly two-thirds of the country's income coming from the agricultural sector. The percentage of the population living below USD Purchasing Power Parity (PPP) US$1.25/day fell from 48 percent to 44 percent between 1995 and 2003. [12] The country is still among the "Low Human Development" countries (rank 160 of 187 on the Human Development Index) as classified by the UNDP, with 48.2 years of life expectancy at birth.[14] However, adult literacy is very high - 82% and children under weight aged under 5 is only 20%.[15]

Lesotho has taken advantage of the African Growth and Opportunity Act (AGOA) to become the largest exporter of garments to the US from sub-Saharan Africa.[16] American Brands and retailers sourcing from Lesotho include: Foot Locker, Gap, Gloria Vanderbilt, JCPenny, Levi Strauss, Saks, Sears, Timberland and Wal-Mart.[17] In mid 2004 its employment reached over 50,000 mainly female workers, marking the first time that manufacturing sector workers outnumbered government employees. In 2008 it exported 487 million dollars mainly to the U.S.A. Since 2004 employment in the sector was somehow reduced to about 45,000, in mid 2011, due to intense international competition in the garment sector. It was the largest formal sector employer in Lesotho in

The Afri-Ski resort in the Maloti Mountains of Lesotho.

2011. [18] In 2007, the average earnings of an employee in the textile sector were $103 per month, and the official minimum wage for a general textile worker was $93 per month. The average gross national income per capita in 2008 was $83 per month.[19] The sector initiated a major program to fight HIV/AIDS called Apparel Lesotho Alliance to Fight AIDS (ALAFA). It is an industry-wide program providing prevention and treatment for the workers. (see below HIV)[20]

Water and diamonds are Lesotho's significant natural resources.[12] Water is utilized through the 21-year, multi-billion-dollar Lesotho Highlands Water Project (LHWP), under the authority of the Lesotho Highlands Development Authority. The project commenced in 1986.[21] The LHWP is designed to capture, store, and transfer water from the Orange River system to South Africa's Free State and greater Johannesburg area, which features a large concentration of South African industry, population, and agriculture. Completion of the first phase of the project has made Lesotho almost completely self-sufficient in the production of electricity and generated approximately $70 million in 2010 from the sale of electricity and water to South Africa.[22] The World Bank, African Development Bank, European Investment Bank, and many other bilateral donors financed the project.

Diamonds are produced in Leteng, Mothae, Liqhobong and Kao mines. The sector suffered a set back in 2008 as the result of the world recession but rebounded in 2010 and 2011. Export of diamonds reached $230 million in 2010/11.[23] In 1957, a South African adventurer, colonel Jack Scott, accompanied by a young man named Keith Whitelock, set out prospecting for diamonds. They found their diamond mine at 3,100 m altitude, on top of the Maluti Mountains in northeastern Lesotho, some 70 km from Mokhotlong at Letseng. In 1967, a fabulous 601-carat (120 g) diamond (Lesotho Brown) was discovered in the mountains by a Mosotho woman. In August 2006, a 603-carat (121 g) white diamond (Lesotho Promise) was discovered at the Letseng-la-Terae mine. Another 478-carat (96 g) diamond was discovered at the same location in 2008.[24]

Lesotho’s progress in moving from a predominantly subsistence-oriented economy to a lower middle income, diversified economy exporting natural resources and manufacturing goods has brought higher, more secure incomes to a significant portion of the population.[12]

The global economic crisis hit the Lesotho economy hard through loss of textile exports and jobs in the sector due largely to the economic slowdown in the United States which is a major export destination, reduced diamond mining and exports, including weak prices for diamonds; drop in SACU revenues due to the economic slowdown in the South African economy, and reduction in worker remittances due to weakening of the South African economy and contraction of the mining sector and related job losses in South Africa. In 2009, GDP growth slowed to 0.9 percent.[12]

The official currency is the loti (plural: maloti), but can be used interchangeably with the South African rand. Lesotho, Swaziland, Namibia, and South Africa also form a common currency and exchange control area known as the Common Monetary Area (CMA). The loti is at par with the rand. One hundred **lisente** equal one loti.

Lesotho is a member of the Southern African Customs Union (SACU), in which tariffs have been eliminated on the trade of goods between other member countries Botswana, Namibia, South Africa, and Swaziland.

Lesotho has received economic aid from a variety of sources, including the United States, the World Bank, Ireland, the United Kingdom, the European Union, and Germany.

Social issues

Significant levels of child labor exist in Lesotho, and the country is in the process of formulating an Action

Program on the Elimination of Child Labor (APEC). According to the UN, Lesotho has the highest rape rate of any country (91.6 out of 100,000 people)[1] (http://www.nationmaster.com/graph/cri_rap_rat-crime-rape-rate)

Demographics

See also: Demographics of Lesotho

Population

Mosotho horseman.

Lesotho has a population of approximately 2,067,000.[1] The population distribution of Lesotho is 25% urban and 75% rural. However, it is estimated that annual increase of urban population is 3.5%.[25] Population density is lower in the highlands than in the western lowlands. Although the majority of the population—60.2%—is between 15 and 64 years of age, Lesotho has a substantial youth population numbering around 34.8%.[25]

Ethnic groups and languages

Lesotho's ethno-linguistic structure consists almost entirely of the Basotho, a Bantu-speaking people: an estimate of 99.7% of the people identify as Basotho.[25] Other ethnic groups include Europeans, numbering in the thousands, and an estimated 5,000 Chinese.[26] Basotho subgroups include the Bakuena (Kuena), Batloung (the Tlou), Baphuthi (the Phuti), Bafokeng, Bataung (the Tau), Batšoeneng (the Tšoene), Matebele, etc.

The main language, Sesotho (or Sotho), is also the first official and administrative language, and it is what Basotho speak on an ordinary basis. English is the other official and administrative language.

Religion

Main article: Religion in Lesotho

The population of Lesotho is estimated to be around 90% Christian. Protestants represent 45% of the population (Evangelicals 26%, and Anglican and other Protestant groups an additional 19%), and Roman Catholics represent 45 percent of the population. Members of other religions (Muslims, Hindus, Buddhists, Baha'i, and members of traditional indigenous religions) comprise the remaining 10% of the population. In Maseru, there is a church in the centre of the city on the way to very famous mall Pioneer, and also a mosque. [27]

Education and literacy

An estimated 85% of the population 15 and over is literate, according to recent estimates. As such, Lesotho boasts one of the highest literacy rates in Africa,[25] in part because Lesotho invests over 12% of its GDP in education.[28] Contrary to most countries, in Lesotho female literacy (94.5%) is higher than male literacy. According to a study by the Southern and Eastern Africa Consortium for Monitoring Educational Quality in 2000, 37% of grade 6 pupils in Lesotho (average age 14 years) are at or above reading level 4, "Reading for Meaning."[29] A pupil at this level of literacy can read ahead or backwards through various parts of

text to link and interpret information. Although education is not compulsory, the Government of Lesotho is incrementally implementing a program for free primary education.[30]

Children in class at Ha Nqabeni primary school

Despite having a highly literate population, Lesotho's residents struggle to access vital services, such as healthcare, travel, and educational resources, as according to the International Telecommunication Union, only 3.4% of the population use the Internet. A service from Econet Telecom Lesotho expanded the country's access to email via entry level, low end mobile phones and consequently improved access to educational information. The African Library Project works to establish school and village libraries in partnership with US Peace Corps Lesotho[31] and the Butha Buthe District of Education.

Health

Infant mortality is at about 8.3 %.[32] There are 5 physicians per 100,000 persons.[33]

HIV/AIDS

Main article: HIV/AIDS in Lesotho

Lesotho is severely afflicted by HIV/AIDS. According to 2009 estimates, the prevalence is about 23.6%, one of the highest in the world.[34] In urban areas, about 50% of women under 40 have HIV. The UNDP stated that in 2006 life expectancy in Lesotho was estimated at 42 years for men and women.[15]

The country regards HIV as one of its most important development issues, and the Government is addressing the pandemic through its HIV/AIDS National Strategic Plan. Coverage of some key HIV/AIDS interventions has improved, including prevention of mother to child transmission and antiretroviral therapy. Prevention of mother to child transmission coverage increased from about 5 percent in 2005, to 31 percent in 2007. The roll-out of antiretroviral therapy has made good progress, with 38,586 people receiving treatment by 2008. [12]

The "Know Your Status" campaign boosted the number of people being tested for HIV to 229,092 by the end of 2007, 12 percent of the population and three times the number tested in 2005. The program is funded by the Clinton Foundation and started in June 2006. Bill Clinton and Microsoft chairman Bill Gates visited Lesotho in July 2006 to assess its fight against AIDS.[35] As a result, the annual rate at which adults in the population who are HIV-negative become HIV-positive declined from 2.9 percent in 2005 to 2.3 percent in 2007, lowering the estimated annual number of new infections from 26,000 to 21,560. These are the first signs of a decline in the HIV epidemic.[12]

The Apparel Lesotho Alliance to Fight AIDS (ALAFA) is an industry-wide program providing prevention and treatment, including ARVs when these are necessary, for the 46,000 mainly women workers in the Lesotho apparel industry. It was launched in May 2006. The program is helping to combat two of the key drivers of the HIV/AIDS epidemic: poverty and gender inequality. Surveys within the industry by ALAFA show that 43% of the employees have HIV.[20]

Foreign relations

Main article: Foreign relations of Lesotho

Lesotho's geographic location makes it extremely vulnerable to political and economic developments in South

Africa. It is a member of many regional economic organizations, including the Southern African Development Community (SADC),[36] and the Southern African Customs Union (SACU).[37] It is also active in the United Nations (UN), the African Union, the Non-Aligned Movement, the Commonwealth, and many other international organizations.[*citation needed*]

The flag used by Lesotho until October 2006.

Prince Seeiso Hirohr Seeiso is the present High Commissioner of the Kingdom of Lesotho to the Court of St. James's. The UN is represented by a resident mission as well, including UNDP, UNICEF, WHO, FAO, WFP, and UNAIDS.

Historically, Lesotho has maintained generally close ties with Ireland.[38]

Lesotho also has maintained ties with the United Kingdom (Wales in particular), Germany, the United States and other Western states. Although in 1990 it broke relations with the People's Republic of China (PRC) and re-established relations with the Republic of China (Taiwan), it later restored ties with the PRC.

Lesotho also recognizes the State of Palestine.[39]

In the past, it was a strong public supporter of the end of apartheid in South Africa and granted a number of South African refugees political asylum during the apartheid era.[39]

Law

Lesotho does not have a single code containing its laws; it draws them from a variety of sources including: Constitution, Legislation, Common Law, Judicial precedent, Customary Law, and Authoritative texts.[40]

The Constitution of Lesotho came into force after the publication of the Commencement Order. Constitutionally, legislation refers to laws that have been passed by both houses of parliament and have been assented to by the King (section 78(1)). Subordinate legislation refers to laws passed by other bodies to which parliament has by virtue of section 70(2) of the Constitution validly delegated such legislative powers. These include government gazettes, ministerial orders, ministerial regulations and municipal bye-laws.

Although Lesotho shares with South Africa, Botswana, Swaziland, Namibia and Zimbabwe a mixed general legal system which resulted from the interaction between the Roman-Dutch Civilian law and the English Common Law, its general law operates independently. Lesotho also applies the common law, which refers to unwritten law or law from non-statutory sources, but excludes customary law. Decisions from South African courts are only persuasive, and courts refer to them in formulating their decisions. Decisions from similar jurisdictions can also be cited for their persuasive value. Magistrates' courts decisions do not become precedent since these are lower courts. They are however bound by decisions of the High Court and the Court of Appeal. At the apex of the Lesotho justice system is the Court of Appeal, which is the final appellate forum on all matters. It has a supervisory and review jurisdiction over all the courts of Lesotho.

Lesotho has a dual legal system consisting of customary and general laws operating side by side. Customary law is made up of the customs of the Basotho, written and codified in the Laws of Lerotholi whereas general law consists of Roman Dutch Law imported from the Cape and the Lesotho statutes. The codification of customary law came about after a council was appointed in 1903 to advise the British Resident Commissioner on what was best for the Basotho in terms of laws that would govern them. Until this time, the Basotho customs and laws

were passed down from generation to generation through oral tradition. The council was then given the task of codifying them, came up with the Laws of Lerotholi which are applied by customary courts today (local courts). Written works of eminent authors have persuasive value in the courts of Lesotho. These include writings of the old authorities as well as contemporary writers from similar jurisdictions.

Culture

See also: Music of Lesotho and List of African writers (by country)

Traditional musical instruments include *lekolulo*, a kind of flute used by herding boys, *setolo-tolo*, played by men using their mouth, and the woman's stringed *thomo*.

The national anthem of Lesotho is "*Lesotho Fatše La Bo-ntata Rona*", which literally translates into "Lesotho, Land Of Our Fathers".

The traditional style of housing in Lesotho is called a *rondavel*.

Traditional attire revolves around the Basotho blanket, a thick covering made primarily of wool. The blankets are ubiquitous throughout the country during all seasons.

Retsilisitsoe Nthunya wrapped in a Basotho blanket. [*citation needed*]

The Morija Arts & Cultural Festival is a prominent Sesotho arts and music festival. It is held annually in the historical town of Morija, where the first missionaries arrived in 1833.

History of Lesotho

From Wikipedia, the free encyclopedia

Flag of Lesotho

The area now known as **Lesotho** (/lɪˈsuːtuː/) goes back as many as 40,000 years. The present Lesotho (then called Basutoland) emerged as a single polity under paramount chief Moshoeshoe I in 1822. Under Mashoeshoe I, Basutoland joined other tribes in their struggle against the Lifaqane associated with the reign of Shaka Zulu from 1818 to 1828.

Subsequent evolution of the state was shaped by contact with the British and Dutch colonists from Cape Colony. Missionaries invited by Moshoeshoe I developed orthography and printed works in the Sotho language between 1837 and 1855. The country set up diplomatic channels and acquired guns for use against the encroaching Europeans and the Korana people. Territorial conflicts with both British and Boer settlers arose periodically, including Moshoeshoe's notable victory over the Boers in the Free State-Basotho War, but the final war in 1867 with an appeal to Queen Victoria, who agreed to make Basutoland a British protectorate. In 1869, the British signed a treaty at Aliwal with the Boers that defined the boundaries of Basutoland and later Lesotho, which by ceding the western territories effectively reduced Moshoeshoe's kingdom to half its previous size.

The extent to which the British exerted direct control over Basutoland waxed and waned until Basutoland's independence in 1966, when it became the Kingdom of Lesotho. However, when the ruling Basotho National Party (BNP) lost the first post-independence general elections to the Basotho Congress Party (BCP), Leabua Jonathan refused to cede and declared himself Tona Kholo (Sesotho translation of prime minister). The BCP began an insurrection that culminated in a January 1986 military coup forced the BNP out of office. Power was transferred to King Moshoeshoe II, until then a ceremonial monarch, but forced into exile when he lost favour with the military the following year. His son was installed as King Letsie III. Conditions remained tumultuous, including an August 1994 coup by Letsie III, until 1998 when the Lesotho Congress for Democracy (LCD) came to power in elections which were deemed fair by international observers. Despite protests from opposition parties, the country has remained relatively stable since.

Ancient history

At some stage during their migration south from a tertiary dispersal area Bantu speaking peoples came to settle the lands that now make up Lesotho as well as a more extensive territory of fertile lands that surround modern day Lesotho. These people spoke a unique "South Sotho" dialect seSotho and called themselves the Basotho. There were several severe disruptions to the Basotho peoples in the early 19th century. Firstly marauding Zulu

clans, displaced from Zululand as part of the Lifaqane (or Mfecane), wrought havoc on the Basotho peoples they encountered as they moved first west and then north. Secondly no sooner than the Zulu has passed to the north than the first Voortrekkers arrived, some of whom obtained hospitality during their difficult trek north. Early Voortrekker accounts describe how the lands surrounding the mountain retreat of the Basotho had been burnt and destroyed, in effect leaving a vacuum that subsequent Voortrekkers began to occupy.

However, this interpretation of history for the entire southern region of Africa has been refuted by Norman Etherington in *The Great Treks: The Transformation of Southern Africa, 1815-1854* (Longman, 2001). Etherington argues that no such thing as the Mfecane occurred, the Zulu were no more marauding than any other group in the region, and the land the Voortrekkers saw as empty was not settled by either Zulu or Basotho because those people did not value open lowland plains as pasture.

Basutoland

See also: Basutoland

In 1818, Moshoeshoe I (/mɵˈʃweɪʃweɪ/) consolidated various Basotho groupings and became their King. During Moshoeshoe's reign (1823-1870), a series of wars (1856-68) were fought with the Boers who had settled in traditional Basotho lands. These wars resulted in the extensive loss of land, now known as the "Lost Territory".

South Africa, Lesotho and Swazuiland in 1885.

A treaty had been signed with the Boer of Griqualand in 1843 and an agreement made with the British in 1853 following a minor war. However, the disputes with the Boer over land were revived in 1858 and more seriously in 1865. The Boer had a number of military successes, killing possibly 1,500 Basotho soldiers, and annexed an expanse of arable land which they were able to retain following a treaty at Thaba Bosiu. In order to protect his people, Moshoeshoe appealed to the British for assistance, and in March 1868 the land was placed under British protection and the Boer were ordered to leave. A treaty was signed at Aliwal in 1869 between the British and the Boer defining the boundaries of the protectorate, the arable land west of the Caledon River remained in Boer hands and is referred to as the Lost or Conquered Territory. Moshoeshoe died in 1870.

In 1871 the protectorate was annexed to Cape Colony. The Basotho resisted the British and in 1879 a southern chief, Moorosi, rose in revolt. The rising was crushed and Moorosi was killed in the fighting. The Basotho then began to fight amongst themselves over the division of Moorosi's lands. The British extended the Cape Peace Preservation Act of 1878 to cover Basutoland and attempted to disarm the natives. Much of the colony rose in revolt in the Gun War (1880-1881), inflicting significant casualties upon the colonial British forces sent to subdue it. An 1881 peace treaty failed to quell sporadic fighting.

Cape Town's inability to control the territory led to its return to crown control in 1884 as the Territory of Basutoland. The colony was bound by the Orange River Colony, Natal Colony, and Cape Colony it was divided into seven administrative districts - Berea, Leribe, Maseru, Mohales Hock, Mafeteng, Qacha's Nek and Quthing. The colony was ruled by the British Resident Commissioner, who worked through the *pitso* (national assembly) of hereditary native chiefs under one paramount chief. Each chief ruled a ward within the territory. The first paramount chief was Lerothodi, the son of Moshoeshoe. During the Second Boer War the colony was neutral. The population was around 125,000 (1875), 310,000 (1901) and 349,000 (1904).

When the Union of South Africa was founded in 1910 the colony was still controlled by the British and moves

were made to transfer it to the Union. However the people of Basutoland opposed this and when the South African Nationalist party put its apartheid policies into place the possibility of annexation was halted. In 1959, a new constitution gave Basutoland its first elected legislature. This was followed in April 1965 with general legislative elections.

The differing fates of the seSotho-speaking peoples in the Protectorate of Basotholand and in the lands that became the Orange Free State are worth noting. The Orange Free State became a Boer-ruled territory. However at the end of the Boer War it was colonised by the British, and this colony was subsequently incorporated by Britain into the Union of South Africa as one of four provinces. It is still part of the modern day Republic of South Africa, now known as the Free State. In contrast Basotholand, along with the two other British Protectorates in the sub-Saharan region (Bechuanaland and Swaziland), was precluded from incorporation into the Union of South Africa. These protectorates were individually brought to independence by Britain in the 1960s in line with the trend towards self-government and independence that swept the British Empire following the close of the Second World War, a trend that reached its peak in Africa in the late 1950s and early 1960s. By becoming a protectorate Basotholand and its inhabitants were not subjected to Afrikaner rule, which saved them from experiencing Apartheid, and so generally prospered under more benevolent British rule. Basotho resident in Basotholand had access to better health services and to education, and came to experience greater political emancipation through independence. These lands protected by the British, however, had a much smaller capacity to generate income and wealth than the "lost territory" had, which had been granted to the Boers.

After a 1955 request by the Basutoland Council to legislate its internal affairs, in 1959 a new constitution gave Basutoland its first elected legislature. This was followed in April 1965 with general legislative elections with universal adult suffrage in which the Basotho National Party (BNP) won 31 and the Basutoland Congress Party (BCP) won 25 of the 65 seats contested.

Kingdom of Lesotho

On October 4, 1966, the Kingdom of Lesotho attained full independence, governed by a constitutional monarchy with a bicameral Parliament consisting of a Senate and an elected National Assembly. Early results of the first post-independence elections in January 1970 indicated that the BNP might lose control. Under the leadership of Prime Minister Chief Leabua Jonathan, the ruling Basotho National Party (BNP) refused to cede power to the rival Basotholand Congress Party (BCP), although the BCP was widely believed to have won the elections. Citing election irregularities, Prime Minister Leabua Jonathan nullified the elections, declared a national state of emergency, suspended the constitution, and dissolved the Parliament. In 1973, an appointed Interim National Assembly was established. With an overwhelming progovernment majority, it was largely the instrument of the BNP, led by Prime Minister Jonathan. In addition to the Jonathan regime's alienation of Basotho powerbrokers and the local population, South Africa had virtually closed the country's land borders because of Lesotho support of cross-border operations of the African National Congress (ANC). Moreover, South Africa publicly threatened to pursue more direct action against Lesotho if the Jonathan government did not root out the ANC presence in the country. This internal and external opposition to the government combined to produce violence and internal disorder in Lesotho that eventually led to a military takeover in 1986.

Under a January 1986 Military Council decree, state executive and legislative powers were transferred to the King who was to act on the advice of the Military Council, a self-appointed group of leaders of the Royal Lesotho Defense Force (RLDF). A military government chaired by Justin Lekhanya ruled Lesotho in coordination with King Moshoeshoe II and a civilian cabinet appointed by the King.

In February 1990, King Moshoeshoe II was stripped of his executive and legislative powers and exiled by Lekhanya, and the Council of Ministers was purged. Lekhanya accused those involved of undermining discipline within the armed forces, subverting existing authority, and causing an impasse on foreign policy that had been

damaging to Lesotho's image abroad. Lekhanya announced the establishment of the National Constituent Assembly to formulate a new constitution for Lesotho with the aim of returning the country to democratic, civilian rule by June 1992. Before this transition, however, Lekhanya was ousted in 1991 by a mutiny of junior army officers that left Phisoane Ramaema as Chairman of the Military Council.

Because Moshoeshoe II initially refused to return to Lesotho under the new rules of the government in which the King was endowed only with ceremonial powers, Moshoeshoe's son was installed as King Letsie III. In 1992, Moshoeshoe II returned to Lesotho as a regular citizen until 1995 when King Letsie abdicated the throne in favor of his father. After Moshoeshoe II died in a car accident in 1996, King Letsie III ascended to the throne again.

In 1993, a new constitution was implemented leaving the King without any executive authority and proscribing him from engaging in political affairs. Multiparty elections were then held in which the BCP ascended to power with a landslide victory. Prime Minister Ntsu Mokhehle headed the new BCP government that had gained every seat in the 65-member National Assembly. In early 1994, political instability increased as first the army, followed by the police and prisons services, engaged in mutinies. In August 1994, King Letsie III, in collaboration with some members of the military, staged a coup, suspended Parliament, and appointed a ruling council. As a result of domestic and international pressures, however, the constitutionally elected government was restored within a month.

In 1995, there were isolated incidents of unrest, including a police strike in May to demand higher wages. For the most part, however, there were no serious challenges to Lesotho's constitutional order in the 1995-96 period. In January 1997, armed soldiers put down a violent police mutiny and arrested the mutineers.

In 1997, tension within the BCP leadership caused a split in which Dr. Mokhehle abandoned the BCP and established the Lesotho Congress for Democracy (LCD) followed by two-thirds of the parliament. This move allowed Mokhehle to remain as Prime Minister and leader of a new ruling party, while relegating the BCP to opposition status. The remaining members of the BCP refused to accept their new status as the opposition party and ceased attending sessions. Multiparty elections were again held in May 1998.

Although Mokhehle completed his term as Prime Minister, due to his failing health, he did not vie for a second term in office. The elections saw a landslide victory for the LCD, gaining 79 of the 80 seats contested in the newly expanded Parliament. As a result of the elections, Mokhehle's Deputy Prime Minister, Pakalitha Mosisili, became the new Prime Minister. The landslide electoral victory caused opposition parties to claim that there were substantial irregularities in the handling of the ballots and that the results were fraudulent. The conclusion of the Langa Commission, a commission appointed by Southern African Development Community (SADC) to investigate the electoral process, however, was consistent with the view of international observers and local courts that the outcome of the elections was not affected by these incidents. Despite the fact that the election results were found to reflect the will of the people, opposition protests in the country intensified. The protests culminated in a violent demonstration outside the royal palace in early August 1998 and in an unprecedented level of violence, looting, casualties, and destruction of property. In early September, junior members of the armed services mutinied. The Government of Lesotho requested that a SADC task force intervene to prevent a military coup and restore stability to the country. To this end, Operation Boleas, consisting of South African and (later) Botswana troops, entered Lesotho on September 22, 1998 to put down the mutiny and restore the democratically elected government. The army mutineers were brought before a court-martial.

After stability returned to Lesotho, the SADC task force withdrew from the country in May 1999, leaving only a small task force (joined by Zimbabwean troops) to provide training to the LDF. In the meantime, an Interim Political Authority (IPA), charged with reviewing the electoral structure in the country, was created in December 1998 and devised a proportional electoral system to ensure that there be opposition in the National Assembly. The new system retained the existing 80 elected Assembly seats, but added 40 seats to be filled on a proportional

basis. Elections were held under this new system in May 2002, and the LCD won again, gaining 54% of the vote. For the first time, however, opposition political parties won significant numbers of seats, and despite some irregularities and threats of violence from Major General Lekhanya, Lesotho experienced its first peaceful election. Nine opposition parties now hold all 40 of the proportional seats, with the BNP having the largest share (21). The LCD has 79 of the 80 constituency-based seats.

Letsie III of Lesotho

From Wikipedia, the free encyclopedia

Letsie III (born **David Mohato Bereng Seeiso**; 17 July 1963) is the reigning king of Lesotho. He succeeded his father, Moshoeshoe II, when the latter was forced into exile in 1990. His father was briefly restored in 1995 but soon died in a car crash in early 1996, and Letsie became king again. As a constitutional monarch, most of King Letsie's duties as monarch of Lesotho are ceremonial.

He was educated in the United Kingdom at Ampleforth College. From there he went on to study at the National University of Lesotho where he graduated with a Bachelor of Arts Degree in Law. He then went on to study at the University of Bristol, the University of Cambridge, and the University of London. He completed his studies in 1989, when he returned to Lesotho.

Marriage and children

King Letsie married in 2000 to Karabo Motšoeneng, with whom he has two daughters and one son:

- Princess Mary Senate Mohato Seeiso, born 7 October 2001 and
- Princess 'M'aSeeiso, born 20 November 2004.
- Prince Lerotholi David Mohato Bereng Seeiso, born 18 April 2007

Moshoeshoe I

From Wikipedia, the free encyclopedia

Moshoeshoe (mɔʊˈʃweɪʃweɪ) (c. 1786[1] – March 11, 1870) was born at Menkhoaneng in the Northern part of present-day Lesotho. He was the first son of Mokhachane, a minor chief of the Bamokoteli lineage- a branch of the Koena (crocodile) clan. In his early childhood, he helped his father gain power over some other smaller clans. At the age of 34 Moshoeshoe formed his own clan and became a chief. He and his followers settled at the Butha-Buthe Mountain.

King

Moshoeshoe was the son of Mokhachane, a minor chief of the Bamokoteli sub-clan. He was born at Menkhoaneng in Leribe, Lesotho as Lepoqo. During his youth, he was very brave and once organised a cattle raid against Ramonaheng and captured several herds. As was the tradition, he composed a poem praising himself where, amongst the words he used to refer to himself, said he was "like a razor which has shaved all Ramonaheng's beards", referring to his successful raid. In Sesotho language, a razor makes a "shoe...shoe..." sound, and after that he was affectionately called Moshoeshoe: "the shaver". He also referred himself as the person of Kali, thus showed that he was a descendant of the Great Kali or Monaheng who is said to be the ancestor of most Bakoena people in Lesotho with the exception of the senior BaMolibeli.

Moshoeshoe and his followers, mostly the Bakoena BaMokoteli, some Bafokeng from his maternal side and other relations as well as some clans including the Amazizi, established his village at Butha-Buthe, where his settlement coincided with the growth of Shaka and what came to be called the Lifaqane. Moshoeshoe's reign coincided with the growth in power of the well-known Zulu chief, Shaka. During the early 19th century Shaka raided many smaller clans along the eastern coast of Southern Africa, incorporating parts of them into his steadily growing Zulu chiefdom. Various small clans were forced to flee the Zulu chief. An era of great wars of calamity followed, known as the *Mfecane/lifaqane*. It was marked by aggression against the Sotho people by the invading Nguni clans. The attacks also forced Moshoeshoe to move his settlement to the Qiloane plateau. The name was later changed to Thaba Bosiu or "mountain of the night" because it was believed to be growing during the night and shrinking during day. It proved to be an impassable stronghold against enemies.

Diplomat

The most significant role Moshoeshoe played as a diplomat was his acts of friendship towards his beaten

enemies. He provided land and protection to various people and this strengthened the growing Basotho nation. His influence and followers grew with the integration of a number of refugees and victims of the wars of calamity.

By the latter part of the 19th century, Moshoeshoe established the nation of the Basotho, in Basutoland. He was popularly known as *Morena e Moholo/morena oa Basotho* (Great King/King of the Basotho).

Guns were introduced with the arrival of the Dutch from the Cape Colony and Moshoeshoe determined that he needed these and a white advisor. From other tribes, he heard of the benefits missionaries brought. By chance, three representatives of the Society arrived in the heart of southern Africa : Eugene Casalis, Constant Gosselin and Thomas Arbousset. Moshoeshoe brought them to his kingdom. Later Roman Catholic Missionaries were to have a great influence on the shape of Basotho History (the first being, Bishop M.F. Allard O.M.I. and Fr. Joseph Gerard O.M.I.).

From 1837 to 1855 Casalis played the role of Moshoeshoe's Foreign Advisor. With his knowledge of the non-African world, he was able to inform and advise the king in his dealings with hostile foreigners. He also served as an interpreter for Moshoeshoe in his dealings with white people, and documented the Sesotho language.

In the late 1830s, Boer trekkers from the Cape Colony showed up on the western borders of Basutoland and subsequently claimed land rights. The trekkers' pioneer in this area was Jan de Winnaar, who settled in the Matlakeng area in May–June 1838. As more farmers were moving into the area they tried to colonise the land between the two rivers, even north of the Caledon, 'claiming' that it had been abandoned by the Sotho people. Moshoeshoe, when hearing of the trekker settlement above the junction, stated that "... the ground on which they were belonged to me, but I had no objections to their flocks grazing there until such time as they were able to proceed further; on condition, however, that they remained in peace with my people and recognised my authority."

Eugene Casalis later remarked that the trekkers had humbly asked for temporary rights while they were still few in number, but that when they felt "strong enough to throw off the mask" they went back on their initial intention.

The next 30 years were marked by conflicts.

Wars

Moshoeshoe signed a treaty with the British Governor, Sir George Thomas Napier. Among the provisions of this treaty was the annexation of a tract of land (now called the Orange River Sovereignty) that many Boers had settled. The outraged Boers were suppressed in a brief skirmish in 1848, but remained bitter at both the British and the Sotho.

The situation erupted in 1851. A British force was defeated by the Sotho army at Kolonyama, touching off an embarrassing war for the British. After repulsing another British attack in 1852, Moshoeshoe sent an appeal to the British commander that allowed him to save face. Once again, diplomacy saved the Sotho kingdom. After a final defeat of the Tloka in 1853, Moshoeshoe reigned supreme.

However, the British pulled out of the region in 1854, causing the de facto formation of two independent states: the Boer Orange Free State and the Sotho Kingdom.

In 1858 Moshoeshoe defeated the Boers in the Free State-Basotho War and in 1865 Moshoeshoe lost a great portion of the western lowlands. The last war in 1867 ended only when the British and Moshoeshoe appealed to

Queen Victoria, who agreed to make Basutoland a British protectorate in 1868. The British were eager to check Boer advances, and Moshoeshoe, with advice from Eugene Casalis, realized that continued pressure from the Boers would lead to the destruction of his kingdom.

In 1869, the British signed a treaty at Aliwal with the Boers. It defined the boundaries of Basutoland and later Lesotho; those boundaries have not changed. The arable land west of the Caledon River remained in Boer hands, and is referred to as the Lost or Conquered Territory. This effectively reduced Moshoeshoe's kingdom to half its previous size.

Legacy

Although he had ceded much territory, Moshoeshoe never suffered a major military defeat and retained most of his kingdom and all of his culture. His death in 1870 marked the end of the traditional era and the beginning of the modern colonial period. Moshoeshoe Day is a national holiday in Lesotho celebrated every year on March 11 to commemorate the day of Moshoeshoe's death.

Moshoeshoe I International Airport is named in his honour.

Vatican City

Coordinates: 41.904°N 12.453°E

From Wikipedia, the free encyclopedia

Vatican City /ˈvætɨkən ˈsɪti/, or **Vatican City State**,[14] in Italian officially **Stato della Città del Vaticano** (pronounced ['staːto della tʃit'ta del vati'kaːno]),[15] is a landlocked sovereign city-state whose territory consists of a walled enclave within the city of Rome, Italy. It has an area of approximately 44 hectares (110 acres), and a population of just over 800.[6][16] This makes Vatican City the smallest independent state in the world by both area and population.

Vatican City was established in 1929 by the Lateran Treaty, signed by Cardinal Secretary of State Pietro Gasparri, on behalf of the Holy See and by Prime Minister Benito Mussolini on behalf of the Kingdom of Italy. Vatican City State is distinct from the Holy See,[17] which dates back to early Christianity and is the main episcopal see of 1.2 billion Latin and Eastern Catholic adherents around the globe. Ordinances of Vatican City are published in Italian; official documents of the Holy See are issued mainly in Latin. The two entities have distinct passports: the Holy See, not being a country, issues only diplomatic and service passports, whereas Vatican City State issues normal passports. In each case very few passports are issued.

The Lateran Treaty in 1929, which brought the city-state into existence, spoke of it as a new creation (Preamble and Article III), not as a vestige of the much larger Papal States (756–1870) that had previously encompassed much of central Italy. Most of this territory was absorbed into the Kingdom of Italy in 1860, and the final portion, namely the city of Rome with Lazio, ten years later, in 1870.

Vatican City is an ecclesiastical[6] or sacerdotal-monarchical[7] state, ruled by the Bishop of Rome—the Pope. The highest state functionaries are all Catholic clergymen of various national origins. It is the sovereign territory of the Holy See (*Sancta Sedes*) and the location of the Pope's residence, referred to as the Apostolic Palace.

The Popes have generally resided in the area that in 1929 became Vatican City since the return from Avignon in 1377, but have also at times resided in the Quirinal Palace in Rome and elsewhere. Previously, they resided in the Lateran Palace on the Caelian Hill on the far side of Rome from the Vatican. Emperor Constantine gave this site to Pope Miltiades in 313. The signing of the agreements that established the new state took place in the latter building, giving rise to the name of

Vatican City State[1]

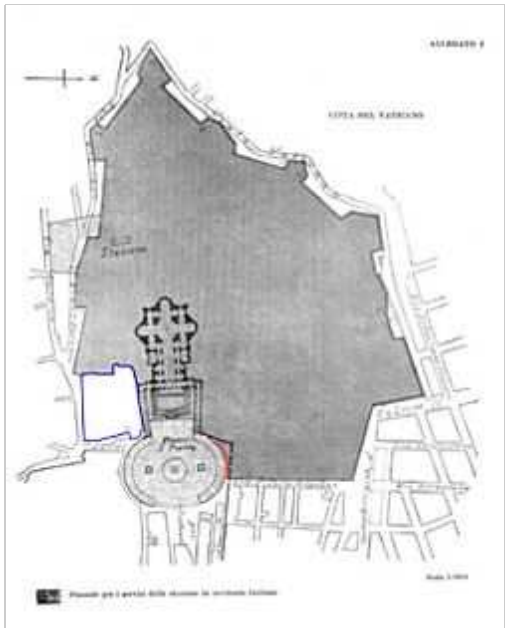
Geography

Main article: Geography of Vatican City

The Vatican climate is the same as Rome's; a temperate, Mediterranean climate with mild, rainy winters from September to mid-May and hot, dry summers from May to August. There are some local features, principally mists and dews, caused by the anomalous bulk of St Peter's Basilica, the elevation, the fountains and the size of the large paved square.



A panorama of the country from atop St. Peter's Basilica.

The Vatican City is the world's smallest state, being only around 44 ha (110 acres).

In July 2007, the Vatican agreed to become the first carbon neutral state. They plan to accomplish this by offsetting carbon dioxide emissions with the creation of a Vatican Climate Forest in Hungary.[18]

Territory

The name "Vatican" predates Christianity and comes from the Latin *Mons Vaticanus*, meaning Vatican Mount.[19] The territory of Vatican City is part of the *Mons Vaticanus*, and of the adjacent former Vatican Fields. It is in this territory that St. Peter's Basilica, the Apostolic Palace, the Sistine Chapel, and museums were built, along with various other buildings. The area was part of the Roman *rione* of Borgo until 1929. Being separated from the city, on the west bank of the Tiber river, the area was an outcrop of the city that was protected by being included within the walls of Leo IV (847–55), and later expanded by the current fortification walls, built under Paul III (1534–49), Pius IV (1559–65) and Urban VIII (1623–44).

Territory of Vatican City according to the Lateran Treaty

When the Lateran Treaty of 1929 that gave the state its present form was being prepared, the boundaries of the proposed territory were influenced by the fact that much of it was all but enclosed by this loop. For some tracts of the frontier, there was no wall, but the line of certain buildings supplied part of the boundary, and for a small part of the frontier a modern wall was constructed.

The territory includes St. Peter's Square, distinguished from the territory of Italy only by a white line along the limit of the square, where it touches Piazza Pio XII. St. Peter's Square is reached through the Via della Conciliazione which runs from close to the Tiber River to St. Peter's. This grand approach was constructed by Benito Mussolini after the conclusion of the Lateran Treaty.

According to the Lateran Treaty, certain properties of the Holy See that are located in Italian territory, most notably Castel Gandolfo and the major basilicas, enjoy extraterritorial status similar to that of foreign embassies.[20][21] These properties, scattered all over Rome and Italy, house essential offices and institutions necessary to the character and mission of the Holy See.[21] Castel Gandolfo and the named basilicas are patrolled internally by police agents of Vatican City State and not by Italian police. St. Peter's Square is ordinarily policed jointly by both.[20]

St. Peter's Square, the basilica and obelisk, from Piazza Pio XII

Gardens

Main article: Gardens of Vatican City

Part of the Vatican Gardens

Within the territory of Vatican City are the Vatican Gardens (Italian: *Giardini Vaticani*),[22] which account for more than half of this territory. The gardens, established during the Renaissance and Baroque era, are decorated with fountains and sculptures.

The gardens cover approximately 23 hectares (57 acres) which is most of the Vatican Hill. The highest point is 60 metres (200 ft) above mean sea level. Stone walls bound the area in the North, South and West.

The gardens date back to medieval times when orchards and vineyards extended to the north of the Papal Apostolic Palace.[23] In 1279 Pope Nicholas III (Giovanni Gaetano Orsini, 1277–1280) moved his residence back to the Vatican from the Lateran Palace and enclosed this area with walls.[24] He planted an orchard *(pomerium)*, a lawn *(pratellum)* and a garden *(viridarium)*.[24]

History

Predecessor states

Main articles: Papal States and History of the Papacy

In this originally uninhabited area (the *ager vaticanus*) on the opposite side of the Tiber from the city of Rome, Agrippina the Elder (14 BC – 18 October AD 33) drained the hill and environs and built her gardens in the early 1st century AD. Emperor Caligula (31 August AD 12 – 24 January AD 41; r. 37–41) started construction of a circus (AD 40) that was later completed by Nero, the *Circus Gaii et Neronis*,[25] usually called, simply, the Circus of Nero. In AD 69, the Year of the Four Emperors, when the northern army that brought Aulus Vitellius to power arrived in Rome, "a large proportion camped in the unhealthy districts of the Vatican, which resulted in many deaths among the common soldiery; and the Tiber being close by, the inability of the Gauls and Germans to bear the heat and the consequent greed with which they drank from the stream weakened their bodies, which were already an easy prey to disease".[26]

The Vatican obelisk was originally taken by Caligula from Heliopolis, Egypt to decorate the spina of his circus and is thus its last visible remnant. This area became the site of martyrdom of many Christians after the Great Fire of Rome in AD 64. Ancient tradition holds that it was in this circus that Saint Peter was crucified upside-down.

Opposite the circus was a cemetery separated by the Via Cornelia. Funeral monuments and mausoleums and small tombs as well as altars to pagan gods of all kinds of polytheistic religions were constructed lasting until before the construction of the Constantinian Basilica of St. Peter's in the first half of the 4th century. Remains of this ancient necropolis were brought to light sporadically during renovations by various popes throughout the centuries increasing in frequency during the Renaissance until it was systematically excavated by orders of Pope Pius XII from 1939 to 1941.

In 326, the first church, the Constantinian basilica, was built over the site that early Roman Catholic apologists (from the first century on) as well as noted Italian archaeologists argue was the tomb of Saint Peter, buried in a common cemetery on the spot. From then on the area started to become more populated, but mostly only by dwelling houses connected with the activity of St. Peter's. A palace was constructed near the site of the basilica as early as the 5th century during the pontificate of Pope Symmachus (reigned 498–514).[27]

Popes in their secular role gradually came to govern neighbouring regions and, through the Papal States, ruled a large portion of the Italian peninsula for more than a thousand years until the mid 19th century, when all of the territory of the Papal States was seized by the newly created Kingdom of Italy. For much of this time the Vatican was not the habitual residence of the Popes, but rather the Lateran Palace, and in recent centuries, the Quirinal Palace, while the residence from 1309–77 was at Avignon in France.

Italian unification

Main article: Roman Question

In 1870, the Pope's holdings were left in an uncertain situation when Rome itself was annexed by the Piedmont-led forces which had united the rest of Italy, after a nominal resistance by the papal forces. Between 1861 and 1929 the status of the Pope was referred to as the "Roman Question". The successive Popes were undisturbed in their palace, and certain prerogatives recognized by the Law of Guarantees, including the right to send and receive ambassadors. But the Popes did not recognise the Italian king's right to rule in Rome, and they refused to leave the Vatican compound until the dispute was resolved in 1929. Other states continued to maintain international recognition of the Holy See as a sovereign entity.

View of the dome of Saint Peter's Basilica from *Borgo Santo Spirito*.

In practice Italy made no attempt to interfere with the Holy See within the Vatican walls. However, they confiscated church property in many other places, including, perhaps most notably, the Quirinal Palace, formerly the pope's official residence. Pope Pius IX (1846–78), the last ruler of the Papal States, claimed that after Rome was annexed he was a "Prisoner in the Vatican".

Lateran treaties

Main article: Lateran Treaty

This situation was resolved on 11 February 1929 between the Holy See and the Kingdom of Italy. The Lateran Treaty was signed by Benito Mussolini on behalf of King Victor Emmanuel III and by Cardinal Secretary of State Pietro Gasparri for Pope Pius XI. The treaty, which became effective on 7 June 1929, and the Concordat

established the independent State of the Vatican City and granted Roman Catholicism special status in Italy.

The Apostolic Palace.

World War II

Main article: Vatican City during World War II

Vatican City officially pursued a policy of neutrality during World War II, under the leadership of Pope Pius XII. Although the city of Rome was occupied by Germany from 1943 and the Allies from 1944, Vatican City itself was not occupied. One of Pius XII's main diplomatic priorities was to prevent the bombing of Rome; so sensitive was the pontiff that he protested even the British air dropping of pamphlets over Rome, claiming that the few landing within the city-state violated the Vatican's neutrality.[28] Before the American entry into the war, there was little impetus for such a bombing, as the British saw little strategic value in it.[29]

After the American entry, the US opposed such a bombing, fearful of offending Catholic members of its military forces, while the British then supported it.[30] Pius XII similarly advocated for the declaration of Rome as an "open city", but this occurred only on 14 August 1943, after Rome had already been bombed twice.[31] Although the Italians consulted the Vatican on the wording of the open city declaration, the impetus for the change had little to do with the Vatican.[32]

Recent history

In 1984, a new concordat between the Holy See and Italy modified certain provisions of the earlier treaty, including the position of Roman Catholicism as the Italian state religion.

Governance

Main article: Politics of Vatican City

The politics of Vatican City takes place in an absolute elective monarchy, in which the head of the Roman Catholic Church takes power. The Pope exercises principal legislative, executive, and judicial power over the State of Vatican City (an entity distinct from the Holy See), which is a rare case of a non-hereditary monarchy.[33]

Vatican City is currently the only widely recognised independent state that has not become a member of the UN. The Holy See, which is distinct from Vatican City State, has permanent observer status with all the rights of a full member except for a vote in the UN General Assembly.

Political system

The government of Vatican City has a unique structure. The Pope is the sovereign of the state. Legislative authority is vested in the Pontifical Commission for Vatican City State, a body of cardinals appointed by the Pope for five-year periods. Executive power is in the hands of the President of that commission, assisted by the General Secretary and Deputy General Secretary. The state's foreign relations are entrusted to the Holy See's Secretariat of State and diplomatic service. Nevertheless, the pope has full and absolute executive, legislative and judicial power over Vatican City. He is currently the only absolute monarch in Europe.

There are specific departments that deal with health, security, telecommunications, etc.[34]

The Cardinal Camerlengo presides over the Apostolic Camera to which is entrusted the administration of the property and the protection of the temporal rights of the Holy See during a papal vacancy. Those of the Vatican State remain under the control of the Pontifical Commission for the State of Vatican City. Acting with three other cardinals chosen by lot every three days, one from each order of cardinals (cardinal bishop, cardinal priest, and cardinal deacon), he in a sense performs during that period the functions of head of state. All the decisions these four cardinals take must be approved by the College of Cardinals as a whole.

The nobility that was closely associated with the Holy See at the time of the Papal States continued to be associated with the Papal Court after the loss of these territories, generally with merely nominal duties (see Papal Master of the Horse, Prefecture of the Pontifical Household, Hereditary officers of the Roman Curia, Black Nobility). They also formed the ceremonial Noble Guard. In the first decades of the existence of the Vatican City State, executive functions were entrusted to some of them, including that of Delegate for the State of Vatican City (now denominated President of the Commission for Vatican City). But with the motu proprio *Pontificalis Domus* of 28 March 1968,[35] Pope Paul VI abolished the honorary positions that had continued to exist until then, such as Quartermaster General and Master of the Horse.[36]

The State of the Vatican City, created in 1929 by the Lateran Pacts, provides the Holy See with a temporal jurisdiction and independence within a small territory. It is distinct from the Holy See. The state can thus be deemed a significant but not essential instrument of the Holy See. The Holy See itself has existed continuously as a juridical entity since Roman Imperial times and has been internationally recognised as a powerful and independent sovereign entity since late antiquity to the present, without interruption even at times when it was deprived of territory (e.g. 1870 to 1929). The Holy See has the oldest active continuous diplomatic service in the world, dating back to at least AD 325 with its legation to the Council of Nicea.[37] Ambassadors are accredited to the Holy See, never to the Vatican City State.

Head of state

Main article: Pope

Vatican City

The Pope is *ex officio* head of state[38] of Vatican City, functions dependent on his primordial function as bishop of the diocese of Rome. The term Holy See refers not to the Vatican state but to the Pope's spiritual and pastoral governance, largely exercised through the Roman Curia.[39] His official title with regard to Vatican City is *Sovereign of the State of the Vatican City*.

His principal subordinate government official for Vatican City is the President of the Pontifical Commission for Vatican City State, who since 1952 exercises the functions previously belonging to the Governor of Vatican City. Since 2001, the President of the Pontifical Commission for Vatican City State also has the title of President of the Governorate of the State of Vatican City.

The Pope resides in the Papal Apartments of the Papal Palace overlooking off Saint Peter's Square. It is here he carries out his business and meets foreign representatives.

The current Pope is Benedict XVI, born Joseph Alois Ratzinger in Bavaria, Germany. Italian Cardinal Giovanni Lajolo serves as President of the Pontifical Commission for the State of Vatican City. He was appointed by Pope

Benedict XVI on 11 September 2006.

Administration

Legislative functions are delegated to the unicameral Pontifical Commission for Vatican City State, led by the President of the Pontifical Commission for Vatican City State. Its seven members are cardinals appointed by the Pope for terms of five years. Acts of the commission must be approved by the pope, through the Holy See's Secretariat of State, and before taking effect must be published in a special appendix of the *Acta Apostolicae Sedis*. Most of the content of this appendix consists of routine executive decrees, such as approval for a new set of postage stamps.

Executive authority is delegated to the Governorate of Vatican City. The Governorate consists of the President of the Pontifical Commission—using the title "President of the Governorate of Vatican City"—a General Secretary, and a Vice General Secretary, each appointed by the pope for five year terms. Important actions of the Governorate must be confirmed by the Pontifical Commission and by the Pope through the Secretariat of State.

The Governorate oversees the central governmental functions through several departments and offices. The directors and officials of these offices are appointed by the pope for five year terms. These organs concentrate on material questions concerning the state's territory, including local security, records, transportation, and finances. The Governorate oversees a modern security and police corps, the *Corpo della Gendarmeria dello Stato della Città del Vaticano*.

Judicial functions are delegated to a supreme court, an appeals court, a tribunal (Tribunal of Vatican City State), and a trial judge.[40] In all cases, the pope may choose at any time to exercise supreme legislative, executive, or judicial functions in the state.

The Country code prefix is *SCV*, and the only postal code is *00120* – altogether *SCV-00120*.[41]

Military and police

Main articles: Military of Vatican City and Crime in Vatican City

Though, like various European powers, earlier Popes recruited Swiss mercenaries as part of an army, the Pontifical Swiss Guard was founded by Pope Julius II on 22 January 1506 as the personal bodyguard of the Pope and continues to fulfil that function. It is listed in the Annuario Pontificio under "Holy See", not under "State of Vatican City". At the end of 2005, the Guard had 134 members. Recruitment is arranged by a special agreement between the Holy See and Switzerland. All recruits must be Catholic, unmarried males with Swiss citizenship who have completed their basic training with the Swiss Army with certificates of good conduct, be between the ages of 19 and 30, and be at least 175 cm (5 ft 9 in) in height. Members are armed with small arms and the traditional halberd (also called the Swiss voulge), and trained in bodyguarding tactics.

The Palatine Guard and the Noble Guard were disbanded by Pope Paul VI in 1970.[42] While the first body was founded as a militia at the service of the Papal States, its functions within the Vatican State, like those of the Noble Guard, were merely ceremonial.

The Corpo della Gendarmeria acts as a police force. Its full name is Corpo della Gendarmeria dello Stato della Città del Vaticano (which means "Gendarmerie Corps of the Vatican City State"), although it is sometimes referred to as the *Vigilanza*, as a shortening of an earlier name. The Gendarmeria is responsible for public order, law enforcement, crowd and traffic control, and criminal investigations in Vatican City.[42]

The military defence of the Vatican City is provided by Italy and its armed forces, given the fact that Vatican City is an enclave within the Italian Republic. Vatican City has no armed force of its own, the Swiss Guard being a corps responsible for the security of the Pope.

Foreign relations

See also: Foreign relations of the Holy See

Vatican City State is a recognised national territory under international law, but it is the Holy See that conducts diplomatic relations on its behalf, in addition to the Holy See's own diplomacy, entering into international agreements in its regard. The Vatican City State thus has no diplomatic service of its own. Because of space limitations, Vatican City is one of the few countries in the world that is unable to host embassies.

Foreign embassies to the Holy See are located in the city of Rome; only during the Second World War were the staff of some embassies accredited to the Holy See given what hospitality was possible within the narrow confines of Vatican City—embassies such as that of the United Kingdom while Rome was held by the Axis Powers and Germany's when the Allies controlled Rome.

Palace of the Governorate of Vatican City State

The size of Vatican City is thus unrelated to the large global reach exercised by the Holy See as an entity quite distinct from the state.[43]

However, Vatican City State itself participates in some international organizations whose functions relate to the state as a geographical entity, distinct from the non-territorial legal persona of the Holy See.

These organizations are much less numerous than those in which the Holy See participates either as a member or with observer status.

They include the following seven, in each of which Vatican City State holds membership:[44][45]

- European Conference of Postal and Telecommunications Administrations (CEPT)
- European Telecommunications Satellite Organization (Eutelsat IGO)
- International Grains Council (IGC)
- International Institute of Administrative Sciences (IIAS)
- International Telecommunication Union (ITU)
- International Telecommunications Satellite Organization (ITSO)
- Universal Postal Union (UPU)

It also participates in:[44]

- World Medical Association
- World Intellectual Property Organization (WIPO)

Economy

Main article: Economy of Vatican City

The Vatican City State budget[46] includes the Vatican museums and post office and is supported financially by the sale of stamps, coins, medals and tourist mementos; by fees for admission to museums; and by publications sales. The incomes and living standards of lay workers are comparable to those of counterparts who work in the city of Rome.[47] Other industries include printing, the production of mosaics, and the manufacture of staff uniforms.

The Institute for Works of Religion, also known as the Vatican Bank, and with the acronym IOR (*Istituto per le Opere di Religione*), is a bank situated in the Vatican that conducts worldwide financial activities. It has an ATM with instructions in Latin, possibly the only such ATM in the world.[48]

Vatican City issues its own coins. It has used the euro as its currency since 1 January 1999, owing to a special agreement with the European Union (council decision 1999/98/CE). Euro coins and notes were introduced in 1 January 2002—the Vatican does not issue euro banknotes. Issuance of euro-denominated coins is strictly limited by treaty, though somewhat more than usual is allowed in a year in which there is a change in the papacy.[49] Because of their rarity, Vatican euro coins are highly sought by collectors.[50] Until the adoption of the Euro, Vatican coinage and stamps were denominated in their own Vatican lira currency, which was on par with the Italian lira.

The Vatican City State, which employs nearly 2000 people, had a surplus of 6.7 million euros in 2007 but ran a deficit in 2008 of over 15 million euros.[51]

In 2012, the U.S. State Department's International Narcotics Control Strategy Report listed Vatican City for the first time among the nations of concern for money-laundering, placing it in the middle category, which includes countries such as Ireland, but not among the most vulnerable countries, which include the United States itself, Germany, Italy and Russia.[52]

Demographics

Population and languages

Main article: Languages of Vatican City

Vatican Museums

Almost all of Vatican City's 826 (2009 est.)[53] citizens either live inside the Vatican's walls or serve in the Holy See's diplomatic service in embassies (called "nunciatures"; a papal ambassador is a "nuncio") around the world. The Vatican citizenry consists almost entirely of two groups: clergy, most of whom work in the service of the Holy See, and a very few as officials of the state; and the Swiss Guard. Most of the 2,400 lay workers who comprise the majority of the Vatican workforce reside outside the Vatican and are citizens of Italy, while a few are citizens of other nations. As a result, all of the City's actual citizens are Catholic as are all the places of worship.

Vatican City has no formally enacted official language, but, unlike the Holy See, which most often uses Latin for the authoritative version of its official documents, Vatican City uses only Italian in its legislation and official communications.[54] Italian is also the everyday language used by most of those who work in the state. In the Swiss Guard, German is the language used for giving commands, but the individual guards take their oath of

loyalty in their own languages, German, French, Romansh or Italian. Vatican City's official website languages are Italian, English, French, German, and Spanish. (This site should not be confused with that of the Holy See, which uses all these languages, along with Portuguese, with Latin since 9 May 2008 and Chinese since 18 March 2009.)

The Seal of Vatican City. Note the use of the Italian language.

Citizenship

Pre-March 2011

Unlike citizenship of other states, which is based either on *jus sanguinis* (birth from a citizen, even outside the state's territory) or on *jus soli* (birth within the territory of the state), citizenship of Vatican City is granted *jus officii*, namely on the grounds of appointment to work in a certain capacity in the service of the Holy See. It usually ceases upon cessation of the appointment. Citizenship is extended also to the spouse, parents and descendants of a citizen, provided they are living with the person who is a citizen.[55][56]

Anyone who loses Vatican citizenship and does not possess other citizenship automatically becomes an Italian citizen as judged by Italian law.[20]

As of 31 December 2005, there were, apart from the Pope himself, 557 people with Vatican citizenship, while there were 246 residents in the state who did not have its citizenship.

Of the 557 citizens, 74% were clergy:

- 58 cardinals, resident in Rome, mostly outside the Vatican;
- 293 clergy, members of the Holy See's diplomatic missions, resident in other countries, and forming well over half the total of the citizens;
- 62 other clergy, working but not necessarily living in the Vatican.

The 101 members of the Papal Swiss Guard constituted 18% of the total, and there were only 43 other lay persons with Vatican citizenship.[57]

Post-February 2011

On 22 February 2011, Pope Benedict XVI promulgated a new "Law concerning citizenship, residency and access" to Vatican City, which became effective on 1 March. It replaced the 1929 "Law concerning citizenship and residence".[58] There are 16 articles in the new law, whereas the old law had 33 articles.[59] Vatican citizenship now has four categories: (1) the pope, (2) cardinals residing in Vatican City, (3) active members of the Holy See's diplomatic corps, and (4) other directors of Vatican offices and services.[59] The new law created a new status, that of official Vatican "residents", i.e., people who live in Vatican City but are not citizens.[59] As of 1 March 2011, the Vatican had 572 citizens, but only 220 of them were living in Vatican City.[59] The other 352 citizens were apostolic nuncios and diplomatic staff.[59] The 220 citizens living in Vatican City were among more than 800 people living in the Vatican.[59]

Culture

Main article: Culture of Vatican City

Michelangelo's *Pietà* is one of the Vatican's best known artworks.

Vatican City is home to some of the most famous art in the world. St. Peter's Basilica, whose successive architects include Bramante, Michelangelo, Giacomo della Porta, Maderno and Bernini is a renowned work of Renaissance architecture. The Sistine Chapel is famous for its frescos, which include works by Perugino, Domenico Ghirlandaio and Botticelli as well as the ceiling and Last Judgement by Michelangelo. Artists who decorated the interiors of the Vatican include Raphael and Fra Angelico.

The Vatican Library and the collections of the Vatican Museums are of the highest historical, scientific and cultural importance. In 1984, the Vatican was added by UNESCO to the List of World Heritage Sites; it is the only one to consist of an entire state.[60] Furthermore, it is the only site to date registered with the UNESCO as a *centre containing monuments* in the "International Register of Cultural Property under Special Protection" according to the 1954 Hague Convention for the Protection of Cultural Property in the Event of Armed Conflict.[60]

Infrastructure

Transport

Main article: Transport in Vatican City

Vatican's Railway Station

Vatican City has a reasonably well developed transport network considering its size (consisting mostly of a plaza and walkways). As a country that is 1.05 kilometres (0.6 mi) long and 0.85 kilometres (0.5 mi) wide,[61] it has a small transportation system with no airports or highways. There is one heliport and a standard gauge railway connected to Italy's network at Rome's Saint Peter's station by an 852-metre-long (932 yd) spur, only 300 metres (330 yd) of which is within Vatican territory.[62]

Pope John XXIII was the first Pope to make use of this railway, and Pope John Paul II used it as well, albeit very rarely. The railway is mainly used to transport freight.[62] As Vatican City has no airports (it is one of the few

independent states in the world without one, except for the aforementioned heliport), it is served by the airports that serve the city of Rome, within which the Vatican is located, namely: Leonardo da Vinci-Fiumicino Airport and to a lesser extent, Ciampino Airport, which both serve as the departure gateway for the Pope's international visits.[62]

The stamp vending machine of the Vatican Postal Service.

Communications

The City is served by an independent, modern telephone system,[63] the Vatican Pharmacy, and post office. The postal system was founded on 11 February 1929, and two days later became operational. On 1 August, the state started to release its own postal stamps, under the authority of the Philatelic and Numismatic Office of the Vatican City State.[64] The City's postal service is sometimes recognised as "the best in the world"[65] and mail has been noted to get to its target before the postal service in Rome.[65]

The Vatican also controls its own Internet TLD, which is registered as (.va). Broadband service is widely provided within Vatican City. Vatican City has also been given a radio ITU prefix, HV, and this is sometimes used by amateur radio operators.

Vatican Radio, which was organised by Guglielmo Marconi, broadcasts on short-wave, medium-wave and FM frequencies and on the Internet.[66] Its main transmission antennae are located in Italian territory. Television services are provided through another entity, the Vatican Television Center.[67]

L'Osservatore Romano is the multilingual semi-official newspaper of the Holy See. It is published by a private corporation under the direction of Roman Catholic laymen but reports on official information. However, the official texts of documents are in the *Acta Apostolicae Sedis*, the official gazette of the Holy See, which has an appendix for documents of the Vatican City State.

Vatican Radio, the Vatican Television Center, and L'Osservatore Romano are organs not of the Vatican State but of the Holy See, and are listed as such in the Annuario Pontificio, which places them in the section "Institutions linked with the Holy See", ahead of the sections on the Holy See's diplomatic service abroad and the Diplomatic Corps accredited to the Holy See, after which is placed the section on the State of Vatican City.

Crime

Main article: Crime in Vatican City

In accordance with Article 22 of the 1929 Lateran Treaty between the Holy See and Italy, the Italian government, when requested by the Holy See, handles the prosecution and detention of criminal suspects, at the expense of the Vatican.[20] Capital punishment was envisaged in the legislation adopted in 1929 on the basis of Italian law, but the Vatican state never exercised it and abolished it in 1969.

Papal States

Coordinates: 42°49′16″N 12°36′10″E

From Wikipedia, the free encyclopedia

The **Papal State(s)**, the **Popedom**, the **State(s) of the Church**, the **Pontifical States**, the **Ecclesiastical States**, or the **Roman States** (Italian: *Stato Pontificio*, also *Stato della Chiesa*, *Stati della Chiesa*, *Stati Pontifici*, and *Stato Ecclesiastico*; Latin: *Status Pontificius*, also *Dicio Pontificia*)[1] were among the major historical states of Italy from roughly the 6th century until the Italian peninsula was unified in 1861 by the Kingdom of Piedmont-Sardinia (after which the Papal States, in less territorially extensive form, continued to exist until 1870).

The Papal States comprised territories under direct sovereign rule of the papacy, and at its height it covered most of the modern Italian regions of Romagna, Marche, Umbria and Lazio. This governing power is commonly called the temporal power of the Pope, as opposed to his ecclesiastical primacy.

The plural *Papal States* is usually preferred; the singular *Papal State* (equally correct since it was not a mere personal union) tends to be used (normally with lower-case letters) for the modern State of Vatican City, an enclave within Italy's national capital, Rome. The Vatican City was founded in 1929, again allowing the Holy See the political benefits of territorial sovereignty.

The Church spent its first three centuries as an outlawed organization and was thus unable to hold or transfer property. Early churches congregated in special rooms of well-to-do individuals set aside for that purpose, and a number of early churches built round the edges of Ancient Rome were ascribed to patrons who held the property in custody for the Church: see *titulus*. After the ban was lifted by the Emperor Constantine I, the Church's private property grew quickly through the donations of the pious and the wealthy; the Lateran Palace was the first significant donation, a gift of Constantine himself.

Other donations soon followed, mainly in mainland Italy but also in the provinces, but the Church held all of these lands as a private landowner, not as a sovereign entity. When in the fifth century the Italian peninsula passed under the control of first Odoacer and then the Ostrogoths, the church organization in Italy, and the bishop of Rome as its head, submitted to their sovereign authority while asserting their spiritual primacy over the whole Church.

The seeds of the Papal States as a sovereign political entity were planted in the sixth century. The Eastern Roman (or Byzantine) government in Constantinople launched a reconquest of Italy that took decades and devastated the country's political and economic structures; just as those wars wound down, the Lombards entered the peninsula from the north and conquered much of the countryside. By the seventh century, Byzantine authority was largely limited to a diagonal band running roughly from Ravenna, where the Emperor's representative, or Exarch, was located, to Rome and south to Naples (the "Rome-Ravenna corridor").

With effective Byzantine power weighted at the northeast end of this territory, the Bishop of Rome, as the largest landowner and most prestigious figure in Italy, began by default to take on much of the ruling authority that Byzantines were unable to project to the area around the city of Rome. While the Bishops of Rome — now beginning to be referred to as the Popes — remained *de jure* Byzantine subjects, in practice the Duchy of Rome, an area roughly equivalent to modern-day Latium, became an independent state ruled by the Church.

The Church's independence, combined with popular support for the Papacy in Italy, enabled various Popes to defy the will of the Byzantine emperor; Pope Gregory II even excommunicated Emperor Leo III the Isaurian during the Iconoclast Controversy. Nevertheless the Pope and the Exarch still worked together to control the rising power of the Lombards in Italy. As Byzantine power weakened, though, the Papacy took an ever larger role in defending Rome from the Lombards, usually through diplomacy, threats and bribery[*citation needed*]. In practice, the papal efforts served to focus Lombard aggrandizement on the Exarch and Ravenna. A climactic moment in the founding of the Papal States was the agreement over boundaries embodied in the Lombard king Liutprand's *Donation of Sutri* (728) to Pope Gregory II [1] (http://www.romeartlover.it/Civita3.html) .

Donation of Pepin

Main article: Donation of Pepin

When the Exarchate of Ravenna finally fell to the Lombards in 751, the Duchy of Rome was completely cut off from the Byzantine Empire, of which it was theoretically still a part. Pope Stephen II acted to neutralize the Lombard threat by courting the de facto Frankish ruler, Pepin the Short. With the urging of Pope Zachary to depose the Merovingian figurehead Childeric III, Pepin was crowned in 751 by Saint Boniface.

The Quirinal Palace, papal residence and home to the civil offices of the Papal States from the Renaissance until their annexation.

Stephen later granted Pepin the title *Patrician of the Romans*. Pepin led a Frankish army into Italy in 754 and 756. Pepin defeated the Lombards — taking control of northern Italy — and made a gift (called the Donation of Pepin) of the properties formerly constituting the Exarchate of Ravenna to the Pope.

In 781, Charlemagne codified the regions over which the Pope would be temporal sovereign: the Duchy of Rome was key, but the territory was expanded to include Ravenna, the Pentapolis, parts of the Duchy of Benevento, Tuscany, Corsica, Lombardy and a number of Italian cities. The cooperation between the Papacy and the Carolingian dynasty climaxed in 800, when Pope Leo III crowned Charlemagne the first "Emperor of the Romans" ('Augustus Romanorum').

Relationship with the Holy Roman Empire

The precise nature of the relationship between the Popes and Emperors — and between the Papal States and the Empire — was disputed. Was the Pope a sovereign ruler of a separate realm in central Italy, or were the Papal States just a part of the Frankish Empire over which the Popes had administrative control? (This last was the view of the late 9th-century *Libellus de imperatoria potestate in urbe Roma*.) Or were the Holy Roman Emperors vicars of the Pope (as a sort of Archemperor) ruling Christendom, with the Pope directly responsible only for the environs of Rome and spiritual duties?

Events in the 9th century postponed the conflict: the Holy Roman Empire in its Frankish form collapsed as it was subdivided among Charlemagne's grandchildren. Imperial power in Italy waned and the papacy's prestige declined. This led to a rise in the power of the local Roman nobility, and the control of the Papal States during the early tenth century by a powerful and corrupt aristocratic family, the Theophylacti. This period was later dubbed the Saeculum obscurum or "dark age of the papacy", and sometimes as the "rule by harlots".[3] In practice, the Popes were unable to exercise effective sovereignty over the extensive and mountainous territories of the Papal States, and the region preserved its old system of government, with many small countships and marquisates, each centered upon a fortified *rocca*.

Over several campaigns in the mid-tenth century, the German ruler Otto I conquered northern Italy; Pope John XII crowned him emperor (the first so crowned in more than forty years), and the two of them ratified the Diploma Ottonianum, which guaranteed the independence of the Papal States. Yet over the next two centuries, Popes and Emperors squabbled over a variety of issues, and the German rulers routinely treated the Papal States as part of their realms on those occasions when they projected power into Italy. A major motivation for the

Gregorian Reform was to free the administration of the Papal States from imperial interference, and after the extirpation of the Hohenstaufen dynasty, the German emperors rarely interfered in Italian affairs. By 1300, the Papal States, along with the rest of the Italian principalities, were effectively independent. During the Renaissance the Spanish Emperors fought wars over the Papal States, often against the Pope.

Period of the Avignon papacy

Main article: Avignon Papacy

From 1305 to 1378, the Popes lived in the papal enclave of Avignon, surrounded by Provence, and were under the influence of the French kings in the 'Babylonian Captivity'. During this Avignon Papacy, local despots took advantage of the absence of the popes, to establish themselves in nominally papal cities: the Pepoli in Bologna, the Ordelaffi in Forlì, the Manfredi in Faenza, the Malatesta in Rimini all gave nominal acknowledgement to their papal overlords and were declared vicars of the Church.

In Ferrara, the death of Azzo VIII d'Este without legitimate heirs (1308) encouraged Clement to bring Ferrara under his direct rule: for only nine years, however, was it governed by his appointed vicar, Robert d'Anjou, King of Naples, before the citizens recalled the Este from exile (1317); interdiction and excommunications were in vain: in 1332 John XXII was obliged to name three Este brothers as his vicars in Ferrara.

In Rome itself the Orsini and the Colonna struggled for supremacy, dividing the city's *rioni* between them. The resulting aristocratic anarchy in the city provided the setting for the fantastic dreams of universal democracy of Cola di Rienzo, who was acclaimed Tribune of the People in 1347 and met a violent death in 1354.

The Rienzo episode engendered renewed attempts from the absentee papacy to re-establish order in the dissolving Papal States, resulting in the military progress of Cardinal Egidio Albornoz, who was appointed papal legate, and his condottieri heading a small mercenary army. Having received the support of the archbishop of Milan and Giovanni Visconti, he defeated Giovanni di Vico, lord of Viterbo, moving against Galeotto Malatesta of Rimini and the Ordelaffi of Forlì, the Montefeltro of Urbino and the da Polenta of Ravenna, and against the cities of Senigallia and Ancona. The last holdouts against full papal control were Giovanni Manfredi of Faenza and Francesco II Ordelaffi of Forlì. Albornoz, at the point of being recalled in 1357, in a meeting with all the Papal vicars, 29 April 1357, promulgated the *Constitutiones Sanctæ Matris Ecclesiæ*, which replaced the mosaic of local law and accumulated traditional 'liberties' with a uniform code of civil law. These *Constitutiones Egidiane* mark a watershed in the legal history of the Papal States; they remained in effect until 1816. Pope Urban V ventured a return to Italy in 1367 that proved premature; he returned to Avignon in 1370

During this period the city of Avignon itself was added to the Papal States; it remained a papal possession even after the popes returned to Rome, being seized and incorporated into the by then unitary French state only during the French Revolution.

Renaissance

During the Renaissance, the papal territory expanded greatly, notably under Popes Alexander VI and Julius II. The Pope became one of Italy's most important secular rulers as well as the head of the Church, signing treaties with other sovereigns and fighting wars. In practice, though, most of the Papal States was still only nominally controlled by the Pope, and much of the territory was ruled by minor princes. Control was always contested; indeed it took until the 16th century for the Pope to have any genuine control over all his territories.

Papal responsibilities were often (as in the early 16th century) in conflict. The Papal States were involved in at

Antichristus (1521) by Lucas Cranach the Elder is a woodcut of the Papal States at war during the Renaissance.

least 3 wars in the first 2 decades.[4][5] Pope Julius II, the "Warrior Pope", fought on their behalf. The Reformation began in 1517. Before the Holy Roman Empire fought the Protestants, its soldiers (including many Protestants), sacked Rome as a side effect of battles over the Papal States.[6] A generation later the armies of Emperor Philip II of Spain stomped those of Pope Paul IV over the same issues.[7]

At its greatest extent, in the 18th century, the Papal States included most of Central Italy — Latium, Umbria, Marche and the Legations of Ravenna, Ferrara and Bologna extending north into the Romagna. It also included the small enclaves of Benevento and Pontecorvo in southern Italy and the larger Comtat Venaissin around Avignon in southern France.

French Revolution and Napoleonic era

The French Revolution proved as disastrous for the temporal territories of the Papacy as it was for the Roman Church in general. In 1791 the Comtat Venaissin and Avignon were annexed by France. Later, with the French invasion of Italy in 1796, the Legations were seized and became part of the revolutionary Cisalpine Republic.

Map of Italy in 1796, showing the Papal States before the Napoleonic wars changed the face of Italy

Two years later, the Papal States as a whole were invaded by French forces, who declared a Roman Republic. Pope Pius VI died in exile in France in 1799. The Papal States were restored in June 1800 and Pope Pius VII returned, but the French again invaded in 1808, and this time the remainder of the States of the Church were annexed to France, forming the *départements* of *Tibre* and *Trasimène*.

With the fall of the Napoleonic system in 1814, the Papal States were restored once more. From 1814 until the death of Pope Gregory XVI in 1846, the Popes followed a reactionary policy in the Papal States. For instance, the city of Rome maintained the last Jewish ghetto in Western Europe. There were hopes that this would change when Pope Pius IX was elected to succeed Gregory and began to introduce liberal reforms.

Italian nationalism and the end of the Papal States

Main article: Papal States under Pope Pius IX

Italian nationalism had been stoked during the Napoleonic period but dashed by the settlement of the Congress of Vienna (1814–15), which left Italy divided: aside from Sardinia-Piedmont, Tuscany and the north were under

rule of junior cadet branches of the Habsburgs and in the south the Kingdom of the Two Sicilies was under Bourbon rule. In 1848, nationalist and liberal revolutions began to break out across Europe; in 1849, a Roman Republic was declared and Pope Pius IX fled the city.

A view of the Papal States from the perspective of the mid 19th century is readily available.[8]

After the Austro-Sardinian War of 1859, much of northern Italy was unified under the House of Savoy, and Giuseppe Garibaldi led a revolution that overthrew the Bourbon monarchy in the Kingdom of the Two Sicilies. Afraid that Garibaldi would set up a republican government in the south, the Sardinians petitioned Emperor Napoleon III of France for permission to send troops through the Papal States to gain control of the Two Sicilies, which was granted on the condition that Rome was left undisturbed. In 1860, with much of the region already in rebellion against Papal rule, Sardinia-Piedmont conquered the eastern two-thirds of the Papal States and cemented its hold on the south. Bologna, Ferrara, Umbria, the Marches, Benevento and Pontecorvo were all formally annexed by November of the same year, and a unified Kingdom of Italy was declared.

The Papal States were reduced to Latium, the immediate neighbourhood of Rome, which was declared Capital of Italy in March 1861, when the first Italian Parliament met in the Piedmontese kingdom's old capital, Turin. However, the Italian Government could not take possession of its capital because Napoleon III kept a French garrison in Rome in order to protect Pope Pius IX. The opportunity to eliminate the Papal States came when the Franco-Prussian War began in July 1870, and Napoleon III had to recall his garrison from Rome. Following the collapse of the Second French Empire at the Battle of Sedan, widespread public demonstrations demanded that the Italian Government take Rome. King Victor Emmanuel II sent Count Gustavo Ponza di San Martino to Pius IX with a personal letter offering a face-saving proposal that would have allowed the peaceful entry of the Italian Army into Rome, under the guise of offering protection to the pope.

The Breach of Porta Pia, on the right, in a contemporary photograph.

On September 10, 1870, Italy declared war on the Papal States, and the Italian Army, commanded by General Raffaele Cadorna, crossed the frontier of the then remaining papal territory on 11 September and advanced slowly toward Rome. The Italian Army reached the Aurelian Walls on 19 September and placed Rome under a state of siege. Although the pope's tiny army was incapable of defending the city, Pius IX ordered it to put up at least a token resistance to emphasize that Italy was acquiring Rome by force and not consent. This incidentally served the purposes of the Italian State and gave rise to the myth of the Breach of Porta Pia, in reality a tame affair involving a cannonade at close range that demolished without much fuss a 1600-year-old wall in poor repair. The city was captured on September 20, 1870. Rome and Latium were annexed to the Kingdom of Italy as a result of a plebiscite the following October.

Despite the fact that the traditionally Catholic powers did not come to the Pope's aid, the papacy rejected any substantial accommodation with the Italian Kingdom, especially any proposal which required the Pope to become an Italian subject. Instead the papacy confined itself (see Prisoner in the Vatican) to the Apostolic Palace and adjacent buildings in the loop of the ancient fortifications known as the Leonine City, on Vatican Hill. From there it maintained a number of features pertaining to sovereignty, such as diplomatic relations, since in canon law these were inherent in the papacy. In the 1920s, the papacy — then under Pius XI — renounced the bulk of the Papal States and the Lateran Treaty (or Concordat) with Italy was signed on February 11, 1929, creating the State of the Vatican City, forming the sovereign territory of the Holy See, which was also indemnified to some degree for loss of territory.

Institutions

- As the *plural* name Papal States indicates, the various regional components, usually former independent states, retained their identity under papal rule. The Pope was represented in each province by a governor, either styled papal legate, as in the former principality of Benevento, or Bologna, Romagna, and the March of Ancona; or papal delegate, as in the former duchy of Pontecorvo and in the Campagne and Maritime Province.
- The police force, known as *sbirri* ("cops" in modern Italian slang), was billeted in private houses (normally a practice of military occupation) and enforced order quite rigorously.
- For the defence of the states against the nascent Italian state in the last years of papal territorial autonomy, an international Catholic volunteer corps, called Papal Zouaves after a kind of French colonial native Algerian infantry, and imitating their uniform type, was created and fought in many engagements with great courage against superior odds in men and equipment.[9]

History of the papacy

From Wikipedia, the free encyclopedia

See also: List of popes

According to Catholic doctrine, popes are successors to Saint Peter.

The **history of the papacy**, the office held by the pope as head of the Catholic Church, spans from the time of Saint Peter to present day.

During the Early Church, the bishops of Rome enjoyed no temporal power until the time of Constantine. After the fall of Rome (the "Middle Ages"), the papacy was influenced by the temporal rulers of and surrounding the Italian Peninsula; these periods are known as the Ostrogothic Papacy, Byzantine Papacy, and Frankish Papacy. Over time, the papacy consolidated its territorial claims to a portion of the peninsula known as the Papal States. Thereafter, the role of neighboring sovereigns was replaced by powerful Roman families during the *saeculum obscurum*, the Crescentii era, and the Tusculan Papacy.

From 1048 to 1257, the papacy experienced increasing conflict with the leaders and churches of the Holy Roman Empire and the Byzantine Empire. The latter culminated in the East-West Schism, dividing the Catholic Church and Eastern Orthodox Church. From 1257–1377, the pope, though the bishop of Rome, resided in Viterbo, Orvieto, and Perugia, and then Avignon. The return of the popes to Rome after the Avignon Papacy was followed by the Western Schism: the division of the western church between two, and for a time three, competing papal claimants.

The Renaissance Papacy is known for its artistic and architectural patronage, forays into European power politics, and theological challenges to papal authority. After the start of the Protestant Reformation, the Reformation Papacy and Baroque Papacy lead the Catholic Church through the Counter Reformation. The popes during the Age of Revolution witnessed the largest expropriation of wealth in the church's history, during the French Revolution and those that followed throughout Europe. The Roman Question, arising from Italian unification, resulted in the loss of the Papal States and the creation of Vatican City.

During the Roman Empire (until 493)

Early Christianity

Further information: Primacy of Simon Peter and Persecution of Christians in the Roman Empire

Catholics recognize the pope as a successor to Saint Peter, whom, according to the Roman Catholic interpretation of the bible, Jesus named as the "shepherd" and "rock" of the Church (see Matthew 16:18–9).[1][2] Although Peter never bore the title of "pope", which came into use much later, Catholics recognize him as the first pope,[3] while official declarations of the Church speak of the popes as holding within the college of the Bishops a position analogous to that held by Peter within the college of the Apostles, namely Prince of the Apostles, of which the college of the Bishops, a distinct entity, is the successor.[4][5][6]

Many popes in the first three centuries of the Christian era are obscure figures. Several suffered martyrdom along with members of their flock in periods of persecution. Most of them engaged in intense theological arguments with other bishops.

From Constantine (312–493)

Main article: Bishops of Rome under Constantine I

The legend surrounding Constantine I's victory in the Battle of the Milvian Bridge (312) relates his vision of the Chi Rho and the text in hoc signo vinces in the sky, and reproducing this symbol on the shields of his troops. The following year, Constantine and Licinius proclaimed the toleration of Christianity with the Edict of Milan, and in 325 Constantine convened and presided over the First Council of Nicaea, the first ecumenical council. None of this, however, has particularly much to do with the popes, who did not even attend the Council; in fact, the first bishop of Rome to be contemporaneously referred to as "pope" (παππας, or *pappas*) is Damasus I (366–84).[7] Moreover, between 324 and 330, Constantine built Constantinople as a new capital for the empire, and—with no apologies to the Roman community of Christians—relocated key Roman families and translated many Christian relics to the new churches he built from the ground up.

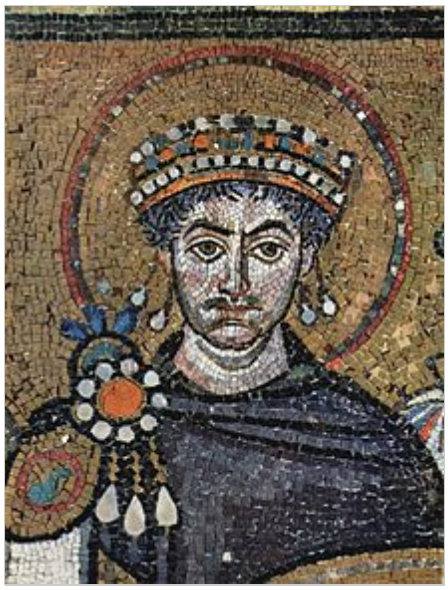
Raphael's *The Baptism of Constantine* depicts Sylvester I instead of his actual baptizer Eusebius of Nicomedia, an Arian bishop.

The "Donation of Constantine", an 8th century forgery used to enhance the prestige and authority of popes, places the pope more centrally in the narrative of Constantinian Christianity. The legend of the Donation claims

that Constantine offered his crown to Sylvester I (314–35), and even that Sylvester baptized Constantine. In reality, Constantine was baptized (nearing his death in May 337) by Eusebius of Nicomedia, an Arian bishop, unlike the pope. Nicomedia had been the capital of the Eastern Roman Empire since 286. Sylvester was succeeded by Mark (336) and Julius I (337–52) during the life of Constantine.

Although the "Donation" never occurred, Constantine did hand over the Lateran Palace to the bishop of Rome, and begin the construction of Old Saint Peter's Basilica (the "Constantinian Basilica"). The gift of the Lateran probably occurred during the reign of Miltiades (311–14), Sylvester I's predecessor, who began using it as his residence. Old St. Peter's was begun between 326 and 330 and would have taken three decades to complete, long after the death of Constantine. Constantine's legalization of Christianity, combined with the donation of these properties, gave the pope an unprecedented level of temporal power, for the first time creating an incentive for secular leaders to interfere with papal succession.

Middle Ages (493–1417)



Further information: Papal States

Ostrogothic Papacy (493–537)

Main article: Ostrogothic Papacy

Byzantine Papacy (537–752)

Main article: Byzantine Papacy

Justinian I re-conquered Rome and appointed the next three popes.

The Byzantine Papacy was a period of Byzantine domination of the papacy from 537 to 752, when popes required the approval of the Byzantine Emperor for episcopal consecration, and many popes were chosen from the *apocrisiarii* (liaisons from the pope to the emperor) or the inhabitants of Byzantine Greece, Syria, or Sicily. Justinian I conquered the Italian peninsula in the Gothic War (535–54) and appointed the next three popes, a practice that would be continued by his successors and later be delegated to the Exarchate of Ravenna.

With the exception of Pope Martin I, no pope during this period questioned the authority of the Byzantine monarch to confirm the election of the bishop of Rome before consecration could occur; however, theological conflicts were common between pope and emperor in the areas such as monotheletism and iconoclasm. Greek speakers from Greece, Syria, and Byzantine Sicily replaced members of the powerful Roman nobles in the papal chair during this period. Rome under the Greek popes constituted a "melting pot" of Western and Eastern Christian traditions, reflected in art as well as liturgy.

Pope Gregory I (590–604) was a major figure in asserting papal primacy and gave the impetus to missionary activity in northern Europe, including England.

Frankish influence (756–857)

Main article: Frankish Papacy

In 751, Aistulf took Ravenna and threatened Rome. In response to this threat, Pope Stephen II made an unusual journey north of the Alps to visit the Frankish king, Pepin III, to seek his help against the invading Lombards.

The pope anointed Pepin at the abbey of St Denis, near Paris, together with Pepin's two young sons Charles and Carloman. Pepin duly invaded northern Italy in 754, and again in 756. Pepin was able to drive the Lombards from the territory belonging to Ravenna but he did not restore it to its rightful owner, the Byzantine emperor. Instead, perhaps accepting the validity of the Donation of Constantine, he handed over large areas of central Italy to the pope and his successors.

The land given to pope Stephen in 756, in the so-called Donation of Pepin, made the papacy a temporal power. This territory would become the basis for the Papal States, over which the popes ruled until the Papal States were incorporated into the new Kingdom of Italy in 1870. For the next eleven centuries, the story of Rome will be almost synonymous with the story of the papacy.

The Lombard kingdom reached its height in the 7th and 8th century. Paganism and Arianism were at first prevalent among the Lombards but were gradually supplanted by Catholicism. Roman culture and Latin speech were gradually adopted and the Catholic bishops emerged as chief magistrates in the cities. Lombard law combined Germanic and Roman traditions. After Aistulf's death King Desiderius renewed the attack on Rome. In 772, Pope Adrian I enlisted the support of Charlemagne, Pepin's successor, who intervened, and, after defeating the Lombards, added their kingdom to his own.

After being physically attacked by his enemies in the streets of Rome, Pope Leo III made his way in 799 through the Alps to visit Charlemagne at Paderborn.

It is not known what was agreed between the two, but Charlemagne traveled to Rome in 800 to support the pope. In a ceremony in St Peter's Basilica, on Christmas Day, Leo was supposed to anoint Charlemagne's son as his heir. But unexpectedly (it is maintained), as Charlemagne rose from prayer, the pope placed a crown on his head and acclaimed him emperor. It is reported that Charlemagne expressed displeasure but nevertheless accepted the honour. The displeasure was probably diplomatic, for the legal emperor was supposed to be seated in Constantinople. Nevertheless this public alliance between the pope and the ruler of a confederation of Germanic tribes was a reflection of the reality of political power in the west. This coronation launched the concept of the new Holy Roman Empire which would play an important role throughout the Middle Ages. The Holy Roman Empire only became formally established in the next century. But the concept is implicit in the title adopted by Charlemagne in 800: 'Charles, most serene Augustus, crowned by God, great and pacific emperor, governing the Roman empire.'

Influence of powerful Roman families (904–1048)

Main articles: Saeculum obscurum, Crescentii, and Tusculan Papacy

The period beginning with the installation of Pope Sergius III in 904 and lasting for sixty years until the death of Pope John XII in 964 is sometimes referred to as Saeculum obscurum or the "dark age." Historian Will Durant refers to the period from 867 to 1049 as the "nadir of the papacy".[8]

During this period, the popes were controlled by a powerful and corrupt aristocratic family, the Theophylacti, and their relatives.[9]

Conflicts with the Emperor and East (1048–1257)

Main article: History of the papacy (1048–1257)

The Imperial crown once held by the Carolingian emperors was disputed between their fractured heirs and local overlords; none emerged victorious until Otto I, Holy Roman Emperor invaded Italy. Italy became a constituent kingdom of the Holy Roman Empire in 962, from which point the emperors were Germanic. As emperor's consolidated their position, northern Italian city-states would become divided by Guelphs and Ghibellines. Henry III, Holy Roman Emperor found three rival popes when he visited Rome in 1048 because of the unprecedented actions of Pope Benedict IX. He deposed all three and installed his own preferred candidate: Pope Clement II.

The history of the papacy from 1048 to 1257 would continue to be marked by conflict between popes and the Holy Roman Emperor, most prominently the Investiture Controversy, a dispute over who—pope or emperor—could appoint bishops within the Empire. Henry IV's Walk to Canossa in 1077 to meet Pope Gregory VII (1073–85), although not dispositive within the context of the larger dispute, has become legendary. Although the emperor renounced any right to lay investiture in the Concordat of Worms (1122), the issue would flare up again.

Long-standing divisions between East and West also came to a head in the East-West Schism and the Crusades. The first seven Ecumenical Councils had been attended by both Western and Eastern prelates, but growing doctrinal, theological, linguistic, political and geographic differences finally resulted in mutually denunciations and excommunications. Pope Urban II (1088–99) speech at the Council of Clermont in 1095 became the rallying cry of the First Crusade.

Unlike the previous millennium, the process for papal selection became somewhat fixed during this period. Pope Nicholas II promulgated *In Nomine Domini* in 1059, which limited suffrage in papal elections to the College of Cardinals. The rules and procedures of papal elections evolved during this period, laying the groundwork for the modern papal conclave. The driving force behind these reforms was Cardinal Hildebrand, who later became Gregory VII.

The wandering popes (1257–1309)

Main articles: Viterbo Papacy, Orvieto Papacy, and Perugia Papacy

The papal palace in Viterbo...

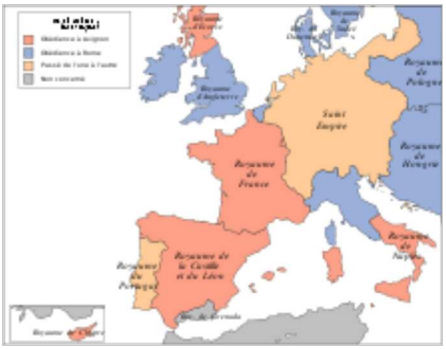
...and Orvieto

The pope is the bishop of Rome, but it is nowhere written that he has to stay there (in fact, only 200 years prior, cardinals would have been required to reside in Rome). Political instability in thirteenth-century Italy forced the papal court to move to several different locations. Frequent destinations include Viterbo, Orvieto, and Perugia. The popes brought the Roman Curia with them, and the College of Cardinals met in the city where the last pope had died to hold papal elections. Host cities enjoyed boosts their prestige and certain economic advantages, but the municipal authorities risked being subsumed into the administration of the Papal States if they allowed the pope to overstay his welcome.

According to Eamon Duffy, "aristocratic factions within the city of Rome once again made it an insecure base for a stable papal government. Innocent IV was exiled from Rome and even Italy for six years, and all but two of the papal elections of the thirteenth century had to take place outside Rome. The skyline of Rome itself was now dominated by the fortified war-towers of the aristocracy (a hundred were built in Innocent IV's pontificate alone) and the popes increasingly spent their time in the papal palaces at Viterbo and Orvieto."[10]

Avignon Papacy (1309–1377)

Main article: Avignon Papacy



The Palais des Papes in Avignon

During this period, seven popes, all French, resided in Avignon starting in 1309: Pope Clement V (1305–14), Pope John XXII (1316–34), Pope Benedict XII (1334–42), Pope Clement VI (1342–52), Pope Innocent VI (1352–62), Pope Urban V (1362–70), Pope Gregory XI (1370–78). In 1378, Gregory XI moved the papal residence back to Rome and died there.

Western schism (1378–1417)

Main article: Western schism

The division of European allegiances at a point during the Western Schism

After seventy years in France the papal curia was naturally French in its ways and, to a large extent, in its staff. Back in Rome some degree of tension between French and Italian factions was inevitable. This tension was brought to a head by the death of the French pope Gregory XI within a year of his return to Rome. The Roman crowd, said to be in threatening mood, demanded a Roman pope or at least an Italian one. In 1378 the conclave elected an Italian from Naples, Pope Urban VI. His intransigence in office soon alienated the French cardinals. And the behaviour of the Roman crowd enabled them to declare, in retrospect, that his election was invalid, voted under duress.

The French cardinals withdrew to a conclave of their own, where they elected one of their number, Robert of Geneva. He took the name Clement VII. By 1379, he was back in the palace of popes in Avignon, while Urban VI remained in Rome.

This was the beginning of the period of difficulty from 1378 to 1417 which Catholic scholars refer to as the "Western schism" or, "the great controversy of the antipopes" (also called "the second great schism" by some secular and Protestant historians), when parties within the Catholic Church were divided in their allegiances among the various claimants to the office of pope. The Council of Constance, in 1417, finally resolved the controversy.

For nearly forty years the Church had two papal curias and two sets of cardinals, each electing a new pope for Rome or Avignon when death created a vacancy. Each pope lobbied for support among kings and princes who played them off against each other, changing allegiance when according to political advantage.

In 1409 a council was convened at Pisa to resolve the issue. The council declared both existing popes to be schismatic (Gregory XII from Rome, Benedict XIII from Avignon) and appointed a new one, Alexander V. But the existing popes had not been persuaded to resign so the church had three popes.

Another council was convened in 1414 at Constance. In March 1415 the Pisan pope, John XXIII, fled from Constance in disguise; he was brought back a prisoner and deposed in May. The Roman pope, Gregory XII, resigned voluntarily in July.

The Avignon pope, Benedict XIII, refused to come to Constance. In spite of a personal visit from the emperor Sigismund, he would not consider resignation. The council finally deposed him in July 1417. Denying their right to do so, he withdrew to an impregnable castle on the coast of Spain. Here he continued to act as pope, creating

new cardinals and issuing decrees, until his death in 1423.

The council in Constance, having finally cleared the field of popes and antipopes, elected Pope Martin V as pope in November.

Early Modern and Modern Era (1417–present)

Renaissance Papacy (1417–1534)

Main article: Renaissance Papacy

From the election of Pope Martin V of the Council of Constance in 1417 to the Reformation, Western Christianity was largely free from schism as well as significant disputed papal claimants. Martin V returned the papacy to Rome in 1420. Although there were important divisions over the direction of the religion, these were resolved through the then-settled procedures of the papal conclave

Pope Leo X with his cousins Giulio de' Medici *(left, the future Pope Clement VII)* and Luigi de' Rossi *(right)*, whom he appointed as cardinal-nephews.

Unlike their European peers, popes were not hereditary monarchs, so they could only promote their family interests through nepotism.[11] The word *nepotism* originally referred specifically to the practice of creating cardinal-nephews, when it appeared in the English language about 1669.[12] According to Duffy, "the inevitable outcome of all of this was a creation of a wealthy cardinalatial class, with strong dynastic connections."[13] The College was dominated by cardinal-nephews —relatives of the popes that elevated them, crown-cardinals —representatives of the Catholic monarchies of Europe, and members of the powerful Italian families. The wealthy popes and cardinals increasingly patronized Renaissance art and architecture, (re)building the landmarks of Rome from the ground up.

The Papal States began to resemble a modern nation-state during this period, and the papacy took an increasingly active role in European wars and diplomacy. Pope Julius II become known as "the Warrior Pope" for his use of bloodshed to increase the territory and property of the papacy.[14] The popes of this period used the papal military not only to enrich themselves and their families, but also to enforce and expand upon the longstanding territorial and property claims of the papacy as an institution.[15] Although before the Western Schism the papacy had derived much of its revenue from the "vigorous exercise of its spiritual office," during this period the popes were financially dependent on the revenues from the Papal States themselves. With ambitious expenditures on war and construction projects, popes turned to new sources of revenue from the sale of indulgences and bureaucratic and ecclesiastical offices.[16] Pope Clement VII's diplomatic and military campaigns resulted in the Sack of Rome in 1527.[17]

Popes were more frequently called upon to arbitrate disputes between competing colonial powers than to resolve complicated theological disputes. Columbus' discovery in 1492 upset the unstable relations between the kingdoms of Portugal and Castile, whose jockeying for possession of colonial territories along the African coast had for many years been regulated by the papal bulls of 1455, 1456, and 1479. Alexander VI responded with three bulls, dated May 3 and 4, which were highly favorable to Castile; the third *Inter caetera* (1493), awarded Spain the sole right to colonize most of the New World.

According to Eamon Duffy, "the Renaissance papacy invokes images of a Hollywood spectacular, all decadence and drag. Contemporaries viewed Renaissance Rome as we now view Nixon's Washington, a city of expense-account whores and political graft, where everything and everyone had a price, where nothing and nobody could be trusted. The popes themselves seemed to set the tone."[13] For example, Leo X was said to have remarked: "Let us enjoy the papacy, since God has given it to us."[11] Several of these popes took mistresses and fathered children and engaged in intrigue or even murder.[13] Alexander VI had four acknowledged children: Cesare Borgia, Lucrezia Borgia, Gioffre Borgia, and Giovanni Borgia.

Roman Question (1870–1929)

Main article: Roman Question

The provisional capital of Italy had been Florence since 1865. After defeating the papal forces in 1870, the Italian government moved to the banks of the Tiber a year later. Victor Emmanuel installed himself in the Quirinale Palace. Rome became once again, for the first time in thirteen centuries, the capital city of a united Italy. Rome was unusual among capital cities only in that it contained the power of the pope and a small parcel of land (Vatican City) beyond national control. This anomaly was not formally resolved until the Lateran pacts of 1929.

The breach of the Porto Pio during the Capture of Rome

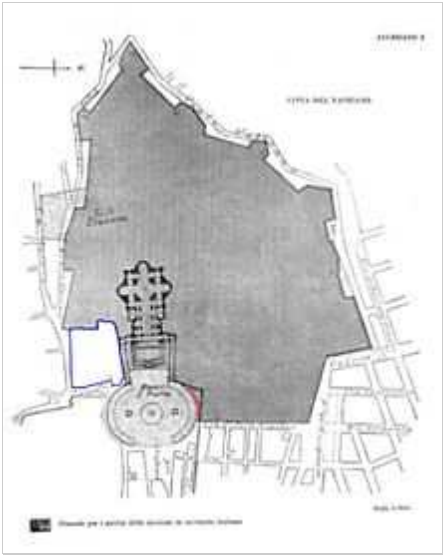
The last eight years of his long pontificate — the longest in Church history — Pope Pius IX spent as prisoner of the Vatican. Catholics were forbidden to vote or being voted in national elections. However, they were permitted to participate in local elections, where they achieved successes.[18] Pius himself was active, during those years, by creating new diocesan seats and appointing bishops to numerous dioceses, which had been unoccupied for years. Asked if he wanted his successor to follow his Italian policies, the old pontiff replied:

> My successor may be inspired by my love to the Church and my wish to do the right thing. Everything changed around me. My system and my policies had their time, I am too old to change direction. This will be the task of my successor.[19]

Pope Leo XIII, considered a great diplomat, managed to improve relations with Russia, Prussia, German France, England and other countries. However, in light of a hostile anti-Catholic climate in Italy, he continued the policies of Pius IX towards Italy, without major modifications.[20] He had to defend the freedom of the Church against Italian persecutions and attacks in the area of education, expropriation and violation of Catholic Churches, legal measures against the Church and brutal attacks, culminating in anticlerical groups attempting to

throw the body of the deceased Pope Pius IX into the Tiber river on July 13, 1881.[21] The pope even considered moving the papacy to Trieste or Salzburg, two cities under Austrian control, an idea which the Austrian monarch Franz Josef I gently rejected.[22]

His encyclicals changed Church positions on relations with temporal authorities, and, in the 1891 encyclical Rerum Novarum addressed for the first time social inequality and social justice issues with Papal authority. He was greatly influenced by Wilhelm Emmanuel von Ketteler, a German bishop who openly propagated siding with the suffering working classes[23] Since Leo XIII, Papal teachings expand on the right and obligation of workers and the limitations of private property: Pope Pius XI Quadragesimo Anno, the Social teachings of Pope Pius XII on a huge range of social issues, John XXIII Mater et Magistra in 1961, Pope Paul VI, the encyclical Populorum Progressio on World development issues, and Pope John Paul II, Centesimus Annus, commemorating the 100th anniversary of Rerum Novarum of Pope Leo XIII.



The eclipse of papal temporal power during the 19th century was accompanied by a recovery of papal prestige. The monarchist reaction in the wake of the French Revolution and the later emergence of constitutional governments served alike, though in different ways, to sponsor that development. The reinstated monarchs of Catholic Europe saw in the papacy a conservative ally rather than a jurisdictional rival. Later, when the institution of constitutional governments broke the ties binding the clergy to the policies of royal regimes, Catholics were freed to respond to the renewed spiritual authority of the pope.

The popes of the 19th and 20th centuries exercised their spiritual authority with increasing vigor and in every aspect of religious life. By the crucial pontificate of Pope Pius IX (1846–1878), for example, papal control over worldwide Catholic missionary activity was firmly established for the first time in history.

From the creation of Vatican City (1929)

Further information: Vatican City

The pontificate of Pope Pius XI was marked by great diplomatic activity and the issuance of many important papers, often in the form of encyclicals. In diplomatic affairs, Pius was aided at first by Pietro Gasparri and after 1930 by Eugenio Pacelli (who succeeded him as Pope Pius XII). Cardinal Gasparri's masterpiece was the Lateran Treaty (1929), negotiated for the Vatican by Francesco Pacelli. Nevertheless, the Fascist government and the pope were in open disagreement over the restriction of youth activities; this culminated in a strong papal letter (Non abbiamo bisogno, 1931), arguing the impossibility of being at once a Fascist and a Catholic. Relations between Mussolini and the Holy See were cool ever after.

A map of Vatican City, as established by the Lateran Treaty (1929)

Negotiations for the settlement of the Roman Question began in 1926 between the government of Italy and the Holy See, and in 1929 they culminated in the agreements of the three Lateran Pacts, signed for King Victor Emmanuel III of Italy by Prime Minister Benito Mussolini and for Pope Pius XI by Cardinal Secretary of State Pietro Gasparri in the Lateran Palace (hence the name by which they are known).

The Lateran treaty included a political treaty, which created the state of the Vatican City and guaranteed full and independent sovereignty to the Holy See. The pope was pledged to perpetual neutrality in international relations and to abstention from mediation in a controversy unless specifically requested by all parties. The concordat

established Catholicism as the religion of Italy. And the financial agreement was accepted as settlement of all the claims of the Holy See against Italy arising from the loss of temporal power in 1870.

The sum thereby given to the Holy See was actually less than Italy declared it would pay under the terms of the Law of Guarantees of 1871, by which the Italian government guaranteed to Pope Pius IX and his successors the use of, but not sovereignty over, the Vatican and Lateran Palaces and a yearly income of 3,250,000 lire as indemnity for the loss of sovereignty and territory. The Holy See, on the grounds of the need for clearly manifested independence from any political power in its exercise of spiritual jurisdiction, refused to accept this settlement, and the popes thereafter considered themselves prisoners in the Vatican, a small, limited area inside Rome.

The *Reichskonkordat*, signed on July 20, 1933, between Germany and the Holy See remains the most important and controversial of Pacelli's concordats. A national concordat with Germany was one of Pacelli's main objectives as secretary of state. As nuncio during the 1920s, he had made unsuccessful attempts to obtain German agreement for such a treaty, and between 1930 and 1933 he attempted to initiate negotiations with representatives of successive German governments, but the opposition of Protestant and Socialist parties, the instability of national governments and the care of the individual states to guard their autonomy thwarted this aim. In particular, the questions of denominational schools and pastoral work in the armed forces prevented any agreement on the national level, despite talks in the winter of 1932.[24][25]

Adolf Hitler was appointed Chancellor on 30 January 1933 and sought to gain international respectability and to remove internal opposition by representatives of the Church and the Catholic Centre Party. He sent his vice chancellor Franz von Papen, a Catholic nobleman and former member of the Centre Party, to Rome to offer negotiations about a Reichskonkordat.[26] On behalf of Cardinal Pacelli, his long-time associate Prelate Ludwig Kaas, the out-going chairman of the Centre Party, negotiated first drafts of the terms with Papen.[27] The concordat was finally signed, by Pacelli for the Vatican and von Papen for Germany, on 20 July and ratified on September 10, 1933.[28]

Between 1933 to 1939, Pacelli issued 55 protests of violations of the *Reichskonkordat*. Most notably, early in 1937, Pacelli asked several German cardinals, including Cardinal Michael von Faulhaber to help him write a protest of Nazi violations of the *Reichskonkordat*; this was to become Pius XI's encyclical *Mit Brennender Sorge*. The encyclical, condemning the view that "exalts race, or the people, or the State, or a particular form of State ... above their standard value and divinizes them to an idolatrous level", was written in German instead of Latin and read in German churches on Palm Sunday 1937.[29]

World War II (1939-1945)

Main articles: Vatican City during World War II and Pope Pius XII and the Holocaust

When Germany invaded Poland on September 1, 1939, the Vatican declared neutrality to avoid being drawn into the conflict and also to avoid occupation by the Italian military. In 1944, the German Army occupied Rome. Adolf Hitler proclaimed that he would respect Vatican neutrality. However, several incidents, such as giving aid to downed Allied airmen, nearly caused Nazi Germany to invade the Vatican. Rome was liberated by the Allies after several months of occupation.

The Church policies after World War II of Pope Pius XII focused on material aid to war-torn Europe with its 15 million displaced persons and refugees, an internal internationalization of the Roman Catholic Church, and the development of its worldwide diplomatic relations. His encyclicals, *Evangelii Praecones*[30] increased the local decision-making of Catholic missions, many of which became independent dioceses. Pius XII demanded

recognition of local cultures as fully equal to European culture.[31][32] He internationalized the College of Cardinals by eliminating the 1000 year old Italian majority and appointed cardinals from Asia, South America and Australia. In Western Africa[33] Southern Africa[34] British Eastern Africa, Finland, Burma and French Africa Pope Pius established independent dioceses in 1955.

While after years of rebuilding the Church thrived in the West and most of the developing world, it faced most serious persecutions in the East. Sixty million Catholics came under Soviet dominated regimes in 1945, with tens of thousands of priests and religious killed, and millions deported into Soviet and Chinese Gulags. The communist regimes in Albania, Bulgaria, Romania and China practically eradicated the Roman Catholic Church in their countries[35]

From Vatican II (1962-1965)

Further information: Second Vatican Council

The opening of the Second Session of the Second Vatican Council

The continuing strength of the forces within the church favoring theological innovation and energetic reform became unmistakably evident at the Second Vatican Council, convened by Pope John XXIII (1958–1963), and found expression especially in its decrees on ecumenism, religious liberty, the liturgy, and the nature of the church. The ambivalence of some of those decrees, however, and the disciplinary turmoil and doctrinal dissension following the ending of the council, brought about new challenges to papal authority.

On October 11, 1962, Pope John XXIII opened the Second Ecumenical Vatican Council. The 21st ecumenical council of the Catholic Church emphasized the universal call to holiness and brought many changes in practices, including an increased emphasis on ecumenism; fewer rules on penances, fasting and other devotional practices; and initiating a revision of the services, which were to be slightly simplified and made supposedly more accessible by allowing the use of native languages instead of Latin. Opposition to changes inspired by the Council gave rise to the movement of Traditionalist Catholics who disagree with changing the old forms of worship.

On December 7, 1965, a Joint Catholic-Orthodox Declaration of His Holiness Pope Paul VI and the Ecumenical Patriarch Athenagoras I lifted the mutual excommunication against Catholic and Orthodox which had been in force since the Great Schism of 1054.

The bishops agreed that the pope exercises supreme authority over the church, but defined "collegiality", meaning that all bishops share in this authority. Local bishops have equal authority as successors of the Apostles and as members of a larger organization, the Church founded by Jesus Christ and entrusted to the apostles. The pope serves as a symbol of unity and has additional authority to ensure the continuation of that unity.

During the Second Vatican Council, Catholic bishops drew back a bit from statements which might anger Christians of other faiths.[36] Cardinal Augustin Bea, the President of the Christian Unity Secretariat had always the full support of Pope Paul VI in his attempts to ensure that the Council language is friendly and open to the sensitivities of Protestant and Orthodox Churches, whom he had invited to all sessions at the request of Pope John XXIII. Bea also was strongly involved in the passage of Nostra Aetate, which regulates relation of the Church with the Jewish faith and members of other religions[37]

The establishment of national conferences of bishops tended to erode papal authority to some degree, and Pope Paul VI's encyclical Humanae Vitae (1968), reaffirming the prohibition of artificial birth control, was met with

both evasion and defiance in the USA and Western Europe but warmly welcomed in South America, Eastern and Southern Europe.[38]

Pope Paul VI (1963–1978), however, continued the ecumenical efforts of Pope John XXIII in his contacts with Protestant and Orthodox churches. He also continued John XXIII's attempts to make discreet moves in the direction of pragmatic accommodation with the Communist regimes of eastern Europe, a policy that were possible in the eras of Krushchev and Brezhnev. Paul VI also reorganized the curia and spoke strongly for peace and social justice.

Pope Paul VI faced criticism throughout his papacy from both traditionalists and liberals for steering a middle course during Vatican Two and in the course of the implementation of its reforms thereafter.[39] His passion for peace during the Vietnam War was not understood by all. The urgent task of overcoming World poverty and start real development resulted partly in benign neglect of papal teachings by the influential and the rich. On basic Church teachings, this pope was unwavering. On the tenth anniversary of Humanae Vitae, he strongly reconfirmed his teachings.[40] In his style and methodology, he was a disciple of Pius XII, whom he deeply revered.[41] He suffered under the attacks of his predecessor for his alleged silences, knowing from personal association with the late pope the real concerns and compassion of Pius XII.[41] Pope Paul is not credited to have had the encyclopaedic culture of Pius XII, nor his phenomenal memory, his amazing gift for languages, his brilliant style in writing,[42] nor did he have the Charisma and outpouring love, sense of humor and human warmth of John XXIII. *He took on himself the unfinished reform work of these two popes, bringing them diligently with great humility and common sense and without much fanfare to conclusion.*[40] In doing so, Paul VI saw himself following in the footsteps of the Apostle Paul, torn to several directions as *Saint Paul, who always said, I am attracted to two sides at once, because the Cross always divides.*[43]

He became the first pope to visit all five continents.[44] Paul VI systematically continued and completed the efforts of his predecessors, to turn the Euro-centric Church into a Church for the whole world, by integrating the bishops from all continents in its government and in the Synods which he convened. His August 6, 1967 Motu Proprio *Pro Comperto Sane* opened the Roman Curia to the bishops of the world. Until then, only Cardinals could be leading members of the Curia.[44]

An inner joy seems to have been a characteristic of Paul VI. His confessor, the Jesuit Paolo Dezza arrived at the Vatican every Friday evening at seven p.m. to hear confession of Paul VI. The only words he ever spoke about his long service to Paul VI during his pontificate were, *that this pope is a man of great joy.*[45] After the death of Pope Paul VI, Dezza was more outspoken, saying that "if Paul VI was not a saint, when he was elected pope, he became one during his pontificate. I was able to witness not only with what energy and dedication he toiled for Christ and the Church but also and above all, how much he suffered for Christ and the Church. I always admired not only his deep inner resignation but also his constant abandonment to divine providence.".[46] It is this character trait, which led to the opening of the process of beatification and canonization for Paul VI.

With the accession of Pope John Paul II after the mysterious death of John Paul I (who only survived as pope for 33 days), the church had, for the first time since Pope Adrian VI in the 16th century, a non-Italian pope. John Paul II has been credited with helping to bring down communism in eastern Europe by sparking what amounted to a peaceful revolution in his Polish homeland. Lech Wałęsa, one of the several founders of the Solidarity worker movement that ultimately toppled communism, credited John Paul with giving Poles the courage to rise up.[47] The last Soviet premier Mikhail Gorbachev acknowledged

Pope John Paul II (1978-2005)

publicly the role of John Paul II in the fall of Communism.[48] The pope himself stated after the fall of Communism that "the claim to build a world without God has been shown to be an illusion" (Prague, April 21, 1990).

But this world without God exists in Capitalism too. Therefore, as did his predecessors, John Paul repeated the content of Christianity, its religious and moral message, its defense of the human person, and warned against the dangers of capitalism. "Unfortunately, not everything the West proposes as a theoretical vision or as a concrete lifestyle reflects Gospel values."

The long pontificate of John Paul is credited with re-creating a sense of stability and even identity to the Catholic Church after years of questioning and searching.[49] His teaching was firm and unwavering on issues which seemed to be in doubt under his predecessor including the ordination of women, liberation theology and priestly celibacy.[50] He virtually stopped the liberal laicisation of problem priests policy of Pope Paul VI,[51] which inadvertently may have contributed to problems in the USA.[52] His authoritative style was reminiscent of Pope Pius XII, whose teaching he repeated in his own words, such as the identity of the Catholic Church with the Body of Christ and his condemnations of capitalism "viruses": secularism, indifferentism, hedonistic consumerism, practical materialism, and also formal atheism.[53]

As always after a long pontificate, a new page was opened in the history of the Church with the election of a new pope. Pope Benedict XVI was elected in 2005. In his inaugural homily, the new Pontiff explained his view of a relation with Christ:

> “ Are we not perhaps all afraid in some way? If we let Christ enter fully into our lives, if we open ourselves totally to Him, are we not afraid that He might take something away from us?... No! If we let Christ into our lives, we lose nothing, nothing, absolutely nothing of what makes life free, beautiful and great. No! Only in this friendship do we experience beauty and liberation....When we give ourselves to Him, we receive a hundredfold in return. Yes, open, open wide the doors to Christ – and you will find true life.[54] ”

Pope Benedict XVI

From Wikipedia, the free encyclopedia

Benedict XVI (Latin: *Benedictus PP. XVI*; Italian: *Benedetto XVI*; German: *Benedikt XVI.*; born **Joseph Aloisius Ratzinger** on 16 April 1927) is the 265th and current Pope,[1] by virtue of his office of Bishop of Rome, the Sovereign of the Vatican City State and the leader of the Catholic Church, which includes the Latin Church and the twenty-two sui iuris Eastern Catholic Churches. Often regarded as the present *Successor to Saint Peter*, Benedict XVI was elected on 19 April 2005 in a papal conclave, celebrated his Papal Inauguration Mass on 24 April 2005, and took possession of his cathedral, the Archbasilica of St. John Lateran, on 7 May 2005. A native of Bavaria, Pope Benedict XVI has both German and Vatican citizenship.

After a long career as an academic, serving as a professor of theology at various German universities—the last being the University of Regensburg—he was appointed Archbishop of Munich and Freising and cardinal by Pope Paul VI in 1977. In 1981, he settled in Rome when he became Prefect of the Congregation for the Doctrine of the Faith, one of the most important dicasteries of the Roman Curia. From 2002 until his election as Pope, he was also Dean of the College of Cardinals, and as such the *primus inter pares* among the cardinals. Prior to becoming Pope, he was "a major figure on the Vatican stage for a quarter of a century" as "one of the most respected, influential and controversial members of the College of Cardinals"; he had an influence "second to none when it came to setting church priorities and directions" as one of Pope John Paul II's closest confidants.[2]

Like his predecessor, Benedict XVI is theologically conservative and his teaching and prolific[3] writings defend traditional Catholic doctrine and values. During his papacy, Benedict XVI has advocated a return to fundamental Christian values to counter the increased secularisation of many developed countries. He views relativism's denial of objective truth, and the denial of moral truths in particular, as the central problem of the 21st century. He teaches the importance of both the Catholic Church and an understanding of God's redemptive love. He has reaffirmed the "importance of prayer in the face of the activism and the growing secularism of many Christians engaged in charitable work."[4] Pope Benedict has also revived a number of traditions including elevating the Tridentine Mass to a more prominent position.[5]

Overview

Pope Benedict XVI at a private audience on 20 January 2006

Benedict XVI was elected Pope at the age of 78. He is the oldest person to have been elected Pope since Pope Clement XII (1730–40). He had served longer as a cardinal than any Pope since Benedict XIII (1724–30). He is the ninth German Pope, the eighth having been the Dutch-German Pope Adrian VI (1522–23) from Utrecht. The last Pope named Benedict was Benedict XV, an Italian who reigned from 1914 to 1922, during World War I (1914–18).

Born in 1927 in Marktl, Bavaria, Germany, Ratzinger had a distinguished career as a university theologian before being appointed Archbishop of Munich and Freising by Pope Paul VI (1963–78). Shortly afterwards, he was made a cardinal in the consistory of 27 June 1977. He was appointed Prefect of the Congregation for the Doctrine of the Faith by Pope John Paul II in 1981 and was also assigned the honorific title of the cardinal bishop of Velletri-Segni on 5 April 1993. In 1998, he was elected sub-dean of the College of Cardinals. On 30

November 2002, he was elected dean, taking, as is customary, the title of cardinal bishop of the suburbicarian diocese of Ostia. He was the first Dean of the College elected Pope since Paul IV (1555–59) and the first cardinal bishop elected Pope since Pius VIII (1829–30).

Even before becoming Pope, Ratzinger was one of the most influential men in the Roman Curia, and was a close associate of John Paul II. As Dean of the College of Cardinals, he presided over the funeral of John Paul II and over the Mass immediately preceding the 2005 conclave in which he was elected. During the service, he called on the assembled cardinals to hold fast to the doctrine of the faith. He was the public face of the church in the *sede vacante* period, although, technically, he ranked below the *Camerlengo* in administrative authority during that time. Like his predecessor, Benedict XVI affirms traditional Catholic doctrine.

In addition to his native German, Benedict speaks French and Italian fluently. He also has a very good command of Latin and speaks English and Spanish adequately. Furthermore, he has some knowledge of Portuguese. He can read Ancient Greek and biblical Hebrew.[6] He has stated that his first foreign language is French. He is a member of several scientific academies, such as the French *Académie des sciences morales et politiques*. He plays the piano and has a preference for Mozart and Bach.[7]

Marktl am Inn, the house where Ratzinger was born. The building still stands today.

Joseph Aloisius Ratzinger was born on 16 April, Holy Saturday, 1927, at Schulstraße 11, at 8:30 in the morning in his parents' home in Marktl, Bavaria, Germany. He was baptised the same day. He was the third and youngest child of Joseph Ratzinger, Sr., a police officer, and Maria Ratzinger (née Peintner). His mother's family was originally from South Tyrol (now in Italy).[*citation needed*] Pope Benedict XVI's brother, Georg Ratzinger, a priest and former director of the Regensburger Domspatzen choir, is still alive. His sister, Maria Ratzinger, who never married, managed Cardinal Ratzinger's household until her death in 1991. Their grand-uncle was the German politician Georg Ratzinger.

At the age of five, Ratzinger was in a group of children who welcomed the visiting Cardinal Archbishop of Munich with flowers. Struck by the cardinal's distinctive garb, he later announced the very same day that he wanted to be a cardinal.

Ratzinger attended the elementary school in Aschau am Inn, which was renamed in his honour in 2009.[8]

Following his 14th birthday in 1941, Ratzinger was conscripted into the Hitler Youth—as membership was required by law for all 14-year-old German boys after December 1939[9]—but was an unenthusiastic member who refused to attend meetings, according to his brother.[10] In 1941, one of Ratzinger's cousins, a 14-year-old boy with Down syndrome, was taken away by the Nazi regime and killed during the Action T4 campaign of Nazi eugenics.[11] In 1943, while still in seminary, he was drafted into the German anti-aircraft corps as Luftwaffenhelfer (air force child soldier).[10] Ratzinger then trained in the German infantry.[12] As the Allied front drew closer to his post in 1945, he deserted back to his family's home in Traunstein after his unit had ceased to exist, just as American troops established their headquarters in the Ratzinger household.[13] As a German soldier, he was put in a POW camp but was released a few months later at the end of the war in the summer of 1945.[13] He reentered the seminary, along with his brother Georg, in November of that year.

Thus, following repatriation in 1945, the two brothers entered Saint Michael Seminary in Traunstein, later studying at the Ducal Georgianum (*Herzogliches Georgianum*) of the Ludwig-Maximilian University in Munich. They were both ordained in Freising on 29 June 1951 by Cardinal Michael von Faulhaber of Munich. Ratzinger recalled:

> ...at the moment the elderly Archbishop laid his hands on me, a little bird – perhaps a lark – flew up from the altar in the high cathedral and trilled a little joyful song.[14]

Ratzinger's 1953 dissertation was on St. Augustine and was titled *The People and the House of God in Augustine's Doctrine of the Church*. His *Habilitation* (which qualified him for a professorship) was on Bonaventure. It was completed in 1957 and he became a professor of Freising College in 1958.

Pre-papal career

Academic career: 1951–77

Ratzinger became a professor at the University of Bonn in 1959; his inaugural lecture was on "The God of Faith and the God of Philosophy". In 1963, he moved to the University of Münster.

During this period, Ratzinger participated in the Second Vatican Council (1962–65). Ratzinger served as a *peritus* (theological consultant) to Cardinal Frings of Cologne. He was viewed during the time of the Council as a reformer, cooperating with theologians like Hans Küng and Edward Schillebeeckx. Ratzinger became an admirer of Karl Rahner, a well-known academic theologian of the Nouvelle Théologie and a proponent of church reform.

In 1966, Ratzinger was appointed to a chair in dogmatic theology at the University of Tübingen, where he was a colleague of Hans Küng. In his 1968 book *Introduction to Christianity*, he wrote that the pope has a duty to hear differing voices within the Church before making a decision, and he downplayed the centrality of the papacy. During this time, he distanced himself from the atmosphere of Tübingen and the Marxist leanings of the student movement of the 1960s that quickly radicalised, in the years 1967 and 1968, culminating in a series of disturbances and riots in April and May 1968. Ratzinger came increasingly to see these and associated developments (such as decreasing respect for authority among his students) as connected to a departure from traditional Catholic teachings.[15] Despite his reformist bent, his views increasingly came to contrast with the liberal ideas gaining currency in theological circles.[16]

Some voices, among them Hans Küng, deem this a turn towards conservatism, while Ratzinger himself said in a 1993 interview, "I see no break in my views as a theologian [over the years]".[17] Ratzinger has continued to defend the work of the Second Vatican Council, including *Nostra Aetate*, the document on respect of other religions, ecumenism and the declaration of the right to freedom of religion. Later, as the Prefect for the Congregation for the Doctrine of the Faith, Ratzinger most clearly spelled out the Catholic Church's position on other religions in the 2000 document *Dominus Iesus* which also talks about the Roman Catholic way to engage in "ecumenical dialogue".

During his years at Tübingen University, Ratzinger published articles in the reformist theological journal *Concilium*, though he increasingly chose less reformist themes than other contributors to the magazine such as Hans Küng and Edward Schillebeeckx.

In 1969, he returned to Bavaria, to the University of Regensburg. He founded the theological journal *Communio*, with Hans Urs von Balthasar, Henri de Lubac, Walter Kasper and others, in 1972. *Communio*, now published in seventeen languages, including German, English and Spanish, has become a prominent journal of contemporary Catholic theological thought. Until his election as Pope, he remained one of the journal's most prolific contributors. In 1976, he suggested that the Augsburg Confession might possibly be recognised as a Catholic statement of faith.[18][19]

Archbishop of Munich and Freising: 1977–82

On 24 March 1977, Ratzinger was appointed Archbishop of Munich and Freising. He took as his episcopal motto *Cooperatores Veritatis* (Co-workers of the Truth) from 3 John 8, a choice he comments upon in his autobiographical work, *Milestones*. In the consistory of the following 27 June, he was named Cardinal-Priest of *Santa Maria Consolatrice al Tiburtino* by Pope Paul VI. By the time of the 2005 Conclave, he was one of only 14 remaining cardinals appointed by Paul VI, and one of only three of those under the age of 80. Of these, only he and William Wakefield Baum took part in the conclave.[20]

Prefect of the Sacred Congregation for the Doctrine of the Faith: 1981–2005

Main article: Joseph Ratzinger as Prefect of the Congregation for the Doctrine of the Faith

On 25 November 1981, Pope John Paul II named Ratzinger as the Prefect of the Sacred Congregation for the Doctrine of the Faith, formerly known as the "Sacred Congregaton of the Holy Office", the historical Inquisition. Consequently, he resigned his post at Munich in early 1982. He was promoted within the College of Cardinals to become Cardinal Bishop of Velletri-Segni in 1993 and was made the college's vice-dean in 1998 and dean in 2002.

Ratzinger defended and reaffirmed Catholic doctrine, including teaching on topics such as birth control, homosexuality, and inter-religious dialogue. The theologian Leonardo Boff, for example, was suspended, while others were censured. Other issues also prompted condemnations or revocations of rights to teach: for instance, some posthumous writings of Jesuit priest Anthony de Mello were the subject of a "notification". Ratzinger and the congregation viewed many of them, particularly the later works, as having an element of religious indifferentism (*i.e.*, Christ was "one master alongside others"). In particular, *Dominus Iesus*, published by the congregation in the jubilee year 2000, reaffirmed many recently "unpopular" ideas, including the Catholic Church's position that "Salvation is found in no one else, for there is no other name under heaven given to men by which we must be saved." The document angered many Protestant churches by claiming that they are not actually churches, but "ecclesial communities".[21]

Ratzinger's 2001 letter *De delictis gravioribus* clarified the confidentiality of internal church investigations, as defined in the 1962 document

Crimen Sollicitationis, into accusations made against priests of certain crimes, including sexual abuse. This became a target of controversy during the sex abuse scandal.[22] While bishops hold the secrecy pertained only internally, and did not preclude investigation by civil law enforcement, the letter was often seen as promoting a coverup.[23] Later, as Pope, he was accused in a lawsuit of conspiring to cover up the molestation of three boys in Texas, but sought and obtained diplomatic immunity from prosecution.[24]

On 12 March 1983, Ratzinger, as prefect, notified the lay faithful and the clergy that archbishop Pierre Martin Ngo Dinh Thuc had incurred excommunication *latae sententiae* for illicit episcopal consecrations without the apostolic mandate.

In 1997, when he turned 70, Ratzinger asked Pope John Paul II for permission to leave the Congregation of the Doctrine of Faith and to become an archivist in the Vatican Secret Archives and a librarian in the Vatican Library, but the pope refused such permission.[25][26]

Election to the papacy

Main article: Papal conclave, 2005

Prediction

On 2 January 2005, *Time* magazine quoted unnamed Vatican sources as saying that Ratzinger was a front runner to succeed John Paul II should the pope die or become too ill to continue as pope. On the death of John Paul II, the *Financial Times* gave the odds of Ratzinger becoming pope as 7–1, the lead position, but close to his rivals on the liberal wing of the church. In April 2005, before his election as pope, he was identified as one of the 100 most influential people in the world by *Time*. While Prefect of the Congregation for the Doctrine of the Faith, Ratzinger repeatedly stated he would like to retire to his house in the Bavarian village of Pentling near Regensburg and dedicate himself to writing books.

Though Ratzinger was increasingly considered the front runner by much of the international media, others maintained that his election was far from certain, since very few papal predictions in modern history had come true. The elections of both John Paul II and his predecessor, John Paul I had been rather unexpected. Despite being the favorite (or perhaps because he was the favorite), it was a surprise to many that he was actually elected, as traditionally the frontrunners are passed over by the conclave for someone else.

Election

On 19 April 2005, Ratzinger was elected as the successor to Pope John Paul II on the second day of the papal conclave after four ballots. Ratzinger had hoped to retire peacefully and said that "At a certain point, I prayed to God 'please don't do this to me'...Evidently, this time He didn't listen to me."[27] Coincidentally, 19 April is the feast of St. Leo IX, the most important German pope of the Middle Ages, known for instituting major reforms during his pontificate.

Before his first appearance at the balcony of Saint Peter's Basilica after becoming pope, he was announced by Jorge Medina Estévez, Cardinal Protodeacon of the Holy Roman Church. Cardinal Medina Estévez first addressed the massive crowd as "dear(est) brothers and sisters" in Italian, Spanish, French, German and English, with each language receiving cheers from the international crowd, before continuing with the traditional *Habemus Papam* announcement in Latin.

At the balcony, Benedict's first words to the crowd, given in Italian before he gave the traditional *Urbi et Orbi* blessing in Latin, were:

> “ Dear brothers and sisters, after the great Pope John Paul II, the Cardinals have elected me, a simple, humble labourer in the vineyard of the Lord. The fact that the Lord knows how to work and to act even with insufficient instruments comforts me, and above all I entrust myself to your prayers. In the joy of the Risen Lord, confident of his unfailing help, let us move forward. The Lord will help us, and Mary, His Most Holy Mother, will be on our side. Thank you.[28] ”

On 24 April, he celebrated the Papal Inauguration Mass in St. Peter's Square, during which he was invested with the Pallium and the Ring of the Fisherman. Then, on 7 May, he took possession of his cathedral church, the Archbasilica of St. John Lateran.

Choice of name

Ratzinger chose the pontifical name Benedict, which comes from the Latin word meaning "the blessed", in honour of both Pope Benedict XV and Saint Benedict of Nursia. Pope Benedict XV was Pope during the First World War, during which time he passionately pursued peace between the warring nations. St. Benedict of Nursia was the founder of the Benedictine monasteries (most monasteries of the Middle Ages

were of the Benedictine order) and the author of the *Rule of Saint Benedict*, which is still the most influential writing regarding the monastic life of Western Christianity.

The pope explained his choice of name during his first General Audience in St. Peter's Square, on 27 April 2005:

> “ Filled with sentiments of awe and thanksgiving, I wish to speak of why I chose the name Benedict. Firstly, I remember Pope Benedict XV, that courageous prophet of peace, who guided the Church through turbulent times of war. In his footsteps I place my ministry in the service of reconciliation and harmony between peoples. Additionally, I recall Saint Benedict of Nursia, co-patron of Europe, whose life evokes the Christian roots of Europe. I ask him to help us all to hold firm to the centrality of Christ in our Christian life: May Christ always take first place in our thoughts and actions![29] ”

Tone of papacy

During his inaugural Mass, the previous custom of every cardinal submitting to the Pope was replaced by having twelve people, including cardinals, clergy, religious, a married couple and their child, and newly confirmed people, greet him. (The cardinals had formally sworn their obedience upon his election.) He began using an open-topped papal car, saying that he wanted to be closer to the people. Pope Benedict has continued the tradition of his predecessor John Paul II and baptises several infants in the Sistine Chapel at the beginning of each year, in his pastoral role as Bishop of Rome.

Pope Benedict XVI's first trip in the Popemobile

Beatifications

On 9 May 2005, Benedict XVI began the beatification process for his predecessor, Pope John Paul II. Normally, five years must pass after a person's death before the beatification process can begin. However, in an audience with Pope Benedict, Camillo Ruini, Vicar General of the Diocese of Rome and the official responsible for promoting the cause for canonization of any person who dies within that diocese, cited "exceptional circumstances" which suggested that the waiting period could be waived. This happened before, when Pope Paul VI waived the five year rule and announced beatification processes for his predecessors, Pope Pius XII and Pope John XXIII. Benedict XVI followed this precedent when he waived the five year rule for John Paul II.[30] The decision was announced on 13 May 2005, the Feast of Our Lady of Fátima and the 24th anniversary of the attempt on John Paul II's life.[31] John Paul II often credited Our Lady of Fátima for preserving him on that day. Cardinal Ruini inaugurated the diocesan phase of the cause for beatification in the Lateran Basilica on 28 June 2005.[32]

The first beatification under the new Pope was celebrated on 14 May 2005, by José Cardinal Saraiva Martins, Cardinal Prefect of the Congregation for the Causes of Saints. The new Blesseds were Mother Marianne Cope and Mother Ascensión Nicol Goñi. Cardinal Clemens August Graf von Galen was beatified on 9 October 2005. Mariano de la Mata was beatified in November 2006 and Rosa Eluvathingal was beatified 3 December of that year, and Fr. Basil Moreau was beatified September 2007.[33] In October 2008 the following beatifications took place: Celestine of the Mother of God, Giuseppina Nicoli, Hendrina Stenmanns, Maria Rosa Flesch, Marta Anna Wiecka, Michael Sopocko, Petrus Kibe Kasui and 187 Companions, Susana Paz-Castillo Ramirez, Maria Isbael Salvat Romero, and John Henry Newman.

Unlike his predecessor, Benedict XVI delegated the beatification liturgical service to a Cardinal. On 29 September 2005, the Congregation for the Causes of Saints issued a communiqué announcing that henceforth beatifications would be celebrated by a representative of the Pope, usually the Prefect of that Congregation.[34]

Canonizations

Pope Benedict XVI celebrated his first canonizations on 23 October 2005 in St. Peter's Square when he canonized Josef Bilczewski, Alberto Hurtado SJ, Zygmunt Gorazdowski, Gaetano Catanoso, and Felice da Nicosia. The canonizations were part of a Mass that marked the conclusion of the General Assembly of the Synod of Bishops and the Year of the Eucharist.[35] Pope Benedict XVI canonized Bishop Rafael Guizar y Valencia, Mother Theodore Guerin, Filippo Smaldone, and Rosa Venerini on 15 October 2006.

Pope Benedict at the canonization of Frei Galvão

During his visit to Brazil in 2007, Pope Benedict XVI presided over the canonization of Frei Galvão on 11 May, while George Preca, founder of the Malta based M.U.S.E.U.M., Szymon of Lipnica, Charles of Mount Argus, and Marie-Eugénie de Jésus were canonized in a ceremony held at the Vatican on 3 June 2007.[36] Preca is the first Maltese saint since the country's conversion to Christianity in 60 A.D. when St. Paul converted the inhabitants.[37] In October 2008 the following canonizations took place: Saint Alphonsa of India,[38] Gaetano Errico, Narcisa

de Jesus Martillo Moran, Maria Bernarda Bütler. In April 2009 he canonized Arcangelo Tadini, Bernardo Tolomei, Nuno Álvares Pereira, Geltrude Comensoli, Caterina Volpicelli.[39] In October of the same year he canonized Jeanne Jugan, Jozef Damian de Veuster, Zygmunt Szczęsny Feliński, Francisco Coll Guitart and Rafael Arnáiz Barón.[40][41]

On 17 October 2010, Pope Benedict XVI formally declared sainthood for Saint André Bessette, a French-Canadian; Stanislaw Soltys, a 15th-century Polish priest; Italian nuns Giulia Salzano and Camilla Battista da Varano; Spanish nun Candida Maria de Jesus Cipitria y Barriola and an Australian nun, Mother Mary MacKillop.[42]

On 23 October 2011, Pope Benedict XVI canonized three saints: a Spanish nun Bonifacia Rodriguez y Castro, Italian archbishop Guido Maria Conforti, and Italian priest Luigi Guanella. [43]

In December 2011, Pope Benedict formally recognized the validity of the miracles necessary to proceed with the canonizations of Kateri Tekakwitha, who will be the first Native American saint, Marianne Cope, a nun working with lepers in what is now the state of Hawaii, Giovanni Battista Piamarta, an Italian priest, Jacques Berthieu a French Jesuit priest and African martyr, Carmen Salles y Barangueras, a Spanish nun and founder of the Sisters of the Immaculate Conception, Peter Calungsod, a lay catechist and martyr from the Philippines, and Anna Schaffer whose desire to be a missionary was unfulfilled on account of her illness. At this time a date of canonization is not set.[44]

Curia reform

Pope Benedict began downsizing the Roman Curia when he merged four existing pontifical councils into two in March 2006. The Pontifical Council for Migrants was merged with the Pontifical Council for Justice and Peace headed by Cardinal Martino. Likewise, Cardinal Poupard, who headed the Pontifical Council for Culture, now also oversees the operations of what had been the Pontifical Council for Interreligious Dialogue, though both Councils maintained separate officials and staffs while their status and competencies continued unchanged. In May 2007 it was decided that Interreligious Dialogue would again become a separate body under a different President. In June 2010 Benedict created the Pontifical Council for the Promotion of the New Evangelisation. He appointed Archbishop Salvatore Fisichella as its first president.

Teachings

See also: Theology of Pope Benedict XVI

As Pope, one of Benedict XVI's main roles is to teach about the Catholic faith and the solutions to the problems of discerning and living the faith,[45] a role that he can play well as a former head of the Church's Congregation for the Doctrine of the Faith. The main points of emphasis of his teachings are stated in more detail in Theology of Pope Benedict XVI.

"Friendship with Jesus Christ"

At the conclusion of his first homily as Pope, Benedict referred to both Jesus Christ and John Paul II. Citing John Paul II's well-known words, "Do not be afraid! Open wide the doors for Christ!", Benedict XVI said:

> “Are we not perhaps all afraid in some way? If we let Christ enter fully into our lives, if we open ourselves totally to Him, are we not afraid that He might take something away from us?...And once again the Pope said: No! If we let Christ into our lives, we lose nothing, nothing, absolutely nothing of what makes life free, beautiful and great. No! Only in this friendship do we experience beauty and liberation....When we give ourselves to Him, we receive a hundredfold in return. Yes, open, open wide the doors to Christ – and you will find true life.[46]”

Benedict XVI: "The Eucharist is the

"Friendship with Jesus Christ" is a frequent theme of his preaching.[47][48] He stressed that on this intimate friendship, "everything depends."[49] He has also said: "We are all called to open ourselves to this friendship with God... speaking to him as to a friend, the only One who can make the world both good and happy... That is all we have to do is put ourselves at his disposal...is an extremely important message. It is a message that helps to overcome what can be considered the great temptation of our time: the claim, that after the Big Bang, God withdrew from history."[50] Thus, in his book *Jesus of Nazareth*, his main purpose was "to help foster [in the reader] the growth of a living relationship" with Jesus Christ.[49]

He took up this theme in his first encyclical *Deus Caritas Est*. In his personal explanation and summary of the encyclical, he stated: "If friendship with God becomes for us something ever more important and decisive, then we will begin to love those whom God loves and who are in need of us. God wants us to be friends of his friends and we can be so, if we are interiorly close to them."[51]

enduring presence of Jesus' self-oblation." (*Deus Caritas Est*)

Thus, he said that prayer is "urgently needed...It is time to reaffirm the importance of prayer in the face of the activism and the growing secularism of many Christians engaged in charitable work."

"Dictatorship of Relativism"

Continuing what he said in the pre-conclave Mass about what he has often referred to as the "central problem of our faith today",[52] on 6 June 2005 Pope Benedict also said:

> Today, a particularly insidious obstacle to the task of education is the massive presence in our society and culture of that relativism which, recognising nothing as definitive, leaves as the ultimate criterion only the self with its desires. And under the semblance of freedom it becomes a prison for each one, for it separates people from one another, locking each person into his or her own ego.[53]

He said that "a dictatorship of relativism"[54] was the core challenge facing the church and humanity. At the root of this problem, he said, is Kant's "self-limitation of reason". This, he said, is contradictory to the modern acclamation of science whose excellence is based on the power of reason to know the truth. He said that this self-amputation of reason leads to pathologies of religion such as terrorism and pathologies of science such as ecological disasters.[55] Benedict traced the failed revolutions and violent ideologies of the 20th century to a conversion of partial points of view into absolute guides. He said "Absolutizing what is not absolute but relative is called totalitarianism."[56]

In an address to a conference of the Diocese of Rome held at the basilica of St. John Lateran 6 June 2005, Benedict remarked on the issues of same sex marriage and abortion:

> The various forms of the dissolution of matrimony today, like free unions, trial marriages and going up to pseudo-matrimonies by people of the same sex, are rather expressions of an anarchic freedom that wrongly passes for true freedom of man...from here it becomes all the more clear how contrary it is to human love, to the profound vocation of man and woman, to systematically close their union to the gift of life, and even worse to suppress or tamper with the life that is born.[57]

Christianity as religion according to reason

In the discussion with secularism and rationalism, one of Benedict's basic ideas can be found in his address on the "Crisis of Culture" in the West, a day before Pope John Paul II died, when he referred to Christianity as the Religion of the Logos (the Greek for "word", "reason", "meaning", or "intelligence"). He said:

> From the beginning, Christianity has understood itself as the religion of the *Logos*, as the religion according to reason...It has always defined men, all men without distinction, as creatures and images of God, proclaiming for them...the same dignity. In this connection, the Enlightenment is of Christian origin and it is no accident that it was born precisely and exclusively in the realm of the Christian faith....It was and is the merit of the Enlightenment to have again proposed these original values of Christianity and of having given back to reason its own voice... Today, this should be precisely [Christianity's] philosophical strength, in so far as the problem is whether the world comes from the irrational, and reason is not other than a 'sub-product,' on occasion even harmful of its development—or whether the world comes from reason, and is, as a consequence, its criterion and goal...In the so necessary dialogue between secularists and Catholics, we Christians must be very careful to remain faithful to this fundamental line: to live a faith that comes from the *Logos*, from creative reason, and that, because of this, is also open to all that is truly rational.[58]

Benedict also emphasised that "Only creative reason, which in the crucified God is manifested as love, can really show us the way."

Encyclicals

Pope Benedict has to date written three encyclicals: *Deus Caritas Est* (Latin for "God is Love"), *Spe Salvi* ("Saved by Hope"), and *Caritas in Veritate* ("Love in Truth").

In his first encyclical, *Deus Caritas Est*, he said that a human being, created in the image of God who is love, is able to practice love: to give himself to God and others (agape), by receiving and experiencing God's love in contemplation. This life of love, according to him, is the life of the saints such as Teresa of Calcutta and the Blessed Virgin Mary, and is the direction Christians take when they believe that God loves them in Jesus Christ.[59]

The encyclical contains almost 16,000 words in 42 paragraphs. The first half is said to have been written by Benedict in German, his mother tongue, in the summer of 2005; the second half is derived from uncompleted writings left by his predecessor, Pope John Paul II.[60] The document was signed by Pope Benedict on Christmas Day, 25 December 2005.[61] The encyclical was promulgated a month later in Latin

and was translated into English, French, German, Italian, Polish, Portuguese and Spanish. It is the first encyclical to be published since the Vatican decided to assert copyright in the official writings of the Pope.[62]

Pope Benedict's second encyclical titled *Spe Salvi* ("Saved by Hope"), about the virtue of hope, was released on 30 November 2007.[63][64]

Benedict's third encyclical titled *Caritas in Veritate* ("Love in Truth" or "Charity in Truth"), was signed on 29 June 2009 (the Feast of Sts. Peter and Paul) and released on 7 July 2009.[65] In it, the Pope continued the Church's teachings on social justice. He condemned the prevalent economic system "where the pernicious effects of sin are evident," and called on people to rediscover ethics in business and economic relations.[65]

Post-synodal apostolic exhortation

Sacramentum Caritatis (The Sacrament of Charity) signed 22 February 2007, released in Latin, Italian, English, French, German, Portuguese, Spanish, and Polish. It was made available in various languages 13 March 2007 in Rome. The English edition from *Libera Editrice Vaticana* is 158 pages. This apostolic exhortation "seeks to take up the richness and variety of the reflections and proposals which emerged from the recent Ordinary General Assembly of the Synod of Bishops..." which was held in 2006.[66]

Motu proprio on Tridentine Mass

See also: Summorum Pontificum

On 7 July 2007, Benedict XVI issued the *motu proprio Summorum Pontificum*, declaring that upon "the request of the faithful", celebration of Mass according to the Missal of 1962 (commonly known as the Tridentine Mass), was to be more easily permitted. Stable groups who previously had to petition their bishop to have a Tridentine Mass may now merely request permission from their local priest.[67] While *Summorum Pontificum* directs that pastors should provide the Tridentine Mass upon the requests of the faithful, it also allows for any qualified priest to offer private celebrations of the Tridentine Mass, to which the faithful may be admitted if they wish.[68] For regularly scheduled public celebrations of the Tridentine Mass, the permission of the priest in charge of the church is required.[69]

A pre-1969 Latin Rite altar with reredos.
The high altar of a church was usually preceded by three steps, below which were said the Prayers at the Foot of the Altar. Side altars usually had only one step.

In an accompanying letter, the Pope outlined his position concerning questions about the new guidelines.[68] As there were fears that the move would entail a reversal of the Second Vatican Council,[70] Benedict emphasised that the Tridentine Mass would not detract from the Council, and that the Mass of Paul VI would still be the norm and priests were not permitted to refuse to say the Mass in that form. He pointed out that use of Tridentine Mass "was never juridically abrogated and, consequently, in principle, was always permitted."[68] The letter also decried "deformations of the liturgy ... because in many places celebrations were not faithful to the prescriptions of the new Missal" as the Second Vatican Council was wrongly seen "as authorising or even requiring creativity", mentioning his own experience.[68]

The Pope considered that allowing the Tridentine Mass to those who request it was a means to prevent or heal schism, stating that, on occasions in past history, "not enough was done by the Church's leaders to maintain or regain reconciliation and unity" and that this "imposes an obligation on us today: to make every effort to enable for all those who truly desire unity to remain in that unity or to attain it anew."[68] Many feel the decree aimed at ending the schism between the Holy See and traditionalist groups such as the Society of St. Pius X (SSPX). Cardinal Darío Castrillón Hoyos, the president of the Pontifical Commission established for the purpose of facilitating full ecclesial communion of those associated with that Society,[71] stated that the decree "opened the door for their return". Bishop Bernard Fellay, superior general of the SSPX, expressed "deep gratitude to the Sovereign Pontiff for this great spiritual benefit".[67]

Unicity and Salvific Universality of the Church

Near the end of June 2007, the Congregation for the Doctrine of the Faith issued a document approved by Benedict XVI "because some contemporary theological interpretations of Vatican II's ecumenical intent had been 'erroneous or ambiguous' and had prompted confusion and doubt."[72] The document has been seen as restating "key sections of a 2000 text the pope wrote when he was prefect of the congregation, *Dominus Iesus*."[72]

Consumerism

Benedict XVI has condemned excessive consumerism, especially among youth. He stated in December 2007 that "[A]dolescents, youths and even children are easy victims of the corruption of love, deceived by unscrupulous adults who, lying to themselves and to them, draw them

into the dead-end streets of consumerism."[73]

In June 2009, he blamed outsourcing for greater availability of consumer goods which lead to downsizing of social security systems.[74]

Ecumenical efforts

Main article: Pope Benedict XVI and Ecumenism

Speaking at his weekly audience in St Peter's Square on 7 June 2006, Pope Benedict asserted that Jesus himself had entrusted the leadership of the Church to his apostle Peter. "Peter's responsibility thus consists of guaranteeing the communion with Christ," said Pope Benedict. "Let us pray so that the primacy of Peter, entrusted to poor human beings, may always be exercised in this original sense desired by the Lord, so that it will be increasingly recognised in its true meaning by brothers who are still not in communion with us."

Dialogue with other religions

Pope Benedict is open to dialogue with other religious groups, and has sought to improve relations with them throughout his pontificate.[75][76] He has, however, generated certain controversies in doing so.

Judaism

Main article: Pope Benedict XVI and Judaism

When Benedict ascended to the Papacy his election was welcomed by the Anti-Defamation League who noted "his great sensitivity to Jewish history and the Holocaust".[77] However, his election received a more reserved response from the United Kingdom's Chief Rabbi Jonathan Sacks, who hoped that Benedict would "continue along the path of Pope John XXIII and Pope John Paul II in working to enhance relations with the Jewish people and the State of Israel."[78] The Foreign Minister of Israel also offered more tentative praise, though the Minister believed that "this Pope, considering his historical experience, will be especially committed to an uncompromising fight against anti-Semitism."[78]

Critics have accused Benedict's papacy of insensitivity towards Judaism. The two most prominent instances were the expansion of the use of the Tridentine Mass and the lifting of the excommunication on four bishops from the Society of St. Pius X (SSPX). In the Good Friday service, the traditional Mass rubrics include a prayer that asks God to lift the veil so *they [Jews] may be delivered from their darkness.* This prayer has historically been contentious in Judaic-Catholic relations and several groups saw the restoration of the Tridentine Mass as problematic.[79][80][81][82][83] Among those whose excommunications were lifted was Bishop Richard Williamson, an outspoken Holocaust denier.[84][85][86][87] The lifting of his excommunication led critics to charge that the Pope was condoning his anti-Semitic views.[88]

Islam

Main article: Pope Benedict XVI and Islam

Pope Benedict's relations with Islam have been strained at times. On 12 September 2006 Pope Benedict XVI delivered a lecture which touched on Islam at the University of Regensburg in Germany. The pope had previously served as professor of theology at the university, and his lecture was entitled "Faith, Reason and the University—Memories and Reflections". The lecture received much attention from political and religious authorities. Many Islamic politicians and religious leaders registered their protest against what they said was an insulting mischaracterisation of Islam, although his focus was aimed towards the rationality of religious violence, and its effect on the religion.[89][90] Muslims were particularly offended by the following quotation from the Pope's speech:

> “ Show me just what Muhammad brought that was new and there you will find things only evil and inhuman, such as his command to spread by the sword the faith he preached.[90] ”

The passage originally appeared in the "*Dialogue Held With A Certain Persian, the Worthy Mouterizes, in Anakara of Galatia*[91][92] written in 1391 as an expression of the views of the Byzantine emperor Manuel II Paleologus, one of the last Christian rulers before the Fall of Constantinople to the Muslim Ottoman Empire, on such issues as forced conversion, holy war, and the relationship between faith and reason. According to the German text, the Pope's original comment was that the emperor "addresses his interlocutor in an astoundingly harsh—to us surprisingly harsh—way" *(wendet er sich in erstaunlich schroffer, uns überraschend schroffer Form)*.[93] Pope Benedict apologised for any offence he had caused and made a point of visiting Turkey, a predominantly Muslim country, and praying in its Blue Mosque.

Pope Benedict XVI planned on 5 March 2008, to meet with Muslim scholars and religious leaders autumn 2008 at a Catholic-Muslim

seminar in Rome.[94] That meeting, the "First Meeting of the Catholic-Muslim Forum," was held from November 4–6, 2008.[95]

On 9 May 2009 H.H. Pope Benedict XVI visited the King Hussein Mosque, Amman, Jordan where he was addressed by H.R.H. Prince Ghazi bin Muhammad bin Talal.[75]

Tibetan Buddhism

The Dalai Lama congratulated Pope Benedict XVI upon his election,[96] and visited him in October 2006 in the Vatican City. In 2007 China was accused of using its political influence to stop a meeting between the Pope and the Dalai Lama.[97]

Indigenous American beliefs

While visiting Brazil in May 2007, "the pope sparked controversy by saying that native populations had been 'silently longing' for the Christian faith brought to South America by colonizers."[98] The Pope continued, stating that "the proclamation of Jesus and of his Gospel did not at any point involve an alienation of the pre-Columbus cultures, nor was it the imposition of a foreign culture."[98] President of Venezuela Hugo Chávez demanded an apology, and an indigenous organisation in Ecuador issued a response which stated that "representatives of the Catholic Church of those times, with honourable exceptions, were accomplices, deceivers and beneficiaries of one of the most horrific genocides of all humanity."[98] Later, the pope, speaking Italian, said at a weekly audience that it was:

> "not possible to forget the suffering and the injustices inflicted by colonizers against the indigenous population, whose fundamental human rights were often trampled."[99]

International Society for Krishna Consciousness

While visiting the United States on 17 April 2008, Benedict met with International Society for Krishna Consciousness representative Radhika Ramana Dasa;[100] a notable Hindu scholar[101] and disciple of Hanumatpreshaka Swami.[102] On behalf of the Hindu American community, Radhika Ramana Dasa presented a gift of an Om symbol to Benedict.[103][104]

Apostolic ministry

Main article: List of journeys of Pope Benedict XVI

Pope Benedict XVI in a Mercedes-Benz popemobile in São Paulo, Brazil

As Pontiff, Benedict XVI carries out numerous Apostolic activities including journeys across the world and in the Vatican.

Benedict travelled extensively during the first three years of his papacy. In addition to his travels within Italy, Pope Benedict XVI has made two visits to his homeland, Germany, one for World Youth Day and another to visit the towns of his childhood. He has also visited Poland and Spain, where he was enthusiastically received.[105] His visit to Turkey, an overwhelmingly Muslim nation, was initially overshadowed by the controversy about a lecture he had given at Regensburg. His visit was met by nationalist and Islamic protesters[106] and was placed under unprecedented security measures.[107] However, the trip went ahead and Benedict made a joint declaration with Ecumenical Patriarch Bartholomew I in an attempt to begin to heal the rift between the Catholic and Orthodox churches.

In 2007, Pope Benedict visited Brazil in order to address the Bishops' Conference there and canonize Friar Antônio Galvão, an 18th century Franciscan. In June 2007, Benedict made a personal pilgrimage and pastoral visit to Assisi, the birthplace of St. Francis. In September, Benedict undertook a three day visit to Austria,[108] during which he joined Vienna's Chief Rabbi, Paul Chaim Eisenberg, in a memorial to the 65,000 Viennese Jews who perished in Nazi death camps.[109] During his stay in Austria, he also celebrated Mass at the Marian shrine Mariazell and visited Heiligenkreuz Abbey.[110]

In April 2008, Pope Benedict XVI made his first visit to the United States since becoming pope.[111] He arrived in Washington, DC where he was formally received at the White House and met privately with U.S. President George W. Bush.[112] While in Washington, the pope addressed representatives of US Catholic universities, met with leaders of other world religions, and celebrated Mass at the Washington Nationals' baseball stadium with 47,000 people.[113] The Pope also met privately with victims of sexual abuse by priests. The pope travelled to New York where he addressed the United Nations General Assembly.[114] Also while in New York, the pope celebrated Mass at St. Patrick's Cathedral, met with disabled children and their families, and attended an event for Catholic youth,

Pope Benedict XVI celebrates his 81st birthday with U.S. President George W. Bush and his wife, Laura.

where he addressed some 25,000 young people in attendance.[115] On the final day of the pope's visit, he visited the World Trade Center site and later celebrated Mass at Yankee Stadium.[116]

In July 2008, the Pope travelled to Australia to attend World Youth Day 2008 in Sydney. On 19 July, in St. Mary's Cathedral, he made an apology for child sex abuse perpetrated by the clergy in Australia.[117][118] On 13 September 2008, at an outdoor Paris Mass attended by 250,000 people, Pope Benedict XVI condemned the modern materialism – the world's love of power, possessions and money as a modern-day plague, comparing it to paganism.[119][120]

In 2009, he visited Africa (Cameroon and Angola) for the first time as a Pope. During his visit, he suggested that altering sexual behavior was the answer to Africa's AIDS crisis, and urged Catholics to reach out and convert believers in sorcery.

He visited the Middle East (Jordan, Israel and Palestine) in May 2009.

Pope Benedict's main arena for pastoral activity is the Vatican itself, his Christmas and Easter homilies and Urbi et Orbi are delivered from St Peter's Basilica. The Vatican is also the only regular place where the Pope travels via motor without the protective bulletproof case common to most popemobiles. Despite the more secure setting Pope Benedict has been victim to security risks several times inside Vatican City. On Wednesday, 6 June 2007 during his General Audience a man lept across a barrier, evaded guards and nearly mounted the Pope's vehicle, although he was stopped and Benedict seemed to be unaware of the event. On Thursday, 24 December 2009, while Pope Benedict was proceeding to the altar to celebrate Christmas Eve Mass at St Peter's Basilica, a woman later identified as 25-year-old Susanna Maiolo, who holds Italian and Swiss citizenships, jumped the barrier and grabbed the pope by his vestments and pulled him to the ground. The 82-year-old fell but was assisted to his feet and he continued to proceed towards the altar to celebrate Mass. Roger Etchegaray, 87, the vice-dean of the College of Cardinals, fell also and suffered a hip fracture. Italian police revealed that the woman had previously attempted to accost the Pope at the previous Christmas Eve Mass, but was prevented from doing so.[121][122]

In his homily, Pope Benedict forgave Susanna Maiolo[123] and urged the world to "wake up" from selfishness and petty affairs, and find time for God and spiritual matters.[121]

Between 17 and 18 April, Pope Benedict made an Apostolic Journey to the Republic of Malta. Following meetings with various dignitaries on his first day on the island, 50,000 people gathered in a drizzle for Papal Mass on the granaries in Floriana. The Pope also met with the Maltese youth at the Valletta Waterfront, where an estimated 10,000 young people turned up to greet him.[124] During his visit the Pope was moved to tears while expressing his shame at cases of abuse on the island during a 20 minute meeting with victims.[125]

Sexual abuse in the Catholic Church

See also: Catholic sex abuse cases

Response

Prior to 2001, the primary responsibility for investigating allegations of sexual abuse and disciplining perpetrators rested with the individual dioceses. In 2001, Ratzinger convinced John Paul II to put the Congregation for the Doctrine of the Faith in charge of all investigations and policies surrounding sexual abuse in order to combat such abuse more efficiently.[126][127] According to John L. Allen, Jr., Ratzinger in the following years "acquired a familiarity with the contours of the problem that virtually no other figure in the Catholic church can claim" and "driven by that encounter with what he would later refer to as 'filth' in the church, Ratzinger seems to have undergone something of a 'conversion experience' throughout 2003–04. From that point forward, he and his staff seemed driven by a convert's zeal to clean up the mess".[128] In his role as Head of the CFD, he "led important changes made in church law: the inclusion in canon law of internet offences against children, the extension of child abuse offences to include the sexual abuse of all under 18, the case by case waiving of the statute of limitation and the establishment of a fast-track dismissal from the clerical state for offenders."[129] As the Head of the CDF, Ratzinger developed a reputation for handling these cases. According to Charles J. Scicluna, a former prosecutor handling sexual abuse cases, "Cardinal Ratzinger displayed great wisdom and firmness in handling those cases, also demonstrating great courage in facing some of the most difficult and thorny cases, *sine acceptione personarum* (without exceptions)".[128][130]

One of the cases Ratzinger pursued involved Father Marcial Maciel Degollado, a Mexican priest and founder of the Legion of Christ, who had been accused repeatedly of sexual abuse. Biographer Andrea Tornielli suggested that Cardinal Ratzinger had wanted to take action against Marcial Maciel Degollado, but that John Paul II and other high-ranking officials, including several cardinals and notably the pope's influential secretary Stanisław Dziwisz, prevented him from doing so.[127][131] According to Jason Berry, Angelo Sodano "pressured" Cardinal Ratzinger, who was "operating on the assumption that the charges were not justified", to halt the proceedings against Maciel in 1999[132] When Maciel was honored by the Pope in 2004, new accusers came forward[132] and Cardinal Ratzinger "took it on himself to authorize an investigation of Maciel"[127] After Ratzinger became pope he began proceedings against Maciel and the Legion of Christ that

forced Maciel out of active service in the church.[126] On 1 May 2010 the Vatican issued a statement denouncing Maciel's "very serious and objectively immoral acts", which were "confirmed by incontrovertible testimonies" and represent "true crimes and manifest a life without scruples or authentic religious sentiment." Pope Benedict also said he would appoint a special commission to examine the Legionaries' constitution and open an investigation into its lay affiliate Regnum Christi.[133] Cardinal Christoph Schönborn explained that Ratzinger "made entirely clear efforts not to cover things up but to tackle and investigate them. This was not always met with approval in the Vatican".[126][134] According to Schönborn, Cardinal Ratzinger had pressed John Paul II to investigate Hans Hermann Groër, an Austrian cardinal and friend of John Paul accused of sexual abuse, resulting in Groër's resignation.[131]

In March 2010, the Pope sent a Pastoral Letter to the Catholic Church in Ireland addressing cases of sexual abuse by Catholic priests to minors, expressing sorrow, and promising changes in the way accusations of abuse are dealt with.[135] Victim groups claim the letter failed to clarify if secular law enforcement has priority over canon law confidentiality pertaining to internal investigation of abuse allegations.[136][137][138][139] The Pope then promised to introduce measures that would 'safeguard young people in the future' and 'bring to justice' priests who were responsible for abuse.[125] In April, the Vatican issued guidelines on how existing church law should be implemented. The guideline dictates that "Civil law concerning reporting of crimes... should always be followed."[140] The guideline was intended to follow the norms established by U.S. bishops, but it does not require the reporting of "allegations" or crimes where reporting is not required by law.[141]

Attire

Main article: Ceremonial of Benedict XVI

Pope Benedict XVI in choir dress with the red summer papal mozzetta, embroidered red stole, and the red papal shoes.

Pope Benedict XVI has re-introduced several papal garments which had previously fallen into disuse. Pope Benedict XVI resumed the use of the traditional red papal shoes, which had not been used since early in the pontificate of Pope John Paul II. Contrary to the initial speculation of the press that the shoes had been made by the Italian fashion house Prada, the Vatican announced that the shoes were provided by the pope's personal shoemaker.[142]

On 21 December 2005, the pope began wearing the camauro, the traditional red papal hat usually worn in the winter. It had not been seen since the pontificate of Pope John XXIII (1958–1963). On 6 September 2006 the pope began wearing the red cappello romano (also called a saturno), a wide-brimmed hat for outdoor use. Rarely used by John Paul II, it was more widely worn by his predecessors.

Health

Because of age-related health problems, in order to have free time to write, and because he reached the age limit for bishops (75) he had hoped to retire, and submitted his resignation three times, but had continued at his post in obedience to the wishes of Pope John Paul II. In September 1991, Ratzinger suffered a hemorrhagic stroke, which slightly impaired his eyesight temporarily but he recovered completely.[143] This was never affirmed – the official news was that Cardinal Ratzinger fell and struck his head against a radiator – but an open secret known to the Conclave that elected him Pope.[144]

Since he became Pope in April 2005 there were several rumors about his health but none of them was ever confirmed. Early in his pontificate Pope Benedict XVI predicted a short reign which led to concerns about his health.[145] In May 2005, the Vatican revealed that he had subsequently suffered another mild stroke. French Cardinal Philippe Barbarin further revealed that since the first stroke, Ratzinger had been suffering from a heart condition as a result of his age, and is currently on medication. In late November 2006, Vatican insiders told the international press that the Pope had a routine examination of the heart.[144] A few days later an unconfirmed rumor emerged that Pope Benedict had undergone an operation in preparation for an eventual bypass operation but this rumor was only published by a small left-wing Italian newspaper and was never confirmed by any Vatican insider.[146]

On Friday 17 July 2009 Benedict was hospitalised after falling and breaking his right wrist while on vacation in the Alps. His injuries were reported to be minor.[147]

Titles and style

Papal styles of
Pope Benedict XVI

The official style of the Pope is **His Holiness Pope Benedict XVI**; in Latin, **Benedictus XVI**, **Episcopus Romae**. However, his rarely used full title is: *His Holiness Pope Benedict XVI, Bishop of Rome, Vicar of Christ, Successor of the Prince of the Apostles, Supreme Pontiff of the Universal Church, Primate of Italy, Archbishop and Metropolitan*

of the Roman province, Sovereign of the State of the Vatican City, Servant of the Servants of God.

Reference style	His Holiness
Spoken style	Your Holiness
Religious style	Holy Father

Before 1 March 2006, the list of titles also used to contain that of a "Patriarch of the West", which traditionally appeared in that list of titles before "Primate of Italy". The title of "Patriarch of the West" was first adopted in the year 642 by Pope Theodore I, but was rarely used since the East-West Schism of 1054. From the Orthodox perspective, authority in the Church could be traced to the five patriarchates of Rome, Constantinople, Alexandria, Antioch and Jerusalem. However, some Catholic theologians have argued that the term "Patriarch of the West" has no clear historical or theological basis and was introduced into the papal court in 1870 at the time of the First Vatican Council. Pope Benedict chose to remove the title at a time when discussions with the Orthodox churches have centred on the issue of papal primacy.

Arms

Positions on moral and political issues

Birth control and HIV/AIDS

In 2005, the Pope listed several ways to combat the spread of HIV, including chastity, fidelity in marriage and anti-poverty efforts; he also rejected the use of condoms.[149] The alleged Vatican investigation of whether there are any cases when married persons may use condoms to protect against the spread of infections surprised many Catholics in the wake of John Paul II's consistent refusal to consider condom use in response to AIDS.[150] However, the Vatican has since stated that no such change in the Church's teaching can occur.[151] *TIME* also reported in its 30 April 2006 edition that the Vatican's position remains what it always has been with Vatican officials "flatly dismiss[ing] reports that the Vatican is about to release a document that will condone any condom use."[151]

In March 2009, the Pope stated:

> I would say that this problem of AIDS cannot be overcome merely with money, necessary though it is. If there is no human dimension, if Africans do not help, the problem cannot be overcome by the distribution of prophylactics: on the contrary, they increase it. The solution must have two elements: firstly, bringing out the human dimension of sexuality, that is to say a spiritual and human renewal that would bring with it a new way of behaving towards others, and secondly, true friendship offered above all to those who are suffering, a willingness to make sacrifices and to practise self-denial, to be alongside the suffering.[152]

In November 2010, in a book-length interview, the Pope, using the example of male prostitutes, stated that the use of condoms, with the intention of reducing the risk of HIV infection, may be an indication that the prostitute is intending to reduce the evil connected with his or her immoral activity.[153] In the same interview, the Pope also reiterated the traditional teaching of the Church that condoms are not seen as a "real or moral solution" to the HIV/AIDS pandemic. Further, in December 2010, the Congregation of the Doctrine of the Faith explained that the Pope's statement did not constitute a legitimization of either prostitution or contraception, both of which remain gravely immoral.[153]

Homosexuality

During his time as Prefect of the Congregation for the Doctrine of the Faith (CDF) Benedict XVI made several efforts to tackle the issue of homosexuality within the Church and the wider world. In 1986 the CDF sent a letter to all Bishops entitled: *On the Pastoral Care of Homosexual Persons*. The letter condemned a liberal interpretation of the earlier CDF document *Declaration on Certain Questions Concerning Sexual Ethics*, which had led to a "benign" attitude "to the homosexual condition itself". *On the Pastoral Care of Homosexual Persons* clarified that the Church position on Homosexuality was that "although the particular inclination of the homosexual person is not a sin, it is a more or less strong tendency ordered toward an intrinsic moral evil; and thus the inclination itself must be seen as an objective disorder."[154] However the document also condemned homophobic attacks and violence stating "It is deplorable that homosexual persons have been and are the object of violent malice in speech or in action. Such treatment deserves condemnation from the Church's pastors wherever it occurs."[154]

In 1992 he again approved CDF documents declaring that homosexual "inclination itself must be seen as an objective disorder" and extended this principle to civil law. "Sexual orientation", the document opined, was not equivalent to race or ethnicity, and it declared that it was "not unjust discrimination to take sexual orientation into account."[155]

On 22 December 2008, the Pope gave an end of year message to the Roman Curia in which he talked about gender and the important distinction between men and women. The pope said that the church viewed the distinction as central to human nature, and "asks that this order, set down by creation, be respected". He characterised gender roles which deviated from his view of what gender roles should be as "a

violation of the natural order". The church, he said, "should protect man from the destruction of himself". He said a sort of ecology of man was needed, adding: "The tropical forests do deserve our protection; but man, as a creature, does not deserve any less." He attacked what he described as gender theories which "lead towards the self-emancipation of man from creation and the creator".[156][157]

LGBT groups such as the Italian Arcigay and German LSVD have announced that they found the Pope's comments homophobic.[158] Aurelio Mancuso, head of Arcigay, saying "A divine programme for men and women is out of line with nature, where the roles are not so clear."[156]

Father Federico Lombardi, a Vatican spokesman, claimed the Pope had not wished specifically to attack homosexuality, and had not mentioned gays or lesbians in his text. Father Lombardi insisted, however, that there had been an overreaction to the Pope's remarks. "He was speaking more generally about gender theories which overlook the fundamental difference in creation between men and women and focus instead on cultural conditioning." Nevertheless, the remarks were interpreted as a call to save mankind from homosexuals and transsexuals.[156]

International relations

Main article: Foreign relations of the Vatican

Migrants and refugees

In a message released 14 November 2006, during a Vatican press conference for the 2007 annual observance of World Day for Migrants and Refugees, the pope urged the ratification of international conventions and policies that defend all migrants, including refugees, exiles, evacuees, and internally displaced persons. "The church encourages the ratification of the international legal instruments that aim to defend the rights of migrants, refugees and their families," the pope said. "Much is already being done for the integration of the families of immigrants, although much still remains to be done."[159]

Benedict with then President of Russia Vladimir Putin on 13 March 2007

Pope Benedict has also promoted various UN events, such as World Refugee Day, on which he offered up special prayers for refugees and called for the international community to do more to secure refugees' human rights. He also called on Catholic communities and organizations to offer them concrete help.[160]

China

Main article: People's Republic of China – Holy See relations

In 2007 Benedict sent a letter at Easter to Catholics in China that could have wide-ranging implications for the church's relationship with China's leadership. The letter provides long-requested guidance to Chinese bishops on how to respond to illicitly ordained bishops, as well as how to strengthen ties with the Patriotic Association and the Communist government.[161]

Korea

On 13 November 2006, Benedict said the dispute over the North Korea nuclear weapons program should be resolved through negotiations, in his first public comment on the security issue, a news report said. "The Holy See encourages bilateral or multilateral negotiations, convinced that the solution must be sought through peaceful means and in respect for agreements taken by all sides to obtain the denuclearisation of the Korean Peninsula." Benedict was talking to the new Japanese ambassador to the Vatican.[162]

Turkey

Main article: Holy See – Turkey relations

In a 2004 *Le Figaro* interview, Ratzinger said that Turkey, which is demographically Muslim but governmentally secular by virtue of its state constitution, should seek its future in an association of Muslim nations rather than the European Union, which Ratzinger has stated has Christian roots. He said Turkey had always been "in permanent contrast to Europe and that linking it to Europe would be a mistake.[163]

Later visiting the country to "reiterate the solidarity between the cultures," it was reported that he made a counter-statement backing Turkey's bid to join the EU. Prime Minister of Turkey Recep Tayyip Erdoğan, said that the pope told him in their meeting that while the Vatican seeks to stay out of politics it desires Turkey's membership in the EU.[164][165] However, the Common Declaration of Pope Benedict XVI and Patriarch Bartholomew I of Constantinople implied that support for Turkey's membership in the European Union would be contingent on the establishment of religious freedom in Turkey:[166] "In every step towards unification, minorities must be protected, with

their cultural traditions and the distinguishing features of their religion."[167] The Declaration also reiterates Pope Benedict XVI's call for Europe to preserve its Christian roots.

Israel

Main article: Holy See – Israel relations

In May 2009 he visited Israel.[168][169] This was the third Papal visit to the Holy Land, the previous ones being made by Pope Paul VI in 1964 and Pope John Paul II in 2000.

Vietnam

Main article: Holy See – Vietnam relations

Pope Benedict XVI and Prime Minister Nguyễn Tấn Dũng met at the Vatican on 25 January 2007 in a "new and important step towards establishing diplomatic ties".[170] The Pope met with President Nguyễn Minh Triết on 11 December 2009. Vatican officials called the meeting "a significant stage in the progress of bilateral relations with Vietnam."[171]

Global economy

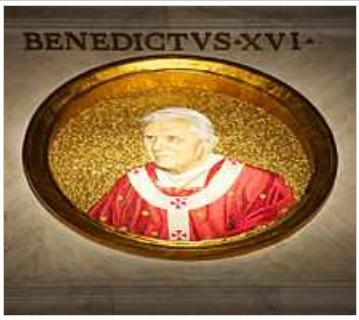
In 2009 the Pope intervened in global economic and political affairs with his third encyclical, *Charity in Truth* (Latin *Caritas in Veritate*), which can be viewed on the Vatican's web site.[172] The document sets out the Pope's position on the case for worldwide redistribution of wealth in considerable detail and goes on to discuss the environment, migration, terrorism, sexual tourism, bioethics, energy and population issues. *The Financial Times* has reported that the Pope's advocacy for a fairer redistribution of wealth has helped set the agenda for the 2009 July G8 summit.[173][174]

Nuclear energy

Pope Benedict XVI has called for nuclear disarmament. At the same time, he has supported the peaceful use of nuclear energy as a tool for development and the fight against poverty. In his message for the 50th anniversary of the founding of the International Atomic Energy Agency, he confirmed: "The Holy See, fully approving of the IAEA's goal, has been a member from the organisation's foundation and continues to support its activity."[175]

Interests

Pope Benedict is known to be deeply interested in classical music,[7] and is an accomplished pianist.[176] He has a grand piano in his papal quarters. The Pontiff's favorite composer is Wolfgang Amadeus Mozart, of whose music the Pope said: "His music is by no means just entertainment; it contains the whole tragedy of human existence."[177] Benedict also stated that Mozart's music affected him greatly as a young man and "deeply penetrated his soul."[177] Benedict's favorite works of music are Mozart's Clarinet Concerto and Clarinet Quintet.[178]



Pope Benedict has recorded an album of contemporary classical music in which Benedict sings and recites prayers to the Blessed Virgin Mary.[179] The album was set for release on 30 November 2009.

Pope Benedict is also known to be fond of cats.[7] As Cardinal Ratzinger he was known to look after stray cats in Rome. A book called "Joseph and Chico: A Cat Recounts the Life of Pope Benedict XVI" was published in 2007 which told the story of the Pope's life from the feline Chico's perspective. This story was inspired by an orange tabby Pentling cat, which belonged to the family next door.[180] During his trip to Australia for World Youth Day in 2008 the media reported that festival organizers lent the Pope a grey cat called Bella[181] in order to keep him company during his stay.[182]

Honours and awards

1977 Grand Cross of the National Order of Merit of the Republic of Ecuador
1977 Bavarian Order of Merit
1985 Great Cross of Merit of the Federal Republic of Germany with Star and Sash
1985 Constitutional Medal of the Bavarian state parliament in Gold
1989 Ordine della Minerva at the University of Chieti
1989 Augustin Bea Prize (Rome)
1989 Karl-Valentin-Orden (Munich)

1991 Leopold Kunschak Prize (Vienna)
1991 Georg von Hertling Medal of CT
1992 Grand Gold Medal with Ribbon for Services to the Republic of Austria

Pope

From Wikipedia, the free encyclopedia

The **Pope** (from Latin: *papa*; from Greek: πάππας (*pappas*),[1] a child's word for *father*)[2] is the Bishop of Rome and the leader of the worldwide Catholic Church. In the Catholic Church, the Pope is regarded as the successor of Saint Peter, the Apostle. The current office-holder is Pope Benedict XVI, who was elected in a papal conclave on 19 April 2005.[nb 1]

The office of the pope is known as the *papacy*. His ecclesiastical jurisdiction is often called the "Holy See" (*Sancta Sedes* in Latin), or the "Apostolic See" based upon the Church tradition that the Apostles Saint Peter and Saint Paul were martyred in Rome. The pope is also head of state of Vatican City,[3] a sovereign city-state entirely enclaved within the city of Rome.

The papacy is one of the most enduring institutions in the world and had a prominent part in human history.[4] The Popes in ancient times helped in the spread of Christianity and resolve various doctrinal disputes. [5] In the Middle Ages they played a role of secular importance in Western Europe, often serving as referees between the monarchs and averting several wars. [6][7][8] Currently, in addition to the expansion of the Christian faith and doctrine, the popes are dedicated to ecumenism and interreligious dialogue, charitable work, and the defense of human rights.[9][10]

Having been gradually forced to give up temporal power, popes now focus almost exclusively on religious matters.[5] Over the centuries, papal claims of spiritual authority have been ever more clearly expressed, culminating in 1870 with the proclamation of the dogma of papal infallibility for rare occasions when the pope speaks *ex cathedra* — literally "from the chair (of St. Peter)" — to issue a formal definition of faith or morals.[5] The first explicit such occasion (after the proclamation), and so far the last, was in 1950, with the definition of the dogma of the Assumption of Mary.

Bishop of Rome

BISHOPRIC
CATHOLIC

Incumbent:
Benedict XVI
Elected: 19 April 2005

Province:	Ecclesiastical Province of Rome
Diocese:	Rome
Cathedral:	Basilica of St. John Lateran
First Bishop:	According to traditional Christianity, Saint Peter
Formation:	According to traditional Christianity, the 1st century

History

Main article: History of the papacy

Part of a series on the

Catholic Church

Title and etymology

The word *pope* derives from Greek **πάππας** meaning "Father".

This title was first assumed by the Patriarchs of Alexandria, long before it was assumed by the Bishops of Rome. In fact, the first to carry the title of pope was the Patriarch of Alexandria, Pope Heracleus (232–49 AD), the 13th Alexandrine Patriarch.[11][12] Papa has been the specific designation for the Archbishop of Alexandria, Patriarch of Egypt, and the See of Saint Mark, whose ecclessiastic title is "Papa Abba", the Abba stands for the devotion of all monastics, from Pentapolis in the West to Constantinople in the East, to his guidance. Abba is the most powerful designation, that for all monks in the East to voluntarily follow his spiritual authority.[11] The first record in history of the term "pope" is assigned to Pope Heraclas of Alexandria in a letter written by the bishop of Rome, Dionysius, to Philemon:

> τοῦτον ἐγὼ τὸν κανόνα καὶ τὸν τύπον παρὰ τοῦ μακαρίου πάπα ἡμῶν Ἡρακλᾶ παρέλαβον.[13]

Which translates into:

> I received this rule and ordinance from our blessed pope, Heraclas.

According to the Oxford English Dictionary, the earliest recorded use of the title 'pope' in English is in an Old English translation (*c*. 950) of Bede's *Ecclesiastical History of the English People*:

> Þa wæs in þa tid Uitalius papa þæs apostolican seðles aldorbiscop.[14]

In Modern English:

> At that time, Pope Vitalian was chief bishop of the apostolic see.

It is difficult to ascertain the identity of the first Bishop of Rome to carry the title Pope of Rome. Some sources suggest that it was Pope Marcellinus (d. 304 AD),[15] while other sources suggest that this did not happen until the 6th century, with Pope John I (523–6 AD) the first to assume this title.[11] Bestowing the title on Rome's Pontiff did not strip it from Alexandria's, and the Roman Catholic Church recognizes this ecclesiastical fact.[11] From the 6th century, the imperial chancery of Constantinople normally reserved this designation for the Bishop of Rome. From the early 6th century, it began to be confined in the West to the Bishop of Rome, a practice that was firmly in place by the 11th century, when Pope Gregory VII declared it reserved for the Bishop of Rome.[15]

Catholics recognize the pope as a successor to Saint Peter, whom, according to Roman Catholic teaching, Jesus named as the

Protestants generally agree that Jesus singled out Peter as the focal point of the first-century church. However, they contend that the New Testament offers no proof that Jesus established the papacy nor even that he established Peter as the first bishop of Rome.[22] The Catholic Church teaches that Jesus personally appointed Peter as leader of the Church and in its dogmatic constitution *Lumen Gentium* makes a clear distinction between apostles and bishops, presenting the latter as the successors of the former, with the pope as successor of Peter in that he is head of the bishops as Peter was head of the apostles.[23] Some historians have argued that the notion that Peter was the first bishop of Rome and founded the episcopal see there can be traced back no earlier than the 3rd century.[24] The writings of the Church Father Irenaeus who wrote around 180 AD reflect a belief that Peter "founded and organised" the Church at Rome.[25] Moreover, Irenaeus was not the first to write of Peter's presence in the early Roman Church. Clement of Rome wrote in a letter to the Corinthians, *c.* 96[26] about the persecution of Christians in Rome as the "struggles in our time" and presented to the Corinthians its heroes, "first, the greatest and most just columns, the "good apostles" Peter and Paul.[27] St. Ignatius of Antioch wrote shortly after Clement and in his letter from the city of Smyrna to the Romans he said he would not command them as Peter and Paul did.[28] Given this and other evidence, many scholars agree that Peter was martyred in Rome under Nero, although some scholars argue that he may have been martyred in Palestine.[29][30][31]

Various Christian communities would have had a group of presbyter-bishops functioning as leaders of their local churches. Gradually, episcopacies were established in metropolitan areas.[32] It has been conjectured that Antioch, where Peter was before he went to Rome, may have been one of the first Christian communities to have adopted such a structure.[32] In Rome there were many who claimed to be the rightful bishop though again Irenaeus stressed the validity of one line of bishops from the time of St. Peter up to his contemporary Pope Victor I and listed them.[33] Some writers claim that the emergence of a single bishop in Rome probably did not occur until the middle of the 2nd century. In their view, Linus, Cletus and Clement were possibly prominent presbyter-bishops but not necessarily monarchical bishops.[24] This would not affect their authority as popes in Catholic Theology.

The Holy See was accorded prominence in the early Church period in issues related to matters of the whole Catholic Church.[34]

Early Christianity (*c.* 30–325)

It seems that at first the terms 'episcopos' and 'presbyter' were used interchangeably.[35] The consensus among scholars has been that, at the turn of the 1st and 2nd centuries, local congregations were led by bishops and presbyters whose offices were overlapping or indistinguishable.[36] There was probably no single 'monarchical' bishop in Rome before the middle of the 2nd century ... and likely later."[37] Other scholars and historians disagree, citing the historical records of St. Ignatius of Antioch and St. Irenaeus who recorded the linear succession of Bishops of Rome (the popes) up until their own times. They also cite the importance accorded to the popes in the ecumenical councils, including the early ones.[38]

In the early Christian era, Rome and a few other cities had claims on the leadership of worldwide Catholic Church. James the Just, known as "the brother of the Lord", served as head of the Jerusalem church, which is still honored as the "Mother Church" in Orthodox tradition. Alexandria had been a center of Jewish learning and became a center of Christian learning. Rome had a large congregation early in the apostolic period whom Paul the Apostle addressed in his Epistle to the Romans, and according to tradition Paul was martyred there.

During the 1st century of the Church (*ca.* 30–130), the Roman capital became recognized as a Christian center of exceptional importance. Pope Clement I at the end of the 1st century wrote an epistle to the Church in Corinth intervening in a major dispute, and apologizing for not having taken action earlier.[39] However, there are only a few other references of that time to recognition of the authoritative primacy of the Roman See outside of Rome. In the Ravenna Document (http://www.vatican.va/roman_curia/pontifical_councils/chrstuni /ch_orthodox_docs/rc_pc_chrstuni_doc_20071013_documento-ravenna_en.html) of 13 October 2007, theologians chosen by the Roman Catholic and the Eastern Orthodox Churches stated: "41. Both sides agree… that Rome, as the Church that 'presides in love' according to the phrase of St Ignatius of Antioch (*To the Romans* (http://www.crossroadsinitiative.com/library_article/244/Letter_of_Ignatius_of_Antioch_to_the_Romans.html) , Prologue), occupied the first place in the *taxis*, and that the bishop of Rome was therefore the *protos* among the patriarchs. They disagree, however, on the interpretation of the historical evidence from this era regarding the prerogatives of the Bishop of Rome as *protos*, a matter that was already understood in different ways in the first millennium." In addition, in the last years of the 1st century AD the Church in Rome intervened in the affairs of the Christian Church in Corinth to help solve their internal disputes.

Later in the 2nd century AD, there were more manifestations of Roman authority over other churches. In 189 AD, assertion of the primacy of the Church of Rome may be indicated in Irenaeus of Lyons's *Against Heresies* (3:3:2): "With [the Church of Rome], because of its superior origin, all the churches must agree... and it is in her that the faithful everywhere have maintained the apostolic tradition." In 195 AD, Pope Victor I, in what is seen as an exercise of Roman authority over other churches, excommunicated the Quartodecimans for observing Easter on the 14th of Nisan, the date of the Jewish Passover, a tradition handed down by St. John the Evangelist (see Easter controversy). Celebration of Easter on a Sunday, as insisted on by the pope, is the system that has prevailed (see computus).

Early popes helped spread Christianity and resolve doctrinal disputes.[5]

Nicaea to East-West Schism (325–1054)

The Edict of Milan in 313 granted freedom to all religions in the Roman Empire,[40] beginning the Peace of the Church. In 325, the First Council of Nicaea condemned Arianism, declaring trinitarianism dogmatic, and in its sixth canon recognized the special role of the sees of Rome, Alexandria, and Antioch.[41] Great defenders of Trinitarian faith included the Popes, especially Pope Liberius, who was exiled to Berea by Constantius II for his Trinitarian faith,[42] Damasus I, and several other bishops.[43]

In 380 Catholicism was declared the sole state religion of the Roman Empire.[44][45] While the civil power in the East controlled the church and the bishop of Constantinople, the capital, wielded much power,[46] in the West the Bishops of Rome was able to consolidate the influence and power they already possessed.[46] After the fall of the Western Roman Empire, barbarian tribes were converted to Arian Christianity or Catholicism;[47] Clovis I, king of the Franks, was the first important barbarian ruler to convert to Catholicism rather than Arianism, allying himself with the papacy. Other tribes, such as the Visigoths, later abandoned Arianism in favour of Catholicism.[47]

Medieval Age

After the fall of Rome, the pope served as a source of authority and continuity. Gregory the Great (*c* 540–604) administered the church with strict reform. From an ancient senatorial family, Gregory worked with the stern judgement and discipline typical of ancient Roman rule. Theologically, he represents the shift from the classical to the medieval outlook; his popular writings are full of dramatic miracles, potent relics, demons, angels, ghosts, and the approaching end of the world.[48]

Gregory the Great (*c* 540–604) who established medieval themes in the Church, in a painting by Carlo Saraceni, c. 1610, Rome.

Gregory's successors were largely dominated by the Exarch of Ravenna, the Byzantine emperor's representative in Italy. These humiliations, the weakening of the empire in the face of Muslim expansion, and the inability of the emperor to protect the papal estates against the Lombards, made Pope Stephen II turn from Emperor Constantine V. He appealed to the Franks to protect his lands. Pepin the Short subdued the Lombards and donated Italian land to the papacy. When Leo III crowned Charlemagne (800), he established the precedent that, in the West, no man would be emperor without anointment by a pope.[48]

From the seventh century it became common for European monarchies and nobility to found churches and perform investiture or deposition of clergy in their states and fiefdoms, their personal interests causing corruption among the clergy.[49][50] This practice had become common because often the prelates and secular rulers were also participants in public life.[51] To combat this and other practices that had corrupted the Church between the years 900 and 1050, centres emerged promoting ecclesiastical reform, the most important being the Abbey of Cluny, which spread its ideals throughout Europe.[50] This reform movement gained strength with the election of Pope Gregory VII in 1073, who adopted a series of measures in the movement known as the Gregorian Reform, in order to fight strongly against simony and the abuse of civil power and try to restore ecclesiastical discipline, including celibacy.[43] The conflict between popes and secular autocratic rulers such as the Holy Roman Emperor Henry IV and Henry I of England, known as the question of investiture, was only resolved in 1122, by the Concordat of Worms, in which the pope decreed that clerics were to be invested by clerical leaders, and temporal rulers by lay investiture.[49] Soon after, Pope Alexander III began reforms that would lead to the establishment of canon law.[48]

Since the beginning of the seventh century the Islamic Caliphate had conquered much of the southern Mediterranean, and represented a threat to Christianity.[52] In 1095, the Byzantine emperor Alexius I asked for military aid from Pope Urban II against the Muslim invasionns.[53] Urban, at the council of Clermont, called the First Crusade to assist the Byzantine Empire to regain the old Christian territories, especially Jerusalem.[54]

The low point of the papacy was 867–1049.[55] The papacy came under the control of vying political factions. Popes were variously imprisoned, starved, killed, and deposed by force. The family of a certain papal official made and unmade popes for fifty years. The official's great-grandson, Pope John XII, held orgies of debauchery in the Lateran palace. Emperor Otto I of Germany had John accused in an ecclesiastical court, which deposed him and elected a layman as Pope Leo VIII. John mutilated the Imperial representatives in Rome and had himself reinstated as pope. Conflict between the Emperor and the papacy continued, and eventually dukes in league with the emperor were buying bishops and popes almost openly.[55]

In 1049, Leo IX became pope, at last a pope with the character to face the papacy's problems. He traveled to the major cities of Europe to deal with the church's moral problems firsthand, notably simony and clerical marriage and concubinage. With his long journey, he restored the prestige of the papacy in the north.[55]

East–West Schism to Reformation (1054–1517)

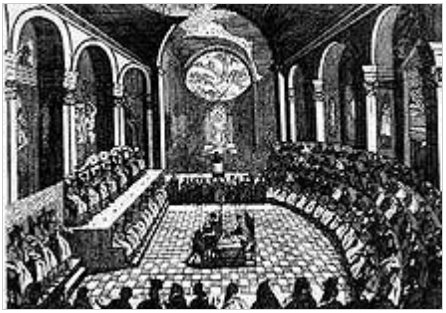
The East and West churches split definitively in 1054. This fracture was caused more by political events than by slight diversities of creed. Popes had galled the emperors by siding with the king of the Franks, crowning a rival Roman emperor, appropriating the Exarchate of Ravenna, and driving into Greek Italy.[55]

A historical map of the Mediterranean states in 1400. The Western Schism lasted from 1378 to 1417.

In the Middle Ages, popes struggled with monarchs over power.[5]

From 1309 to 1377, the pope resided not in Rome but in Avignon. The Avignon Papacy was notorious for greed and corruption.[56] During this period, the pope was effectively an ally of France, alienating France's enemies, such as England.[57]

The pope was understood to have the power to draw on the "treasury" of merit built up by the saints and by Christ, so that he could grant indulgences, reducing one's time in purgatory. The concept that a monetary fine or donation accompanied contrition, confession, and prayer eventually gave way to the common assumption that indulgences depended on a simple monetary contribution. The popes condemned misunderstandings and abuses, but were too pressed for income to exercise effective control over indulgences.[56]



Popes also contended with the cardinals, who sometimes attempted to assert the authority of councils over the pope's. Conciliar theory holds that the supreme authority of the church lies with a General Council, not with the pope. Its foundations were laid early in the 13th century, and it culminated in the 15th century. The failure of the conciliar theory to gain broad acceptance after the 15th century is taken as a factor in the Protestant Reformation.[58]

Various anti-popes challenged papal authority, especially during the Western Schism (1378–1417). In this schism, the papacy had returned to Rome from Avignon, but an anti-pope was installed in Avignon, as if to extend the papacy there.

The Eastern Church continued to decline with the Eastern Roman (Byzantine) Empire, undercutting Constantinople's claim to equality with Rome. Twice an Eastern Emperor tried to force the Eastern Church to reunify with the West. Papal claims of superiority were a sticking point in reunification, which failed in any event. In the 15th century, the Ottoman Turks captured Constantinople.

Reformation to present (1517 to today)

Protestant Reformers criticized the papacy as corrupt and characterized the pope as the antichrist.

As part of the Catholic Reformation, Pope Paul III (1534–49) initiated the

Popes instituted a Catholic Reformation[5] (1560–1648), which addressed the challenges of the Protestant Reformation and instituted internal reforms. Pope Paul III initiated the Council of Trent, whose definitions of doctrine and whose reforms sealed the triumph of the papacy over elements in the church that sought conciliation with Protestants and opposed papal claims.[59]

Gradually forced to give up secular power, the popes focused on spiritual

issues.[5]

In 1870, the First Vatican Council proclaimed the dogma of papal infallibility for those rare occasions the pope speaks *ex cathedra* when issuing a solemn definition of faith or morals.[5]

Council of Trent (1545–63), which established the triumph of the papacy over those who sought to reconcile with Protestants or oppose Papal claims.

Later the same year, Victor Emmanuel II seized Rome from the pope's control and substantially completed the unification of Italy.[5]

In 1929, the Lateran Treaty between Italy and Pope Pius XI established the Vatican City State, guaranteeing papal independence from secular rule.[5]

In 1950, the pope defined the Assumption of Mary as dogma, the only time that a pope has spoken *ex cathedra* since papal infallibility was explicitly declared.

The Petrine Doctrine is still controversial as an issue of doctrine that continues to divide the eastern and western churches and separate Protestants from Rome.

Saint Peter and the origin of the office

See also: Primacy of Simon Peter

The dogmas and traditions of the Roman Catholic Church teach that the institution of the papacy was first mandated by interpretations of several Biblical passages, mainly Matthew 16:13–19:[nb 2]

> When Jesus came into the coasts of Caesarea Philippi, he asked his disciples, saying, Whom do men say that I the Son of man am? …And Simon Peter answered and said, Thou art the Christ, the Son of the living God. And Jesus answered and said unto him, Blessed art thou, Simon Bar-Jona: for flesh and blood hath not revealed it unto thee, but my Father which is in heaven. And I also say to you that you are Peter, and upon this rock I will build my church, and the gates of the netherworld will not prevail against it. I will give you the keys of the kingdom of heaven; whatever you bind on earth will be bound in heaven, and whatever you loose on earth will be loosed in heaven.

Catholics believe that this passage shows Jesus establishing his church on the shoulders of Simon son of John (Peter). The Catholic scholarly community agrees with the church's interpretation that the "rock" Jesus refers to in this passage is Peter, an interpretation that some other scholars agree with.[60]

Since the Protestant reformation, Protestant scholars have asserted that the "rock" Jesus referred to was Jesus himself, or Peter's faith. The argument follows that, when Jesus says, "You are Peter (Greek: Πέτροζ(Petros), small stone as a pebble), and upon this rock Greek: πέτρα(petra), a large stone edifice as a cliff or ledge) I will build my Church", Jesus is pointing to something much larger than Peter, based on the clear distinction in the Greek of a small stone and a large rock cliff as well as the Greek grammatical structure, as the basis for his kingdom, not making a pope of Peter as Catholics claim.[61] The truth that Peter affirmed in verse 16 is that Jesus is Christ and faith in Him serves as the foundation of the Church and the whole set of the apostles teaching not solely or even mainly, little pebble, that is Peter.[62][63][64] Others, using Peter's own words, argue that Christ intended himself as the foundation of the church and not Peter.[65] Others have argued that the church is indeed built upon Jesus and faith, but also on the disciples as the roots and foundations of the church on the basis of Paul's teaching in Romans and Ephesians, though not primarily Peter.[66]

The reference to the "keys of the kingdom of heaven" here is the basis for the symbolic keys often found in Catholic papal symbolism, such as in the Vatican Coat of Arms.

Election, death and resignation

Election

Main article: Papal conclave

The Giving of the Keys to Saint Peter painted by Pietro Perugino (1492)

The pope was originally chosen by those senior clergymen resident in and near Rome. In 1059 the electorate was restricted to the Cardinals of the Holy Roman Church, and the individual votes of all Cardinal Electors were made equal in 1179. Pope Urban VI, elected 1378, was the last pope who was not already a cardinal at his election. Canon law requires that if a layman or non-bishop is elected, he receives episcopal consecration from the Dean of the College of Cardinals before assuming the Pontificate. Under present canon law, the pope is elected by the cardinal electors, comprising those cardinals who are under the age of 80.

The Second Council of Lyons was convened on 7 May 1274, to regulate the election of the pope. This Council decreed that the cardinal electors must meet within ten days of the pope's death, and that they must remain in seclusion until a pope has been elected; this was prompted by the three-year *Sede Vacante* following the death of Pope Clement IV in 1268. By the mid-16th century, the electoral process had evolved into its present form, allowing for variation in the time between the death of the pope and the meeting of the cardinal electors.

Traditionally, the vote was conducted by acclamation, by selection (by committee), or by plenary vote. Acclamation was the simplest procedure, consisting entirely of a voice vote, and was last used in 1621. Pope John Paul II abolished vote by acclamation and by selection by committee, and henceforth election will be by full vote by ballot of the Sacred College of Cardinals.

The conclave in Konstanz where Pope Martin V was elected

The election of the pope almost always takes place in the Sistine Chapel, in a sequestered meeting called a "conclave" (so called because the cardinal electors are theoretically locked in, *cum clave*, i.e., with key, until they elect a new pope). Three cardinals are chosen by lot to collect the votes of absent cardinal electors (by reason of illness), three are chosen by lot to count the votes, and three are chosen by lot to review the count of the votes. The ballots are distributed and each cardinal elector writes the name of his choice on it and pledges aloud that he is voting for "one whom under God I think ought to be elected" before folding and depositing his vote on a plate atop a large chalice placed on the altar (in the 2005 conclave, a special urn was used for this purpose instead of a chalice and plate). The plate is then used to drop the ballot into the chalice, making it difficult for electors to insert multiple ballots. Before being read, the ballots are counted while still folded; if the number of ballots does not match the number of electors, the ballots are burned unopened and a new vote is held. Otherwise, each ballot is read aloud by the presiding Cardinal, who pierces the ballot with a needle and thread, stringing all the ballots together and tying the ends of the thread to ensure accuracy and honesty. Balloting continues until someone is elected by a two-thirds majority.[67]

One of the most prominent aspects of the papal election process is the means by which the results of a ballot are

announced to the world. Once the ballots are counted and bound together, they are burned in a special stove erected in the Sistine Chapel, with the smoke escaping through a small chimney visible from St. Peter's Square. The ballots from an unsuccessful vote are burned along with a chemical compound to create black smoke, or *fumata nera*. (Traditionally, wet straw was used to produce the black smoke, but this was not completely reliable. The chemical compound is more reliable than the straw.) When a vote is successful, the ballots are burned alone, sending white smoke (*fumata bianca*) through the chimney and announcing to the world the election of a new pope. At the end of the conclave that elected Pope Benedict XVI, church bells were also rung to signal that a new pope had been chosen.

The formal declaration of "Habemus Papam" after the election of Pope Martin V

The Dean of the College of Cardinals then asks two solemn questions of the cardinal who has been elected. First he asks, "Do you freely accept your election?" If he replies with the word *"Accepto"*, his reign begins at that instant, *not* at the inauguration ceremony several days afterward. The Dean then asks, "By what name shall you be called?" The new pope then announces the regnal name he has chosen. (If the Dean is elected pope, the Vice Dean performs this task.)

The new pope is led through the "Door of Tears" to a dressing room where three sets of white papal vestments (*immantatio*) await: small, medium, and large. Donning the appropriate vestments and reemerging into the Sistine Chapel, the new pope is given the "Fisherman's Ring" by the Camerlengo of the Holy Roman Church, whom he first either reconfirms or reappoints. The pope then assumes a place of honor as the rest of the cardinals wait in turn to offer their first "obedience" (*adoratio*) and to receive his blessing.

The Senior Cardinal Deacon then announces from a balcony over St. Peter's Square the following proclamation: *Annuntio vobis gaudium magnum! Habemus Papam!* ("I announce to you a great joy! We have a pope!"). He then announces the new pope's Christian name along with his newly chosen regnal name.

Until 1978 the pope's election was followed in a few days by the Papal Coronation. A procession with great pomp and circumstance formed from the Sistine Chapel to St. Peter's Basilica, with the newly elected pope borne in the *sedia gestatoria*. There, after a solemn Papal Mass, the new pope was crowned with the *triregnum* (papal tiara) and he gave for the first time as pope the famous blessing *Urbi et Orbi* ("to the City [Rome] and to the World"). Another renowned part of the coronation was the lighting of a bundle of flax at the top of a gilded pole, which would flare brightly for a moment and then promptly extinguish, with the admonition *Sic transit gloria mundi* ("Thus passes worldly glory"). A similar warning against papal hubris made on this occasion was the traditional exclamation *"Annos Petri non videbis"*, reminding the newly crowned pope that he would not live to see his rule lasting as long as that of St. Peter, who according to tradition headed the church for 35 years and has thus far been the longest reigning pope in the history of the Catholic Church.[68]

A traditionalist Catholic belief claims the existence of a Papal Oath sworn, at their coronation, by all popes from Pope Agatho to Pope Paul VI, but which since the abolition of the coronation ceremony is no longer used. There is no reliable authority for this claim.

The Latin term *sede vacante* ("while the see is vacant")[69] refers to a papal interregnum, the period between the death of a pope and the election of his successor. From this term is derived the term sedevacantism, which designates a category of dissident Catholics who maintain that there is no canonically and legitimately elected pope, and that there is therefore a *Sede Vacante*. One of the most common reasons for holding this belief is the

idea that the reforms of the Second Vatican Council and especially the replacement of the Tridentine Mass with the *Mass of Paul VI* are heretical, and that those responsible for initiating and maintaining these changes are heretics and not true popes.[70][71][72] Sedevacantists are considered to be schismatics by the mainstream Roman Catholic Church.

For centuries, from 1378 on, those elected to the papacy were predominantly Italians. Prior to the election of the Polish cardinal Karol Wojtyla as Pope John Paul II in 1978, the last non-Italian was Pope Adrian VI of the Netherlands, elected in 1522. John Paul II was followed by the German-born Benedict XVI, leading some to believe that, although Rome is in Italy, Italian domination of the papacy is over.

Death

The current regulations regarding a papal interregnum—that is, a *sede vacante* ("vacant seat")—were promulgated by John Paul II in his 1996 document *Universi Dominici Gregis*. During the "Sede Vacante", the Sacred College of Cardinals, composed of the pope's principal advisors and assistants, is collectively responsible for the government of the Church and of the Vatican itself, under the direction of the Camerlengo of the Holy Roman Church; however, canon law specifically forbids the cardinals from introducing any innovation in the government of the Church during the vacancy of the Holy See. Any decision that requires the assent of the pope has to wait until the new pope has been elected and accepts office.

Funeral of Pope John Paul II at the Vatican in 2005, presided over by Cardinal Ratzinger, the future Pope Benedict XVI

In recent centuries it was traditional, when a pope was judged to have died, for the Cardinal Chamberlain to confirm the death ceremonially by gently tapping the pope's head thrice with a silver hammer, calling his birth name each time. This custom was not followed at the death of Pope John Paul I[73] and was not revived upon the death of Pope John Paul II.[74] The Cardinal Chamberlain then retrieves the Ring of the Fisherman and cuts it in two in the presence of the Cardinals. The Pope's seals are defaced, to keep them from ever being used again, and his personal apartment is sealed.

The body then lies in state for several days before being interred in the crypt of a leading church or cathedral; all who have died in the 20th and 21st centuries have been interred in St. Peter's Basilica. A nine-day period of mourning (*novendialis*) follows the interment.

Resignation

Main article: Papal resignation

The Code of Canon Law 332 §2 (http://www.vatican.va/archive/ENG1104/_P16.HTM) states, "If it happens that the Roman Pontiff resigns his office, it is required for validity that the resignation is made freely and properly manifested but not that it is accepted by anyone."

Titles

Official list of titles

Papal styles of
Pope

The official list of titles of the Pope, in the order in which they

are given in the Annuario Pontificio, is: Bishop of Rome, Vicar of Jesus Christ, Successor of the Prince of the Apostles, Supreme Pontiff of the Universal Church, Primate of Italy, Archbishop and Metropolitan of the Roman Province, Sovereign of the State of Vatican City, Servant of the Servants of God.[75]

The official list of titles does not include all the titles that are officially used.

Reference style	His Holiness
Spoken style	Your Holiness
Religious style	Holy Father
Posthumous style	NA

Pope

The best-known title, that of "Pope", does not appear in the official list, but is commonly used in the titles of documents, and appears, in abbreviated form, in their signatures. Thus Pope Paul VI signed as "Paulus PP. VI", the "PP." standing for "*Papa*" ("Pope").[76][77][78][79][80]

The title "Pope" was from the early 3rd century an honorific designation used for *any* bishop in the West.[81] In the East it was used only for the Bishop of Alexandria.[81] Pope Marcellinus (d. 304) is the first Bishop of Rome shown in sources to have had the title "Pope" used of him. From the 6th century, the imperial chancery of Constantinople normally reserved this designation for the Bishop of Rome.[81] From the early 6th century, it began to be confined in the West to the Bishop of Rome, a practice that was firmly in place by the 11th century,[81] when Pope Gregory VII declared it reserved for the Bishop of Rome.

In Eastern Christianity, where the title "Pope" is used also of the Bishop of Alexandria, the Bishop of Rome is often referred to as the "Pope of Rome", regardless of whether the speaker or writer is in communion with Rome or not.

Vicar of Jesus Christ

"Vicar of Jesus Christ" (*Vicarius Iesu Christi*) is one of the official titles of the Pope given in the *Annuario Pontificio*. It is commonly used in the slightly abbreviated form "Vicar of Christ" (*Vicarius Christi*). While it is only one of the terms with which the Pope is referred to as "Vicar", it is "more expressive of his supreme headship of the Church on earth, which he bears in virtue of the commission of Christ and with vicarial power derived from him", a vicarial power believed to have been conferred on Saint Peter when Christ said to him: "Feed my lambs. . . . Feed my sheep" (John 21:16-17 (http://bibref.hebtools.com/?book=%20John&verse=21:16-17&src=!)).[82]

The first record of the application of this title to a Bishop of Rome appears in a synod of 495 with reference to Pope Gelasius I.[83] But at that time, and down to the 9th century, other bishops too referred to themselves as vicars of Christ, and for another four centuries this description was sometimes used of kings and even judges,[84] as it had been used in the 5th and 6th centuries to refer to the Byzantine emperor.[85] Earlier still, in the 3rd century, Tertullian used "vicar of Christ" to refer to the Holy Spirit[86][87] sent by Jesus.[88] Its use specifically for the Pope appears in the 13th century in connection with the reforms of Pope Innocent III,[85] as can be observed already in his 1199 letter to Leo I, King of Armenia.[89] Other historians suggest that this title was already used in this way in association with the pontificate of Pope Eugenius III (1145–1153).[83]

This title "Vicar of Christ" is thus not used of the Pope alone and has been used of all bishops since the early centuries.[90] The Second Vatican Council referred to all bishops as "vicars and ambassadors of Christ",[91] and

this description of the bishops was repeated by Pope John Paul II in his encyclical *Ut unum sint*, *(http://www.vatican.va/edocs/ENG0221/__PT.HTM)* 95. The difference is that the other bishops are vicars of Christ for their own local churches, the Pope is vicar of Christ for the whole Church.[92]

On at least one occasion the title "Vicar of God" (a reference to Christ as God) was used of the pope.[82]

The title "Vicar of Peter" (*Vicarius Petri*) is used only of the Pope, not of other bishops. Variations of it include: "Vicar of the Prince of the Apostles" (*Vicarius Principis Apostolorum*) and "Vicar of the Apostolic See" (*Vicarius Sedis Apostolicae*).[82] Saint Boniface described Pope Gregory II as vicar of Peter in the oath of fealty that he took in 722.[93] In today's Roman Missal, the description "vicar of Peter" is found also in the collect of the Mass for a saint who was a pope.[94]

Pontiff

The term "pontiff" is derived from the Latin word *pontifex*, which literally means "bridge builder" (*pons* + *facere*),[95] and which designated a member of the principal college of priests in ancient Rome.[95][96][97] The Latin word was translated into ancient Greek variously: as ἱεροδιδάσκαλος, ἱερονόμος, ἱεροφύλαξ, ἱεροφάντης,[98] or ἀρχιερεύς (high priest)[99][100] The head of the college was known as the Pontifex Maximus (the greatest pontiff).[101]

Entrance to Vatican City, with inscription "Benedictus XVI Pont(ifex) Max(imus) Anno Domini MMV Pont(ificatus) I.", i.e., "Benedict XVI, Pontifex Maximus, in the year of Our Lord 2005, the first year of his pontificate."

In Christian use, *pontifex* appears in the Vulgate translation of the New Testament to indicate the Jewish high priest (in the original, ἀρχιερεύς).[102] The term came to be applied to any Christian bishop,[103] but since the 11th century commonly refers specifically to the Bishop of Rome,[104] who is more strictly called the "Roman Pontiff". The use of the term to refer to bishops in general is reflected in the terms "Roman Pontifical" (a book containing rites reserved for bishops, such as confirmation and ordination)[105] and "pontificals" (the insignia of bishops).[106]

The *Annuario Pontificio* lists as one of the official titles of the pope that of "Supreme Pontiff of the Universal Church" (in Latin, *Summus Pontifex Ecclesiae Universalis*).[107] He is also commonly called the Supreme Pontiff or the Sovereign Pontiff (in Latin, *Summus Pontifex*).

Pontifex Maximus, similar in meaning to *Summus Pontifex*, is a title commonly found in inscriptions on papal buildings, paintings, statues and coins, usually abbreviated as "Pont. Max" or "P.M." The office of pontifex maximus, or head of the college of pontiffs, was held by Julius Caesar and thereafter by the Roman emperors until Gratian (375-383) relinquished it.[108][109][110] Tertullian, when he had become a Montanist, used the title derisively of either the Pope or the Bishop of Carthage.[111] The Popes began to use this title regularly only in the 15th century.[111]

Servant of the Servants of God

The title "Servant of the Servants of God", although used by Church leaders including St. Augustine and St. Benedict, was first used by Pope St. Gregory the Great in his dispute with the Patriarch of Constantinople after

the latter assumed the title "Ecumenical Patriarch". It was not reserved for the pope until the 13th century. The documents of the Second Vatican Council reinforced the understanding of this title as a reference to the pope's role as a function of collegial authority, in which the Bishop of Rome serves the world's bishops.

Patriarch of the West

From 1863 until 2005, the *Annuario Pontificio* included also the title "Patriarch of the West". This title was first used by Pope Theodore I in 642, and was only used occasionally. Indeed, it did not begin to appear in the pontifical yearbook until 1863. On 22 March 2006, the Vatican released a statement explaining this omission on the grounds of expressing a "historical and theological reality" and of "being useful to ecumenical dialogue". The title Patriarch of the West symbolized the pope's special relationship with, and jurisdiction over, the Latin Church—and the omission of the title neither symbolizes in any way a change in this relationship, nor distorts the relationship between the Holy See and the Eastern Churches, as solemnly proclaimed by the Second Vatican Council.[112]

Other titles

Other titles commonly used are "His Holiness", "Holy Father". In Spanish and Italian, "*Beatísimo/Beatissimo Padre*" (Most Blessed Father) is often used in preference to "*Santísimo/Santissimo Padre*" (Most Holy Father). In the medieval period, "*Dominus Apostolicus*" ("the Apostolic Lord") was also used.

Signature

As indicated above, the Pope normally signs documents using the title "Papa" in the abbreviated form "PP." and with the numeral, as in "Benedictus PP. XVI" (Pope Benedict XVI). Exceptions are bulls of canonization and decrees of ecumenical councils, which the Pope signs with the formula, "Ego N. Episcopus Ecclesiae catholicae", without the numeral, as in "Ego Paulus Episcopus Ecclesiae catholicae" (I, Paul, Bishop of the catholic/universal Church).[113] The Pope's signature is followed, in bulls of canonization, by those of all the cardinals resident in Rome, and in decrees of ecumenical councils, by the signatures of the other bishops participating in the council, each signing as Bishop of a particular see.

Papal bulls are headed *N. Episcopus Servus Servorum Dei* ("Name, Bishop, Servant of the Servants of God"). In general, they are not signed by the Pope, but Pope John Paul II introduced in the mid-1980s the custom by which the Pope signs not only bulls of canonization but also, using his normal signature, such as "Benedictus PP. XVI", bulls of nomination of bishops.

Regalia and insignia

Main article: Papal regalia and insignia

- "Triregnum", also called the "tiara" or "triple crown", represents the pope's three functions as "supreme pastor", "supreme teacher" and "supreme priest". Recent popes have not, however, worn the *triregnum*, though it remains the symbol of the papacy and has not been abolished. In liturgical ceremonies the Pope wear an episcopal mitre (an erect cloth hat).
- Pastoral Staff topped by a crucifix, a custom established before the 13th century (see papal cross).
- Pallium, or pall, a circular band of fabric worn around the neck over the chasuble. It forms a yoke about the neck, breast and shoulders and has two pendants hanging down in front and behind, and is ornamented with six crosses. Previously, the pallium worn by the Pope was identical to those he granted to the primates, but in 2005 Pope Benedict XVI began to use a distinct papal pallium that is larger than the

primatial, and was adorned with red crosses instead of black.
- "Keys to the Kingdom of Heaven", the image of two keys, one gold and one silver. The silver key symbolizes the power to bind and loose on Earth, and the gold key the power to bind and loose in Heaven.
- Ring of the Fisherman, a gold ring decorated with a depiction of St. Peter in a boat casting his net, with the Pope's name around it.
- *Umbraculum* (better known in the Italian form *ombrellino*) is a canopy or umbrella consisting of alternating red and gold stripes, which used to be carried above the pope in processions.
- *Sedia gestatoria*, a mobile throne carried by twelve footmen (*palafrenieri*) in red uniforms, accompanied by two attendants bearing *flabella* (fans made of white ostrich feathers), and sometimes a large canopy, carried by eight attendants. The use of the *flabella* was discontinued by Pope John Paul I. The use of the *sedia gestatoria* was discontinued by Pope John Paul II.

The coat of arms of the Holy See. That of the State of Vatican City is the same except that the positions of the gold and silver keys are interchanged.[114]

In heraldry, each pope has his own Papal Coat of Arms. Though unique for each pope, the arms are always surmounted by the two keys in saltire (i.e., crossed over one another so as to form an *X*) behind the escutcheon (shield) (one silver key and one gold key, tied with a red cord), and above them a silver *triregnum* with three gold crowns and red *infulae* (lappets—two strips of fabric hanging from the back of the triregnum which fall over the neck and shoulders when worn). This is blazoned: "two keys in saltire or and argent, interlacing in the rings or, beneath a tiara argent, crowned or"). With the recent election of Benedict XVI in 2005, his personal coat of arms eliminated the papal tiara; a mitre with three horizontal lines is used in its place, with the pallium, a papal symbol of authority more ancient than the tiara, the use of which is also granted to metropolitan archbishops as a sign of communion with the See of Rome, was added underneath of the shield. The distinctive feature of the crossed keys behind the shield was maintained. The omission of the tiara in the Pope's personal coat of arms, however, did not mean the disappearance of it from papal heraldry, since the coat of arms of the Holy See was kept unaltered.

The flag most frequently associated with the pope is the yellow and white flag of Vatican City, with the arms of the Holy See (blazoned: "Gules, two keys in saltire or and argent, interlacing in the rings or, beneath a tiara argent, crowned or") on the right-hand side (the "fly") in the white half of the flag (the left-hand side—the "hoist"—is yellow). The pope's escucheon does not appear on the flag. This flag was first adopted in 1808, whereas the previous flag had been red and gold, the traditional colors of the papacy. Although Pope Benedict XVI replaced the triregnum with a mitre on his personal coat of arms, it has been retained on the flag.

Status and authority

Main articles: Primacy of the Roman Pontiff and Papal infallibility

First Vatican Council

The status and authority of the Pope in the Catholic Church was dogmatically defined by the First Vatican Council on 18 July 1870. In its Dogmatic Constitution of the Church of Christ, the Council established the following canons:[115]

"If anyone says that the blessed Apostle Peter was not established by the Lord Christ as the chief of all the apostles, and the visible head of the whole militant Church, or, that the same received great honour but did not

receive from the same our Lord Jesus Christ directly and immediately the primacy in true and proper jurisdiction: let him be anathema.[116]

If anyone says that it is not from the institution of Christ the Lord Himself, or by divine right that the blessed Peter has perpetual successors in the primacy over the universal Church, or that the Roman Pontiff is not the successor of blessed Peter in the same primacy, let him be anathema.[117]

If anyone thus speaks, that the Roman Pontiff has only the office of inspection or direction, but not the full and supreme power of jurisdiction over the universal Church, not only in things which pertain to faith and morals, but also in those which pertain to the discipline and government of the Church spread over the whole world; or, that he possesses only the more important parts, but not the whole plenitude of this supreme power; or that this power of his is not ordinary and immediate, or over the churches altogether and individually, and over the pastors and the faithful altogether and individually: let him be anathema.[118]

To maintain contacts with local clergymen and Catholic communities, the popes grant private audiences as well as public ones. Here the Canons Regular of the Holy Cross from Uden (Netherlands) are received by Pope Pius XII.

We, adhering faithfully to the tradition received from the beginning of the Christian faith, to the glory of God, our Saviour, the elevation of the Catholic religion and the salvation of Christian peoples, with the approbation of the sacred Council, teach and explain that the dogma has been divinely revealed: that the Roman Pontiff, when he speaks ex cathedra, that is, when carrying out the duty of the pastor and teacher of all Christians by his supreme apostolic authority he defines a doctrine of faith or morals to be held by the universal Church, through the divine assistance promised him in blessed Peter, operates with that infallibility with which the divine Redeemer wished that His church be instructed in defining doctrine on faith and morals; and so such definitions of the Roman Pontiff from himself, but not from the consensus of the Church, are unalterable. But if anyone presumes to contradict this definition of Ours, which may God forbid: let him be anathema."[119]

Second Vatican Council

In its Dogmatic Constitution on the Church (1964), the Second Vatican Council declared:

Pope Pius XII, wearing the traditional 1877 Papal Tiara, is carried through St Peter's Basilica on a *sedia gestatoria* c. 1955.

"Among the principal duties of bishops the preaching of the Gospel occupies an eminent place. For bishops are preachers of the faith, who lead new disciples to Christ, and they are authentic teachers, that is, teachers endowed with the authority of Christ, who preach to the people committed to them the faith they must believe and put into practice, and by the light of the Holy Spirit illustrate that faith. They bring forth from the treasury of Revelation new things and old, making it bear fruit and vigilantly warding off any errors that threaten their flock. Bishops, teaching in communion with the Roman Pontiff, are to be respected by all as witnesses to divine and Catholic truth. In matters of faith and morals, the bishops speak in the name of Christ and the faithful are to accept their teaching and adhere to it with a religious assent. This religious submission of mind and will must be shown in a special way to the authentic magisterium of the Roman Pontiff, even when he is not speaking ex cathedra; that is, it must be shown so that his supreme magisterium is acknowledged with reverence, the judgments made by him are sincerely adhered to, according to his manifest mind and will. His mind and will in the matter may be known either from the character of the documents, from

his frequent repetition of the same doctrine, or from his manner of speaking.

... this infallibility with which the Divine Redeemer willed His Church to be endowed in defining doctrine of faith and morals, extends as far as the deposit of Revelation extends, which must be religiously guarded and faithfully expounded. And this is the infallibility which the Roman Pontiff, the head of the college of bishops, enjoys in virtue of his office, when, as the supreme shepherd and teacher of all the faithful, who confirms his brethren in their faith, by a definitive act he proclaims a doctrine of faith or morals. And therefore his definitions, of themselves, and not from the consent of the Church, are justly styled irreformable, since they are pronounced with the assistance of the Holy Spirit, promised to him in blessed Peter, and therefore they need no approval of others, nor do they allow an appeal to any other judgment. For then the Roman Pontiff is not pronouncing judgment as a private person, but as the supreme teacher of the universal Church, in whom the charism of infallibility of the Church itself is individually present, he is expounding or defending a doctrine of Catholic faith. The infallibility promised to the Church resides also in the body of Bishops, when that body exercises the supreme magisterium with the successor of Peter. To these definitions the assent of the Church can never be wanting, on account of the activity of that same Holy Spirit, by which the whole flock of Christ is preserved and progresses in unity of faith."[120]

Politics of the Holy See

Residence and jurisdiction

Pope Pius VII, bishop of Rome, next to Cardinal Caprara. The Pope wears the pallium, a liturgical vestment that is used heraldically at the foot of the coat of arms of Benedict XVI.

The pope's official seat or cathedral is the Basilica of St. John Lateran, and his official residence is the Palace of the Vatican. He also possesses a summer residence at Castel Gandolfo, situated on the site of the ancient city of Alba Longa. Until the time of the Avignon Papacy, the residence of the Pope was the Lateran Palace, donated by the Roman Emperor Constantine the Great.

The Pope's ecclesiastical jurisdiction (the Holy See) is distinct from his secular jurisdiction (Vatican City). It is the Holy See that conducts international relations; for hundreds of years, the papal court (the Roman Curia) has functioned as the government of the Catholic Church.

The names "Holy See" and "Apostolic See" are ecclesiastical terminology for the ordinary jurisdiction of the Bishop of Rome (including the Roman Curia); the pope's various honors, powers, and privileges within the Catholic Church and the international community derive from his Episcopate of Rome in lineal succession from the Apostle Saint Peter (see Apostolic Succession). Consequently, Rome has traditionally occupied a central position in the Catholic Church, although this is not necessarily so. The Pope derives his pontificate from being Bishop of Rome but is not required to live there; according to the Latin formula *ubi Papa, ibi Curia*, wherever the Pope resides is the central government of the Church, provided that the pope is Bishop of Rome. As such, between 1309 and 1378, the popes lived in Avignon, France (see Avignon Papacy), a period often called the Babylonian Captivity in allusion to the Biblical exile of Israel.

Though the Pope is the diocesan Bishop of the Diocese of Rome, he delegates most of the day-to-day work of leading the diocese to the Cardinal Vicar, who assures direct episcopal oversight of the diocese's pastoral needs, not in his own name but in that of the Pope. The current Cardinal Vicar is Agostino Vallini, who was appointed to the office in June 2008.

Political role

Main article: Politics of the Vatican City

Antichristus, a woodcut by Lucas Cranach of the pope using the temporal power to grant authority to a generously contributing ruler

Though the progressive Christianisation of the Roman Empire in the 4th century did not confer upon bishops civil authority within the state, the gradual withdrawal of imperial authority during the 5th century left the pope the senior imperial civilian official in Rome, as bishops were increasingly directing civil affairs in other cities of the Western Empire. This status as a secular and civil ruler was vividly displayed by Pope Leo I's confrontation with Attila in 452. The first expansion of papal rule outside of Rome came in 728 with the Donation of Sutri, which in turn was substantially increased in 754, when the Frankish ruler Pippin the Younger gave to the pope the land from his conquest of the Lombards. The pope may have utilized the forged Donation of Constantine to gain this land, which formed the core of the Papal States. This document, accepted as genuine until the 15th century, states that Constantine I placed the entire Western Empire of Rome under papal rule. In 800 Pope Leo III crowned the Frankish ruler Charlemagne as Roman Emperor, a major step toward establishing what later became known as the Holy Roman Empire; from that date onward the popes claimed the prerogative to crown the Emperor, though the right fell into disuse after the coronation of Charles V in 1530. Pope Pius VII was present at the coronation of Napoleon I in 1804, but did not actually perform the crowning. As mentioned above, the pope's sovereignty over the Papal States ended in 1870 with their annexation by Italy.

Popes like Alexander VI, an ambitious if spectacularly corrupt politician, and Pope Julius II, a formidable general and statesman, were not afraid to use power to achieve their own ends, which included increasing the power of the papacy. This political and temporal authority was demonstrated through the papal role in the Holy Roman Empire (especially prominent during periods of contention with the Emperors, such as during the Pontificates of Pope Gregory VII and Pope Alexander III). Papal bulls, interdict, and excommunication (or the threat thereof) have been used many times to increase papal power. The Bull *Laudabiliter* in 1155 authorized Henry II of England to invade Ireland. In 1207, Innocent III placed England under interdict until King John made his kingdom a fiefdom to the Pope, complete with yearly tribute, saying, "we offer and freely yield...to our lord Pope Innocent III and his catholic successors, the whole kingdom of England and the whole kingdom of Ireland with all their rights and appurtenences for the remission of our sins".[121] The Bull *Inter caetera* in 1493

led to the Treaty of Tordesillas in 1494, which divided the world into areas of Spanish and Portuguese rule. The Bull *Regnans in Excelsis* in 1570 excommunicated Elizabeth I of England and declared that all her subjects were released from all allegiance to her. The Bull *Inter Gravissimas* in 1582 established the Gregorian Calendar.[122]

International position

Under international law, a serving head of state has sovereign immunity from the jurisdiction of the courts of other countries, though not from that of international tribunals.[123][124][125] This immunity is sometimes loosely referred to as "diplomatic immunity", which is, strictly speaking, the immunity enjoyed by the *diplomatic representatives* of a head of state.

International law treats the Holy See, essentially the central government of the Roman Catholic Church, as the juridical equal of a state. It is distinct from the state of Vatican City, existing for many centuries before the foundation of the latter. (It is common, however, for publications to use "Holy See", "Vatican/Vatican City", and even "Rome" interchangeably, and incorrectly.) Most countries of the world maintain the same form of diplomatic relations with the Holy See that they entertain with other states. Even countries without those diplomatic relations participate in international organizations of which the Holy See is a full member.

It is as head of the Holy See, not of Vatican City, that the U.S. Justice Department ruled that the Pope enjoys head-of-state immunity.[126] This head-of-state immunity, recognized by the United States, must be distinguished from that envisaged under the United States' Foreign Sovereign Immunities Act of 1976, which, while recognizing the basic immunity of foreign governments from being sued in American courts, lays down nine exceptions, including commercial activity and actions in the United States by agents or employees of the foreign governments. It was in relation to the latter that, in November 2008, the United States Court of Appeals in Cincinnati decided that a case over sexual abuse by Catholic priests could proceed, provided the plaintiffs could prove that the bishops accused of negligent supervision were acting as employees or agents of the Holy See and were following official Holy See policy.[127][128]

In April 2010 there was press coverage in Britain concerning a proposed plan by atheist campaigners and a prominent barrister to have Pope Benedict XVI arrested and prosecuted in the UK for alleged offences, dating from several decades before, in failing to take appropriate action regarding Catholic sex abuse cases and concerning their disputing his immunity from prosecution in that country.[129] This was generally dismissed as "unrealistic and spurious".[130] Another barrister said that it was a "matter of embarrassment that a senior British lawyer would want to allow himself to be associated with such a silly idea".[131]

Objections to the papacy

The Pope's claim to authority is either disputed or not recognised at all by other churches. The reasons for these objections differ from denomination to denomination.

Orthodox, Anglican and Old Catholic churches

Other traditional Christian churches (Assyrian Church of the East, the Oriental Orthodox Church, the Eastern Orthodox Church, the Old Catholic Church, the Anglican Communion, the Independent Catholic Churches, etc.) accept the doctrine of Apostolic Succession and, to varying extents, papal claims to a primacy of honour while generally rejecting that the pope is the successor to Peter in any unique sense not true of any other bishop. Primacy is regarded as a consequence of the pope's position as bishop of the original capital city of the Roman Empire, a definition explicitly spelled out in the 28th canon of the Council of Chalcedon. These churches see no

foundation to papal claims of *universal immediate jurisdiction*, or to claims of papal infallibility. Several of these churches refer to such claims as *ultramontanism*.

Antichristus, by Lucas Cranach the Elder, from Luther's 1521 *Passionary of the Christ and Antichrist*. The Pope is signing and selling indulgences.

Protestant denominations

Main article: Historicism (Christian eschatology)

Many Christian denominations reject the claims of Petrine primacy of honor, Petrine primacy of jurisdiction, and papal infallibility. These denominations vary from simply not accepting the Pope's claim to authority as legitimate and valid, to believing that the Pope is the Antichrist[132] from 1 John 2:18 (http://www.biblegateway.com/passage/?search=1%20John%202:18;&version=9;) ,[133] the Man of Sin from 2 Thessalonians 2:3-12 (http://www.biblegateway.com/passage/?search=2%20Thessalonians%202:3-12&version=9) ,[134] and the Beast out of the Earth from Revelation 13:11-18 (http://www.biblegateway.com/passage/?search=Revelation%2013:11-18;&version=9;) .[135] The sweeping rejection includes some denominations of Lutherans: Confessional Lutherans hold that the pope is the Antichrist, stating that this article of faith is part of a *quia* rather than *quatenus* subscription to the Book of Concord. In 1932, the Lutheran Church - Missouri Synod (LCMS) adopted *A Brief Statement of the Doctrinal Position of the Missouri Synod*, which a small number of Lutheran church bodies now hold.[136] Statement 43, *Of the Antichrist*:[137]

Antichristus, by the Lutheran Lucas Cranach the Elder. This woodcut of the traditional practice of kissing the Pope's toe is from *Passionary of the Christ and Antichrist*. The two fingers the Pope is holding up symbolizes his claim to be the Church's substitute for Christ's earthly presence.

43. As to the Antichrist we teach that the prophecies of the Holy Scriptures concerning the Antichrist, 2 Thess. 2:3-12 (http://www.biblegateway.com/passage

Christus, by Lucas Cranach. This woodcut of John 13:14–17 is from *Passionary of the Christ and Antichrist*. Cranach shows Jesus kissing Peter's foot during the footwashing. This stands in contrast to the opposing woodcut, where the Pope demands others kiss his feet.

> /?search=2%20Thess.%202:3-12&version=9) ;1 John 2:18 (http://www.biblegateway.com/passage/?search=1%20John%202:18;&version=9;) , have been fulfilled in the Pope of Rome and his dominion. All the features of the Antichrist as drawn in these prophecies, including the most abominable and horrible ones, for example, that the Antichrist "as God sitteth in the temple of God", 2 Thess. 2:4 (http://www.biblegateway.com/passage/?search=2%20Thess.%202:4;&version=9;) ; that he anathematizes the very heart of the Gospel of Christ, that is, the doctrine of the forgiveness of sins by grace alone, for Christ's sake alone, through faith alone, without any merit or worthiness in man (Rom. 3:20-28 (http://www.biblegateway.com/passage/?search=Rom.%203:20-28;&version=9;) ; Gal. 2:16 (http://www.biblegateway.com/passage/?search=Gal.%202:16;&version=9;)); that he recognizes only those as members of the Christian Church who bow to his authority; and that, like a deluge, he had inundated the whole Church with his antichristian doctrines till God revealed him through the Reformation—these very features are the outstanding characteristics of the Papacy. (Cf. Smalcald Articles, Triglot, p. 515, Paragraphs 39-41; p. 401, Paragraph 45; M. pp. 336, 258. (http://www.bookofconcord.com/smalcald.html#article4)) Hence we subscribe to the statement of our Confessions that the Pope is "the very Antichrist." (Smalcald Articles, Triglot, p. 475, Paragraph 10; M., p. 308. (http://www.bookofconcord.com/smalcald.html#article4))

The claim of temporal power over all secular governments, including territorial claims in Italy, raises objection.[138] The papacy's complex relationship with secular states such as the Roman and Byzantine Empires are also objections. Some disapprove of the autocratic character of the papal office.[139] In Western Christianity these objections both contributed to and are products of the Protestant Reformation.

Antipopes

Main articles: Antipope and Western Schism

Groups sometimes form around antipopes, who claim the Pontificate without being canonically and properly elected to it.

Traditionally, this term was reserved for claimants with a significant following of cardinals or other clergy. The existence of an antipope is usually due either to doctrinal controversy within the Church (heresy) or to confusion as to who is the legitimate pope at the time (see schism). Briefly in the 15th century, three separate lines of popes claimed authenticity (see Papal Schism). Even Catholics don't all agree whether certain historical figures were popes or antipopes. Though antipope movements were significant at one time, they are now overwhelmingly minor fringe causes.

Other uses of the title "pope"

In the earlier centuries of Christianity, the title "Pope", meaning "father", had been used by all bishops. Some popes used the term and others didn't. Eventually, the title became associated especially with the Bishop of Rome. In a few cases, the term is used for other Christian clerical authorities.

In the Roman Catholic Church

The "Black Pope" is a name that was popularly, but unofficially, given to the Superior General of the Society of Jesus due to the Jesuits' importance within the Church. This name, based on the black colour of his cassock, was used to suggest a parallel between him and the "White Pope" (since the time of Pope Pius V the Popes dresses in white) and the Cardinal Prefect of the Congregation for the Evangelization of Peoples (formerly called the Sacred Congregation for the Propagation of the Faith), whose red cardinal's cassock gave him the name of the

"Red Pope" in view of the authority over all territories that were not considered in some way Catholic. In the present time this cardinal has power over mission territories for Catholicism, essentially the Churches of Africa and Asia,[140] but in the past his competence extended also to all lands where Protestants or Eastern Christianity was dominant. Some remnants of this situation remain, with the result that, for instance, New Zealand is still in the care of this Congregation.

In the Eastern Churches

Since the papacy of Heraclas in the 3rd century, the Bishop of the Alexandria in both the Coptic Orthodox Church of Alexandria and the Greek Orthodox Church of Alexandria continue to be called "Pope", the former being called "Coptic Pope" or, more properly, "Pope and Patriarch of All Africa on the Holy Orthodox and Apostolic Throne of Saint Mark the Evangelist and Holy Apostle" and the last called "Pope and Patriarch of Alexandria and All Africa".

In the Bulgarian Orthodox Church, Russian Orthodox Church and Serbian Orthodox Church, it is not unusual for a village priest to be called a "pope" ("поп" *pop*). However, this should be differentiated from the words used for the head of the Catholic Church (Bulgarian "папа" *papa*, Russian "папа римский" *papa rimskiy*).

In New Religious Movements

Some New Religious Movements, especially those that have disassociated themselves from the Catholic Church yet retain a Catholic hierarchical framework, will use the designation "pope" for a movement's founder or current leader. One example in Africa is the Legio Maria Church of Africa. Another example is Cao Dai, a Vietnamese faith that duplicates the Catholic hierarchy, which is declared legitimate by religious authorities in Cao Dai due to the fact that, according to them, God created both Catholicism and Cao Dai.

Lengths of papal reign

Longest-reigning popes

Although the average reign of the pope from the Middle Ages was a decade, a number of those whose reign lengths can be determined from contemporary historical data are the following:

1. Pius IX (1846–1878): 31 years, 7 months and 23 days (11,560 days).
2. John Paul II (1978–2005): 26 years, 5 months and 18 days (9,665 days).
3. Leo XIII (1878–1903): 25 years, 5 months and 1 day (9,281 days).
4. Pius VI (1775–1799): 24 years, 6 months and 15 days (8,962 days).
5. Adrian I (772–795): 23 years, 10 months and 25 days (8,729 days).
6. Pius VII (1800–1823): 23 years, 5 months and 7 days (8,560 days).
7. Alexander III (1159–1181): 21 years, 11 months and 24 days (8,029 days).
8. St. Sylvester I (314–335): 21 years, 11 months and 1 day (8,005 days).
9. St. Leo I (440–461): 21 years, 1 month, and 13 days. (7,713 days).
10. Urban VIII (1623–1644): 20 years, 11 months and 24 days (7,664 days).

Pope Pius IX, the longest-reigning pope excluding Saint Peter

Saint Peter is thought to have reigned for over 30 years (AD 29 – 64?/67?), but the exact length is not reliably known.

Shortest-reigning popes

Conversely, there have been a number of popes whose reign lasted less than a month. In the following list the number of calendar days includes partial days. Thus, for example, if a pope's reign commenced on 1 August and he died on 2 August, this would count as having reigned for two calendar days.

Pope Urban VII, the shortest-reigning pope

1. Urban VII (15–27 September 1590): reigned for 13 calendar days, died before coronation.
2. Boniface VI (April 896): reigned for 16 calendar days
3. Celestine IV (25 October – 10 November 1241): reigned for 17 calendar days, died before consecration.
4. Theodore II (December 897): reigned for 20 calendar days
5. Sisinnius (15 January – 4 February 708): reigned for 21 calendar days
6. Marcellus II (9 April – 1 May 1555): reigned for 22 calendar days
7. Damasus II (17 July – 9 August 1048): reigned for 24 calendar days
8. Pius III (22 September – 18 October 1503): reigned for 27 calendar days
9. Leo XI (1–27 April 1605): reigned for 27 calendar days
10. Benedict V (22 May – 23 June 964): reigned for 33 calendar days
10. John Paul I (26 August – 28 September 1978): reigned for 33 calendar days.

Stephen (23–26 March 752), died of apoplexy three days after his election, and before his consecration as a bishop. He is not recognized as a valid pope, but was added to the lists of popes in the 15th century as *Stephen II*, causing difficulties in enumerating later popes named Stephen. He was removed in 1961 from the Vatican's list.
